COMMISSION FOR VISITING THE UNIVERSITIES AND COLLEGES IN SCOTLAND, BY HIS MAJESTY GEORGE THE FOURTH.—[23d July 1826.] 1

COMMISSION FOR VISITING THE UNIVERSITIES AND COLLEGES OF SCOTLAND, BY HIS MAJESTY WILLIAM THE FOURTH.—[12th October 1830.] 3

MINUTES and Proceedings of the Royal Commissioners for Visiting the Universities and Colleges of Scotland.—[31st August 1826 to 28th October 1830.]. . . 7 to 69

University of Edinburgh.

MINUTES OF EVIDENCE.

Mr. ARCHIBALD BRUCE, *Accountant for the City of Edinburgh*, and Mr. CARLYLE BELL, *Conjunct Principal Clerk* 71

Portion of City revenue legally belonging to the College, and deficiency of College revenue, how made good, 71. City bond, 71, 72, 74. Ale-duty, 71, 74. Rev. John Penman's and Rev. James Stewart's mortifications, 71, 72, 74. "Compositions paid by vassals," 72. Feu-duties—Ground-annuals, 72. Arrears—Lord Fincastle, 73. Sale of superiorities, 73. Sums paid to bursars short of the interest of the mortifications, 73. Practice as to vacant bursaries, 73, 74. Explanation as to King William's allowance of £50, 74. Mode of auditing College accounts, 74. Processes of augmentation, 74. No consent given by College to sale of superiorities, 74.

Mr. CHARLES CUNNINGHAM, *Conjunct Principal Clerk for the City of Edinburgh*, and Mr. ARCHIBALD BRUCE, *Accountant* 74

Explanations as to College rental, 74, *et seq.* Town View-book, 75. Various branches of College and Town property, 75, *et seq.* Feu-duties, and farms feued by religious houses, 75. Sale of superiorities—Lord Fincastle, 75, 76. Land in Kirk-of-Field, 76. High School founded before the College, and statement respecting its site, 76. Fund for rebuilding the University, and application of the money, 76, 77. Sommerville's mortification, 77. Multiplepoinding, 77, 78. South Bridge Trustees, 77. Observatory on Calton Hill, 77. Golden Charter, 77, 78. Sale of the patronage of Dumbarney, 77. Mode of proceeding in process of augmentation, 77, 78. Intimation of vacant bursaries to Town-council, 78. Manner of keeping bursary funds, 78. Application of inappropriated bursary sums, 78. Town chartulary, 78. Ledger, 78, 79. No detailed account of College property, nor state showing the particulars of the sum of ground-annuals belonging to the College, 78. Ground-annuals, 79.

The Very Rev. Dr. GEORGE HUSBAND BAIRD, D.D., *Principal of the University of Edinburgh* 79

Examinations in Language and Philosophy Classes—calling the catalogue—and mode of ascertaining proficiency of the boys, 80. Discipline how maintained, 80. Number of students in a class, 80. Censors, 80. Procedure in case of irregular attendance, want of proficiency, idleness or carelessness, 80. Imposition of additional tasks, 80, 81, 89. Substitutes for the stimulus at the High School in the Language Classes of the University, 81. Mr. Pillans and Mr. Dunbar, 81. Means of correction in case of perseverance in a course of idleness and neglect, 81. Expulsion when not resorted to, 81. No examinations previous to admission, 81, 84. Number of boys in Humanity Class, 81. Admission of persons to Natural Philosophy who had not studied Mathematics, 81. Class Prizes or Premiums, 81. No general Prizes given by the Senatus Academicus, 81. Separate hours for examination, 81. Dr. Ritchie's mode, 81, 82. Professor of Agriculture, 82. Agreement between the Professors of the Medical Faculty in case either should be appointed First Physician to His Majesty in Scotland, 82. No Regius Professor merely styled Professor of Medicine, 82. Principle on which the Senatus Academicus consider that Regius Professors of the Medical department are not entitled to examine for graduation, 82. Question as to the right of the Crown, 82. Professorships in which no lectures are given, 82, 83, 87. Want of an Observatory, 83. Power of Principal over Professors, 83. Course pursued by Senatus Academicus in the event of misconduct in a Professor, 83. Deliberative vote of Principal, 83. Roll called and censor's duty in ascertaining regularity of attendance, 83, 84. Possibility of a lad obtaining a certificate, without regular attendance, 83. Course pursued with Medical Students, 83. Class-tickets, 83. Extent of examination of Medical Students as to literary qualifications, 83. Latin examinations and thesis, 84. No rule that the degree of M.A. should precede that of M.D., 84. Privilege attached to the degree of M.A., and requisites for admission into the Divinity Hall, 84. Public examinations at the commencement of Session, formerly, 84. No public examination as connected with graduation, 84. Practice in former times as to laureation, 84. Effects of a revival of public examinations or graduation, 84. Introduction of Theses, by Dr. Blair, 84. No general course of study prescribed, and power of a student to enter himself at any class he chooses, 84. Advantage of prescribing a course of study and order of attendance, 84. Age of Censors, 85. Age of students of the Humanity Class, 85. Explanation of the nature of occasional attendance at the Divinity Hall, 85. Extent of power of the Senatus Academicus over Divinity students, 85. Acts of the General Assembly, and forms required by the Presbytery previous to granting licence, 85. Essays not regularly submitted to Principal, 86. Prizes, 86. Prizes given by the Professors at their own expense, 86. Utility of general prizes open to the competition of the whole of the students, and conferred publicly, 86. Dr. Fellowes's, for an Essay on Comets, 86. Foundation of the Gold Medal Prize by the Writers to the Signet, 86. Voice of students in the appropriation of prizes in the Greek class, 86. Freedom of Professors in making their own regulations, 86. Church attendance, 86. Medical students from different countries, 86. Regulation respecting admission of students expelled from other Colleges, 86, 87. Civil History Class, 87. Professor of Public Law, 87. Class of Universal History, 87. Lectures on Agriculture, and reasons for the Professor's not lecturing, 87. Appropriation of the Library fund to the general branches of study, and to the Medical department, 87, 88. Management by particular Curators, 88. Regulations as to the Library, 88. Subscription of Confession of Faith, and Oath of Allegiance, 88. Power of Senatus Academicus, 88. Appointments of Joint Professors, 88. Small Fees or Class-dues, 88. No controversies in regard to jurisdiction of Chancellor or Rector, 89. Correction by Senatus of students rioting in the town, 89. Books for study chosen and recommended by Professors, 89.

University of Edinburgh.

Mr. George Dunbar, *Professor of Greek, and one of the Curators of the Library* . . 89

Want of funds for prizes, 89. Preferable mode, and period for distributing prizes, 89, 90. Gold medal given at the Professor's expense, 89, Age of students in classes, and time of attendance, 89, 91. Mode of conducting class, 89, 90, 91. Authority of Principal to attend the different classes, 90. Division of the Greek class, 90. Explanation of the word "private," 90. Number of students in each class, 91. Boys from the High School, 91. Nature of first Greek class, 91. Teaching of Greek in any private school in Scotland prohibited by an Act of Privy Council of 1670, 91. Discretionary power of Professor to decide which class a boy should enter, 91, 92. Second class, 92. Class examinations, 92. Books used in the first, second, and third class, 93. Exercises, 93. Themes and compulsory compositions in verse and prose, 93. Encouragements for proficiency, 93. Enforcing attention, 93. Fines, 94. Extra exercises, 94. Expulsion, 94. Nature of reproof, 94. Censor, 94. Sufficiency of Professor's authority and completeness of system of discipline, 94. Security for providing study without the walls of the College, 94. Attendance of second class students in third class, 94. Public examinations in the middle and close of session, 94, 95. Periodical or occasional examinations, 95. Revival of ancient custom of Laureation, 95. Degree of M.A. how considered, and probable benefits in making it, under a stricter system of examination, a necessary step for M.D. or D.D., 95, 96. Revival of regulation making the degree of M.A. imperative previous to entering Divinity Hall, 95. Students intending to enter Divinity Hall, must previously attend Philosophy classes, 95. Period of attendance of Divinity students at Greek and Philosophical classes, 95, 96. Occasional attendance at Divinity Hall, 96. Mutual instruction, 96. Greek Grammar, 96. Latin rules more permanently retained in the memory, 97. Moor's and Valpy's grammar, 97. Proportion of first class students who do not attend the second, 97. Examination of students applying for graduation, 97. Mode of adjudging prizes, 97. Certificates, 97. Precautions against improper means for obtaining prizes, 98. Discretionary power of the Professor, 98. Lectures, when at extra hours, 98. Additional tasks, 98. Selection of books, 98. Compositions in English, 98, 99. Subjects of the lectures, 98. Lecture on Greek grammar, 99. Proportion of students who remain to the end of Session, 99. Time to which first and second class continue, 99. Means to induce students not to leave their classes much before the termination of Session, 99. Prolongation of Session, 99. Summer Session, 99. Importance of making the Master of Arts degree a necessary qualification for higher degrees in the University, 99. Necessity of a more extended previous education for M.D., and proposed regulations, 99, 100. Necessity of regular attendance for those aiming at the degree of Master of Arts, 99. Paucity of Medical students who attend the junior classes, 99. No examination upon General Literature at the time of conferring the degree of Doctor of Medicine, 100. Comparative merits of Scotch, and English and Irish Medical students, 100. Regulation respecting an attendance of Medical students on Literary and Philosophical Classes, 100. Advantage of prescribing a general order of study, 100. Students from England, with the view of attending one or two of the Philosophical Classes, 100. Order of study for obtaining the degree of Master of Arts prescribed, 100. Order stated, 101. Degree of Bachelor not practically known, 101. Students foreign bred not allowed to pass Greek Classes, and insist on proceeding to trials for degrees of Arts, 101. Prime students from the High School, 101. A Dean of the Faculty of Arts, 101. Public laureation every year, 101. Nature of Professor's certificate, 101. General system of fines in the junior classes of the College, and small amount of them, 101. Doctor of Laws merely an honorary degree, 101. Management of Library, 101. Proportion of Medical books—Lending out books—*Veto'd* books, 102. Annual sum received by the Professor in lieu of a house, 102.

The Rev. Andrew Brown, D.D., *Professor of Rhetoric* 102

Essential importance of the study of Rhetoric, 102. Public examinations—average age of students—Essays, 103, 105, 106. Classification for prizes—students no voice in conferring prizes—prize fund—regular attendance, 103. Certificate necessary in no department of life, 103. Necessary for the degree of Arts, 103. Average number of students, 103. Character of the subjects for essays, 103, 104. Incitement to be produced by conferring public marks of distinction, 104. Certificate of attendance not required at the Divinity Hall, 104. Expediency of superseding attendance at the Rhetoric Class of students in Divinity Hall, 104. Number of discourses heard by the Professor of Theology in a six months' session, 104. Hour of Dr. Brown's class hour, 105. A clergyman of the Established Church, 105. Rhetoric an indispensable branch of study to a clergyman, 105. Objections to subjecting students of Divinity to any expense, 105. Arrangement of hours to enable Divinity students to attend the class, 105. Proper place of Rhetoric in the order of study, 105. Period of commencement, and how long the class continues, 106. Proposed alteration in the time of lecturing, 106. Possibility of obtaining the degree of M.A. without having performed exercises, 106. Certificate of attendance, 106. Proposition of the Senatus, for making composition requisite at the time of taking the degree of M.A. 106. Revival of public laureation, 106. Degree of M.A. to non-residents, or to general students, 106.

William Wallace, Esq., *Professor of Mathematics* 106

Professor of Mathematics and Astronomy in signing diplomas, 106. Average number of Mathematical students, 107. Average ages, 107. Nature and division of the classes, 107. Prizes, 107. Examinations, 107, 108. Exercises—branches taught in the first and second class—catalogue, 107. Course pursued in the third class, 107. Request by students not to be called up, 107, 108. Prize given for unwearied application, and proficiency, 108. Extent of authority to enforce attendance, 108. Attendance on class necessary for degrees in Arts, and for students in Divinity, 108. Certificates, and discretionary power of refusing them, 108. No fines, 108. Third class of Mathematics regularly taught, 108. Subjects treated by Mr. Playfair, 109. Branches taught in third class, 109. Astronomy considered by Professor Robison as belonging to the class of Mathematics, 109. Former experience of Professor Wallace, 109. Students of Divinity obliged to attend the class one year, 109. Teaching of a third class voluntary, 109, 111. Subjects treated of in the third class, 109. Lectures on Saturdays, 109. Comparative proficiency of the young men at Sandhurst and at Edinburgh, 109. End of Session, and description of students who leave before its expiration, 107. Length of Session for the first two classes, 109. Exercises voluntary, and number performing them, 109. Enforcing attendance, and quality of the certificate of approbation, 110. Calling the roll, 110. Intention to teach Astronomy, and causes of prevention, 110. Astronomy when first taught, to what Chair it belonged, and by what Professors taught, 110. In diplomas Professor Leslie signed himself Professor of Mathematics and Astronomy, 110. Decision of controversy by the Senatus Academicus, 110. Mode of teaching Astronomy previous to 1674, 110. Astronomical instruments, 110. Professorship of Practical Astronomy never taught, 111. Ap-

University of Edinburgh.

Page

pointment of Dr. Blair, and salary annexed to the office, 111. Information respecting an Observatory, 111. Loss of funds for one, by bankruptcy, and authority for placing dividends at the disposal of Thomas Scott, 113. Privileges of *ex-officio* members of the Astronomical Institution, 111. Third class for Practical Mathematics, 111. Number of class, and gratis tickets, 111. Students when capable of entering the Natural Philosophy class, 111. Certificates of attendance, 111. Benefit to Divinity students if proficiency ascertained before entering on the course of Natural Philosophy, 111. Practice at Glasgow of remitting students to the Mathematical class, if not qualified to go on with Natural Philosophy, 111. Stimulus derived from prizes, 111. Mode of detecting Essays not written by students themselves, 112. Prizes in class decided by the Professor, without the intervention of the students, 112. Expediency of re-establishing the ancient practice in conferring degrees in Arts publicly and solemnly, at the conclusion of course, 112. A Professor's place, in case of indisposition, how supplied, 112. Whether entitled to introduce any person into the class as Assistant, without leave of the Senatus Academicus, 112.

JOHN WILSON, Esq., *Professor of Moral Philosophy* 113

Discipline—mode of conducting class, 113. No class-examinations, 113. Alteration in the form of examination, and advantage of public ones, 113, 114. Saturday meetings, 113. Orders of students composing the Moral Philosophy class, 113, 114. Objections of Dr. Brown to examination in the class on Moral Philosophy, 114, 121. Attendance of Divinity students in class imperative, 114. No student can take a degree without attending the Moral Philosophy class, 114. Ages of young men attending class, and time of attendance, 114. Prizes, 114, 119. Comparative advantages of a system of prizes, and of a classification according to merit, as at Oxford, 115. Students no voice in the decision of prizes, 115. Test for ascertaining whether Essays are written by the students themselves, 115. *Grinders*, 115. General attendance on class, good, 115. Advantages of a system of Essay-writing, 115. No roll called, 116. No censors, 116. Average number of students, 116. Class ticket, 116. Rule for granting certificates, and nature of them, 116. No degree taken without producing a certificate of having attended class, 116. Means of enforcing discipline, 116 No fines, 116. Horror of students at public reprehension, 116. As to power of expulsion, 116. Political Economy, and ground for lecturing on it, as forming a part of the science of Moral Philosophy, 116, 117. Names of the most illustrious Professors who have treated on the subject, enumerated, 117. Is Political Economy included in the Doctrina Civilis of Bacon? 117. Separate hour for the lectures, 118. Day of commencement and proposed extent of course, 118. Number of lectures delivered by Mr. Dugald Stewart, 118. Practice in foreign Universities, 118. Conditions of the Professorship founded by Mr. Henry Drummond, at Oxford, 118. Lecturing without permission from the Senatus Academicus, 118. Range and extent of the Professor's intended lectures on Moral Philosophy, 118, 119. Granting certificates, and general form of them, 119. Benefits from the certificate's bearing that the student had made progress in the study, 121. When appointed, 119. Time required for the composition of course, 119. Extent of Dr. Brown's lectures, 119. Separate hours, 119. Saturday's hour voluntary, 119. Criticising Essays, and making subjects open to general competition, 119. Public distribution of prizes, 120. System at Oxford and Cambridge, 120. Public examinations for degrees in Arts, 120. Ground on which the degree is now given, 120. Introduction of a distinction between Ordinary Degree and the Degree with Honours, 120. Privilege to be attached to the degree of M.A., 120. Young men attending class intended for the Bar, 120. Utility of public examination for Degrees, or competition for prizes, 120, 121. Number of degrees taken at present, 121. Class not attended by Principal at the reading of Essays, 121. Advantage of occasional attendance by Principal and some of the Professors, 121. Proportion of students obtaining the highest prizes in the Moral Philosophy Class, who have received prizes in other classes, 121. Simplification of discussions, and mode of examination so as to ascertain the student's clear apprehension of the doctrines delivered, 121. No text-books published, 121. Importance of examination, 121. Theological extent and bearing of the Professor's lectures, 122. Effects of Revealed Religion, and power of moral obligation, 122.

JOHN LESLIE, Esq., *Professor of Natural Philosophy* 122

Meetings of the Senatus Academicus to consider the Returns, 122. Former and present state of the class of Natural Philosophy, 122, 123. Exercises, 122. Certificates of attendance—Discipline—Prizes—Competition—Prizes for merit, 123. Age of pupils, 123. Order, management, and attendance of Curriculum, 124. Means of enforcing discipline, 124. Arrangements for teaching Natural Philosophy under its progressive enlargements, 124. Plan by the Professor of a second alternating class, 124. Extension of Curriculum to five years instead of four, 124, 125. Right of a Professor to set up a new class, and take an hour without permission of the Senatus Academicus, 125. Advantage of an early study of Mathematics, 125. Order for taking Ethics and Physics, 125. Suppression of first classes in the College, 125. Degeneracy of country schools, and insufficiency of them as preparatory for College education, 125. Subjection of the whole schools throughout the country to public inspection and control, 125, 126. Continental system, 125. Gratuitous education, and education at a cheap rate, 125, 126. Arrangement of studies in the Book of Discipline, 126. Experiments and Apparatus, 126, 129. Cursory view of some branches from the extent of the subject, 126. Attendance on second class of Mathematics before entering Natural Philosophy class, 126. Evasion of Mathematical class by Divinity students, 126. Advantage of a restraining power on the admission of students to the Natural Philosophy class without a sufficient knowledge of Mathematics, 127. Benefits of making a degree of M.A. obligatory on students for Law and Divinity, 127. Extent of Mathematical knowledge necessary to enter the class with advantage, 127. Algebra, in which Universities always taught in the First class, 127. Elements of Euclid when introduced, 127. Geography and Dialling, 127. Branches taught in M'Laurin's time by the Professor of Mathematics, 127. David Gregory, 128. Newtonian Philosophy, 128. Title by which Professor subscribes himself, 128. Astronomy when taught, 128. Professor Dugald Stewart—Professor Playfair—and Mr. Matthew Stewart, 128. Professor Leslie never gave lectures on Astronomy, 128. Date of the institution of Natural Philosophy as a separate class, 128. Sir Robert Stewart, 128. Illustration of Integration of Quantities, as applied to certain Astronomical Problems, introduced into the Third class, 128. No Fourth class contemplated, 128. Liability of the Town to afford a complete apparatus, 129. Professor Robison, 129. Addition to present apparatus by Professor Leslie, 129. Year in which he commenced as Professor of Mathematics, 129. Explanation of blanks in the Returns regarding Third class, 129. Returns of numbers attending class, 129. Monthly entry of names to prevent evasion, 129. Certificates obtained from Secretary, 129, 130. List of members attending Winter Session and Summer Course, 130, and *note*. Public examinations by Principal or Professors, 130. Prizes—Dr. Fellowes's prizes, 130. Classification at the end of the Session according to merit and proficiency, 130. Prizes or classification, which the best, 130. No public examinations of

Page

University of Edinburgh.

any sort in the University, 130. None for degrees, 130. Degree of Arts confers no civil privilege, 131. Proposed alterations in the conferring of degrees, 131. Length of original Curriculum, 131. Revival of the degree of Bachelor, 131. No distinct Humanity class, originally, 121. The four original classes, with those superadded, 131. Injury by the regulation respecting the Rhetoric class, 131. Circumstances under which degree granted, after three years' attendance, 131. Comparative merits of English and Irish students resorting to Edinburgh, 131. Act passed by Town-council to prohibit any person in Edinburgh from teaching Greek, 131. Reputation of the University to what extent affected by granting degrees in an easier form, 131. Term of seven years kept up in England, 131. Decrease or increase in the number of those taking the degree of M.A. since the addition of the Rhetoric class, 132. Proportion taking the degree who are Dissenters, 132. No religious test required, 132. *Sponsio* signed, 132. Subscription by Roman Catholic, 132. No society of students for the prosecution of Physical study, 132. Nature, and proposed regulations for such societies, 132. The Speculative Society, 132. Proposed improvement in the mode of graduations in degrees, 132. Small fees, 133. Extent of allowance received from the Town for instruments, or philosophical apparatus, 133. Attendance by students, 133. Extension of period of course, 133. Method of examinations in the presence of the whole class at St. Andrews, and at Glasgow, 133. Professor Jardine's Outline, 133. Monitors, 133. Number attending examination on Saturdays, 133. Proposed second class, or subdivision of the general class, 133. Alterations in the course of Academical study—Earlier introduction of Physical science, and throwing Logic and Ethics to a later period, 134.

The Rev. David Ritchie, D.D., *Professor of Logic* 134

Average age of students, 134. Removal of students incompetent, 134. Arrangement respecting Mathematical and Natural Philosophy class, 134. General course of study prescribed only for those intended for the church, 134. Order of class attendance to obtain the degree of M.A., 134. Proposed alteration, in taking the first Mathematical class, 134. Unimportance of students taking Physics or Metaphysics first, 134. Average number and age of students attending, 135. Mode of instruction in class, 135. Class-examinations—Catalogue—Enforcing attendance—Refusal of certificates—Causes of non-attendance, 135. Regularity of Divinity students, and examples of irregular attendance, 135. Examination at a separate hour combined with the plan of teaching by lectures, 135. Classes that should be combined with the study of Logic, 135. Order of precedence in the Moral Philosophy and Natural Philosophy Classes, 135. Examination and exercises, 135, 136, 137. Natural Philosophy, Moral Philosophy, and Logic, taught all at the same hour at Aberdeen, 135. Professor Jardine's Outline, 136. Reading portions of Greek and Latin authors who treat of the systems of Ancient Philosophy, 136. Books recommended, 136. Only one class, 136. Prizes, 136. Rule laid down for distributing them, 136. Subjects of Essays prescribed, 136. Glasgow system of making students write out at the second hour the substance of the lecture of the preceding hour, 136. Public examinations and distinctions on taking degrees, 137. Competition for prizes, 137. Mode of awarding prizes, 137. Desuetude of students enrolling themselves at Divinity Hall, in taking a degree, 137. Academical authority to require students of the Theological class to take the degree of Arts, 137, 138. Power of the Church alone to prescribe the course of education, 138, 139. Laws of the General Assembly imperative, 138. Course of Philosophy made imperative by the Church, 138. Law of the Church with respect to the degree of A.M., 138. Causes of irregular attendance, 139. Refusing admission into class, in case of improper conduct, 139. Essays, 139. Prize-essays—Class-examinations, 139. Printed form of certificate, containing the highest possible qualifications, for Professor to score out those not applying to a particular student, 139. Particular course of study prescribed for degrees, in what case imperative on the Senatus Academicus, 139. First Professor who taught Logic by lecture not recollected, 139. Separation of Rhetoric from Logic when it took place, 139. Coincidence in the three classes of Rhetoric, Logic, and Moral Philosophy, 139. No concert among the Professors, 139. No harm in two discussing the same subject, 140. Order of precedence in Rhetoric and Logic, 140. No account of previous studies—Irregular attendance, 140. Subjects treated of most essential, 140. Knowledge of the Latin language necessary? 140. Schools of Scotland, 140. Certificates of attendance—Taking notes—No text-book, 140. Persons who are not allowed to compete for prizes, 140. Ignorance of Greek and Latin of students joining class, 140. Literary societies, 140. Fees, 140. By whom introduced, 140. Lower rate for Divinity students, 141. Prizes obtained for exercises not performed by the students themselves, 141. Debating societies, 141. Length of a Divinity Session, 141. Number of discourses delivered in the course of a Session, 141. Number of days in the week which the Professor meets, 141. Devolving on Principal the duty of hearing discourses, 141.

Robert Jameson, Esq., *Regius Professor of Natural History* 141

Mode of teaching in the Natural History class, 141. Prizes—Class-examinations—Age of students—Students from the various ranks and departments of life who attend the class, 142. Conversational mode of instruction, 142. Contributions to the Museum duty-free, 142. When appointed, 142. General notice of the Museum, 143. Text-book, 143. Examinations, private and public, 143. Conferring degrees in Arts, 143. Competition for prize-essays, 143. Proposed changes in the constitution of the University, and appointment of Chancellor, 143. Discretionary authority of each Professor in the plan of teaching, 144. Lodging a controlling power in the Senatus Academicus, or a Chancellor, 144. Suggestions respecting the Museum—additional accommodation, donations, &c., 144. Admission of students of Divinity to Natural History, 144. Period of life for attending the class with advantage, 144. Advantage of a previous knowledge of Greek, 145. Logic, 145. Order of precedence in Chemistry and Natural History, 145. Subjects treated by Professors of the two sciences, 145. Treating of different departments under different classes, beneficial, 145. Library, 145. Admission fee to the Museum, 143, 145. Hunterian Museum at Glasgow, 145. Utility of young men destined for the Church attending a course of Natural History, 145. Wernerian and Plinian Society, 145. Conversations in the Museum, 146. Exercises, 146. Completion of Synopsis in one Session, 146. Geological exercises, 146. No regular Syllabus, 146. Funds collected for the Museum, 146. Collection from Paris, 146. Eminence of the Museum on the Continent, 146. Attainments of Professors in foreign Universities, 146. Physical Science not more cultivated on the Continent than in Scotland, 146, 147. Greater proportion of English books translated into French and German, 147. Increasing estimation for the English language throughout the Continent, 147. Historians of Great Britain, 147. Comparative attainments in *Classical* Literature, 147. System of education in the Scotch Universities how regarded abroad, 147. German Professors, 147. Relative proportion of students from other countries, 147. State of instruction in foreign Universities, and disappearance of Latin in the lectures in Holland, 147. Text-books translated into French and German, 147. Decrease in the number of foreigners attending the University of Edinburgh, 147. Scottish Journals, 148. University of Leyden,

University of Edinburgh.

Page

148. Dutch Professors, how and by whom appointed, 148. Advantage of all the Professors being nominated by the Crown, 148. Board of Education recommended, 148. Qualifications and age of Professors, 148. Age of Continental Professors, 148. Selection of gentlemen possessing a superior mode of communicating knowledge, 148.

Dr. William Ritchie, *Professor of Divinity*.—[Examined by a Committee.] . . 148

Days in the week how occupied—Examinations—Discourses—Number of Discourses prescribed by the Church to each student—Conduct of students—Irregular students—Certificates for admission to other Universities—Of conduct during the summer season, 149. Imprudence in abolishing irregular attendance, 149. Nature of the Professor's certificates, 149, 150. As to Principal hearing any part of the Discourses, 150. University Towns on the Continent in which the Professor resided, 150. Griesbach and Eichhorn, 150. Estimation of Scottish literature—of the Medical Professors—and lectures in Natural History and Chemistry, 150. Opinion of learned men on the Continent respecting the works of Dr. Robertson, 150. Anecdote of Gibbon, 150. Blair's Sermons, 150. Ferguson's History of the Roman Republic, 150. Translations into German of other authors, 150. Example of a Scottish University being followed—Coadjutor at Mentz, and Sallust, 151. Dr. Campbell's works, 151. Nomination of Professors by the Crown, 151. No Professor of Rhetoric in Germany in Dr. Ritchie's time, 151. Dr. Blair, Gesner, 151. Comparative advance of Scotch Professors with those of Germany in Logic, Moral Philosophy, Physical Science, Medicine, 151. Biblical Criticism, overrated, 151. Library, and selection of the books, 151. Separate hours for hearing Discourses in the power of the Professor, 151.

John Leslie, Esq., *Professor of Natural Philosophy*. (Re-examination) 151

Supplementary of Mr. Leslie's evidence—Remarks on the Returns of the Senatus Academicus —Election of Rector—Revival of the office of Chancellor—Right of Town-council to appoint University printer—Government grant of £500 for printing books for the use of students— —Lectures on the corruption of the Roman tongue during the middle ages, and the rise and formation of modern Law Latin—*Sponsio Academica*—Salary of Professor of Practical Astronomy, 152. Patronage in filling up vacant chairs—College Revenues—Mortcloth dues—Town's bursaries—*Triad, Tetrad, Quaternion*—Names given to different classes of students—*Baccalaurei*, why so named—*Laureation*—Imposition of the *pileus*—Diploma of A.M. before permission to enter Divinity Hall, 153—The bar—Title of A.M. a requisite to obtaining the Medical degree—Allotment of Professors—Merging of minor chairs—Military Surgery, Rhetoric—Practical Astronomy in that of Natural Philosophy, 154. Professors of Mathematics and Natural Philosophy—Medical Curriculum—Distinct Chair of Surgery, 155. Sketch of a Course of Medical Education, 155. Library, 156. Observatory, 157. Faculty of Arts—Abolition of all the Junior or First Classes, 157. Physical Cabinet, 158. General Observations, 159.

The Rev. Dr. Brunton, *Professor of Oriental Languages and Hebrew* 159

Suggestions with regard to the Faculty of Theology, 160. Arrangement for Principal and Professor of Divinity, 160. Existing defects in the study of Theology, 160. Recommendation of the General Assembly to attend the Hebrew Class for one year, 160. Divinity students received upon trials without a certificate from the Hebrew Professor, 160. Imperative order and advantages for students in Divinity to attend the class two years, 160, 161, 162. Chaldee and Syriac, 161. To whom taught, 162. Mode of conducting class, 161. Prize Exercise, 161. Mode of distributing prizes, 161. No fee taken for the second year, 161. No points used in teaching, 161. Persian, 162. Increase in the number of hours, 162. Prolongation of Session in Divinity, 162. Certificates, 162. Library, 162. Period at which students leave, 162. Public examinations, 162. Mode of ascertaining and stimulating to proficiency, 163. No general public examination at the close of Session, 163. Hours of attendance at Divinity Hall, 153. Classes attended by students after entering Divinity Hall, and alternatives in the course of Theological Study, 163. One Session not sufficient for the three different branches, 163. Obstacle to the attendance at the Divinity Hall of a greater number of hours during the day, 163. Class examination, 164. Presbyterial examination, 164. At what stage examined in Hebrew, 164. Dividing the hearing of Discourses among the Theological Professors, 164. Importance of delivering a Systematic Course of Lectures on Divinity during each Session, 164. Division of students into two classes, 164. Occasional attendance, 165, 167, 168. Advantages of enforcing regular academical attendance, 165. Library, 165. Separate hour for examination, 165. Effects of not calling the catalogue after the middle of March, 165. Course pursued at Glasgow and at Edinburgh, at the Divinity Hall, 166. Prolongation of Session, 166. Criticising Discourses, 166. Ascertaining, at the commencement of Session, if studies have been prosecuted during the preceding vacations, 166. Prize-essays, 166. Public distribution of prizes, 167. Discourses too numerous, 167. Age of students in Divinity, 167. Examinations in English, 167. Fitness of youths of eighteen for tutors, 167. Biblical Criticism, whether sufficiently attended to, 167. Act of General Assembly concerning Theological Study read in the University, 168. Studied at the University of Edinburgh, 168. Increased ardour of students in Divinity, 168. Regular attendance, 168. Attention to Classical Literature, 168. Discourses before the Presbytery, 168. Examinations for proficiency, 168. Recurrence to the ancient mode of conferring academical honours, 168. Proportion who take the degree of A.M., 169. Students from seceders, 169. Exaction of another year's attendance upon the Philosophy and Language Classes, 169. Extent of certificate of attendance on the Greek Class required by Divinity Professor, 169. Importance of gentlemen going into the Church being as learned as possible, 169. Exaction of two Sessions of regular attendance, and another year's attendance on the Language Class, in place of the occasional year's attendance on the Divinity Class, 169. Subjects of Discourses prescribed, 169, 170. Would the obligation to give three years' atttendance on the professional classes be a hardship? 170. Increase of Divinity students, and in number of preachers, 170. Effects of an alteration in the system of academical education in the Church, 170. Advantages of a strict and public examination for the degree of A.M., 170. Present mode of acquiring distinction, 171. Remission of young men thought inadequate for admission to Divinity Hall, 171. Attainments, Literary and Theological, of young men applying for licences as Preachers, 171.

The Rev. Dr. Meiklejohn, *Professor of Ecclesiastical History and Divinity* . . . 171

Improvement in three classes of the Faculty of Arts, 171. Alteration of hour, 171. Selection of an hour in the Professor's class for examination and hearing of Discourses, 172. Average age of young men in class, 172. Employment of students as tutors, 172. No public examination, 172. Mode of ascertaining if the Discourses have been written by the young men themselves, 172. Prizes, 172, 173. No public fund for prizes, 172. No general examination at the end of Session, 172. Certificates of attendance, 172. A resolution of the Assembly how

University of Edinburgh.

long a good law of the Church, 172. Beneficial effects of the institution of prizes, or public examinations, annually, 172. Utility of private examination, 172. Leaving class before expiration of Session, 173. Discipline how enforced, 173. Catalogue—Certificates, 173. Occasional attendance, 173. Class examination, at separate hour, 173. Taught the Mathematical Class at Glasgow, 173. Comparative merits of the Philosophy and Language Classes at Glasgow and Edinburgh, 173. Professor Jardine's Outline, 173. On making it incumbent on students of Divinity to take the degree of A.M. before entering Divinity Hall after a strict examination, 173. Professor's opportunities of knowing proficiency of students, 174. System pursued at Glasgow, in the Logic Class, 174. No Professor of Rhetoric there, 174. Enrolling of students at Glasgow in special classes, 174. Present practice of enrolling with a degree at Edinburgh, 174. On efficient examination, for a degree, 174. Church History not the Professor's particular province, 175. Short plan of his mode of lecturing, 175. Criticism on Discourses read, 175. Subjects of the Essays, 175. Books recommended to the students, 175. No examinations of students on the subjects of the Lectures, 175. Utility of such examination, 176. Disadvantage of not paying more attention to Theological Science, 176. Consequences of a strict mode of tuition on students of Divinity, 176. Nature of the certificates, 176. Divinity Library, 176. Explanation of the words "usual meeting prolonged," 176. Classes which the students *ought* to attend while prosecuting their Theological Studies, 177. Sacrifice of the object in giving instruction to students of Divinity in an efficient manner, to the desire of enabling them to give instruction to others, 177. Time of attendance at Glasgow, 177. Nature of the Black-stone examination at Glasgow, 177. Remission of students, 178. Attainments in Greek, 178. Biblical Criticism, 178. Number of Discourses in Divinity Hall too great, 178. Students tutors in families, 178. Occasional students enrol, 178. Attainments ascertained by Presbyterial examinations, 178. Preference of regular to occasional students, 178.

ALEXANDER IRVING, Esq., *Professor of Civil Law* 178

Mode of conducting class, 179, *et seq.* Improvements suggested, 179. Age of students—Certificates, 179. *Vivâ voce* examination in Latin, 179. Prizes—General examination at end of Session, 179. Which Professor first lectured in English, and when, 179. Powers of the Senatus Academicus, 179, 180. Regular Rector or Chancellor, 179. Importance of Civil Law, 179, 180. Nature of Lectures, and text-books used, 180. Class-examinations, 180. Division of the course into two classes, for the Institutes and the Pandects, 181. History of Roman Law, 182. Lectures on Scotch Law, 182. Conveyancing class, 183. Utility of rigid examinations, 183. Mode of securing attendance, 183. Knowledge of Civil Law not likely to be acquired after coming to the Bar, 183. Influence of the Civil Law on the modern Mercantile Law of England, with respect to contracts, and responsibility for neglect, 183, 184. Necessity of a proper course of instruction in Civil Law for the explanation of the Elements and Principles of the Scotch Law, 184. Regulation that gentlemen intending to be called to the Bar should attend for three years upon the classes for the Faculty of Arts and Philosophy, 184. Exceptions in favour of English scholars, 184. Period when the Institute Class terminates, 184. Extension of the Course of Lectures for one year, 184. Extent of powers of the Senatus Academicus over Professors and students, 184. Advantages of vesting in some extrinsic body the power of ascertaining the qualifications for the various classes, 184. Expulsion, or suspension, 184, 185. Extent of power of the Senatus Academicus to maintain discipline, 185. Powers personally in the Principal, 185. Professorship of conveyancing, 185. Teaching by Lecture, 185. Discussions in the Senatus Academicus respecting the addition of particular classes to the Curriculum for degrees, 185. Expediency of trusting an authoritative power in the Town-council, 186.

GEORGE JOSEPH BELL, Esq., *Professor of Scotch Law* 186

Public and private class-examination—Age of students, 186. Examinations in the nature of public Exercises, 186. Prizes, 187. Certificate of attendance not necessary to go before the Faculty of Advocates, 187. Regulations with respect to literary education and attendance in Philosophy and Jurisprudence, 187. Number of students left blank in the Returns, 187. No means of enforcing discipline and attendance, 187. Beneficial mode of enforcing attendance by certificates, 187. No roll or catalogue, 187. State of country practitioners, 187. Orderly conduct of students, 188. Period of class closing, 188. Is tuition hour for the Season sufficient to comprise the whole subject of Scotch Law? 188. Both Civil and Criminal Law comprehended in the Course of Lectures, 188. Conveyancing not embraced in the Lectures, 188. Conveyancing class how viewed, 189. Conveyancing made imperative on their apprentices, by Writers to the Signet, 188. Lectures spoken, from notes, 188. Heads of Lectures not published, 188. Division of class into a course of two years, and difficulties of accomplishing it, 188. General principle on which the course is conducted, 189. Suggestion of an elementary class, and of one more detailed, 189. Necessity of students for the Bar devoting two years to the study of Scotch Law, 189. System of examination extensively acted on in Glasgow, 189. Mode of proceeding when Lecturing on Contracts and Dispositions, 189. Titles to heritable property, 189. Entails, 190. Proposed extension of commentaries on the more profound and difficult branches, 190. Lectured on Conveyancing two years, 190. State and utility of the Conveyancing Class, 190. When instituted, 190. Attendance on the class of Roman and Civil Law how far requisite, 190. Necessity of Lectures on Criminal Law, 190.

WILLIAM PULTENEY ALISON, Esq. M.D., *Dean of the Faculty of Medicine, and Professor of the Theory of Physic* 190

Elevation of the degree in Arts into an object of distinction and emulation, 191. Making degree imperative, 191. Suggestions as to public examinations, 191. Objections to rigorous examinations for Medical degrees being more public, 191. Subdivision of the degree in Arts—Bachelor and Master, 191. Course proposed, 191. Want of sufficient provision in the University for the previous literary and scientific studies of medical men urged in the Medical Faculty, 191. Junior Professor, Dean, 191, 235. No particular duties, 191, 192. Estimation in which the Edinburgh Medical degree is held, and opinions of Sir James M'Grigor and Dr. Burnett, 192. Beneficial effects of the new Regulations, 192. Opinions of London Medical Journals, 192, 193. General view of the education for Medical graduates, mode of securing a supply of useful practitioners, and effects of making the degree more difficult of attainment, 193. Leaning of the public to practical rather than to literary or scientific attainments in medical men, 194. Degree of Surgeon and Apothecary in addition to the Medical degree, 194. Comparative number of Physicians, Surgeons, and Surgeon-apothecaries in London and Paris, 194. Apothecaries of Paris prevented from practising, 194. Effects of the bye-laws of the College of Physicians, and its corporate privileges, 194. Bye-laws of the College of Surgeons, 195. Distance out of London to which the bye-laws of the College of Physicians apply, 195. Specific age before a man can have the degree of Doctor of Medicine, 195. Age how ascer-

Page

University of Edinburgh.

tained, and suggestion for improving the mode of obtaining it, 195. Difficulty of getting certificates of age from Medical students from Ireland and foreign countries, 195. Considerations on exacting an extended literary preliminary education, acquirements best adapted for Medical men, and course of study now in force in the University, 195, *et seq.* Graduates of Trinity College, Dublin, 196. Testimonium, 196. Dr. Barlow's opinion on the Edinburgh course, 196. University where Dr. Barlow took his degree, 197. Mr. Lawrence's opinion, 197. Proportion of graduates from several countries, 197. Excellence of the English graduates, 197; accounted for, 198; their age, 198. Practice in France of candidate for a Medical degree being what is called Bachelor of Letters and Bachelor of Science, 198. Proposed institution of the degree in Medicine and Philosophy, 198. Stating in diploma the different degrees a student has obtained, 198. Concurrence of the Faculty of Medicine in Professor Alison's statement, 199. As to *enforcing* an extensive previous course of literary and scientific study, 199. Amount of literary qualification to be required of Medical students, 199, 203. Nature of the present examinations, and proposed improvement in the mode of examining, 199. Division of examinations in France into five parts, 199. Additional Clinical Course recommended by Dr. Barlow, 200. Proposed separate courses for Surgery and Anatomy, 200. Dr. Monro, 200. Joint Professorship, 200. Proposed degree in Surgery, 200. Additional Examiners, 200. Clinical Professors, 200. Clinical Lectures, by rotation, or attaching the duty to particular classes in the University, 200. Appointment of Professor of Chemistry and of Botany not fit to deliver Clinical Lectures, 201. Commissions of the Professors of Chemistry and Botany, 201. *Materia Medica*, 201. Clinical Surgery, 201. Allowance to be made in the Universify for Medical schools not Universities, 201. Receiving certificates of attendance on Lectures and on an hospital, 201. Opposition of the Senatus Academicus, 202. Plan for giving certificates after examinations, 202. Ensuring regularity of attendance—Monthly insertion of names in the Album, 202. Proposed declaration of regular attendance, 202. Proportion of rejected candidates to those receiving the degree of M.D., 202. Number of hours occupied in examinations for degrees, 202, 203. Examination in Latin, and when in English, 203. Means of ascertaining literary proficiency, 213. Medical graduation how regarded, 203. On a knowledge of Greek for Medical men, 203; of German, 203. Misapplication of Greek technology, 203. Observation of Mr. Dugald Stewart, 203. Nature and mode of the examinations, 203. Practice of the Professor of Chemistry, 203. As to examinations in English, 203, 204. Examinations and Theses, at Paris, in French, 204. Theses, by whom written at Edinburgh, 204. Examination upon some classical author, 204. Separation of Surgery from Anatomy, and teaching it by a practising Surgeon, 204. Divisions of Surgery at Paris, 204. System of Medical instruction at Paris, 204, 205. Union of Medicine and Surgery, 205. Person practising Midwifery not allowed to bear the degree of Doctor of Medicine by the College of Physicians in London, 205. Full course of Surgery and Clinical Surgery, 205. Surgery and Anatomy separated at Glasgow, 205. Preliminary University education, and Dr. Gregory, 205. Opinion of men of high attainments of the necessity of a general course of preliminary education, 205. Practising on the diploma of Surgeon, 205. Number of class, and difficulties of introducing a system of examination in the Medical classes, 205. Teaching Clinical Medicine by examination, 205. Age required by the College of Surgeons in London, 206. As to advantages resulting to the study of Medicine from the Edinburgh degree being conferred after one year's attendance at the University, 206. Application of the system of two sets of examinations, 206. Proportion of Irish graduates, 206. Medical Jurisprudence, 206. Natural History, 206, 207. Practice of the Professor of Materia Medica, 206. Military Surgery, 207. Anatomical Museum, 207. College of Surgeons, 207. Lecturers on the Theory and Practice of Physic, besides the Professors in the University, 207. Co-operation between the University and the College of Surgeons, 207. High degree of Medicine and Philosophy, given in Germany, 207. Literary classes—Prolongation of Session—Summer course, in addition to the Winter course, 207. Philosophical classes, 208. Order for taking them, 208. Moral Philosophy last, 208. Order of tutors, in the event of two degrees, 208. Private teachers, 208. Elementary Greek and Latin, 208. General competition for prizes, 208 Age of those attending the first Greek and Latin classes, 209. Medical classes in Glasgow, 209.

Dr. William Pulteney Alison. (Further Examination.) 209

Increased number of Lectures on Anatomy—Private dissecting rooms—Age at which Medical students commence their Medical studies—Pecuniary circumstances of students who have not served an apprenticeship, 209. Comparative circumstances of Medical and Divinity students, 209. Previous education in Literature and Philosophy, 209. Irish and Scotch graduates, 209. Initial examinations, 209. Agreement in all the Universities as to the space of time necessary for a degree, 210. Candidates for degrees in Medicine required at Aberdeen to take a Master's degree, 210. Effects of the fourth year's study at Edinburgh, 210. Examination in Greek by Apothecaries' Company in Dublin; and at St. Andrews and Aberdeen, 210. Sentiments of the Army Medical Board respecting a liberal education, 210. Regulation as to Medical student's attending Lectures on Philosophy for an hour a-day during two or more of the first years of his Medical studies, 210. Classes of study recommended by the University, two of which must be attended, 211. Prolongation of Session, 211, 217. Students leaving Edinburgh during vacation, 211. Summer classes, 211. Medical tutors, 211. Grinding, 211. Effects of the institution of the London University, 211. Raising the qualifications for Surgical Diploma, to obviate objections in regard to the education of a Physician, 211, 212. Raising the age for the degree of M.D., 212. Practical instruction obtained out of the College, 212. Clinical Medicine, 212. Clinical Lecturing by two Professors, 212. Advantages of a rotation of Lecturing, 212. Pinel and Laennec, 212. Order for the attendance in Medical classes by graduates, 213. Two years' hospital attendance, in which years to be taken, 213. Tickets of attendance, in London, 214. Certificates received by the Professor, 214. Dublin Hospital, 214. Advice to students as to the order for their attending the classes and the hospitals, 214. As to ascertaining the previous attainments of students before they come to College, 214. Appointment of a Professor of Chemistry not fit for the charge of Clinical wards, 214. Professor of Botany when first Professor of Medicine, 214. Adding to the number of examiners those Medical Professors not so at present, 214. Professor of Natural History, 214. Authority to examine given formerly by the Senatus Academicus, 214. Power of appointing Examiners, 214, 215. Control of all acts of the Senatus Academicus, by a superior and permanent body, 215. Permanent visitation, 215. Appointment of Chancellor, with assistants, 215. Objections to control being placed in the Town-council, 215. Deacon of the College of Surgeons, 215. Patrons why not a fit body for exercising the power of appointing Examiners for degrees, or for directing the course of study at the University, 215. Authority upon which the Medical School was originally framed, and the original regulations for Medical study put forth, 215, 216. Formation of the Medical School, 216. Universities of Scotland how far entitled to form new Faculties, or to institute new degrees, 216. Right of superinducing the Faculties of Medicine and Law on the

University of Edinburgh.

original establishment, 216. Practical evil, if any, from the patronage and control of the Magistrates and Town-council, 216. Members of the Town-council whether fit persons in whom should be vested the regulation of the Medical Curriculum, 216. Term University explained, 216. Mode of appointing Professors, 216. Professorship of Mental Diseases, 216. Lectures at the Salpétrière, 216. Physiology and Pathology, 216. Theory of Medicine, 216. Subjects treated in one Medical class not treated in others, 217. Arrangements respecting Dr. Monro, 217. Advantage, as to Anatomy and Surgery, of two separate and complete courses, 217. Reason of students leaving, and monthly insertion of names in the Album to compel attendance to the beginning of April, 217. Effects of a prolongation of Session, 217. Greater number of men educated for the Medical profession than can find respectable employment, 217. Extra hour for the Surgery class, 217. Course of Mental Disease, and Clinical Surgery, Summer courses, 217. Advantage of more Summer courses, 217. Importance of the subject of Physiology, and branches of science requisite for following it, 218. Concert among Professors of kindred branches of Medicine, 218. Physiology, lectured on by Dr. Monro—Physiology and Pathology, by Dr. Duncan, Professor Alison's colleague, 218. Preliminary inquiry of student applying for ticket, whether he had studied Chemistry and Anatomy, 218. Systematic pursuit of Medical studies, 218. Studies of apprentices directed by the Surgeons, 218. No practical evil from no particular order being prescribed for attending the Medical classes, 218. Examinations how conducted in case of deviation from the proper order of study, 218.

Dr. DUNCAN, Senior, *Professor of the Theory of Physic* 218

Conjunct Professor with Dr. Alison, 218. Proposed Professorships of Horticulture and of Agriculture, 219. Professorship of Comparative Anatomy, 219. Pathological Physiology reserved, Therapeutics given to Dr. Alison, 219. Alterations in the *Statuta*, 219. Printing Theses, imperative, 219. Law that students should be examined in Latin, 219. Supplementary—Objections to regulations in the new edition of the *Statuta Solennia*—Publication of an Inaugural Dissertation not required—Examinations in English admitted—Examination in Greek abolished, 219. Effects of the new regulations, and opinion that the *Statuta* of 1819 should be continued without alteration, 219.

Dr. ANDREW DUNCAN, Junior, *Professor of Materia Medica, and Secretary to the University*. 219

Prepared the Answers to the Queries sent to the Senatus Academicus, 219. Statement of the manner in which the Returns were prepared, 219, 220. Proposed improvements in his own Chair, 220. Pharmacy—Art of Prescription would form a good Summer course, 220. Number of Lectures, 220. Class of Materia Medica how taught, 220. Question whether apparatus and collection of Materia Medica be private property, 220. Its extent, and how procured, 220. No money received from the Patrons towards the collection, 221. Impracticability and inutility of class-examinations, 221. Number of teaching hours, and of pupils, 221. Grinders, 221. Beneficial effects of general examinations at the end of the Session, 221. Syllabus—Text-book, 221. Institution of Prizes for the best account of the Lectures, at the end of the Session, 221. As to examination respecting the doses of medicine, and the manner of distinguishing the substances used in medicine, 221. Routine practice of Physicians, and tabular view, 221. On the introduction of a Summer course, and class for exercises in the art of writing prescriptions, 222. Exhibition of specimens, 222. Interference with another hour's attendance on another class, 222. Pharmaceutical Operations, 222. Chemical Pharmacy, 223. Branches of knowledge requisite for understanding the Lectures, 223. Systems of Botany taught by Dr. Duncan and Dr. Grahame, 223. Comparing analogous substances in the exhibition of specimens, 223. Hour of Lecture eight in the morning, and reason for it, 223. Hours for Anatomy, Chemistry, the Hospital, and Institutes of Medicine, 223. No Medical Lectures at twelve o'clock, 223. Clinical Lectures given in rotation, by any of the Professors entitled Professors of Medicine, and constituting the Medical Faculty, 223. Never given by any of the Regius Professors, 223. Fee for the Summer course, 223. Detail of the manner of conducting Clinical instruction, 223. Difference between the office of Clinical Professor in foreign countries, and at Edinburgh, 224. Practice at Vienna—Professor Frank, 224. Advantage of teaching Clinical Medicine by rotation, 224. Proposed arrangement for two Professors to be lecturing at one time, 224, 225. Inconveniences from unwieldiness of the class, 225. On the proposed addition of the Regius Professors to the Professors now appointed to deliver Clinical Lectures, 225. Regius Professors, those of Military Surgery, Clinical Surgery, Medical Jurisprudence, and Natural History, 225. Clinical Professors outvoted in the Senatus Academicus in the proposition for nine months' Clinical attendance, 225. Double course in a ward—Repeaters, 225. Making Clinical Surgery imperative, 225. Detail of Medical education in foreign Universities, and separation of Surgery from the study of Medicine, as in Edinburgh, 225, 226. Union of the professions of Surgeon and Barber when Dr. Duncan was on the Continent, 225. Practice in Germany of granting degrees in Medicine, Surgery, and Midwifery, 225. No prescribed course of study for Surgery except in the Austrian States, 225. Constitution of foreign Universities, and three classes of Professors, 225. Fees for private Lectures, 226. Comparative extent of instruction in the University of Edinburgh and in foreign Universities, 226. Reporting on the case, in Clinical Lectures, and adjourning the instruction to another room, 226. Complaints by Dr. Monro, 226. Effects of reporting on the case in the patient's hearing, 226. Delicacy towards the patient, 226. Lectures where given, 226. Remarks by Professor not indicative of his opinion, 226. Prescription read aloud in Latin, 226. Practice in particular complaints, 227.

MACVEY NAPIER, Esq., *Professor of Conveyancing*. 227

Constitution of the University—Powers of the Senatus Academicus—Primary and appellatory branches of government—Chancellor, with a board of assessors, 227. Duties of Lord Rector by usage in the Principal, or Senatus Academicus—Rector originally a resident member—Vesting the regulation of *Curricula* in the Senatus Academicus—Alteration in the distribution of classes, 228. Intellectual Philosophy—Metaphysics, Logic, Pneumatics and Moral Philosophy, 228. Definition and appointment of the different branches so as to make them more consonant to the present state of science, 229. Political Philosophy, 229. Instrumental Philosophy last, 229. Theory of Evidence—History of the Senses, 229. Attended Language Classes at Glasgow, 229. Black-stone Examination a piece of form, 229. Necessity of revision in the Curriculum of study for the degree of A.M. and mode of conferring it, 229, 230. Bachelor's degree, 229. Tendency of public examinations to degenerate, 229, 230. Public examinations might be made efficient in Languages and Mathematics, 229. Former practice as to laureation, 230. Requisites for a Bachelor's and Master's degree, 230. Latin and Greek, 230. Difficulties of *public* examinations on Intellectual and Moral Philosophy, 230. Physical Science preceding Intellectual Philosophy, 230. Year for commencing the study of Intellectual Philosophy, 231. Professor Jardine's method, 231. Encouraging young men to attend many classes at once, 231. Exercises, 231. Classes taught at the same hour at Aber-

Page

University of Edinburgh.

deen, 231. Curriculum for particular professions, 231. System of Lecturing, without examinations, 231. Want of examinations in the University a great defect, 231. Abolition of Junior Language Classes, 231. Class for Grecian and Roman literature, 232. Tendency of teaching the junior language classes in the University, 232. Country Schools, 232. Edinburgh Academy, 232. Students of Divinity, 232. Period within which schools might be formed for superseding the sort of assistance in teaching Greek and Latin at present derived from the Universities, 232. High School of Edinburgh, 233. Establishment of public schools by Government, 233. State and constitution of the Professor's own class, 233. Introduction of examinations, 233. No prizes, 233. Class imperative, 233. Separate hour for examination, 233. Incorporation of class with the University, 233. No roll called, 233. Could subjects of Lectures be effectually treated by Professor of Scotch Law? 233.

Dr. Andrew Duncan, Junior. (Further Examination.) 233

Extensive occupation attached to the Chair of Materia Medica, 233. Assistant, 234. Introduction of examinations, 234. Arrangement between the Professors of the Practice and Theory of Medicine and of Chemistry, as to salary of King's First Physician, 234. Clinical Lectures,—by whom given in Germany and Italy, 234. Constituent members, duties and privileges of the Medical Faculty of the University, 234. Anatomy when added to the Faculty, 234. New Commission of the Professor of Midwifery, 234. Seven members of the Faculty, fee divided among six, 234. Dr. Hamilton, 234, 235. Medical degree of Edinburgh purely professional, 235. Concurrence with Dr. Alison respecting greater literary attainments, 235. Mode of superadding literary acquirements to those of Medical knowledge, 235. Comparative state of education of Physicians, now, and 80 or 100 years ago, 235, 236. Merits of Medical Works now and previously, 235. Inductive Logic, 235, 236. Attainments of candidates in Latin, 236. Test of literary acquirements by the new *Statuta*, 236. Extent of qualifications for Medical graduation, 236. Greek, 236. *Statuta* of St. Andrews, 236. Objections to requiring evidence of attendance on the Philosophical Classes, 236. Knowledge of Greek required by the Apothecaries' Corporation of Dublin, 236. Diploma of Surgery, and of Physic, 236. Effects of initial examination, 236. Advantages of a smaller number of graduates with very superior qualifications, 237. Curricula of Study, Literary, Philosophical, and Medical, in foreign Universities, 237. Hinderances in life to Medical graduates of the Edinburgh University, 237. Petition against the Apothecaries' Bill, 237, 239. Greek and Latin, and the acquisition of learned and philosophical attainments in France and the Low Countries, 237. Effects of an enlargement of the number of Medical graduates beyond the demand for Physicians, 237. Rejection on the score of deficiency of grammatical knowledge, 237. Extent of students' acquisitions of Latin, 238, 239. Disuse of Latin over the whole of Europe, 238. Examinations in English, 238. Age on trials for degrees, 238. Knowledge of Greek, 238, 239; of the French and German, 238. Proof of a knowledge of French, 239. Attendance on Philosophical Classes, 239. Professional Curriculum errs in not having a sufficient time for Clinical education, 239. Nature of the Apothecaries' Bill of 1814, 239. Regulation by authority of preparatory education of Physicians, in France, and other countries, 239. Cause of the introduction of the preliminary examination in Latin, 239. As to a moderate knowledge of Greek, 240. Suggestion of extension of the studies for a Physician to four years, 240. Uniformity of time in all the Universities for the Medical classes, 240. Distinction at Dublin of Doctor *of* Medicine, and Doctor *in* Medicine, 240. Amount of fees on graduation, and how divided, 240. Nature, length of time, burden, and number of the examinations, 240, 241. Extent of Professors' emolument, 240, 241. Period for graduation, 241. Examiners, 241. Professorship of Anatomy and of the Principles and Practice of Surgery, united in the same person, 241. Total separation, or Conjunct Professorship, 241, 242. Similarity of views in Lectures by different Professors, 242. Establishment of separate Professor of Surgery,—ought to be a Practising Surgeon? 242. Dr. Monro, 242. Appointment and delegation of Examiners, 242. Appointment of a Court of Appeal, or Chancellorship, 242. Improvements in the Curriculum for Medical graduation, 242. Effects of the addition of a Professorship of Surgery on the students, 242. Attendance of students on private Lecturers, 242, 243; on Military Surgery, Clinical Surgery, Medical Jurisprudence, Natural History, 243. Why Professor of Surgery could not embrace all the subjects relating to Military and Naval Surgeons, 244. Addition of Professorship of Surgery to the Curriculum, 244. Clinical Surgery not superseded by it, 244. Rendering the degree in Arts an object of emulation, 244. By whom named Professor, 244. No evil experienced from the present practice, and as to the best mode of appointing Professors, 244. Competition, 244. Who the most competent, the Crown or the Faculty, 244. Power of adding new Professorships not to be left to the Town-council, 245. Origin and nature of the appointment of Public Law, and the Law of Nature and of Nations in the University, 245. Reason for instituting the office of Chancellor, and by whom to be elected, 245. Average annual expense of a student of Medicine, 245. Increase of fees no effect in deterring students, 245. Preference of the present arrangement as to fees, 245. Payments for the janitor and library funds, 245. Period when Medical students lived within the College, 245. Regularity of attendance, 246. Ardour of students in prosecuting their studies, 246. Regulation respecting the Anatomical Museum, 246. Private property in preparations or apparatus, 246. Dr. Walker, 246. Want of control by Principal over Professors, 246. Necessity of increased controlling power in the Senatus Academicus, and of a more accurate definition of their power, 246. No complaint as to the charge of graduation fees, 246. Reasons why a regulation prescribing the course of studies for a Medical student for the first, second, third, and fourth years, would be hurtful, 246. Disadvantages of a fixed Curriculum, 247. In what foreign countries Curricula are fixed, 247. Authority of Principal, 247. Extent of additional authority to be given to Principal, 247. Should have a deliberative and a casting vote in the Senatus Academicus, 247. Original and present powers of Principal, 247. Principal Robertson, 247. Regulations for Medical education requiring a shorter attendance on the classes in the Curriculum, framed by the Senatus Academicus with reference to instruction afforded by private Lectures, 247.

Dr. Alison. (Further Examination.) 248

Opinions of Dr. Gregory, and branches of science which he would rather have recommended—Greek—Difference in the situation of the gentlemen at the head of the Army Medical Board, 248. Recommendation by the Medical Boards of the Army and Navy of high literary and scientific qualifications, as ensuring promotion, 248. Assimilation of all regulations in the Universities, 248. Practice of not graduating at Aberdeen, 248. Medicine not taught at Aberdeen with a view to a Medical degree, 249. Editions of the Statuta, only one in Latin, 249. Alterations in the Medical Curriculum from 1767 to 1825, 249. Amount of qualifications, 249. Length of Curriculum superior to what is imperative in the Army and Navy, 249. Reason why the University of Edinburgh has not required attendance oftener than once on some of the more important classes, 249. Anatomy, 249. Certificates received from private

Page

University of Edinburgh.

Lecturers, 249. Certificates in the Army from "recognized schools," 249. Three of the important classes should be taken twice, 250. What private Lecturers should be admitted, 250. Addition of Medical Jurisprudence to the Curriculum, 250. Foreign Universities where it is added, 250.

Dr. Home, *Professor of the Practice of Physic* 250

Correction of Answer to Query No. 7—No Professor of Materia Medica held the office of Second Physician to the King before his father, 250. The only one who taught by lecture and examination, 250. Hours given, and advantages of his system of examination, 250. Total number of class in 1825, 251. Attendance of all those who intend taking a degree, 251. Certificates, 251. Making examinations imperative, 251. Practical importance of the examinations, 251. Advantage of pursuing the same course in the other Medical classes, 251. What led to the practice, 151. Proposed arrangement for two sets of Professors taking different wards of the Infirmary in their Clinical Lectures, 251. Allotment of patients, 252. Rendering two courses of Clinical Lectures imperative, 252. Constitution of the Medical Faculty—No other addition than Midwifery should be made an imperative part of the Curriculum, 252. Objections to add the class of Natural History, 252. Time of the Professor not saved were the students previously acquainted with *Materia Medica*, 252. Botany not to be made an imperative class, 252. Botanical system adopted by the Professor of *Materia Medica*, 252. Adopted the Linnæan system when Professor of *Materia Medica*, 252. Courses that should not be made imperative, 252. Suggestion for giving more dignity to the degree of Master of Arts, 252. Introduction of examinations into the Philosophical class, 252. Suggestions on the subject of Patronage, 252. Chancellor, Court of Appeal, and evils from the want of it, 253. Permanent body in which it might be lodged, 253. Want of a fixed constitution for the Senatus Academicus, and extent to which their powers should be carried, 253. Quarterly meetings—Bye-laws, 253. Principal should have more power as President of the Senatus Academicus—Should be ordered to examine the classes—His power in former times, 253. Medical degrees—Effect of an imperative regulation with regard to literary studies, 253. No students leave the University incompetent to practise Medicine, 253. Conferring a higher degree, as in foreign Universities, 253. Doctor Philosophiæ higher than the Doctor Medicinæ, 253. Doctor Chirurgiæ distinct from Doctor Medicinæ, 253; does not rank as high as a Bachelor of Physic, 253. Doctor Artis Obstetricæ, 253. Examinations in two parts, if the course of study is to last four years—but rendered optional, 254; taken the third year—should be examined only in branches they had already studied, 254. Conducting examinations in Latin, 254. Effects of conducting examinations only in English, 254. Test of the competency of Professors before appointment to their situations, 254. Anatomy and Chemistry to be taken first in the order of study, 254. Advantage of a line of study being pointed out, 254. Lessening the examination for degrees if all the Professors were to examine in their several classes, 254. Abolition of Thesis, 255. Substitution of stricter examinations for it, 255. Advantages to the student of dispensing with it, 255. Retiring pension to Professors, 255. Regulation to this effect at Wilna, 255. Want of ceremony in the University, 255. Practice in the foreign Universities of opening the Session by a discourse on the studies to be followed, 255.

Dr. Robert Graham, *Professor of Medicine and Botany* 256

Alterations in the constitution of the University—Nomination of Chancellor, with Court of Assessors—Incompetency of Town-council to exercise the appointment, 256. Appointment of Assessors by Chancellor, 256. Patronage of the Chairs, in case of removal, where to be lodged, 256. Good effects of the present arrangement, 256. The Senate—Quarterly and other meetings of the Senatus Academicus, and right of calling in whom to be vested, 256. Degrees that should and should not originate with the Senate, 256. Power of enforcing discipline among students, 256; of reprimanding Professors, 257; of appointing substitutes, 257; of inquiring into class discipline, 257; of inflicting fines, 256, 257. Fine in the Medical Faculty for non-attendance, 257. Fines exacted in the Senate to go to the Library, 257. Donation to Library, 257. Duties of the respective Faculties, 257. In whom should be the appointment of Examiners, 257. Regulation of the Curricula of study, 256, 257, 264. Duties of Dean, 257. Gradations of Appeals, 257. Principal, 257. Conferring degrees in Arts with solemnity, 257. Meaning of the term Medical Faculty, and its constituent members, 257. Medical Jurisprudence, 257. Advantage of additional Examiners, 257, 258. Two-fold division of examinations of candidates for degrees, 258. Number graduated who attend only one year, 258. Application of a different rule to students taking their whole Medical education at the University, and to those attending only for a year, 258. Branches of study made imperative, 258. Proposed addition of Clinical Surgery and Practical Anatomy to the Curriculum, 258. Situation in which the Professor of Clinical Surgery stands, 258. Examinations when in Latin, and when in English, 258. Addition of the Language Professors to the body of examiners, 258. Greek, 559. Grinders, 259. Theses should be rendered optional, 259. Abolition of Theses, with a general view of their nature, and mode of dealing with them, 259, 260. Commentaries on Cases, 259. Mode practised at Copenhagen, 260. Student liable to rejection by Examiners if recommending method of treatment injurious in the eyes of all Medical men, 260. Opinions as to Examinations in general by Professors, or different members of Faculties, in their own classes, 260. Examinations on Practical Botany, 261. Dr. Home's method, 261. Objections to a separate hour for examinations, 261. Botany an indispensable part of the Medical Curriculum, 261. Duration of course—Number of pupils, 261. Second Winter course, 261. Optional course in Humanity and Greek, and for candidates for degrees, 261. Prolongation of both Summer and Winter Session, 261. Objection, arising from the pecuniary circumstances of the students, 262. Arrangements in Clinical Medicine—Division of students, two courses going on at the same time, prolongation of course to nine months, 262. Obviating an unequal division of the pupils, 262. Defective maintenance of the Botanic Garden, 262. Regius Professor of Botany and Keeper of the Garden, 262. General state of the Garden, 262, 263. Its size, 263. Allowance for Dublin, 263; for Cork, 263. Fund by tickets of admission, 263. Garden at Glasgow, 263; at Liverpool, 263. Sum expended by the Professor out of his own pocket, 264. Library, 264. Present plan of examination for Medical degrees affords opportunity to every Professor to ascertain candidate's proficiency in his particular line of study, 264. Division into sub-committees for examination, 264. Practice for each Professor to examine in his own department, 264. Time required by the Army Medical Board for attendance on Materia Medica, and on Botany, 264. Botany a more essential part of education than Mineralogy, 264. Zoology, 264. Universities in which Materia Medica is taught as a separate department, 264. Why Professor of Materia Medica cannot communicate a sufficient knowledge of Botany in his class, 264, 265. Materia Medica and Botany formerly taught in one Chair, and when separated, 265. Dr. Hope, 265.

Page

Dr. Thomas Charles Hope, *Professor of Chemistry and Chemical Pharmacy* . . . 265 *University of Edinburgh.*

Correction—"the two preceding Professors of Materia Medica" held the office of Second Physician to the King, 265. Constitution of the University—Chancellor and Rector—Assessors—Appeal from the Senatus Academicus, 265. Discipline—Principal's additional duties—Prelections of all Professors to commence on the same day—Opening of University by an address from the Principal; Visiting Junior classes and being present at examinations—General superintendence of all within the College—Additional salary, 265. Present right of Principal to visit classes, 265. Present extent of Principal's authority, 266. Necessity of an accurate definition of the power of the Senate over Professors and students, and extent to which it should apply, 266, 269. Fixing the Curricula of study, 266. Establishment of a Board consisting of Chancellor and Assessors, 266. Nature of the assistant Court and of its controlling power, 269. Improvement with regard to the students—Attendance of the junior classes—Allocation of seats, with censors—Complaint that Medical Professors give no certificates of attendance—Mode of encouraging attendance in the higher classes, to enable the Professor to give certificate of attendance—Tickets, 266. Greater frequency and formality of examinations in the junior classes, 267. Professional classes, 267. Separate hour for examination, 267. Subordinate class, 267. Importance of Themes and Exercises, in the junior classes, 267. Professor Jardine's class at Glasgow, 267. Themes in what cases to be made imperative, 267. Public and private classes, 267. Junior and higher class, 267. Extension of examination to all who are to obtain degrees in Arts, 267. Public distribution of Prizes, 267. Mode of encouraging the taking of the degree in Arts, 267, 268. Classification of Honours, as in the English Universities, 268. Advantages attending the degree, 268. Cambridge system, 268. Academical privileges after graduation, 268. Election of Chancellor, as at Oxford, 268. Majority of English graduates not men of fortune, 268. Dr. Hope's plan of election of Chancellor, 268. Rector, 268; and nature of his functions, 269. Objections to the election of Rector being in the students, 269. Duties and powers of the Rector of Glasgow, 269. Power claimed by the Patrons, of appointment, suspension, and deprivation, 269. Appointment of Examiners for degrees in whom to be vested, 269. Professors giving additional Lectures, or lessening them without consent of the Senatus, 269. Lessening of the teaching time in the Logic class, 270. Commencing the junior classes, Latin, Greek, and Mathematics, at a higher state of progress, 270. Inconveniences in regard to Greek, 270. Consequences of the abolition of these classes, 270. Country schools, 270. Separation of Professorships of Surgery and Anatomy, 270. Should Professor of Surgery be a practising surgeon, 270. Indemnification to Professor in case of separation, 270. Appropriation of wards in the Infirmary for Clinical Surgery, 270. Concurrence with Dr. Alison on the subject of previous preliminary education for medical students, 270, 271.

Dr. Alexander Monro, *Professor of Anatomy and Surgery* 271

Duration of his Lectures on Anatomy, 271. Examinations on Anatomy and Surgery, 271. Duration of course, 271. Nature of his course of Surgery, 271. Facilities for the acquisition of dead bodies, 272. Concurrence in opinion with Dr. Alison and Dr. Graham, 272. Court of Appeal, 272. Election of superior Court by graduates, 272. No resident graduates, nor persons like tutors in the University, 272. Solemn opening of Session by Principal, 272. Public examinations and classification of students, 273. Certificates, 273. Class-examinations, 273. Diminution of class by higher fee, 273. Examinations in what language, 273. Concurrence of Senatus, individually, as to fee, 273. Anatomical Museum, 273. Under-Conservator's salary of the Hunterian Museum, London, 273. Separate Professorship of Surgery, 274. Military Surgery, 274. Dr. Ballingall and Dr. Hamilton, 275. Lithotomy, 275. Comparative Anatomy, 275. Comparative duration of course, 275. Physiology, Institutions of Medicine, 275. Extent of the utility of a knowledge of Mechanics, 275. Unwillingness of students to submit to general examinations, 276. Number of Surgical Lectures, and of students, 276. Summer Session, 276. Rendering only three years' study imperative, for a degree in Medicine, 276. Mischief of summer vacation, 276. Private study, 276. Increase in the number of Examinators, in the Professors of Military and Clinical Surgery, 276. Examinations in two different years, and giving diplomas in Surgery, 276. Satisfaction with the present mode of conferring degrees in Medicine, 276. Examinations in Latin or English, 276, 277. Inaugural Dissertation, 276. Defending Theses, 277. Public examinations as a test of qualification, 277. Character of Theses, and literary merits of Medical authors of the present day, 277.

Dr. Thomas Charles Hope, *Professor of Chemistry.* (Further Examination.) . . 277

Concurrence with Dr. Alison, 277. Adequacy of the education of gentlemen coming to the University to graduate, 277. Surgery, a separate class, made imperative, and restriction as to other classes, 277. Aversion to extensive alterations, and high estimation of the graduates of the University, 278. Mode of filling up and improving the Anatomical course in the event of separation, 278. Second class examinations, by Dr. Monro, 278. Fee, 278. Class examinations at a separate hour, and number of students, 278. Comparative Anatomy, 278. Occasional meetings of delegates from the different Universities, 278. Origin of fees to Theological Professors, 278. Professor of Physic at Glasgow, 278. Situation of the Chancellor of Glasgow, 278; and extent of his interference, 279. New Chairs exclusively created by the Crown, 279. Extent of interference of the Rector, 279. Anatomical Museum, 279. Army Board Museum, 279. No allowance for providing apparatus, 279. Preference of University Lectures to private ones, 279. Ground of the University's not enforcing more than one year's attendance on some of the classes included in the Curriculum, 279. Anatomy, Practice of Physic, and Chemistry classes recommended for additional attendance, 279. Eminence of private teachers, 280. Clinical Medicine—Subdivision of students, and additional wards, 280. Greater advantage of attending the Clinical Physician than the Ordinary Physician of the house, 280. Payment to the Infirmary by the students, 280. Want of an adequate provision for the study of Anatomy, 280. Lecturing by rotation, 280. Arrangement respecting Clinical Surgery, 280, 281. Suggestion of a similar Curriculum for the Doctor's Degree in all the Universities of Scotland, 281. Essential parts of a Medical education, 281. Botany, 281. Former practice of illustrating an aphorism of Hippocrates, in Latin, by a commentary, 281. Regulation at Aberdeen that candidate for M.D. must have taken the degree of Arts, 281. No regular Medical School at either Aberdeen or St. Andrews, 281. Necessity of uniformity as to previous acquirements in candidates for degrees, in University regulations, 281. Dr. Hope's opinion on the remarks by Abraham Colles, with regard to the extent of previous Classical and Scientific information for Medical graduates, 281. On a knowledge of Greek in a Medical man, 282. French Medical Dictionary, 282. Effects on the Medical School of Edinburgh of foreign Universities requiring evidence by examination of the scientific qualifications of persons who obtain a degree, 282. Comparative state of the professional studies at Edinburgh, and at Paris, Oxford, and Cambridge, 282. Degree of Doctor of Philosophy, 283. Logic, 283. Medical Logic and Mathematics, 283.

ROBERT CHRISTISON, Esq., M.D., *Regius Professor of Medical Jurisprudence* . . 289

Does not belong to the Faculty of Medicine, 290. Propriety of vesting the jurisdiction of the University in the Senatus Academicus, with appeal to a Chancellor's Court, 290. Election of Chancellor, 290. Exclusion of the Town-council from making internal regulations, 290. Opinions on the subject of Medical education, 290, 291. Higher and inferior degree, 290, 291. Surgical part of education, 290. Comparative state of foreign and Scottish graduates, 291. Greek, 291, 297. Modern languages, 291, 297. Chemistry, 291. Public laboratories, 291, 292. Practical Chemistry, 292. Paris Apothecaries, 292. M. Robiquet, 292. Should the Professor of Chemistry always be a Physician? 292. Clinical Medicine, 292. Clinical Surgery, 293. Separate Professorship of Surgery, 293, 295. Military Surgery, 293. Lithotomy, 293. Hospital Reports, 293. Two Clinical courses, 294. Lecturing on the patients of other people, 294. Finishing course every Session, 294. Class-examinations, before taking a degree, 294. Paris mode, 294. Disapprobation of the system of grinding, 295. Examination upon heads never before lectured upon, 295. Subdivision of the examination, 295. Addition to the number of Examiners, 295. Enlargement of fee, 295. Professors of Surgery, Medical Jurisprudence, and Clinical Surgery, should be made Examiners, 295. Number of chairs made up to ten, 295. Language of the examinations, 295. Aid of Professor of Humanity in examining a student's proficiency, 296. Prizes for Medical students, 296. Mode of obviating the possibility of assigning prizes for Essays to persons who did not write them, 296. Interference with Edinburgh graduates under the Apothecaries' Company's Act of 1815, 296. Publishing a programme of study by the Medical Faculty, 296. Consequences of requiring a higher previous education for Medical graduates, 297. Comparative expenses at Edinburgh and Paris, 297. Number of classes, and Sessions required to be attended in the University of Paris, 297. Comparative state of Medical practice in France and Germany, 297. Sessions of attendance required at Vienna, 297. Incompetent knowledge of Latin by Edinburgh graduates, and mode of remedying the defect, 297. Advantages of a knowledge of Greek in ensuring a considerable share of scholarship in Latin, 297. French and German, 297. Hardship of requiring a previous knowledge, by examination, before commencing the Medical Curriculum, 297, 298. Ardour of Medical students in the prosecution of professional knowledge, 298. Completion of course within the walls of the University, 298. Utility of private Lecturers, 298. Enumeration of Medical classes indispensably necessary to graduation, 298. London University, 298. Medical Jurisprudence, 298. No classes to be attended oftener than once, 298. Anatomy, with its correlative topics, sufficient to occupy a whole Session, 298. Botany, should be retained as an imperative class, 299. Improvement in the existing degree in the event of students taking a higher degree, 299.

Dr. ALEXANDER MONRO, *Professor of Anatomy and Surgery.* (Further Examination.) . 299

Readiness to give as extended a course of Surgery as is given in Britain, separately, 299. Importance of students attending twice the more elementary branches of Medicine, 299. Appointment of an Anatomical Draughtsman, 299. Improvement in Clinical Surgery, 299. Retiring pension to Professors advanced in life, 299.

Dr. GEORGE BALLINGALL, *Regius Professor of Military Surgery* 300

Detailed views of the Professor respecting the requisite qualifications for the degree of Doctor of Medicine, 300. Enumeration of classes in the Curriculum, 301. Opinions respecting Medical Jurisprudence, Clinical Surgery, and Military Surgery, 301. Language of the examinations for degrees, 301. Classes to be made imperative, 302. Separate Professorship of Surgery, 302. Anatomy—Preliminary education to be enforced—Public examination previous to granting degrees, 302. Prize essays, 302. Nature of his Lectures, 302. Utility of occasional class-examinations, 302, 303. Eagerness of his own apprentices for examination, 303. Desirableness of previous examination of Medical students, in languages, 303. Power of rejection with the Faculty of Arts, 303. Increase in the number who should be Examinators, and the appointment in whom to be vested, 303.

r. JAMES HAMILTON, Junior, *Professor of the Theory and Practice of Midwifery* . 303

Difference between students who attend the Literary classes and the Medical students, 304. Evils from a course of education not being prescribed, and remedy proposed, 304. Logic not allowed to be attended the first year at St. Andrews, 304. Practice at Trinity College, Cambridge, 304. Age of boys entering the University, 304. Country schools, 304, 305. Summer vacation, 305. Elementary instruction in Greek and Latin, 305. Raising the degree of Arts in public estimation, 305. Improvements in the mode of examining for Medical degrees, 305. Account of a Medical examination for a Bachelor of Medicine at Cambridge, 305, 306. Oath of secresy at Cambridge, 306. Language of the examinations, and objections to their being *vivâ voce*, 306. Proposed combination of printed questions and written answers, with *vivâ voce* examinations, 307. Defective state of the preliminary education of candidates, and

branches of knowledge deemed essential, 307. Importance of the Greek language, 307. Necessity of a distinct practical Professor of Surgery, 307. What Chairs should be added to the Curriculum, 307. Reasons for increasing the difficulty in taking the Medical degree at the University, 307. Number of graduates, Scotch, Irish, and English, for twenty-six years, 307. Practice of gentlemen with Medical degrees sinking them, 307, 308. Medical Jurisprudence, 307. Military and Clinical Surgery, Natural History, Natural Philosophy, Logic, and Mathematics, 308. Time between getting a degree and obtaining licence from the College of Physicians, how passed, 308. Bachelor of Medicine in the English Universities, when entitled to practise, 308. Period after entering the University before the degree of Bachelor can be obtained, 308. Necessity of a thorough previous liberal education to qualify a gentleman to become a Doctor in Medicine, 308. Medical degree merely a literary distinction, not marking a man's qualifications to practise Physic, 308. Gentlemen practising as Surgeons, without belonging to either College, 308, 309. Extension in the amount of knowledge required by the College of Surgeons, 309. Apprenticeship, 309. English examinations by the College, 309. Control enforced by the Faculty of the Physicians and Surgeons of Glasgow, 309. Importance of a separate Professor of Clinical Medicine, 309. Further plan for accomplishing the object of raising the degree, 309. Necessity of testimonials in favour of character, 310. Case of the ballad-singer, in Dublin, 310. Dr. Brodum, 310. No Faculty of Surgery, nor diploma for Surgeon, 310. Admirable regulations of the College of Surgeons, 310. Licences, 310. Effects of public opinion, 310. Necessity of a knowledge of Greek, 310. Aphorism from Hippocrates, 310. As to the necessity of a knowledge of Greek by Surgeons and Physicians, 311. Proper period for the examinations in regard to previous education, 311. Degrading effects of encouraging the number of Medical graduates, rather than discouraging them, 311. Regulated age for taking the degree, 311. Previous apprenticeships of English and Irish students, 311, 312. Nature of the intended degree of Bachelor of Medicine, 312. M.D. when to be given, 312. Period of attendance, 312. Prolongation of Session, 312. Expense of a student in ordinary circumstances, 312. Botany imperative as a Summer course, 312. Question as to his belonging to the Medical Faculty, and taking part in the examinations, 312, *et seq.* Nature of his commission, 312, 313. Reason why he took no part in the examinations, 313. Period for commencement of the Medical classes, 313. Received no copy of the *Statuta Solennia* from the Senatus Academicus, 313. Gets no share of the fees, 313, 315. Ground of his not participating in them, 314. Dr. Gregory, 314. Proposition for a new mode of examination, 314. *Vivâ voce* examinations in English, 314. Question as to his taking part in the examinations after the *Statuta Solennia* come to take effect, 314. Extent of the authority of the Senatus Academicus without the concurrence of the patrons, 314. Duration of class, 315. Date of his admission to the Senatus Academicus, 315. Dean of the Faculty, 316. Observations on his own Chair, 316. No salary, 316. Lying-in-Hospital, 316. Museum his private property, 316. Number of courses, 316. Private Lectures to female practitioners, 316. Period of commencement of course, 316. Christmas holidays, 316. Would make the Midwifery class the last, 316. Dr. Osborne, 316. Lectures upon the Diseases of Women and Children, 316, 317. Publication of a cheap text-book, 317. Cause of the diminution in the number of his class, 317. Variation in the account of the number of students accounted for, 317. Established rule with regard to fees, for those who attended the second and third course, 317.

Dr. Robert Christison, *Regius Professor of Medical Jurisprudence and Police.* (Further Examination.) 317

Class-examinations, with practical instruction in the department relative to poisons, 318. Teaching how to examine dead bodies for the detection of disease, injuries, poisons, &c., 318. Reasons why it should be made an imperative class, 318. Importance of Medical Jurisprudence, from the frequency of Medico-legal examinations, 318. Ignorance in country practitioners, 318. The Gardner Peerage, 318. Greater interference on the part of the police, on the continent, than in Scotland, 318, 319. Detection of arsenic by the process of reduction, 319. Cases of long preservation of bodies by arsenic, 319. Doubts thrown on morbid appearances by recent investigations, 319. Exeter case, 319. Case of Captain Donnellan, 319. Foreign Universities where Medical Jurisprudence is made imperative, 319. American States, 319. Change in opinion of Medical Jurists as to evidence in instances of drowning, child-murder, &c., 319. Poisons which there are no means of detecting in the stomach after death, 320. Discovery of Chemical tests for the detection of vegetable poisons, opium and nux vomica, 320. Supplementary of Dr. Christison's evidence—Memorial, 320. Letter to the Principal and Professors of the University, 321.

Dr. George Ballingall, *Professor of Military Surgery.* (Further Examination.) . . 328

Proposition of the compound degree, "Medicinæ Baccalaureus et Chirurgiæ Magister," and studies to be made imperative for it, 328. *Rontiniers*, 328. Elevation of the present degree of M.D. by preliminary education, 328. Apprenticeship, 328. Practical Anatomy and Clinical Surgery not now imperative for the Doctor's degree, 328. Two courses of Anatomy required by the College of Surgeons, 329. Graduates of the University not qualified to be Hospital Mates, 329. Taking certificates of attendance upon private Lecturers, 329. Statements respecting his own class—Dr. Thomson, 329. Access to the Anatomical Museum, 330.

Dr. Robert Graham, *Professor of Medicine and Botany.* (Further Examination.) . 330

Proportion of the best Medical Officers in the Army, Navy, and the Colonies, who receive their education at Edinburgh, 330. Utility of Botany, and state of the Botanic Garden, 330, 331. Nature of the Commission of the Professor of Natural History and of Botany, 331. Royal Botanic Garden of Edinburgh, excepting that of Kew, the only establishment of the kind which is the property of the Crown, 331. Amount yielded to Government by stamps on degrees at Edinburgh, 332. Increase in the number of pupils of Medicine and Botany, since 1763, 332. Plan for dividing the Clinical students, in the Infirmary, 333. Introduction of a higher degree in Medicine, 333. Separation of the Chairs of Anatomy and Surgery, 333. New Chair to be made imperative, 333. Three Surgical Professors, 333. Surgical-Clinical wards in the Infirmary, and doing duty in rotation, 333, 334. Granting degree of Master in Surgery, 333. Surgical Professors to be added to the Examinators, 333. Duties of the Professor of Clinical Surgery, 333. Objection to the Professor of Anatomy giving Clinical Lectures on Surgery, 334. Nature of proposed Winter course, 334. Herbarium, 334. Two future classes of graduates—one after three years' Medical study, with degree of M.A., and one after four years' Medical study, without previous University education being imperative, 334. Principle on which part of the professional education would be rendered less necessary, by requiring a previous literary or scientific education, 334. Present distinction of M.A. dispenses with one year of Medical study, 334. One year's attendance only required at the University, 334.

University of Edinburgh.

WILLIAM WOOD, Esq., *Fellow of the Royal College of Surgeons* 335

Defects of the University regulations with regard to previous education of Graduates, 335. Necessity of a knowledge of Greek, 335. Sciences and Languages requisite for a Medical man, and order for taking them, 335. Mathematics, Logic, and Moral Philosophy, 335. Branches necessary for a Surgeon, 335. Mental Diseases, 336. Question of diminution in the number of graduates by requiring preliminary education, 336. Studies recommended by the College of Surgeons, and rejection of candidates for want of a knowledge of Latin, 336. Rise in the value and number of Surgical Diplomas under increased strictness in the Regulations, 336, 337, 338. Date of the last Regulations, 337. Legal privilege of the Diploma, 337. Dr. Musgrave, 337. Number rejected at examinations, 337. Diploma preceding M.D., 337. Success of men of science over those merely professional, 337. Danger of an increase in the number of inferior licences to practise, 337. Union of the College of Surgeons with the University in prescribing the same course of Preliminary Education, 338. Inferiority in extent of education required by the College of Surgeons in London, 338. Latin and Greek, and extent required in Dublin, 338. Dr. Colles, 338. Necessity of acquiring the habit of philosophizing on matters of science in general to obtain professional eminence, 338. Expense in obtaining the Diploma of Surgeon, and degree of M.D., 338. Fees, 338. Museum of Pathology and Anatomy, 339. Years of study and courses required by the College of Surgeons, 339. Apprenticeship, 339. English students, and advantage of classical knowledge in passing examinations, 339. Four years required by the Statuta, 339. Persons getting the degree of M.D. not qualified to enter the Army, 339. Knowledge of Greek required by the Army, 339. Celsus, with Greek quotation, given to Army candidates to read, 339. Suggestions with regard to Medical education generally in the University—Winter and Summer Sessions for Botany—Classes allowed to be of three months' duration—Surgical Lectures to be given by a Practical Surgeon, 339. Regulation of different courses—Practical Anatomy, Chemistry, Pharmacy, Practical Medicine, 399, 340. Interchange of studies requisite to form good Surgeons and good Physicians, 340. Members of College of Physicians allowed to practise as Surgeons, 340. Necessity of the higher Classical and Philosophical attainments for the degree of M.D., 340. Clinical Medicine, 340. Disadvantages of a variety of practice, 340. *Clinique*, 341. Clinical Surgery, 341. Desirableness of Physicians in the Royal Infirmary being Clinical Professors in the University, 341. Branches of knowledge useful to Physicians not introduced into the *Statuta*, 341. Natural History, Botany, 341. Comparative Anatomy, 341. Anatomy, 341. Medical Jurisprudence, 341. Teaching by lecturing and imperative examinations, 342. General suggestions on the subject of examinations, 342. Fees, 342. Examinations private, and by whom to be conducted, 342. Annual examinations, 342. Obviating remissions, 342. Examinations to be oral, and in English, 342. Latin, 342. Objections to some regulations of the Statuta, 342, 343. Necessity of four years' study for strict professional education, 343. Hospital attendance, 343. Army and Navy, 343. Order for attendance of classes, 343, 344. Age for degree, 343. Enumeration of defects in the *Statuta*, 343. Classes to be made imperative—Anatomy, Surgery, and Clinical Surgery, 344. Cause of the degree of M.D. standing so high, 344. Expense, 344. Practice of Physic to be taken two Sessions, 344. Midwifery, and the Diseases of Women and Children, 344.

Dr. JOHN ABERCROMBIE, *Fellow of the Royal College of Physicians* 345

Member of both Colleges—Preliminary education—Languages, Moral Philosophy, Logic, Certificates—Private study—Apothecary system in England, 345, 346. Limited extent of the monopoly of the College of Physicians, 346. Apprentices, 346. Use of Mechanics, 346. System of Tutors, Grinders, 346. Regulating course of studies—Recognizing Tutors by the University, 346. Division of Clinical students, 347. Rotation of lecturing, 347. Proposition for *three permanent Clinical Professors*, all lecturing at once, 347. Clinical Lecturer a regular Physician of the Hospital, 347. Subjecting patients to the examination of the young men in Clinical wards, 347. Six months' ticket, 347. Minute attention to patients in Clinical wards, 347. Preference of unusual and acute cases, 347. Practical Anatomy, 347. Separate Professorship of Surgery, 348. Optional classes, 348. Classes to be made imperative, 348. Four years' course—Prolongation of Summer course—Attendance on classes twice—*Lectureship* of Mental Diseases—Clinical Surgery necessary for a Physician and Surgeon, 348. Place of the Professor's preliminary education, and benefit from previous study for his degree of M.A., 348, 349. Strictness of regulations of the College of Surgeons, 348. Preference for English examination after a previous examination in Latin, 349. Footing upon which Fellows are admitted, 349. Principle of his recommendation of Greek, 349. English students, 349. Tickets received from private Lecturers, 349. Throwing open the monopoly of the Apothecaries' Company, 349. Course of five years' apprenticeship to practise as an Apothecary in England, 350. As to Surgeons in England furnishing their own patients with Medicines, 350. Physicians writing their own language in a manner to prove that they belong to a learned profession, 350. Literary character of the Medical Treatises of the present day, 350. Question as to additional attendance on Anatomical classes in the University being made optional, 350.

Dr. WILLIAM CULLEN, *Fellow of the Royal College of Surgeons, Edinburgh* . . . 350

Regulations as to previous education at Paris, and literary degree necessary to obtain the degree of M.D., and attend the Lectures of the Faculty of Medicine, 350. French towns where the degree may be obtained, and classes they must attend, 351. Equivalent degrees from Dublin, Oxford, and Cambridge, considered sufficient by the Faculty of Paris, 351. State of the literary and scientific character of Physicians in France, 351. Abolition of the Faculty of Medicine, 351. Detailed description and nature of the *Faculty of Medicine*, and its constituent parts, 351. Abundance in the supply of dead bodies, 353. Chairs of Physique Médicale, and Histoire Naturelle Médicale, 353. Order of attendance on the classes, 354. Four years' attendance required, 354, 357. Geneva school, 355. Clinical Lectures at Paris, 355. Insufficiency of a six months' course of lectures to embrace the subject of Anatomy in all its details, 356. Classes overburdened by the extent of the subject, 356. Pharmacologie and Chimie Médicale defined, 356. Chemistry—Dr. Hope, 356. Medical Jurisprudence, 356. Period of vacation in Paris, 356. Attendance during the Summer course, 356. Insufficiency of the mode of examination for degrees in this University, 357. Mode of examining in Paris, 357. Language of the examinations, 357. Greek and Latin required in the previous course of education, 357. Inferiority of degrees of Strasburgh and Montpelier, 357. No age mentioned in Paris for Doctor of Medicine, 357. Modification of Medical practitioners, 357. Optional order and negligence in attendance, 358. Expense of attending the Medical Faculty four years, 358. Payment for bodies from the Hospitals, 358. Physiology might be made a distinct Chair at Edinburgh, 358. Want of a separate Professorship of Surgery, taught by a Practical Surgeon, 358. Imperfections and inutility of the present mode of conducting Clinical Lectures, 358. Detailed statement of the Paris mode, 358, 359, 360. Ob-

jections to the system by rotation, 359. Reasons why as complete a course of Clinical information could not be given in Edinburgh and London as at Paris, 359. Diseases of the brain, 359. Thoracical diseases, 359. Comparative attention to the cure of patients in London and Paris, 359. Winter classes, 360. Manner in which the study of Anatomy is pursued at Paris, 360. Preliminary education at the University, with respect to degrees in Medicine, 360. Greek, Latin, and Mathematics, 361, 362. French more important than Greek, 361, 362. Inutility of Mathematics, 361. Mr. John Hunter grossly illiterate, 361. Character among Medical practitioners of the Graduates of Oxford and Cambridge, 361. Smallness of the number of Medical degrees taken at Oxford and Cambridge, and with what view taken, 361. Probable tendency of the alteration of the constitution of the Faculty of Medicine at Paris, by the Government, 361. Effects at Edinburgh of requiring from candidates for degree and diploma a previous knowledge of Greek and Mathematics, 361. Introduction of a lower class of practitioners, 362. Apothecaries, 362. Uniform increase in the number of applications for the diploma of Surgeon with the raising of the qualification, 362; accounted for, 362. Increase of the diploma in respectablity, 362. Institution of a higher degree, 362. Not more than one practitioner in Edinburgh who is a Greek scholar, 362. Desirableness of an acquisition of the Classics, 363.

The Rev. Sir Henry Moncrieff, Bart., D.D. 363

Improvements in the management of the classes, 363. Examinations—Securing attendance by regular catalogues—Case of the Schoolmaster, 363. Prolongation of Session, 363. Its bearing on students of Divinity, 363. Length of Session at Glasgow sixty years ago, 363. Day of commencement, 364. Elevation of the M.A. degree, and slovenliness at Glasgow, 364. Introduction of stricter examinations at Edinburgh and Glasgow, 364. Irish graduates, 364. Teaching hours in the Literary classes at Glasgow, 364. Controlling power as to discipline, 364. First Greek class, and country schools, 364. Examinations in the Literary and Philosophical classes, 364. Practice at Glasgow, 365. Examinations and catalogue in Divinity classes, 365. Introduction of a class for Biblical Criticism, 365. Lectures on it at St. Mary's College, St. Andrews, and at Aberdeen, 365. Assigning duty to Principal, 365. Hearing Discourses, 365, 366. Irregular attendance at Divinity Hall, 365. Restricting of licence to a degree of regular attendance, 366. Five Discourses required, 366. Exercise and Addition, 366. Division of the labour of hearing the Discourses—Certificates given by the Professor at the head of the Divinity Chair, 366. As to capability of young men from seventeen to nineteen years of age, superintending the education of the young, 366. Completion of Systematic Divinity within the time required for regular attendance, 367. Fees at Divinity Hall, 367. Advantage of moderate fees, 367. Fees at other classes—Oriental languages, 367. Gratis tickets, 367. Class of Church History, 367. Sufficiency of present means for Divinity students' obtaining Literary and Scientific acquirements, 367. Proper period for a course of Divinity, 367. Division of course into separate parts, 368. Attendance at Divinity Hall should be made imperative, 368. Class of Logic and Rhetoric, 368.

The Rev. John Inglis, D.D. 368

Writing Essays, and examinations on the subjects of the Lectures, and on the books directed to be read, 368, 373. Division of students into *ordinary* and *extraordinary*; duties enjoined on the former, and privileges to be attached to them, 368. Plan for enabling the First Professor of Divinity to obtain time for lectures and examinations, by dividing the duty of hearing Discourses between him and the Professor of Ecclesiastical History, 368, 369. Concurrence of the General Assembly, 369. Fees from Divinity students, 369. Five Discourses required of every Divinity student, and nature of them, 369. Church History Discourses, 369. Latin, 369, 370. Homily, 369, 370. Presbyterial Discourses, 370. Biblical Criticism, 370 Extent of regular and occasional attendance reckoned sufficient at the Divinity Hall, 370. Inconveniences of cutting off occasional attendance, 370, 371. Excess in the proportion of students of Divinity to supply the vacancies of the Church, 371. Sons of clergymen eminently qualified, and useful part of the Scotch clergy from the lower class of society, 371, 372. Age of students entering Divinity Hall, 371. Period for attending the three classes of Intellectual and Physical Science, 371, 372. Abolition of Elementary Greek class, and mode of ensuring competent parochial Schoolmasters, 372. Increase in the number of the junior class in the College since the paying a greater attention to the teaching of Greek in the High School, and in all other principal Schools and Academies throughout the country, 373. Humanity class taught at the same hour with the second Greek class, 373. Desirableness of frequency of Examinations rather than an increase in the Exercises, 373. Principal Haldane, 374. Delivering Exercises to Professors, 374. Method of ascertaining the proportion of regular and irregular students, 374. What constitutes a regular student in the view of the Church, 374. Necessity for the Professor of Divinity's having two hours a-day—one for Lecturing, the other for Examination or Discourses, 374.

The Rev. Andrew Thomson, D.D., *Minister of St. George's Church* . . . 374

In what classes strict and public examinations should be imperative, 374. Insufficiency of mere lecturing, 375. Knowledge of Mathematics to enter the Natural Philosophy class, 375. Examination preferable to certificates, 375. Necessity of proficiency in Classical learning to derive benefit from the Rhetoric or Logic class, 375. Mortifying exhibition of a boy in the junior class, from Heriot's Hospital, 375. Examinations for bursaries given by Heriot's Hospital, 376. Stimulating mode of examination when Dr. Thomson was at College, 376. Mode and necessity of securing and ascertaining attendance, 376. Catalogue, 376. Attendance of a full course of Philosophy required by the Church, 376. Case of imposition by evasion, in a minister of the Church, 376. Censors, 376. Plan for a Directory in the studies of young men, rather than giving full discussions upon every topic, 376, 377. Order of the Philosophical classes, 377. Logic and Moral Philosophy, 377. Natural History a part of the Curriculum, 377, 379. Precedence of Physical Sciences to the science of Intellectual Philosophy in a Curriculum for degrees, 377, 379. Extension of Philosophical Course to five Sessions 378, 379. Its effects upon Divinity students, 378. Longer attendance upon the Greek class, 378. Case in which the first class might be dispensed with, 378. Discouragements of Classical attainments in country Schoolmasters, 378. Ignorance of Preachers provided with certificates, 378. Teaching the Greek alphabet at the College, 379. Poor not neglected by parish Schoolmasters, 379. Elevation of the degree in Arts, and mode of effecting it, 379. Alternative of a degree or equivalent examination required of Divinity students, previous to entering Divinity Hall, 379. Preference of examination, 379, 380. Regulation by the Senatus Academicus allowing no student to enter Divinity Hall without the degree, about the middle of last century, 379. Proposition for *degrees of degrees*, 380. Prolongation of Session, 380. Summer Sessions, 380. Retrograde movement of boys going from the High School to the College, and mode of obviating it, 380. Revival of former length of Session of nine or ten

University of Edinburgh.

months, 380. Optional Summer class, 380. Experiment for opening the classes for Mathematics and Natural Philosophy in the Summer, 381. Desirableness of raising the standard of Classical and Scientific information, 381. Preference of a course of five years, each Session six months long, to one of four years, each Session extending to nine months, 381. Prescribing a course of study at the end of each Session for examination on the course they have pursued during the Summer, 381. Advantages of a Syllabus, 381. Its effects on Professors and students, 381. Want of additional bursaries, 381. Mode of augmenting the time for teaching the Divinity class, and curtailing the Discourses, 381. Proposed regulation that students of Divinity should devote themselves solely to Theological studies, and order of attendance upon the prescribed classes, after securing a previous literary and scientific education, 382. Additional Professorship of Biblical Criticism, and arrangements respecting his class, 382, 383. Dr. Finlay, of Glasgow, 382. Examinations to ascertain progress and to convey instruction, 382. Division of students, 382. Devolving additional duties on Principal, 383. Discourses and Exercises, 383. Suggestions for relieving the Professor of Divinity of two of his five Discourses, 383. Arrangement for Church History class, 383. Class of Ecclesiastical History two years, 383. Exercise and Addition to be heard by Professor of Biblical Criticism, 384. Hebrew, number of Sessions, and when to be taken, 384. Four Sessions of regular attendance, 384. Irregular attendance no attendance, 384. Exercise and Addition to be prescribed on the Old Testament as well as the New, 384. Enumeration of the advantages of regular over irregular attendance, 384. Irregular attendance why a sort of imposition on the country and the Church, and cause of the degeneracy, 385. Tutors in families, 385, 386. Nine years' University education, 386. Degree of Bachelor of Divinity, 386. Church attendance, 386. Opening classes with prayer, 386, 387.

FRANCIS JEFFREY, Esq., *Advocate*, and THOMAS THOMSON, Esq., *Advocate* 387

Mr. Jeffrey.

Constitution of the University—Visitatorial Court—Chancellor, with Assessors—by whom to be appointed—Mode of giving value and importance to the degree of M.A., 387. Rector, 388. Vesting the privilege of nominating Chancellor in matriculated students—System at Glasgow, 388, 389. Proper quarter for nominating Professors, 389. Vesting superintendence of the discipline of the students in Principal, 389. Authority of Senatus Academicus, 389. Extent of power of Professors, 389. Power of Rector at Glasgow, 390. Granting certificates of attendance by Professors, 390. Opening Session with solemnity, 390. Mode of maintaining discipline, 390. System of small fines at Glasgow, 390. Raising Graduation into importance, 390. Defect of the Academical system in trusting to the mere oral recitation of lectures, 390. Deficiency of Examination and written Exercises, 391. Mutual instruction system, 391. Prolongation of Session, 391. Shortening of vacation, 391. Characteristic peculiarity of Mr. Jardine's class of Logic, 391. Difficulty of the art of examining, and mode of effecting it, 392. Mr. Miller, 392. Associations of students for discussion, 392. Restoration of Academical honours to popularity and general use, 392. Reformation in the English Universities by what means effected, 393. Prolongation of the course of study, 393. Comparative state of knowledge with that of England, 393. Rendering degrees desirable, without infringing on the principle of free competition, 393. Investing them with splendour and solemnity, 393. Distinction between an ordinary degree and a degree with honour and publicity, 393. Requirement of Master of Degrees in Medicine and Divinity, 394. State of the Bar, 394. Necessity of previous education to enter the Faculty of Advocates, 394. Privileges to Graduates, 395. Constituent bodies for the election of Rector and Chancellor, 395. Election of Rector for term of years, 395. Order for taking the classes—Postponement of the Speculative Sciences to the Practical Sciences, 395. Ethic and Logic classes, 395. Precedence of Natural Philosophy, 396. Natural History, 396. Separate Professorship in Arts or Philosophy, 396. Necessity of a Professorship of Political Economy, 396. Adding it to the Curriculum, 396. Practice of Professor Stewart to teach Political Economy, 396. In the province of the Professor of Moral Philosophy? 396. So taught at Glasgow, 396. Instruction in Greek, 397. Number in class at Glasgow, 397. Abolition of Elementary class, at Edinburgh, 397. Of no use to teach Greek by a *Latin* grammar, 398. Utility of Greek and Latin as parts of a liberal education, 398. Slowness of the present method of instruction, 398. Views as to a class of Civil History, or the Law of Nature and of Nations, 398. Lord Meadowbank and Lord Woodhouselee, 398. Written Prelections, or *vivâ voce* speaking, 398. *Beau ideal* of a Professor, 399.

THOMAS THOMSON, Esq., *Advocate*. 399

Want of clear definition of the powers of the University, in its original constitution—Vesting primary regulation of the University in the Senatus Academicus, with control in some other quarter—Chancellor, with Assessors, and fitness of a portion of the Patrons forming an ingredient in the Visitatorial Court, 399. Privilege of voting in Graduates, 399. Election for term of years, and appointment by whom in the first instance, 400. Eligible a second time, 400. Rector, 400. Medical students, 400. Double vote in Chancellor, 400. Constituent members of the Court of Assessors, 401. Principal, 401. Functions of Rector at Glasgow, and non-residence, 401. As to mode of election at Glasgow, 401. Mr. Burke, 402. Communication between Professors and students, 402. Institution of office of Lord Rector in any University possessing a Chancellor and a Court of Assessors, 402. Expulsion by a Rectorial Court at Glasgow, 402. Consolidation of the office with that of Principal, 402. Control of University accounts at Glasgow, 402. Judicial power of Principal and Senatus Academicus, 402. Competency of Professor to enforce discipline, 403. Fines for absence—Calling the catalogue, 403. Expulsion, 403. Enforcing regular attendance, 403. Graduation employed for this purpose, 403. Certificates, 403. Mixture of class-examination with lectures, 403. Examinations on works recommended by the Professors, 403. Examinations and illustrations on a good text-book, 404. Suggestions on the subject of Graduation, 404. Practice at Glasgow, 404. System for admission into the Faculty of Advocates, 405. Opinion on the present order of the Curriculum, 405. Precedence of Physical Science to Science of the Mind, 405. Necessity of a knowledge of Mathematics for the study of Natural Philosophy, 405. Previous examination in Mathematics by whom to be conducted, 406. Advantages of the same Professor carrying on the same students through Logic and Ethics, 406. Ancient system of Logic, 406. Opinion of Dr. Reid on conducting all branches of liberal study under the direction of a single Regent, 406, 407. Advantages of a subdivision of the Curriculum, 407. Class of Political Economy, 407. Question as to its introduction at Glasgow, 407. Chair of Moral Philosophy in the Scottish Universities, what it has been held to include, 407. 408. Suggestions as to the Library, 404, 408. System of Deposit, 409. Advocates' Library, 409. Literary advantages derived from a judicious and liberal administration of the Library, 409. Essential benefits to authors from copies of books entered at Stationers' Hall, 410.

University of Edinburgh.

Academical patronage, 410. Power of Town-council to establish new Professorships, 410. Visitatorial Court, 410. Advantages of Royal Appointments, 410. Appointment of Professors from leets formed by another body, 410. Junior Classes, 411. Greek Literature when introduced into the Universities, 411. Proposal for placing the Greek Class on the same footing as the Humanity Class, 411. Objection to teaching the elements of Greek as a part of the Curriculum, 411. Tutors, 411. Impossibility of a man becoming a good Greek scholar from mere attendance on the class, 411. As to annual examination, to ascertain whether proficiency already acquired be kept up, 411. Exercises on some of the Philosophical authors in that language, in examination for degrees, 411. System at Oxford, 411. Bursaries, and practice at Glasgow, 411. Prolongation of course, 411. Mischief of vacations of six or seven months, 411. Prescription of exercises, 412. Arrangement as to additional courses, 412. State of the Class of the Law of Nature and of Nations, 412. Separation of International Law from Municipal Law, 412.

The Rev. ANDREW THOMSON, D.D. (Further Examination) 412

Scheme for a course of Divinity, with mode of conducting it, 412. Course recommended by the Act of Parliament of 1579, for St. Andrews, 413. Partial attendance never contemplated to be tolerated under those enactments, 413. Five years' course by the regulation of the Book of Discipline, 413. *Suppositi* at St. Andrews how admissible, 413. Knowledge of Hebrew required before admission to the Divinity Classes, 413. Young men to be licensed at a more advanced age than twenty-one, under that arrangement, 413. Act of General Assembly enjoining that young men who could not afford to attend the University should be superintended in their studies by members of the Presbytery, 413, 414. Gross absurdity of partial attendance, and opinion of Dr. Campbell, of Aberdeen, 414. Reasons for requiring such an extensive course of study referred to in the Table, with the most advisable mode of carrying it into effect, 414. Prescribing attendance at Divinity Hall, 414. Introduction of a Bachelor's degree, 414. Advantage of strict examination, 414. Reasons for exacting a small fee from students in Divinity, 414. Depreciation of instruction under gratuitous teaching, 414. Amount of fees for the whole course of Divinity, 415. Management of Divinity Library, 415, 416. Complaints of students, 415. *Veto* of the Professor at Glasgow, 415.

The Rev. Dr. WILLIAM MUIR, *one of the Ministers of the City of Edinburgh* . . 416

Necessity of Lectures, with the mode of rendering them practically useful, 416. Hour for examinations, and for receiving exercises in writing, 416. Class-examinations to be made imperative on all classes in every University, 416. System of examination at Glasgow, 417. Authorship of Prize-essays at Glasgow how ascertained, 417. Number of Essays in the Logic Class, 417. Examination in the Philosophy Classes, 417. Latin books read in the Moral Philosophy Class, 417. Comparative merits of the system pursued at Glasgow and Edinburgh, 417. Language Classes, 417. Disparity between the attainments of the students and the certificates they have brought, 418. Heriot's Hospital, 418. Plan of examination pursued at Glasgow in the Humanity and Greek Classes, 418. Private Greek Class at Glasgow, 418. Fees, 418. *Minimum* of fees for Logic, 418. State of Elementary Greek Class at Glasgow, 418. Improvement in Parochial and Grammar Schools, 419. Prolongation of Session without hardship to students, 419. Introduction of the discipline of the High School into the Language Classes at College, 419. Enforcing attendance, 419. Time occupied in calling the catalogue at Glasgow, 419. Number of students in the Greek and Latin Classes, 419. Comparative infrequency of examinations in the Language Classes at Edinburgh and Glasgow, 419. Remarks on the order of attendance on the Philosophical Classes, 419, 420. Mathematics, 420. Precedence of Natural Philosophy to Logic, 420. Natural History when to be taken, 420. Little need of change of procedure in the class-business and discipline of Glasgow, 420. Master of Arts' degree how conferred at Glasgow, 420. Black-stone examination, 420. Separation of Rhetoric from Logic, 420. Rhetoric should follow Logic, 421. Lecturing extemporaneously, 421. Prescribing works to be read by students, with subsequent examinations on them not practised at Glasgow, 421. Utility of the practice, 421. Use of University Library by students at Glasgow, 421. Prolongation of Session, 421. Year for attendance on the Hebrew Class by intended Divinity student, 421. As to requiring a five years' attendance, 422. Furtherance of the interests of the Church by lessening the numbers of those pressing into it, 422. As to supersession of elementary teaching of Greek in the Scotch Universities by employing the present preachers to teach Greek in the parish schools, 422. Suggestions in regard to the study of Theology, 422. Ignorance of Scottish students of Divinity of the writings of the ancient Fathers, 422. Proposed modification of the Lectures of the Professor of Church History, 422. Detriment from irregular attendance at Divinity Hall, 422. Four years' attendance on the Theological Classes, with prolongation of Session, 422, 423. Six years' enrolment from irregular students, 423. Biblical Criticism, 423. Professor of Hebrew to teach his class for three years, 423. Intrant examinations, 423. Superintendence by Professors, 423. System of instruction recommended in the Divinity Class, 423. Prescribing books and exercises, 423. Period within which a full course of Divinity might be embraced, 423. Discourses—Exercise and Addition—Homily, 424. Suggestions for a different arrangement in students' Discourses, and for lightening the duty of the Professor of Divinity, 424. Principals of different Colleges taking part in hearing Discourses, and lecturing on branches of Biblical Criticism, 424. Mode of rendering Lectures more useful, 424. Lectures on Theology delivered by Principal Leishman, of Glasgow, 424. Private counsel of Professor of Divinity, with his students, 425. Professor of Chuch History lecturing every day, 425. Introduction of examinations into class, 425. Revival of Hebrew, 425. Tendency of reading portions of the Fathers in Latin and Greek, to keep up the classical literature of students in Divinity while attending the Hall, 425. Exaction of fees from Divinity students, 425. Qualification of students to act as tutors in gentlemen's families after the age of eighteen, 425. Dependence of progress in Theological study on irregular students' individual exertions, 425. Deteriorating influence of the system of irregular attendance on students as evinced in Presbyterial examinations, 425. Effects on the opinions of the Church of a recommendation from the Commission towards effecting any proposed changes, 426. Presbyterial licences, 426. Extent of the proposed prolongation of Session, and for what classes, 426. Increased expenditure of students by taking fees, 426. Proposed manual containing an abridged view of the evidences of Christianity for the purpose of obtaining a recognition of the principles of Christianity, 426, 427. Act of General Assembly in 1647, requiring Masters in the University to examine their students weekly on the principles of the Christian religion, 427. Plan for enabling the course of education at the Scottish Universities to receive something more of a stamp from the National faith, 427. Proposal of Principals to deliver a popular course of Lectures upon the evidences of Christianity, 427. Requiring attendance on such a class from those intending to take a degree in Arts, 428. Theological Library, 428.

University of Edinburgh.

JAMES PILLANS, Esq., *Professor of Humanity* 428

Number of classes, and teaching hours, 428. Average age of students of Junior Class, 428. Mode of conducting Class-examinations and Prelections, 428, 429. Hour for Lecture in the Second Class, 428. Reasons for not giving any written Lectures until after the holidays, 429. Prescribed Essays on Roman Antiquities, and explanation of the system of written Exercises, 429. Monitors, 429. Latin verses, 430. Small fines, 430. Prizes, 430. Check upon Inspectors, 431. Weekly Exercises imperative, 431. Character of the weekly Exercises in the first and second class, 431. Exercises in the Senior Class, 432. Latin compositions, prose and verse, 432. Comparative difficulty of Latin prose composition, 432. Turning the English compositions into Latin, 432. Indiscriminate examinations, 433. *Private studies*, 433. Examination of the Junior Class, and mode of ascertaining how often the students are called up, 433. General censor, 433. Classification according to proficiency, 433. Boys coming to second class who would be better employed in the first, 433. Fitness of boys for Second Greek who ought to be put in the First Latin, 434. Difficulties of a new arrangement of teaching hours, 434. Inadequate preparation of boys from the country for the first class, 434. Lodging power with Professor of remitting boys to the first class in the event of unfitness for the second, 434. Explanation of system of *Censors* or *Inspectors*, 434, 435. Catalogue, 435. Certificates of regularity of attendance, proficiency, and propriety of behaviour, 435. New form of tickets, 435. Register, 436. Proportion of students of the first class who come to the second, 435, 436. Number attending the third year, who attended the second class, 437. High school boys attending second class without entering the first, 437. Grammars and books of philology used in Junior Class, 437. Indifferent Latinity of Mair's Introduction, 437. Portions of Latin verse got by heart, 438. Difference between the Scotch and English boys in clear and pleasing declamation, 438. Use of the Scotch pronunciation of Latin, 438. Small fines for negligence or error, 438. Books used in the Senior Class—Translations of passages from the higher Classics, 439. Public examinations at commencement or end of Session, 439. Principal has not visited the class, 439. Plan of awarding Prizes, and subjects of them, 439. Prize for Declamation or Recitation, awarded by the students, 439. Prize gold medal by the Society of Writers to the Signet, 439. Advantage of public examinations, and of a more ceremonious distribution of the prizes, 440. Revival of the degree of Bachelor of Arts, 440. Principle of distribution of the prizes, 440. Amount of the fine-money, 440. College-hall, 440. Want of the system of English exhibitions in the Scotch Universities, 440. Class Library and General Library, 440, 441. System of Deposits, 441. Subjects of the Lectures which the Professor is in the habit of delivering, 441. Introduction of the monitorial or mutual instruction system, and mode in which the Junior Class is conducted, 441. Advantage of the Monitorial system in teaching Mathematics, 442. Sciences in which it is inapplicable, 442. Prolongation of Session, 442. Plan for employing students during vacation, 442. Record of *Summer studies*, 442, 443. Improvement of those attending second class, after parting from them in the first, 443. Tuition of students during the vacation, under the direction of their parents, 443. Experiment of a Summer Class, 443. Commencement and close of the Humanity Class as late as the year 1741, 443. Commencement and close of the Private Class, 443. Proposed day for all the classes meeting, 443. Month for closing Session, 443. Order for taking the different branches of study, Mathematics, Natural Philosophy, and Chemistry, 443. Teaching Greek in the University—Impossibility of producing good scholars by trusting the initiation of boys in the elements of any language to a Professor in a University, 443. Difficulties in abolishing the practice of elementary teaching—State of the Parochial Schools, and difficulty of procuring competent Schoolmasters, from the smallness of the remuneration, 444. Extension of the system of examinations to the Philosophical Classes, and best mode of conducting them, 444. Separate hour, combined with reading of Classical authors, connected with some of the subjects of Moral Philosophy, 444. Mr. Jardine's system, 444. Option of examination to adult students, 444. Making examinations, exercises, and attendance at a separate hour imperative on those intending to take a degree, 444, 445; or where the ticket is a professional one, 445. Observations on the subject of Degrees, and good effects of the revival of B.A., 445. Arrangement for a restricted Curriculum, leaving the general student to choose his own class, 445. Logic Class met three hours a-day during a Session of nearly eight months, so late as the middle of the last century, 445. Remark on the order of study prescribed for Divinity students, 445. On rendering the degree of M.A. of more importance, 445. Present mode of obtaining the Master of Arts' degree, 445. Oxford public Examiners, 445. Advantage of enabling a young man to take his degree with honour and distinction, 445. Proposed titles for degrees according to acquirements, 445. Prizes open to competition, 445. Mode of determining whether Exercises were written by the students themselves, 445. Requisites to be made indispensable for the degree of Doctor of Medicine, 445. Maintenance of discipline by each of the Professors, 446. Cause of the neglect of Civil History, 446. Examination of students in Latin previous to entering class, and difficulty of finding a Board of Examiners, 446. Examination of students at the University of Dublin as to their knowledge of Greek and Latin before they can be put on the books of the College, 446. Black-stone examination, 446.

GEORGE BELL, Esq., *Member of the College of Surgeons* 446

Privileges and immunities of the well-educated Physician, 447. Observations on the preliminary education to be required from students intending to graduate, 447. Mode of conducting the Medical Classes, 447. Calling the roll daily—Examinations twice every week—Conversational manner of Professors communicating information, 447. Monographs, 448. Introduction of Essay writing, and of competing for prizes, 448. Adhibiting in red ink, to the name of each pupil in a private list, the general character and *status* of each, 448. Remark on the present Curriculum for degrees, 448. Additional classes proposed, 448. Prolongation of course, 448, 449. Summer classes, and division of Session, 449. Private Lecturers' classes, 449. Recommendation as to Clinical Medicine and Midwifery, 449. Text-books, 449. Separation of Surgery from Anatomy, 449. Want of larger wards in the Infirmary, 449. Proposed arrangement for attendance of Professors in the wards, 449; for rendering the Professor of Clinical Surgery fully effective, 449. Observations on the introduction of the degree of Bachelor of Medicine, 450. Comparative Table of the courses of study required by the *Statuta Solennia* and by the Regulations of the Royal College of Surgeons, in 1826—Number of degrees granted—Sums paid to examinators and to the funds of the institutions, 450. Observations on the propriety of conferring the degree of C.M., 450, 451. Increase in the number of Diplomas under an increase of the required qualifications, 451. Number of Diplomas, and of students graduated, before and after 1801, 451. Increase of students under an augmentation of fees, 451. Expense of the Surgeon's Diploma—Number of students examined in 1825, and of those who received Diplomas, 452. Museum of Morbid, Comparative, and Healthy Anatomy, 452. Manner of conducting the examinations by the College of Surgeons, 452. Preferenceof a mixed examination, 452. Greek, 452. Remission

23

University of Edinburgh.

to their studies by the College of Surgeons of individuals who had previously obtained the degree of Doctor of Medicine, 452. Explanation of the possible case of rejection by the Medical Faculty of those who had Diplomas, 453. Grinders—Mr. Candlish, 453. Examination of every student before entering the Medical Classes, and at the end of Session, 453. Check to the mode of obtaining tickets under different names, 453. Examinations in the class of Surgery, 453. Sum paid by each student for the formation of a Class Library, 453. Accrediting private teachers as Tutors, 453. Average expense of a student of Medicine in Edinburgh, 454; of the classes, 454. Classes too extensive to be embraced in a six months' course, 454. Practice of Physic—Anatomy, 454. Practical Chemistry, 454. Extent of Monopoly of the College of Surgeons of Edinburgh, 454. Persons practising in Edinburgh without Diploma, 454. Medical Jurisprudence, 454. Allowing students to receive a second course on Practical Anatomy from the private teachers, 454. Classes attended twice by students, 455. Injunction by the Professor, or his apprentices, to attend every Medical Class in the University, and several of the private Lecturers, 455.

Dr. John Thomson, *Fellow of the Royal College of Surgeons, and Licentiate of the College of Physicians* 455

I. Improvement of the Literary and Scientific Education of candidates for Medical Degrees, and effect of the amount of preliminary education required, 455, 456. Qualifications required in Dublin, 457. Necessity and utility of a knowledge of Greek, 457. Increase of the desire for a Diploma in proportion to the difficulty of obtaining it, 457. English Apothecaries, 457. A knowledge of Greek where and by whom required, 458. French indispensable, 458. Natural Philosophy, 458. Borelli, "De Motu Animalium," 458. II. Instruction by Examinations as well as by Lectures, and Annual Examination of the Candidates for Graduation by the Members of the Medical Faculty, 458. Grinders, 459, 461. Private Tutors, 459. Letter to Dr. Cullen from the gentlemen who attended his Examination Class in 1781-82, 459. Arrangement of hours—Open hour—The Infirmary hour, 460. III. Examinations conducted, and Theses written in the English language, 460. Examinations for degrees whether to be private or public, 461. Translation and publishing of Edinburgh Theses, 462. Age for graduation twenty-two, 462. IV. Text-books, 462. V. Extension of the Summer Courses to the same length with the Winter Courses, and extension of some of the Winter Courses, 462. Impossibility of completing a Course of Lectures on the Practice of Physic in the time at present allotted for it—Dr. Cullen, 463. Prejudicial effects of the length of the Christmas vacation, 463. Relaxation of attention on the part of the students towards the conclusion of the Session, 464. VI. Division of the Theory or Institutions of Medicine into two distinct Courses, the one on Physiology and the other on Pathology, 464. Therapeutics—Materia Medica, 464. Contrast in the manner of teaching the Institutions of Medicine between the University of Edinburgh and the Universities on the continent, 465. VII. Separation of Surgery from Anatomy, and to be taught by a Practical Surgeon, 465.

Dr. John Thomson (Further Examination) 465

VIII. Establishment of one or more separate Professorships of Clinical Medicine, 465. System of rotation, 466. Number of students that should be attending the Lectures on Clinical Medicine, 468. Number that the Professor or his colleague could take at a time in his private rounds, 468. Division and subdivision of students into parties, 468. Each Clinical Professor to have one ward for male, and another for female patients, 468. Foreign Clinical Institutions, 468. Diminution of disturbance given to patients, by limiting students to particular wards, 469. State of Clinical Surgery, 469. IX. Prescribing a regular course of Medical Study, 469. Arrangement of a course of Medical Study, 470. Suggestions respecting the granting of Licences, 471. Provisions and operation of the English Apothecaries' Act, 471. State of the law before the passing of the Act, 472. Qualifications required by the Act, 472. Comparative courses of study as required by the Royal College of Surgeons of Edinburgh, and by the Company of Apothecaries in London, 472. Plan in London for the purpose of bestowing exclusive privileges on a proportion of Physicians, 473. Number of years the projected course of study is to occupy, 473. To be imperative, 473. Comparison of it with the course pursued on the continent, 473. French nomenclature, 473. Division of the Theory of Physic, 474. Pathology to be given during the Summer Session, 474. Want in England of elementary books on Physiology, Pathology, or Therapeutics, 474. Mode of adapting the course of study to those who may have studied in other schools, 474. Dr. Harrison's plan, 474. Proceedings by the Senatus Academicus, 474. Three Summer courses, leaving one open, 473. 474. Degrees to be taken during the fourth Summer, 474. Confining each annual examination to subjects taught during that Session, with examination as to a student's knowledge of branches taught in a previous Session, in case of doubt, 474. X. Provision for the retirement of Members of the Medical Faculty, unfit for the proper discharge of their duties, 474. Plan on which the Professor of Military Surgery could give Clinical Lectures, 475. Appointments abroad, 475, 476. Heads of a Lecture on Medical education, by Dr. Cullen, 476. Case for the Royal College of Surgeons of Edinburgh, in relation to the Apothecaries' Act, 476.

William Henry Playfair, Esq., *Architect* 477

By whom appointed—Salary—Library, 477, 480. Sum required for completing the College buildings, 477. Sums granted by the House of Commons, 478. Class-rooms for Professors—Museum, 478. Alternate occupation of class-rooms, 478, 479. Materia Medica, 479. Lecture hours of the Professors of Logic and Moral Philosophy, 479. Upper Library, 480. Number of books, capacity of the New Library, and increase in the number of volumes, 481. Working Library, 481, 482. Wickets, 481. Consulting-room, 481. No catalogue, 482. New Publications, 482. Museum, Preparation-room, Class-Libraries, Theological Library, 482. Anatomical Museum, Anatomical Theatre, 483. Amount of total sum wanted, 483. Use of Graduation Hall for Divine Service, 483.

Mr. William Cuningham, *Student of Divinity, Secretary to the Students' Committee* . 483

Petition of Divinity students—Theological Library, 483. Dr. Ritchie, 484. *Cives*, 485.

Mr. Donald M'Kellar, *Preacher of the Gospel* 485

Theological Library—Management at Glasgow, 485.

Dr. Alexander Jameson 485

Public Library and Anatomical Museum, 485.

University of Edinburgh.

Professor Dunbar 485

Fee of Third Greek Class, 485. Books read in Third Greek Class, 485. Expense at Glasgow, 486. Expense of books to students attending Witness's Class, 486. Advantage of using the same Grammar in all public schools and universities, 486. Complaints respecting the Theological Library, 486.

John Wilson, *Principal Janitor of the College of Edinburgh* 486

Fees, 486.

Thomas Barrowman, *Porter or Under Janitor* 486

Salary, 486.

Appendix, No. I.—Copy of an Address by Dr. William Ritchie, Professor of Divinity, to the Students of Divinity 486

„ No. II.—Copy of a Letter from Dr. Ritchie, to Mr. Matthew Leishman, Student of Divinity 487

Dr. Duncan, Junior, *Librarian* 487

Principles of management of the Library, 487. Deposit, Catalogue, Receipt-book, 487. Facilities to literary men, 488. Inconvenience from right of Surgeons, 488. Dissatisfaction of students, 488. Manner of conducting the business of the Library, 488. Books not circulated, 488. Abuses on the part of the Professors and Surgeons, 489. Forestalling of books, in the case of Prizes, 489. Effects of the institution of class Libraries, 489. Alphabetical Receipt-book, 489. Mode in which the Berlin and Gottingen Libraries are managed, 489. Library funds whence derived, 489. Admission of literary or scientific persons, 489. Leave granted to graduates to read, 490. Description of Professors' Receipt-books, 490. Number of volumes in the Library, 490.

Robert Jameson, Esq., *Regius Professor of Natural History* (Further Examination) . 490

State of the Museum—Funds—Government allowance—Sums collected from visitors—Admission money—Admittance of scientific persons, without entrance money, 490, 491. Cases of refusal, 491, 492. Guinea and half-guinea tickets, 491. M. Dufresne, 491. Rule under which scientific persons are allowed specimens out of the cases, 491, 492. Drawing in the Museum, 491. Time the Museum is kept open, 492. Captain Brown, 492. What portion of the Collection private property, 493. In what case Museum may be closed, 493. By whom appointed, 493.

Captain Thomas Brown, F.R.S. 493

Explanation as to his Memorial regarding admission to the Museum, 493. Practice at the British Museum, London, 493; at the Linnæan Society, 493, 495; at the Jardin du Roi, with copy of the ticket of admission, 494. Haerlem, 494. Proceedings between Captain Brown and Professor Jameson, 494. Price paid for Dufresne's collection, 495. State of his projected publication, 495.

Mr. James Haig, *Assistant Librarian of the Advocates' Library* 495

State and management of College Library—Deposit, 495. Receipt-book, 496. Reading in the Library, 496. Students, 496. Arrangement for Professors and members of the College of Surgeons, 497. State of binding of the books, 497. Of books in the Advocates' Library, 497. Supplementary—Suggestions relative to College Library, 497.

Mr. Nicolson Bain, *Under-Librarian of the College Library* 498

System of management—Statement of number of deposits from October 1825 to October 1826, 498. Extension of accommodation, 498. Notice to students, how to apply for books, 499. Books that may and may not circulate, 499. Deposits, 499. Receipt-book, to ensure the return of books, 499, 500. Delays to students in obtaining books, 499, 500. Return of books not returned by students from 1811 to 1825, 500. Members of the College of Surgeons, and Professors, 500. Penalty when exacted, 500. Effects of Class-libraries, 501. Rule respecting literary gentlemen, 501. Cases of refusal, 501. Binding of books, 501.

The Very Rev. Dr. George Baird, *Principal of the University* 501

Statement respecting the claim to an official house, 501. Notes from the records of the Town-council, 502. Right of certain Professors to have houses, 502. Date when the *Regents* and most of the students lived in the Colleges, 502. Sum given to Professor of Divinity in name of house-rent, 502.

Dr. Davidson, M.D. 502

Graduate, and Fellow of the College of Physicians, 502. Places where he attended Medical classes, 503. His views on Preliminary Education, 503. Advantage of a knowledge of Greek, 503. Mathematics and Natural Philosophy, 504. Borelli, 504. Moral Philosophy, 504. Examinations—inefficiency of mere lectures without them, 504. In English—Theses—Grinders, 505. Outlines of Lectures, 505. Theory of Medicine, 506. Pathology, 506. Therapeutics, 506. Clinical Medicine, 506. Practice of Physic, 507. Dr. Gregory, 507. Anatomy and Surgery, 507. Practical Anatomy, 508. Chemistry, 508. Botany, 508. Natural History, 508. Effect of the change on the number of students, 508. Medical Jurisprudence, 508. Influence of proposed Changes on Number of Graduates, 509. Sketch of a proper course of Medical Study, 509. Duration of course, 510. Logic, 510. Private Lectures, 510. Occasional recommendation of practices which betray a complete ignorance of Mechanical Philosophy—Emphysema, 510. Acquaintance with Physical Science, and advantages of a due proportion of general knowledge, 510. Acknowledgment by the Commissioners, 510.

George Dunbar, Esq., *Professor of Greek* (Further Examination) 510

Elementary teaching of Greek—Parochial Schools, 510. Drawbacks and obstacles to the attainment of the elementary parts of the language, 511. Pupils from the High School, 511. Numbers in the three classes, and proportion of those educated in Edinburgh, 511. Two years the general period of attendance, 511. One Session qualifies for Divinity Hall, 511. Writers to the Signet, 511. From three to five years' attendance by some students, 511. Case in which an elementary class in the University might become unnecessary, 512. Advanced age of pupils in the Junior class, 512. Superiority of English boys in Greek, 512. Interference of hours of attendance with some of the Latin classes, 513. Eminence of

Defective state of the Catalogue, 517. Letter containing particular information respecting the Divinity Hall Library of Glasgow, 517—519; and statement of the amount of money collected for it, 519.

The Rev. GEORGE HAMILTON, Kirkcudbright 520

Theological Library, Edinburgh, 520.

The Rev. THOMAS BROWN, Minister of St. John's Church, Glasgow 520

Theological Library, Edinburgh, 520. Dr. Hunter, 520, 521. Glasgow Library, 521.

The Rev. ANDREW BULLOCK, Tulliallan 521

Complaints of students respecting the Theological Library, Edinburgh, 521. Letter from Dr. Ritchie, 522. Appointment of curators from a *leet* chosen by the students, 522. Cause of their ceasing to act, 523. General management of the Library, 523. System at Glasgow, 524. Manner in which the books were given out to each *civis*, 524. Salary of Librarian, 524. Suggestions as to the administration of the Library, 524. Compilation of a Catalogue in the Divinity Hall Library, 524. Evasion of attendance on previous classes, by means of tickets, by three individuals, afterwards admitted into the Divinity Hall, 525. Discovery of non-attendance by calling a Catalogue, 525. Classes in which it was not the practice to call a catalogue, 526. Degree of M. A. obtained under false representations, at Aberdeen College, 526.

COLLEGE LIBRARY—

Paper by Dr. ALEXANDER BRUNTON, *Joint Librarian*, containing Observations on the "Suggestions" of Mr. Haig 526

Paper by Dr. ANDREW DUNCAN, Junior, *Librarian*, containing Remarks on the same "Suggestions." 527

Sir JAMES M'GRIGOR, *Director General of the Army Medical Department* 528

Observations on the course of education in Edinburgh required for a medical degree, 528. Advantage to the public service of an extensive education previously to commencing the study of Medicine, 528. Fitness of the course actually pursued at Edinburgh to qualify for service in the army, 528. Various ranks of medical officers of the army, 528. Requisites for the superior classes, 528. Requisites by the Army Regulations, 528. Degree of M. A. necessary at Aberdeen for the degree of M. D., 528. Previous knowledge that should be required at Edinburgh, 528. Competency and extensive knowledge of Edinburgh graduates, 528. Preliminary examination previous to receiving the degree of Doctor in Medicine, 528. Diploma, and certificates required from candidates for His Majesty's commission of their attendance on the branches of knowledge enumerated, 528. Examination of every medical officer on coming from half-pay to full-pay, and of every officer before obtaining promotion, 528, 529. Opinion on the state and course of education at Edinburgh and Glasgow, 529. Clinical Practice, 529. Institution of a class of Military Surgery at Edinburgh, 529, 530. Practical Anatomy, 530. Excellence of the plan of teaching Chemistry, at Dublin, 530. Separation of Surgery from Anatomy at Edinburgh, 530. Course of Medical Lectures in London, Schools of Medicine attached to Hospitals, and other schools, 530. Professor of Surgery should be a practical surgeon, 530. As to requiring from every one graduating as Doctor of Medicine a previous degree of M. A., or an equivalent examination, 530. Degree of M. A., why more indispensable at Aberdeen, and mode of accomplishing the University education, and that for Medicine, in six years, 530. A competent knowledge of classical literature, Greek and Latin, to be required in graduates in Medicine, 530. Knowledge of Greek and Latin ascertained in examinations at the Army Medical Board, 531. Effect of demanding a higher scale of qualifications, 531. Should Diploma of Surgery be given by the University of Edinburgh to those who do not take degrees in Medicine? 531. Opinion on the regulations of the Royal College of Surgeons of Edinburgh, and on the course of study to obtain their diploma, 531. Impropriety of the same Professor at Glasgow teaching both the Theory and the Practice of Physic, 531.

WILLIAM BURNETT, M.D., *Medical Commissioner of the Navy* 531

Course of Medical Study in the University of Edinburgh, with reference to the Navy—Additional year to the Curriculum, in what case abstracted, 531, 532. Efficiency and preference of Edinburgh graduates, 531. Difference between the University course and that required by the Navy, 533. Deficiency in Practical Anatomy, 533, 534. Importance of Clinical Medicine and Surgery, 534. Haslar Hospital, 534. Number of students that could attend with advantage, 534. Separate Professorship of Surgery, taught by a Practical Surgeon, 534. Military Surgery Class at Edinburgh, 534. Additions to the Curriculum, 534. Examinations in English, 534. Preliminary education, 534. Number of Medical Practitioners in the Navy educated in Scotch Universities, 534. Effect of the University of Edinburgh giving diplomas in Surgery at the same time that they raised the qualification necessary for taking a degree in Medicine, 535. Observations on the system pursued at other Universities, 535. Former and present practice with respect to diploma of Physician at Glasgow, 535. Capitals from which diplomas are all acknowledged as competent degrees, 535. Separation of the Theory from the Practice of Medicine at Glasgow, 535. Medical Jurisprudence—Fever in the Pyramus, 535. Suggested improvements in the Medical education in the Scotch Universities as connected with the Navy, 535.

University of Edinburgh.

APPENDIX (A.)—Regulations of the Army Medical Board, sanctioned by his late Royal Highness the Duke of York, on the Qualifications of Medical Officers for the Army—Hospital Assistant, 533. Assistant Surgeons and Surgeons, 534. Physician and Surgeon to the Forces, 534.

(B.)—Attestation of fitness for employment, 534.

(C.)—Qualifications and course of Education required by the Navy for Assistant Surgeons, 535.

(D.)—Statement of the Number of Assistant Surgeons admitted into the Naval Service between 5th October 1822 and 31st May 1827, with the Names of the Places at which they received their Professional Education; and the Numbers of each Rate or Degree of Qualification, 535.

ROBERT JAMESON, Esq., *Regius Professor of Natural History* (Further Examination) . 536

Case of Captain Brown, 536, *et seq. Drawing-room*, with superintendent, 537. Purchase of M. Dufresne's collection, 538. Students that have the use of the Museum, 540. Admission money, 540. Persons not allowed to make drawings without permission of the keeper, 541. Extent of the collection private property, 541. Right of property in Professors, 541. Town-council's Museum, 541. Portions considered King's property, 541. Catalogue, 541, 542. Exchequer discussion, 541, 542. Interpretation of the words "Royal Museum," 542, 543. Professors' private property in the Museum, 542. Huttonian Collection, 543, 544.

The Rev. ROBERT GORDON, D.D., *one of the Ministers of the City of Edinburgh* . . . 544

Shortness of the Theological Course at Aberdeen, 544. Prolongation of Session of Divinity in Aberdeen whether an inconvenience to the students in general, 544. Comparative inferiority in worldly circumstances of students in Divinity Hall, Aberdeen, to the same class of students in Edinburgh, 544, *note*. Advantage to the interests of the church from an extension of the Session, 545. Question as to the fitness of those who had schools to conduct them in a manner to promote the interests of education, 545. Practice of the Divinity Professor in Marischal College, 545. Impracticability of securing the same advantages from a Session of three months as in one of six, 545. Carelessness in the manner of performing exercises in the Divinity Hall, 545. Exegesis, 545. Resorting to other employments of a number of those who had obtained licences as preachers, 545, 546. Exacting of fees from students of Divinity, 546. Examinations, 546. Proposed complete course of attendance at the Divinity Hall, 546. Professors of Dogmatic Theology and of Biblical Criticism, 546. Duration of Session, 546. As to expediency of the system of double instruction, in King's College and Marischal College, 546. Proposed plan of one Divinity Hall with two Professors, having their departments distinctly defined, 546. Lectured on alternate days, 546. Objection to each lecturing every day, 546. Reason for a union of the colleges, or their entire separation, 546. Cause of the low state of Theological Literature in Scotland, and mode of improving the Theological School, 546. Duration and management of the Hebrew Class, 547. Examinations essential, 547. Effect of extension of Session on the students of Philosophy at King's College and Marischal College, 547.

The Rev. JAMES GORDON. 547

Studied Philosophy at Marischal College, Aberdeen, 547. Length of Session—Pecuniary circumstances of students—Average expense of living—Theological Session too short, 547. Benefits of a prolongation of Session—Partial Sessions—Public Library—Advantages of regular attendance—Comparative pecuniary circumstances of Divinity students at St. Andrews, Aberdeen, and at Edinburgh—Choice of University accounted for—Bursaries—Cause of Mr. Gordon's being drawn to Aberdeen—Writing notes dictated by Professors, 548. Examinations—Professor James Beattie—Attention now paid to Greek and Latin, 548.

The Rev. PATRICK CLASON, *Minister of St. Cuthbert's Chapel* 549

Length of Session at Glasgow—Irish and Scotch students—Average expense of living—Students from the West Highlands—Regular attendance, advantage to young men in enforcing it, 549; and to the interests of the church, 550. Dr. Finlay's opinion of irregular attendance, 550. Effects of the facility in obtaining Licences, 550. Difficulty of irregular students in obtaining books to prosecute their Theological studies, 550. Effects of irregular attendance in the prosecution of Classical Literature, and of Hebrew, 550. Enforcing attendance at College Chapel, Glasgow, 550. Officiating ministers of the chapel, 550. Method of attaining the edification of the students, 551. Academic tone of the discourses, 551. Exhortation of Mr. Jardine to preach the Gospel, 551. Influence on the mind of the Preacher of the Discourses being reported in the notes of the students of Logic, 551. Additions—Theological Tuition—Endowment of a chair of Biblical Criticism in each of the Scottish Universities—Church attendance, 551.

DOUGLAS CHEAPE, Esq., *Advocate, Professor of Civil Law* 551

Course intended to be pursued in conducting the business of the class, 551, 552. Institutes, Pandects, 552. Short Summer Course, 552. Objections to make the second course a continuation of the first, 552. Designed course of Lectures, 553. History of the Roman Law, 553. Modification of the general principles of Civil Law in the different states of Europe, 553. Class examinations at separate hour, 554, 555. Two hours at which Civil Law was formerly taught, 554. Examinations in English optional, 554. Text-book, 554, 555. Increase of class since the regulation of the Writers to the Signet came into force, 554. Scotch Law, 555. Conveyancing Class—Mr. Napier, 555. Effects of a discontinuance of Examinations in Latin, 555. Heineccius, 555. Prizes, Theses, 556. Attendance for one year, 556. Changes in the order of the Institutes, Intestate Succession preceding Testamentary Succession, 556.

DAVID BREWSTER, Esq., LL.D. 556

Improvements in teaching the class of Natural Philosophy and Chemistry, 556. Combination of Examinations and Exercises, 556. Separation of the Mathematical part from the Popular and Experimental part, 556. As to dispensing with Mathematics in those intending to take the degree of M.A., 557. State of Mathematical knowledge among the clergy of Scotland, 557. Chemistry Class—Establishment of a regular Laboratory, 557. Paris Apothecaries, 557. Division of the Natural History Class—No class for Mineralogy in the University, 557. Extension of course, 557. Professors of Mineralogy and Geology at Cambridge, 558. Practice in foreign Universities—Berzelius, 558. State of the Museum, 558. Huttonian Collection, 558. Dr. Black, 559. Difficulty in obtaining drawings from specimens in the Museum, 559. Dr. M'Culloch—Fossil Elk, 559. Freedom of access to other Museums, 549. Regulations

27
University of Edinburgh.

Page

at the British Museum—Separate room, 559, 560. Transmission of specimens to a distance, 560. Library, 560. Deposit—Enforcing return of books, 560. Allowing students to read in the Library, 560. Borrowing books, 560. Class of Mathematics Applied, 560, 561. Extension of Mathematics in foreign Universities, and high proficiency of the young men of the Polytechnic School, 561.

ANDREW COVENTRY, Esq., M.D., *Professor of Agriculture* 561

Proposed improvement in the Medical branch of the College, 561. Nature and Divisions of the Course of Agriculture, 561. Number of Lectures, 561. Lecturing alternate Winters, 561. Structure and Economy of Plants, 562. Decrease in the number of students, 562. Division of course into two branches—Management of Land—Treatment of Live Stock, 562. Description of persons attending class, 562. No fee from Divinity students, 562. Making class imperative, 562. Cause of the decrease in the number of Practical Farmers, 562. Mode of proceeding in treating of soils, 562, 563. Advantages from an alteration of the conditions in leases, 563.

AGLIANBY ROSS CARSON, Esq., LL.D., *Rector of the High School of Edinburgh* . . 563

System of education—Extent of Greek knowledge possessed by students when they leave the High School—Books read—Number of tuition hours, 563. Facility of obtaining a greater knowledge of Greek at the High School, if required, 563. Teaching the Elements of Greek at the University unnecessary for the young men educated at the High School, 563. Effect of abolition of Elementary Greek Class, 563. Parochial Schoolmasters, 563. Fitness of the young men when they leave the High School to attend College, 564. Disadvantage of taking them from a course of ten months to one of five or six, 564. Improvement if Language Classes in the University were to meet nine or ten months in the year, 564. Gaining places, 564. Attendance on one of the Masters of the High School of young men from the country, who have not learned Greek, 564. Effects of a prolongation of Session at the College, 565. Expense of living of a Divinity student, 565. Regular attendance, 565. Evil of a greater number attending Divinity Hall than can be provided for by the Church, 565. Use of the same elementary books for the Classics in all the Universities, 565. Moor's Grammar, 565. Improvement of late years in the knowledge of Greek, at the High School, and proportion of boys who learn Greek, 565. Period of attendance, 565, 566. Leaving the High School without attending the Rector's Class, 566.

DANIEL ELLIS, Esq., F.R.S.E. 566

Museum of Natural History—Reduction in the price of admission—Facilities of access in foreign Museums, 566, 567—Refusal of permission to draw—Practice at the Jardin des Plantes, 566. Prevention of injury to specimens by one or two assistants, 566. Mode of exciting interest in the visiters, 566. The Vatican, 567. Drawing without injury to specimens—Florence, 567. Injury to Minerals from handling, 567. Changes in the Medical Classes, 567. Separate Professorship of Surgery, 567. Clinical Medicine, 567. Crowding round the Lecturer, 567. Utility of additional wards, 567. Morbid Anatomy, 567. Rotation of Lecturers—its disadvantages, 568. On the continent Clinical Professor's a distinct Chair, 568. Number of students that might accompany a Professor, under due regulation, 568. Ordering the course of study, 568. Conversational mode of instruction, 568. Introduction of Tutors—Grinders, 568. Examinations optional, 568. Philosophy Classes, 568, 569. Mathematics, 569. Elementary instruction, 569. Class of Zoology, 569. Consequences of the want of examinations, and of students running from lecture to lecture, 569. Supplementary class of Practical Chemistry, 569. The course of Chemistry in the University the best in Europe, 569. Paris Apothecaries excellent Chemists, 569. Division of Natural History Class, 569. Winter Course of Zoology, Comparative Anatomy, and Mineralogy, 569. Botany, 569. Summer Course, 570. Instruction obtained by students, beyond the Curriculum, 570. Private Lecturers, 570. Dr. Thomson—Drawings of diseased organs, 570. *Family* succession in Chairs, 570. Necessity of teaching Clinical Medicine in connexion with an Hospital, 570. Examinations to ascertain proficiency, 570. Examinations for degrees in Arts or in Medicine, 570. Annual examinations, as at Paris, 570. Practice at Oxford, 570, 571. Conducting examinations in English, 571. Character of the Keeper of the Museum to what extent involved in the merit of publications embracing an account of articles in the Museum, 571. Professor Jameson—Museum almost entirely his sole creation, 571.

The Rev. JAMES MARSHALL 571

Expense of a student living at St. Andrews, 571. Amount of class-fees, 571. No serious hardship to students from a Session of six months and a half, 572. Comparative expense of living at St. Andrews and at Edinburgh, 572. Consequence of lengthening the Session, 572. Want of sufficient time in the Mathematical and Natural Philosophy Classes, 572. Library at St. Andrews, 572. Deposits—Books *veto'd*—Reading in the Library, 572. Incentives from examinations, 572. Want of the same at Edinburgh, 573. Enforcing attendance at Divinity Hall, St. Andrews, 573. Comparative circumstances of students at Edinburgh from Parochial Schools and the same class at St. Andrews, 573. Divinity students at St. Andrews—Bursaries, 573, 572. Table-system, 573. Students from the Highlands, 573. Additional Remarks—Students reading in the Library—Enforcing regular attendance for two or three Sessions on Divinity students, 573. Effects on the Church of a too wide entrance, 574. Comparative circumstances of students, 574.

MACVEY NAPIER, Esq., *Professor of Conveyancing.* (Further Examination.) . . 574

College Library—I. General View of the Library—Partiality in the purchase of Medical books, 574. II. Office of Librarian, 575. Office not incompatible with the duties of a Professorship, 575. Annual or periodical inspection, 575. Admission of students to a participation in the management of the Library, 576. Committee of students, 576. Ascertaining and supplying the want of an adequate number of copies of books much in demand, 576. *Album* for entering by students books much in request, 576. Recovering books borrowed by Professors, 576. III. Sub-Librarians, 576. IV. Catalogues, 557. Catalogue Raisonné, 577. Security by Principal Librarian, 577. V. Rules and Regulations, 577. Privilege of Professors, and number of volumes allowed to a Professor, 578. Enforcing return of books, 578. Fixed period for works being out, 578. Privilege of the *College of Surgeons*, 578. *Civis*, 578, 579. Contrast between the University and the College of Surgeons, 578. Surgeons' apprentices, 579. Allowing students to read in the Library, 579. Abolition of the system of Deposits, 580, 582. Wickets, 580. New arrangements, 580. Stone Hall, 580. Advantages of granting indulgence to students, 580. Effect of the deposit system under a great command of money, 581. Receipt-book—Index, 581. Injury to books by students, 581. Preventives against defacing books, 581. Giving in a list, the day before, of books wanted by students, 581. Check on the Librarian when a book is out, 582. Utility of Class-libraries, 582.

Page

University of Edinburgh.

The Rev. JOHN WILLIAMS, *Rector of the New Academy* 582

Enumeration of Greek Classes at the University, and class most eligible for a scholar to attend upon leaving the Academy, 582. Date when the Academy opened, and numbers in the Sixth and Seventh Class, 583. Rector's Class, 583. Effect of the bye-law of the Writers to the Signet, 583. Civil History Class, and joining the University to secure a bursary, 583. Anxiety of parents for the form of a University education, 583. Age of boys at the conclusion of the Fifth Class, 583. Facility of affording in all the well-conducted Academies the same preparatory instruction in Greek, 583. Two only out of 519 not to be taught Greek, 583. Tutors, deficiency of such persons capable of teaching Greek successfully, 583. Proportion of those who have received previous education in the Parochial Schools, 583. Low state of the sons of gentlemen, 583. Public and private teaching, 583. Comparative advancement in Latin of pupils leaving the Academy, and degree of commensurate benefit to be derived by them at the University, 583, 584. Classes advised to be attended in the University, by young men leaving the Academy, 584. Desirableness of raising the tone of the classes at the University, 584.

The Rev. THOMAS MURRAY, Edinburgh 584

Annual average expense of a student attending the Philosophical Classes, 584. Greater poverty of those from the northern parts, 584. Certificates of full attendance obtained after attending only three or four months, 584. Case of non-attendance, 584. Irregular attendance by what facilitated, 584. Divinity Hall students from all parts, 584. What term considered a regular Session by the students, 584, 585. Effects of an enforcement of regular attendance, 585. Advantage of an extension of Session, 585. Detriment from the long vacation, 585. Disadvantage of the want of examination in the Philosophical Classes, 585. Want of access to the Library, 585. Engrossing a greater amount of books by a greater command of money, 585. Deposits and long detention of books, 585. Complaints with reference to the books in the Divinity Hall Library, 585.

The Rev. JOHN RAMSAY, *Minister of the Parish of Ormiston* 586

Some time Librarian of the College Library and of Divinity Hall Library, 586. Pecuniary circumstances of students from the Highlands, 586. Annual average expense of students exclusive of class-fees, 586. Possible effect of an extension of Session, 586. Hardship of enforcing regular attendance at the Divinity Hall, 586. Mode of supplying the want of lectures and books, 586. Injury from partial attendance, 586, 587. Situations held by partial attenders, 587. Inability to pay the fee at Divinity Hall, 587. No cases of individuals, capable of distinguishing themselves, being stopped in their career by want of funds, 587. Dr. Murray and Mr. Leyden, 587. Effects on the interests of the Church by abridging the facilities for entering it, 587. Manner of conducting the Divinity Hall Library, the Librarians by whom appointed, and their salaries how paid, 587, 588. College Library, 588. Deposit, Books lost, 588. Privilege of Professors, 588. College of Surgeons, 588. Complaints of students, 588. Professorial Librarian, 588. Accounts of expenditure for books never submitted to the students, 589.

Mr. WILLIAM ROXBURGH 589

Average annual expense of a student in humble circumstances at Glasgow, 589. Expense at Edinburgh, 589. Students feel the length of Session a hardship, 589. Certificates of regular attendance, after a Session of five months, 589. State of Divinity Hall Library at Glasgow and at Edinburgh, 589.

The Rev. JOHN WILLIAMS, *Rector of the New Academy.* (Further Examination.) . . . 589

Abolition of Elementary Class at the University, and mode of carrying it into effect, 589. Requisites for admission, with examinations under an independent officer, 589. Professor to prescribe a line of reading, 589. Public examinations by sworn officers at the termination of a pupil's Academical studies, 590. Annual examinations for candidates for degrees, 590. Three years' attendance, with one efficient degree, 590. Proposed Bachelor's degree at the end of the third year, and a Master's at the end of the fourth, 590. Course marked out for possible adoption some future day by the Greek Professor, 590. Indulgence during the last year, 590. Practice of Tutors at Oxford, 590. Coupling private reading under a Tutor, with Professorial teaching, 590. Proposed arrangement for Tutors, 590. Professorial duty at the English Universities entirely a sinecure, 591. Prolongation of Session to eight months, 591. Public examinations, under sworn officers, as at Oxford, 591. Grades in the examinations, 591. Account of the Oxford Examiners, 591. Proposed intermediate schools to be scattered in the different burgh towns, 591. Extent of scholarship of different students entering the Academy, 591. Arrangement for Philosophy and Mathematics, 591. Logic, 592. Greek and Latin, 592. Moral Philosophy, 592. Chemistry, 592. Prize Essays, for every year, 592. No circumstances connected with Scotland to prevent the inhabitants from reaching the same eminence as Classical Scholars, attained by them two or three centuries ago, 592. Facilities of the Scotch to become finished scholars, 592. Eminence of the Germans as scholars, 592. Effects of distinction, without reward, on the youthful mind, and fact in illustration, 592. Mr. Lockhart, Sir William Hamilton, 592. Beneficial influence of the new statute for examinations for degrees at Oxford, passed in 1807, 592. Enlarging powers of Classical study, 592, 593. Grammar used at the New Academy, 593. Desideratum to see Greek Literature flourish, 593. Importance and utility of making Latin verses, 593.

The Rev. ROBERT LORIMER, LL.D., *one of the Ministers of Haddington* 593

Extension of Session, 593. Comparative state of students from the Lowlands and Highlands, 593. Certificates, without regular attendance, 594. Tickets for Philosophy Classes, and then not attending, 594. Mode of securing regular attendance, 594. Length of course recommended for students of Divinity, 594. Effect of the new Regulation on those whom it is desirable to see in the Church, 594. Excess of students above the wants of the Church, 594. Institution of a Professorship of Biblical Criticism, 594. Geography of the East, Antiquities of the Hebrews, &c., 594. Regular examinations, with Essays, 594. Insufficiency of five hours of *mere Lectures*, 594.

The Rev. JOHN LEE, D.D., *Minister of Lady Yester's Church* 595

Where educated, 595. State of the Latin and Greek Classes at the time when he studied, 595. Disadvantages from the want of examinations and imperative exercises in the Philosophical classes, 595. Professor Stewart, 595. Dr. Finlayson—Examinations at a separate hour, 595. Greater frequency of meeting than one hour a-day, in the Philosophy classes, formerly, 595. Mr. Macky's classes, 595. Logic Class, 596. Period of discontinuance of examinations in

29
University of Edinburgh.

Page

Moral Philosophy Class, 596. No catalogues called, Censors in Greek and Latin classes to note absentees, 596. Probable mode in which the shortening of the Session was introduced, 596. Former correspondence of length of Session with that at the other Universities, its duration at the Reformation, and for a century afterwards, 597. School of Medicine in 1741, 597. Sum demanded by the Regents for a Session of the College, 597. Sessions of St. Salvator's College, St. Andrews, from 1689 to 1740, 597. Duration of Session at St. Mary's, 597. Comparative circumstances of students at present and formerly, 597. Bursaries—their disappearance accounted for, 597. Misapplication of a bursary in the Presbytery of St. Andrews, 597. Number of Bursaries of Theology at the commencement of the last century, 598. Beneficial effects of an extension of the Session, 598. Theological Professor at St. Andrews, and taught Logic and Moral Philosophy at Aberdeen, 598. Comparative circumstances of students at Aberdeen and Edinburgh, 598. Expense of students during the Session, 598. Case of the young man who lived upon less at Edinburgh than students at either of the other Colleges, 599; of the Border shepherd, and of a ploughman, 599. Objections to the Bursary system, 600. Practice at St. Andrews and at Aberdeen, 600. Professors furnished by Scotland to foreign Universities before the Reformation, 600. Exchequer Bursaries at St. Andrews, 601. Appropriation of Bursary Foundations on comparative trial, at the conclusion of studies, to be enjoyed for a term of years, 601. Tutors, 601. Expenses of Dr. Lee's own education—Class-fees, 601. Exaction of fees by Professor of Divinity, 601. Regular attendants, 601. Facilities of education in Scotland at the commencement of the last century—Latin—Greek not to be taught but at the University, 601. Number of Schoolmasters reported to the Parliamentary Visitation, in 1690, capable of teaching Latin, 601, and qualified to teach Greek, 602. Eminent men of the Church of Scotland who have been taught at the Parish Schools, 602. Decline in Parish Schools when Dr. Lee was a boy, and practice of the farmers to employ a person who had been at College, to teach Latin, 602. Lower branches of education not neglected by Parish Schoolmasters who teach Latin and Greek, 602. Three shillings a-quarter paid for Latin, 602. Dr. Leyden, 603. Possibility and utility of dispensing with the Elementary Classes in the learned languages in the University of Edinburgh, 603. Preference for an examination in one of the Greek Classics to one on the Gospels, 603. Facility of establishing in the provincial towns, Schools for obtaining a due portion of elementary instruction, 603. View of the Reformers in 1560, 603. Prohibition of the teaching of Greek, 603. Amalgamation of the two Colleges, Aberdeen, 603. Union of Classes in the Faculty of Arts, 603. Providing Tutors, 604. Theological Education—St. Andrews—Additional Classes, 604. Biblical Criticism, 604. Dr. Marsh's arrangement of Theological study, 604. Elementary Class on the Evidences of Christianity, 604. Order of Theological Education in the Dutch Universities, 605; in Germany, 605. Necessity of a prescribed order of study, with a detail of Dr. Lee's scheme, 605. Method in which Ecclesiastical History ought to be taught, 607. Addition to evidence—Advantages to be gained by a study of Ecclesiastical History, and detail of the manner in which it should be pursued, 608. Arrangement of a Theological Course, 612. Advantage of a union of the two Colleges of St. Andrews, 612.

Robert Jameson, Esq., *Regius Professor of Natural History* 613

Right of property in the Museum, 613. French collection—Loan from the Banks, 613. General Reid's fund, 613. Sir Henry Jardine, 613. Exchequer allowance, 614. Various ways in which donations are made, 614. Property in articles coming from a Public Body, 614. Collection left by the former Professor of Natural History, 614. Huttonian Collection, 614. Report-book, 614, 616. Thompsonian Collection, 615. Skull of Asiatic elephant, 615. Exchequer Catalogue, 615. Lowering the admission-money, 616. Hunterian Museum, Glasgow, 616. University Museum an Academical Collection, 616. Gratis annual tickets, 616. Statement of the Income and Expenditure of the Natural History Museum, in the University of Edinburgh, 617.

Sir George S. Mackenzie of Coul, Baronet 618

History of his donation to the College Museum, 618. Motive of his visit to Iceland, 618. Von Buch, 618. Footing on which the Specimens were sent to the Museum, 619. Obstructions to admission, 618, 619. Complaints by scientific men, 619. Injury to Specimens from handling, 619. Publication of accounts of Specimens, 619. Huttonian Collection, 619, 621. Extract from Mr. Playfair's Minute-book, 619. Property belonging to the Royal Society, 620. Advantages of a Central Museum, 621. General views for affording access to, and use of the Museum, 621. Appointment of an Assistant-keeper, 622. Interference of Town-council, 622.

Dr. Samuel Hibbert, F.R.S.E. 622

Difficulty of access to the Museum—Detailed opinion on the subject of the Museum, 622. Cause of withholding contributions, and of his forming a Collection of his own, 623. Wernerian Society not allowed free access to objects deposited in the Museum, 623. Drawing from Specimens, 624. Privileges in other Museums, and precautions in showing to persons of science what they wish to study, 624.

Robert Kay Greville, Esq., LL.D., F.L.S., F.R.S.E. 624

Letter to Mr. Horner regarding the Museum, 624. Information relative to the system of access, 624, 625. Exertions of Professor Jameson to improve the Museum, 625. Condition for obtaining an annual guinea ticket, 625. Annual tickets at will procured by ladies, 625. Distribution in the right of property, 625. Collection of the Wernerian Society deposited there, 625. Collections that passed the Custom-House duty-free, 625. Effect of donations being unacknowledged, 625. Practice of Foreign Museums and of the British Museum, 625. Withholding contributions on the ground of mismanagement, 625. Herbarium of the University, 625. Dr. Graham, 625. Application to the magistrates for a grant of salary to a Keeper of Herbarium, 625. Offer by Dr. Wallich of Botanical Collection, 626. Female officer at the *Jardin des Plantes*, 626. Grant to the Botanic Garden, 626. Want of increase of funds to the Museum, 626. Fee paid by Mr. Greville for admission, 626. Admission only by favour of the keeper, 626. Dr. Brewster, 626. Proposed alterations in the present mode of management, 626. Facility of admission to the Botanic Garden, 627. Access in case of intended publication how regulated, 627. Effects of lowering price to 1*s.*, and mode in that case of arranging admission, 627.

Dr. Gillies, late of Mendoza, in South America 627

Contributions to the College Museum, 627. Causes of his subsequently withholding them, 628. *Chlamyphorus truncatus* presented to the Zoological Society of London, 628. Law of the Wernerian Society, obliging the depositing of objects of Natural History in University Museum, 628. Consequences of inaccessibility on other scientific men, 628. Rules for admis-

Page

University of Edinburgh.

sion, 628. Complaints of the want of public acknowledgment of Donations, 628. Difficulty of establishing the right of property in the articles of the Museum, in the event of Professor Jameson's death, 629. Practice and management of the Zoological Society of London, 629. Tribute to the exertions of Professor Jameson, 629. Proposed arrangements to ensure the prosperity of the Museum, and the satisfaction of scientific men and the public, 629.

Mr. Henry Hulme Cheek, Gardner's Crescent, Edinburgh 629

Petition respecting College Museum, 629. Appointment of an independent Under-keeper, his duties, 629; and salary, 630. Giving out Specimens in a separate room to scientific men, under superintendence, 630. Regulations and terms of admission at other Museums, 630. Amount of admission money to the Zoological Gardens, London, in 1828-9, 630. Effect of the reduction of entrance-money to 1*s.*, 630. Hinderance in the examination of specimens in the case of large numbers, 630. Private property of Professor Jameson, 630. Ticket to the Professor's class, and refusal of admission of Mr. Cheek to the apartments containing the skeleton of the Dugong, 630, 631. Gratis tickets granted by Professor Jameson, 631. Non-admission of Members of the Wernerian Society, 631. Edinburgh Journal of Science, 629, 631. Addition, on revising evidence, 631. Certificate of the Amount of Sums received at the Hunterian Museum, Glasgow, when the admission ticket was at 2*s.* and at 1*s.*, 632.

Mr. William Ainsworth, M.R.C.S.E. 632

A Conductor of the Edinburgh Journal of Science, 632. College Museum—Refusal, when a student of Natural History, to see some skulls, 632. Facilities in Paris, 632.

Robert Jameson, Esq., *Regius Professor of Natural History, and Keeper of the Museum in the University of Edinburgh* 632

Mode of pointing out subjects of the Museum not private property, 632. All property within the walls, as long as it is exhibited there, is public property, 632. Mode of ascertaining what is private property, 633. Specimens coming to the College duty-free, in what case private property, 633. Assistant-keeper dispensed with from want of funds, 633. Explanations of entries in the Exchequer Returns, 633. Property in articles deposited by the Wernerian Society, 633. Exchequer Record, 634. Catalogues, 634. Acknowledgment of donations, 634. Sir George Mackenzie's Collection, 634. Mr. Cheek, 634. Articles sent by Sir Stamford Raffles public property, 634. Extent of Professor's private property, 634, 636. Disposal of money collected at the door, 634. Skins prepared from the public funds, in what case become public property, 635. What portion considered as Professor's property, 635. Principle of application to the Town-council for permission to open the Museum to the public, 635. Nature of the meeting of members authorizing the admission fee, 635. Application by Town-council for a cutter to bring home Dufresne's collection, 635. Ground for this collection being considered the property of the Professors, 635, 636; and for opening the Museum, 635. Nature of Professor Jameson's commission, 635. Privilege of allowing private property to be deposited in the Museum, 636. Professors' right of property in General Reid's fund, and power to withdraw the French Collection, 636. State and dissolution of the Natural History Society, 636. Parts of the Museum to which access is refused and permitted, 636. Effect of the appointment of an Assistant, 636. Want of accommodation; and damage done to a collection sent by Lord Melville, 636, 637. Principle on which demand for admission was fixed at 2*s.* 6*d.*, 637. Paucity of those refusing to pay the entrance-money, 637. Fee to the Hunterian Museum, 637. Sum required to meet the necessary expenses, 637. Objections to allowing access to Medical students, 637. Want of apartments that might be fitted up for accommodation of the Museum, 637.

APPENDIX.

Appendix.

List of the Returns ordered to be made to the Royal Commissioners by all the Universities and Colleges of Scotland . . . . . [1

Alphabetical Index to the subjects of Returns ordered to be made by all the Universities and Colleges of Scotland, having the Numbers of the Requisitions severally placed opposite . . . . . 4]

ORDERS AND RETURNS.

Order I.—Copies of all the Charters of Erection or Foundation of the College of Edinburgh, whether granted by the Crown or by Bishops, by Corporations or by private individuals.

Return by the Senatus Academicus . . . . . [5

Return by the Town-Council.

(1.) *Return by the Senatus Academicus* . . . . 50]
(2.) *Return by the Town-Council* . . . . ib.

University of Edinburgh.] Appendix.

Page

(3.) *Return by the Secretary of the University of Edinburgh* . . . . [50

(4.) Grant by Queen Anne, 13th September 1708, out of the Post-Office Revenue of Scotland, of 210*l.* per annum, in augmentation of the salaries of four Professors of Philosophy, one Professor of Mathematics, one Professor of Humanity, and one Professor of Hebrew ib.

(5.) *Transmitted by the Principal of College of Edinburgh.*

Memorial of the Members of the Theological Faculty . . . . . [51

ORDER VIII.—A Return of the Fees payable, either by Students on attending classes, or by Candidates for Graduation, at their examination or on receiving Degrees; whether to Professors or to the Libraries, or to any of the Institutions or Funds of the College; of the Authority by which the same are fixed; and whether under any, and what control.

Return by the Senatus Academicus.

(1.) Matriculation Fee . . . . . ib.
Fees paid by Students of Divinity . . . . . 52]
Fees for Degrees . . . . . ib.
Tables illustrative of Returns VII. and VIII. . . . . ib.
(2.) Papers relative to the Fees payable to the different Professors, occasioned by certain Demands and Proposals of the Patrons concerning those Fees . . . [53
Narrative . . . . . ib.
(1.) Copy of Letter from Carlyle Bell, Esq., Conjunct City Clerk, relative to Matriculation Fund and Small Fees collected by the Professors . . ib.
(2.) Answer by the Senatus Academicus to the Communication of the Honourable Patrons, of date the 21st October 1825, relative to the Small Fees collected by the Professors . . . . . ib.
(3.) Letter from Carlyle Bell, Esq., Conjunct City Clerk, accompanying Report of College Committee regarding Small Fees . . . . 54]
Report by College Committee of the Town Council on the Small Fees collected by the Professors . . . . . ib.
(4.) Answer of the Senatus Academicus to the Communication of the Honourable Patrons of the 5th May 1826 . . . . . [55
(5.) Report by the College Committee of the Town Council, relative to the Small Fees collected by the Professors . . . . . ib.
(6.) Answer by the Senatus Academicus to the Communication of the College Committee of the Town Council, of date 7th August 1826 . . ib.
(7.) Returns from Professors referred to in the Answer of the Senatus Academicus of 29th August, relative to Class Fees and Small Dues . . . 56]
(8.) Report by the College Committee of the Town Council relative to the Class Fees and Small Dues . . . . . 58]
(9.) Reply of the Senatus Academicus to the Communication of the Honourable Patrons, dated 5th December 1826 . . . . . [59
(10.) Copy Act of Council authorizing the Increase of the Professors' Class Fee . [61

Return by the Town-Council.

Report transmitted by the Town Council, with reference to No. 8 of Appendix of Returns by the University of Edinburgh, in regard to Class Fees . . . . . ib.
Letters to the Clerk, from Drs. Chalmers and M'Gill, in regard to Divinity Students paying Fees . . . . . [65

ORDER VIII.*—A Statement of the whole Expense which must be incurred by every Student in the Colleges of Edinburgh, passing through the Course of Study preparatory to the Degree of Master of Arts, including Class Fees, Price of Books, Library Money, Dues of Graduation, and all other necessary Charges.—(Ordered 27th October 1827.)

Return by the Senatus Academicus.

I. Return from the Professor of Humanity . . . . . ib.
II. Return from the Professor of Greek . . . . . 66]
III. Return from the Professor of Mathematics . . . . . ib.
IV. Return from the Professor of Logic . . . . . ib.
V. Return from the Professor of Rhetoric . . . . . ib.
VI. Return from the Professor of Moral Philosophy . . . . . [67
VII. Return from the Professor of Natural Philosophy . . . . . ib.
VIII. Return from the Dean of the Faculty of Arts . . . . . ib.

ORDER IX.—A full and specific Return of the whole Rentals, Funds, Revenues, and Estate of the College of Edinburgh during the last fifty years; distinguishing the several sources from which the same may be drawn, as well as all occasional payments during the same period.

Return by the Senatus Academicus.

(1.) Account of the College Funds . . . . . ib.
(2.) Extract from General Reid's Will, dated 19th April 1803 . . . . 68]
Extract from Codicil, dated 4th March 1806, to General Reid's Will . . . ib.
Copy of a Letter respecting General Reid's Funds, directed to the Principal of the University and College of Edinburgh . . . . . [69

Return by the Town-Council.

Inventory of Account-Books of the College Revenue, and Documents relative thereto, transmitted by the Town Council of Edinburgh, in Answer to the 9th and 10th Requisitions . . . . . ib

ORDER X.—A full and specific Return of the whole Expenditure of the College of Edinburgh, specifying in detail the mode in which their Revenue is employed, and the purposes and objects to which the annual Revenue or occasional Receipts have been, for the last fifty years, and are applied; and all the Persons or Office-bearers receiving regular or occasional Salaries, Payments, Gratuities, or Fees therefrom; specifying, separately, the Amount of the Public Burdens, Taxations, or Deductions, of whatever sort, borne by the Revenues of the said College.

Page

Return by the Senatus Academicus . . . . . 70]

Return by the Town-Council.

[(1.) General Statement, collecting the Sums embraced under the Detailed States, made out by the City Accountant, dated 10th October 1827, showing the situation of the Ground Annuals, Feu, and Teind Duties, in the year 1827, when compared with the year 1747 . [71

(2.) Statement, showing the Sums entered in the College Accompts, beyond the Ordinary Annual College Revenue. From Martinmas 1775, to 2d October 1826 . . . . 72]

List of the Mortifications to the College of Edinburgh, exhibiting the particulars of the Sums included in the City's Bond, dated the 18th March 1741,—the Bursaries founded prior to March 1741, still acted upon, but not included in that Bond,—and the Sums mortified for Bursars subsequent to 18th March 1741,—collected from the Returns respecting Mortifications, and the College Account Books from 1640 to 1825 . . [75

Representation by the Faculty of Arts to the Senatus Academicus, as to a Course of Preparatory Education for the Candidates for the Degree of M.D. . . . . 142]
The following Paper presented on the 18th of August 1829, and ordered to be printed . 144]
Documents, relating to Medical Degrees and Education, presented to the Commission . [147

ORDER XXXIV.—By whom are Candidates for Degrees examined, and what is the Form and Course of Examination? Are any of the Examinations for Degrees public, and do the same take place in Presence of the whole University? And if Examinations in public have been discontinued, at what Period were they so discontinued?

Return by the Senatus Academicus . . . . 148]

ORDER XXXV.—Are any Degrees conferred by the University of Edinburgh without the examination or attendance of the persons on whom such degrees are conferred? Is this the case, or has it been the case, within the last fifty years, in regard to graduation in the Faculty of Medicine; and, if there has been any alteration in this respect, when did the same take place.

Return by the Senatus Academicus . . . . ib.

ORDER XXXVI.—Are any of the Degrees conferred by the University of Edinburgh honorary degrees? and if so, in what Faculties?

Return by the Senatus Academicus . . . . [149

ORDER XXXVII.—A Return of all the Persons who have graduated at the University of Edinburgh, during the last fifty years; distinguishing the number obtaining degrees in the different Faculties, and in the Faculty of Medicine, specifying the number (if any) who have obtained Medical Degrees, during the same period, who had not attended any Classes in the University or were not personally examined at the time of graduation; the number who had carried on part of their medical education at other Universities; and also the number of Medical Graduates from the different parts of the United Kingdom, and those from Foreign Countries.

Return by the Senatus Academicus.

(1.) Return for the last fifty years of the Names of—1st, Graduates in the Faculty of Arts;—2nd, Graduates in the Faculty of Divinity;—3rd, Graduates in the Faculty of Laws—[Not printed by the Commssion] . . . . . ib.

Page

(2.) Return of the Medical Graduates at the University of Edinburgh during the last fifty years, distinguishing the Number from the different parts of the United Kingdom, from British Colonies and from Foreign Countries . . . . . [149
Second Return of Medical Graduates during the last six years, distinguishing those whose Medical Education had been partly or wholly carried on at other Universities . . 150]
Number of Graduates in Divinity, Law, and Medicine . . . . . [151

ORDER XXXVIII.—What offices or situations, exclusive of Church Livings, are in the gift or appointment of the Senatus Academicus, or of the Principal, or any particular professors, *ex officio?* And what are the duties, perquisites, and emoluments of the same?

Return by the Senatus Academicus . . . . ib.

ORDER XXXIX.—Have the Members of the Senatus Academicus any, and what power, privileges, or immunities in the towns in which the College is situated, either in regard to burghal taxations or burdens, or as to exemption from the jurisdiction of the ordinary magistrates within the same?

Return by the Senatus Academicus . . . 152]

ORDER XL.—Have the Professors individually, or the Senatus Academicus collectively, or any of the office-bearers in the College, any jurisdiction as magistrates within the city, in which the College is situated, either over the inhabitants thereof generally, or over the students of the said College?

Return by the Senatus Academicus . . . . ib.

ORDER XLI.—In what manner are disorders, or delinquencies, or breaches of the peace, or improper conduct on the part of the students, brought before the Senatus Academicus? and by whom, and in what manner, are the same punished?

Return by the Senatus Academicus . . . . ib.

ORDER XLII.—In whom is the power of expulsion of students vested? and by whom is it exercised, and on what authority is such power or claim founded?

Return by the Senatus Academicus . . . . ib.

ORDER XLIII.—Are students who have been expelled from other Colleges excluded by any regulation from admission, matriculation, or graduation, at the College of Edinburgh? and if so, by what authority was such regulation introduced?

Return by the Senatus Academicus . . . . ib.

ORDER XLIV.—Are students on entering at the College of Edinburgh, if they have previously studied at any other, required to produce any certificates of good conduct from such other college?

Return by the Senatus Academicus . . . . ib.

ORDER XLV.—Are Graduates of other Universities admitted *ad eundem* at the College of Edinburgh?

Return by the Senatus Academicus . . . . [153

ORDER XLVI.—What are the qualifications necessary for the office of Principal of the College of Edinburgh? May a Layman hold the office?

Return by the Senatus Academicus . . . . ib.

ORDER XLVII.—Does the Principal of the University of Edinburgh visit and examine the Students of any of the classes? and how often do such visitations take place?

Return by the Senatus Academicus . . . . ib.

ORDER XLVIII.—Does the Principal of the University of Edinburgh teach any class, or give any course of Lectures? and if such duty has ever been performed, when, and by what authority was it discontinued?

Return by the Senatus Academicus . . . . ib.

ORDER XLIX.—Does the Chancellor, or Vice-Chancellor, Rector, or Dean of Faculty of the University, exercise any and what authority or jurisdiction over the Principal, Professors, or Students thereof? and from what source is such authority or jurisdiction derived?

Return by the Senatus Academicus . . . . ib.

ORDER L.—Are there any controversies, pleas, or disputes, now subsisting in the University of Edinburgh, in regard to the jurisdiction, powers, privileges of the Chancellor, Vice-Chancellor, Rector, Dean of Faculty, Principal, Professors, or any Office-bearers in the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus . . . . ib.

ORDER LI.—Are there any controversies, pleas, or disputes, now subsisting in the University of Edinburgh in regard to the members composing the Senatus Academicus, or the several Faculties or Professions, belonging to the Senatus Academicus, or as to the rights, and privileges, and powers of the Senatus Academicus over individual Professors, or as to the classes belonging to the different Faculties? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus.

(1.) Relative to Memorial presented to the Senatus Academicus by the Professors of Medical Jurisprudence and Police, Clinical Surgery, Military Surgery, and Natural History, wherein they claim to be admitted into the Medical Faculty; and also to Memorial of the Professor of Civil History, wherein he claims to be admitted into the Faculty of Arts . . . . . 154]
(2.) Documents referred to in preceding . . . . . ib.

University of Edinburgh.

Appendix.

Page

ORDER LII.—Are there any controversies, pleas, or disputes, now subsisting in the University of Edinburgh as to the rules for granting degrees; or as to the *curriculum* or course of study necessary for Students graduating at the said University? and if so, upon what points connected therewith, and between what parties have such controversies, pleas, or disputes arisen?

Return by the Senatus Academicus.

(1.) Origin of Action of Declarator, raised by the Magistrates and Town-Council against the Principal and Professors . . . . . 158]

(2.) Narrative of the Origin and Steps of the Controversy, to the Period of the Commencement of the Action of Declarator raised by the Patrons for the purpose of enforcing their Claims . . . . . [159

List of Documents respecting the Controversy, presented by the Senatus Academicus, and by the Town-Council . . . . . 160]

ORDER LIII.—Is there any Authority or corporate Body, Office-bearer, or any set of individuals, who have any right of instituting new Faculties or Professorships in the University of Edinburgh? and if so, what are the rights and Academical privileges and immunities belonging to the same so instituted?

Return by the Senatus Academicus . . . . [161

ORDER LIV.—Are the Professors of such new classes admitted Members of the Senatus Academicus, or of the Faculties in the College, with the subjects and department of which such classes are connected?

Return by the Senatus Academicus . . . . ib.

ORDER LV.—Do the Students, or any of them, live within the buildings or the precincts of the College of Edinburgh, or in any manner under the inspection and observation of the Professors?

Return by the Senatus Academicus . . . . ib.

ORDER LVI.—Is there any Academical Dress prescribed in the College of Edinburgh?

Return by the Senatus Academicus . . . . ib.

ORDER LVII.—Were any buildings in the College of Edinburgh at any time appropriated for the residence of students, and any funds destined or employed in the repair and maintenance thereof? and, if such buildings are not so occupied, when did such change take place,—under what authority,—and how are the funds now employed which were destined or formerly employed in the repair or maintenance of such buildings?

Return by the Senatus Academicus . . . . ib.

Return by the Town-Council . . . . ib.

ORDER LVIII.—Do any of the Professors of the College of Edinburgh reside in any houses, or buildings, within the precincts of the said College, and by what authority were the buildings so occupied and appropriated? from what funds are the same repaired and maintained? by what authority were such funds appropriated to that object, and by whom is the expenditure of the same regulated and applied?

Return by the Senatus Academicus . . . . 162]

Return by the Town-Council . . . . ib.

ORDER LVIII.*—To report for what Property the Incorporation of Surgeons pay a feu-duty of 11*s.* odd to the College, as stated in the College Accounts.

Return by the Town-Council . . . . ib.

ORDER LIX.—Were any Funds, at any time, and by what authority, mortified, or in practice employed in the maintenance, repair, and improvement of the Fabric and Buildings of the College of Edinburgh?

Return by the Senatus Academicus . . . . [163

Return by the Town-Council . . . . ib.

ORDER LIX.*—To produce a state of the affairs of the South-Bridge Trustees, and the discharges taken from the tradesmen to whom payments were made for erecting buildings in the University.

Return by the Town-Council . . . ib.

ORDER LX.—Are such funds so employed at the present time, and by what authority, and by whom is the expenditure of the same authorized, regulated, and applied? and, if not so employed, to what purposes, and by what authority, have such funds been diverted?

Return by the Town-Council . . . . 164]

ORDER LX.*—A Return of the Number of Lecture-Rooms in the College of Edinburgh; of the Hours daily during which each Room is occupied; and of the Number of Students each Room is calculated to contain.

Return by Mr. Playfair, Architect . . . . ib.

ORDER LX.**—A Return of the Expense of completing the College Buildings.

Return by the College Building Commissioners . . . [165

(I.) Statement regarding Expenditure upon the College Buildings, pointing out the Expense of the various particulars still required to be done, but not yet contracted for . 166]

(II.) Clauses of Edinburgh Improvement Act, above referred to . . . . ib.

39

University of Edinburgh.

Laws for conducting the Business of the Theological Library in the University of Edinburgh, enacted by the Senatus Academicus, 12th April 1817 . . . ib.
Petition of a Committee appointed by the Students of Divinity, in the University of Edinburgh, to the Royal Commissioners . . . . . 194]
Proceedings of the Senatus Academicus of the University of Edinburgh, on the Communication of the 29th December 1826, sent to them by the Royal Commissioners . [195
Supplement to the Report of the Theological Faculty, on the Remit made to them by the Senatus . . . . . [197

ORDER LXIII.*—"A Return of all Books entered in the Receipt-books of the Libraries of the Universities of Scotland, prior to the date of this Order, as borrowed out by the Professors respectively; specifying the Titles of the Books and the Number of Volumes of the same, the Year when such borrowing took place, the name of the Borrower, and distinguishing such as may appear in the Receipt-books to have been borrowed by any Professor for the use of other Persons; together with a List of the Books which may have been returned to the Library by the Professors respectively, at the date of the Return thus ordered."

Tables containing an abstract of the numbers of the books borrowed out and unreturned at the date of the Order, and the number of volumes returned between that date and the date of the respective Returns, together with the number of volumes borrowed for literary gentlemen, students, and others, made out in a similar manner . . ib.
Edinburgh College Library . . . . . ib.
Extract from the Minutes of a Meeting of the Senatus Academicus of the University of Edinburgh, held on the 21st of November 1829 . . . . . [201
Books still standing against Professors, borrowed previous to 17th October 1827 . ib.
Books standing against the Names of Deceased Professors, and Members of the Royal College of Surgeons, &c. . . . . 202]

ORDER LXIII.**—A Return of the number of Students who have availed themselves of the use of the Libraries of the Universities of Scotland, during Session 1826-27, with the number of Volumes taken out by each during that period. Ordered 9th and 27th October 1827.

Abstract of the Returns to the foregoing Order from all the Universities of Scotland . ib.

ORDER LXIII.***—Return of the total number of Books at present missing from the Libraries of the Universities of Scotland, distinguishing the number missing as at the 1st of January 1826. Ordered 1827.

Return by the Senatus Academicus . . . . ib.

ORDER LXIV.—Are any meetings of Graduates held at the University of Edinburgh, and on what occasions, and for what purposes; or do any of the University meetings include the Graduates, and what are their privileges?

Return by the Senatus Academicus . . . . [203
Petition of Graduates of Edinburgh College, Session 1827 . . . . ib.

ORDER LXV.—Is a Representative annually returned from the University of Edinburgh to the General Assembly of the Church of Scotland, and of whom is the Meeting, in which such Representative is chosen, composed?

Return by the Senatus Academicus . . . . 204]

ORDER LXVI.—Are there any Complaints, Applications, or Petitions now before the Principal and Professors, or other Authority of the University of Edinburgh, from the Students, or any of them, praying for the Alteration of any Academical Rules and Regulations, or complaining of any alleged Grievances at the said College? And if so, transmit Copies of the same, and state the Procedure thereon.

Return by the Senatus Academicus . . . . ib.
Petition of the Students attending the University, subscribers thereof, for themselves and others . . . . . ib.
Petition of the Medical Students of the University of Edinburgh, on the subject of Dissection . . . . . 206]
On the Table of the Commission, but not printed . . . . . ib.

ORDER LXVII.—Are the Principal, Professors, Masters, and others bearing office in the University of Edinburgh, before their admission to the exercise of their respective functions, required to acknowledge, profess, and subscribe the Confession of Faith and Formula of the Church of Scotland, as approved and fixed by Act of Parliament, and to swear and subscribe the Oath of Allegiance to his Majesty? and on what occasion, and before whom, is such acknowledgment and subscription made, and such oath taken?

Return by the Senatus Academicus . . . . [207

ORDER LXVIII.—Is there any common table kept in the College of Edinburgh for any Professors, Fellows, Bursars, Poor Scholars, or Students? if so, from what fund is the expense thereof paid, and by whom is such expense regulated and allowed; and are any of the Professors required to preside at the same, and is such duty performed?

Return by the Senatus Academicus . . . . ib.

41

Page

ORDER LXIX.—Are any private buildings erected, and on what authority or title, within the precincts, belonging to the College of Edinburgh?

Return by the Senatus Academicus . . . . [207

Return by the Town-Council . . . . ib.

ORDER LXX.—Is it the practice in the University of Edinburgh to appoint, during the lifetime of a Professor, an Assistant and Successor to such Professor? How many such appointments have occurred during the last 100 years? And in these cases specify the names of the Incumbents, and of the persons appointed Assistants and Successors, and of the Parties or Body by whom such appointments have been made; and state what allowance and salaries have been given to such Assistants and Successors.

Return by the Senatus Academicus.

List of Cases of the Appointment of Joint Professors, with the benefit of survivancy to either . . . . . ib.
On the Table of the Commission, but not printed, 1 to 14 . . . . 208]

ORDER LXXI.—Are the qualifications required by the Charters, Statutes or Laws of the University of Edinburgh, as a condition of the nomination of Professors, invariably observed in Practice?

Return by the Senatus Academicus . . . . ib.

ORDER LXXII.—Has any person been appointed Professor in the University of Edinburgh under 21 years of age?

Return by the Senatus Academicus . . . . [209

ORDER LXXIII.—Are any lands, or other estate and revenues, attached to any Professorship in the College of Edinburgh? Is there any house attached to the office of Principal, or any Professorship; and is the same inspected, and its state of repair examined, from time to time? or, if any lands or house were formerly granted and mortified for the use of the Principal or any Professor, when and for what purposes, and by what authority or transaction, have the same been diverted?

Return by the Senatus Academicus . . . . ib.

Return by the Town Council . . . . ib.

ORDER LXXIV.—Are the provisions of the charters, statutes, or Acts of Visitation, with respect to the residence and attendance of the Professors, duly observed? and in what manner is leave of absence granted, or in what manner and by what authority is non-attendance noticed and corrected?

Return by the Senatus Academicus . . . . 210]

ORDER LXXV.—Are there any rights of patronage of parish churches, or other church endowment, vested in, and attached to, the University or College of Edinburgh? and by whom and in what manner are such rights of patronage exercised?

Return by the Senatus Academicus . . . . ib.

RETURN BY THE ROYAL COLLEGE OF SURGEONS, EDINBURGH, TO THE COMMISSION . . 210]

COMMISSION

FOR

VISITING THE UNIVERSITIES AND COLLEGES IN SCOTLAND.

23*d July* 1826.

Commission.
23 July 1826.

GEORGE R.

OUR Sovereign Lord, Considering how necessary it is that Universities and Colleges should be provided with good Laws, Statutes, and Ordinances, for the regular Government of their Societies, for regulating the granting of Degrees to their Members, for the management of their Revenues, for the exaction of Fees, and for eschewing Disorders which may happen through defect of such Laws, Statutes, and Ordinances; and being informed that certain Irregularities, Disputes, and Deficiencies have occurred in the Universities of Scotland, calculated to impair the utility of those Establishments; and considering also that it is His Majesty's undoubted Right and Prerogative to name Visitors and Commissioners, to enquire into such irregularities, disputes, and deficiencies, and to remedy the same: Therefore, His Majesty ordains a Letter Patent to be made and passed, under the Seal appointed by the Treaty of Union to be kept and made use of in Scotland in place of the Great Seal of Scotland, nominating, constituting, and appointing, Likeas His Majesty, by these presents, Nominates, Constitutes, and Appoints, His Right Trusty and Right Entirely Beloved Cousin *Alexander* Duke of *Gordon*, Chancellor of His Majesty's College in the University of Aberdeen; His Right Trusty and Right Entirely Beloved Cousin and Councillor *James* Duke of *Montrose*, Chancellor of the University of Glasgow; His Right Trusty and Well-Beloved *George* Lord *Gordon* (commonly called Marquis of *Huntly*), Chancellor of Mareschall College in the University of Aberdeen; His Right Trusty and Right Well-Beloved Cousin and Councillor *George* Earl of *Aberdeen*, Rector of His Majesty's College in the said University of Aberdeen; His Right Trusty and Right Well-Beloved Cousins *Archibald* Earl of *Rosebery*, and *William* Earl of *Mansfield*; His Right Trusty and Well-Beloved Cousin and Councillor *Robert* Viscount *Melville*, Chancellor of the University of St. Andrews; His Right Trusty and Well-Beloved Councillors *Thomas Hamilton* (commonly called Lord *Binning*), and *Charles Hope*, President of the College of Justice in Scotland; His Trusty and Well-Beloved Sir *William Rae*, Baronet, His Majesty's Advocate for Scotland; His Right Trusty and Well-Beloved Councillors *David Boyle*, Justice-Clerk of Scotland; Sir *Samuel Shepherd*, Knight, Chief Baron of the Court of Exchequer in Scotland; and *William Adam*, Chief Commissioner of the Jury Court in Civil Causes in Scotland; His Trusty and Well-Beloved *John Hope*, Esquire, Solicitor-General for Scotland; *George Cranstoun*, Esquire, Dean of the Faculty of Advocates in Scotland; *Thomas Taylor*, Doctor of Divinity, Moderator of the General Assembly of the Church of Scotland; and *George Cook*, Doctor of Divinity, late Moderator of the said General Assembly;*—to be His Majesty's Commissioners for Visiting the Universities and Colleges of Scotland; authorizing and requiring them to meet within the College at Edinburgh, on the 31st day of August next, at one o'clock afternoon, and thereafter, by adjournment or otherwise, at what time or times, place or places, they shall think fit to appoint; with power unto them, or any five of them (who are to be their Quorum), as His Majesty's Commissioners in that behalf, to visit the Universities and Colleges of St. Andrews, Glasgow, Aberdeen, and Edinburgh: And for the more effectual attainment of that end, His Majesty hereby authorizes and requires the said Commissioners, at their General Meeting in Edinburgh, to make choice of and appoint so many of their own number as they may think fit, to repair to St. Andrews, Glasgow, and Aberdeen, for holding particular Visitations of the Universities and Colleges therein respectively situated; to whom, or a Quorum of them, which is always to consist of three at the least, His Majesty commits full power and authority to visit, by virtue of these presents: And His Majesty hereby authorizes the said Commissioners, and their said Committees, to cite the respective Principals, Professors, Regents, and Masters, and others bearing office in the said Universities and Colleges, to appear personally before them, at such time or times, and under such certification, in case of disobedience, as to them shall seem expedient; and to examine them as to all Statutes, Rules, and Ordinances now in force in the said Universities and Colleges, and especially such as relate to the granting of Degrees, whether of Divinity, Law, or Medicine, and to the management and ordering of the said Universities and Colleges, and as to the manner of Teaching therein, and as to all things else relating thereto, as they the said Commissioners, or their Committees, shall think meet; and to look narrowly into the Rentals and Revenues of the said Universities and Colleges, and the management thereof; and into the Laws, Privileges, Immunities, Burdens, Fabrics, and Libraries of the said Universities and Colleges; and also into the Fees, of all descriptions, exacted from Students therein; and to revise the respective Foundations, Mortifications, and Donations, bestowed on them, or any of them;

* By a Supplementary Commission, dated 28th September 1826, His Majesty appointed, as additional Commissioners, the Right Honourable the Earl of *Lauderdale*, Sir *Walter Scott*, Baronet, the Reverend Dr. *John Lee*, and *Henry Home Drummond* and *James Moncrieff*, Esquires, Advocates.

Commission.
23 July 1826.

and the Powers, Jurisdictions, and Privileges of the Chancellors, Vice-Chancellors, Rectors, Deans of Faculty, Professors, and all other Members and Office-bearers in the said Universities and Colleges; as also of their University and Faculty Meetings, as well with respect to the Government, Policy, and Discipline, as to the management and disposal of the Revenue; and also to enquire into the mode of electing or choosing the said Officers; and to decide and determine all Controversies, Pleas, and Disputes which shall have arisen in regard to the Rules for granting Degrees, or upon whatever other allegeance, ground, or cause whatever: And further, to do all other things belonging to the Office of Commissioners for Visiting Universities or Colleges, by the law or custom of Scotland: And His Majesty hereby further authorizes and requires the said Commissioners, or their Quorum, to form a Code or Codes of fit and proper Rules, Statutes, and Ordinances, for regulating the teaching of Youth, and granting Degrees in the said Universities and Colleges, and also for the exaction of Fees, and for the management of the Revenues thereof, and which shall be consistent with the Laws and Government of Church and State, as now by law established: And His Majesty hereby further requires the said Commissioners, or their Quorum, on or before the 1st day of January in the year 1828, to make a Report to His Majesty on the matters thus entrusted to them; setting forth the state of each University and College, and the Rules, Statutes, and Ordinances which they may propose to be established therein, and suggesting any further improvements connected with the said Universities and Colleges which the Powers hereby conferred, may not be deemed sufficient to sanction: And when such Rules, Statutes, and Ordinances shall have been approved by His Majesty, they shall be inserted in a Book or Books, to be signed by the said Commissioners, or their Quorum, which Book shall be lodged with His Majesty's Clerk-Register of Scotland, to the end that the same may be preserved among the Public Records; and a duplicate thereof shall be sent to the Universities and Colleges respectively, to which the same shall be applicable; and such Rules, Statutes, and Ordinances shall thereafter be observed in all time coming in such Universities and Colleges, until altered or revoked by the authority of His Majesty, His Heirs or Successors, and this notwithstanding any prior Rules, Laws, or Customs to the contrary: And His Majesty declares, that this present Commission shall continue and endure during His own pleasure only, and until His Majesty shall think fit to revoke the same under His Royal Sign Manual; and if not sooner revoked, shall cease and be determined so soon as the purposes hereinbefore expressed shall be accomplished. Given at His Majesty's Court, at Carlton House, the 23d day of July 1826, in the Seventh Year of His Majesty's Reign.

(Signed) ROBERT PEEL.

COMMISSION

FOR

VISITING THE UNIVERSITIES AND COLLEGES OF SCOTLAND.

WILLIAM R.

Commission by His Majesty William IV.

12 October 1830.

WHEREAS His Majesty's Royal Predecessor, by his Warrants or Commissions for Letters Patent to be expede under the Seal appointed by the Treaty of Union to be kept and made use of in place of the Great Seal of Scotland, bearing date the 23d day of July and the 28th day of September 1826, in the seventh year of His reign, proceeding upon the narrative, "That considering how necessary it is that Universities and Colleges should be provided with "good Laws, Statutes, and Ordinances, for the regular government of their Societies, for "regulating the granting of degrees to their Members, for the management of their Revenues, "for the exaction of Fees, and for eschewing Disorders which may happen through defect of "such Laws, Statutes, and Ordinances; and being informed that certain irregularities, dis-"putes, and deficiencies have occurred in the Universities of Scotland, calculated to impair "the utility of those Establishments; and considering also that it is His Majesty's undoubted "right and prerogative to name Visitors and Commissioners to enquire into such irregulari-"ties, disputes, and deficiencies, and to remedy the same,"—Did appoint his Right Trusty and Right Entirely Beloved Cousin, *Alexander* Duke of *Gordon* (now deceased); His Right Trusty and Right Entirely Beloved Cousin and Councillor *James* Duke of *Montrose*; His Right Trusty and Well-Beloved *George* Lord *Gordon* (commonly called Marquis of *Huntly*), now Duke of *Gordon*; His Right Trusty and Right Well-Beloved Cousins and Councillors, *James* Earl of *Lauderdale* and *George* Earl of *Aberdeen*; His Right Trusty and Right Well-Beloved Cousins, *Archibald* Earl of *Rosebery*, and *William* Earl of *Mansfield*; His Right Trusty and Well-Beloved Cousin and Councillor, *Robert* Viscount *Melville*; His Right Trusty and Well-Beloved Councillors, *Thomas Hamilton* (commonly called Lord *Binning*), now Earl of *Haddington*, and *Charles Hope*, President of the College of Justice in Scotland; His Trusty and Well-Beloved Sir *William Rae*, Baronet; His Right Trusty and Well-Beloved Councillors, *David Boyle*, Justice-Clerk of Scotland, Sir *Samuel Shepherd*, Knight, and *William Adam*, Chief-Commissioner of the Jury-Court in Civil Causes in Scotland; *George Cranstoun*, Esq., now one of the Senators of the College of Justice in Scotland; *James Moncreiff*, now Sir *James Wellwood Moncreiff*, Baronet, one of the Senators of the College of Justice in Scotland; His Trusty and Well-Beloved Sir *Walter Scott*, Baronet; *John Hope*, Esq., Solicitor-General for Scotland; *Thomas Taylor*, *George Cook*, and *John Lee*, Doctors in Divinity; and *Henry Home Drummond*, Esq.,—to be Commissioners for Visiting the Universities and Colleges of Scotland, authorizing and requiring them to meet within the College at Edinburgh on the 31st day of August then next, at one o'clock afternoon, and thereafter, by adjournment or otherwise, at what time or times, place or places, they should think fit to appoint, with power unto them, or any five of them (who were to be their Quorum), as His Commissioners in that behalf, to visit the Universities and Colleges of St. Andrews, Glasgow, Aberdeen, and Edinburgh: And for the more effectual attainment of that end, His Majesty's Predecessor, by the said Letters Patent, authorized and required the said Commissioners, at their General Meeting in Edinburgh, to make choice of and appoint so many of their own number as they might think fit, to repair to St. Andrews, Glasgow, and Aberdeen, for holding particular Visitations of the Universities and Colleges therein respectively situated, to whom, or a Quorum of them, which was always to consist of three at the least, His late Majesty committed full power and authority to visit, by virtue of the said Letters Patent: And His late Majesty thereby authorized the said Commissioners, and their said Committees, to cite the respective Principals, Professors, Regents, and Masters, and others bearing office in the said Universities and Colleges, to appear personally before them at such time or times, and under such certification, in case of disobedience, as to them should seem expedient; and to examine them as to all Statutes, Rules, and Ordinances now in force in the said Universities and Colleges, and especially such as relate to the granting of Degrees, whether in Divinity, Law, or Medicine, and to the management and ordering of the said Universities and Colleges, and as to the manner of teaching therein, and as to all things else relating thereto, as they the said Commissioners, or their Committees, should think meet; and to look narrowly into the Rentals and Revenues of the said Universities and Colleges, and the management thereof, and into the Laws, Privileges, Immunities, Burdens, Fabrics, and Libraries of the said Universities and Colleges; and also into the Fees of all descriptions exacted from Students therein; and to revise the respective Foundations, Mortifications, and Donations bestowed on them, or any of them, and the powers, jurisdictions, and privileges of the Chancellors, Vice-Chancellors, Rectors, Deans of Faculty, Professors, and all other Members and Office-bearers in the said Universities and Colleges; as also of their University and Faculty Meetings, as well with respect to the Government, Policy, and Discipline, as to the management and disposal of the Revenue; and also to enquire into the mode of electing or choosing the said Officers, and to decide and determine all Controversies, Pleas, and Disputes which should have arisen in regard to the Rules for granting Degrees, or upon whatever other allegeance, ground, or cause whatever; and further, to do all other things belonging to the office of Com-

Commission by His Majesty William IV.

12 October 1830.

missioners for Visiting Universities or Colleges by the law or custom of Scotland: And His late Majesty further authorized and required the said Commissioners, or their Quorum, to form a Code or Codes of fit and proper Rules, Statutes, and Ordinances, for regulating the teaching of Youth and granting Degrees in the said Universities and Colleges, and also for the exaction of Fees, and for the management of the Revenue thereof, and which should be consistent with the Laws and Government of Church and State as by law established: And His late Majesty further required the said Commissioners, or their Quorum, on or before the 1st day of January 1828, to make a Report to Him on the matters entrusted to them, setting forth the state of each University and College, and the Rules, Statutes, and Ordinances which they might propose to be established therein, and suggesting any further improvements connected with the said Universities and Colleges which the powers conferred by the said Letters Patent might not be deemed sufficient to sanction; and when such Rules, Statutes, and Ordinances should have been approved of by His late Majesty, they should be inserted in a Book or Books to be signed by the said Commissioners, or their Quorum, which Book should be lodged with his Majesty's Clerk-Register of Scotland, to the end that the same might be preserved among the public Records; and a duplicate thereof should be sent to the Universities and Colleges respectively, to which the same should be applicable; and such Rules, Statutes, and Ordinances should thereafter be observed in all time coming, in such Universities and Colleges, until altered or revoked by the authority of His Majesty, His Heirs or Successors, and this notwithstanding any prior Rules, Laws, or Customs to the contrary: And His late Majesty declared that the said Letters Patent or Commission should continue and endure during His own pleasure only, and until He should think fit to revoke the same under the Royal Sign-Manual, and, if not sooner revoked, should cease and be determined as soon as the purposes before expressed should be accomplished: And whereas, upon an humble representation of the said Commissioners, praying for an extension of the period allowed to them by the said Letters Patent for making their Report, His late Majesty, by His Warrant or Commission for Letters Patent to be expede under the Seal aforesaid, bearing date the 12th day of October 1827, in the eighth year of His Reign, extended the period at which the said Commissioners were required to make their Report, from the 1st day of January 1828, to the 1st day of January 1829: And whereas the said Commissioners transmitted to His late Majesty a Report, dated the 10th day of November 1828, containing a statement of the Proceedings of the Commissioners to that date, accompanied by various Returns and Documents of importance, and by the whole of the Evidence taken before the Commissioners in each of the Universities; and at the same time represented to His late Majesty that the duty which still remained for them to discharge, in compliance with the directions conveyed to them in said Commissions, was one which required great consideration, and which would occupy much time, if performed in a full and satisfactory manner, His said late Majesty was graciously pleased, by His Warrant or Commission for Letters Patent to be expede under the Seal aforesaid, bearing date the 10th day of December 1828, in the ninth year of His Reign, to extend the time for the said Commissioners to make their further Report until the 1st day of April 1830: And whereas the said Commissioners humbly represented unto His late Majesty, that full attendance of their number could not, at that season of the year, be obtained, in consequence of imperative duties in which some of them were then constantly engaged, and of its being necessary for others of them to attend their duties in Parliament, and that there were several points of great difficulty and importance which they thought it absolutely necessary to have amply discussed by full meetings of the Commissioners, before they came to conclusive opinions upon these points; and therefore prayed for a prolongation of the time allowed for making their final Reports, His late Majesty was graciously pleased, by His Warrant or Commission for Letters Patent to be expede under the Seal aforesaid, bearing date the 11th day of March 1830, to extend the time for the said Commissioners to make their final Reports until the 1st day of November next.

And His present Majesty, considering that said Letters Patent or Commissions by His late Majesty, conferring upon the said Commissioners the powers of Visitors, for the purpose of exercising His Majesty's Royal Prerogative, have fallen, or may fall, in respect of the demise of His late Majesty, of Glorious Memory; and His Majesty being further graciously pleased to approve of the object of the said appointment of Visitors of the Universities and Colleges of Scotland, and of the measures taken by the persons above named in the execution of the duty committed to them by the said Letters Patent, and being resolved to commit to the said persons the said office of Visitors, with all the powers formerly bestowed on them by His late Majesty, and for the same ends and purposes; Therefore His Majesty's Royal Will and Pleasure is, that Letters Patent be forthwith made and passed under the Seal aforesaid, Nominating, Constituting, and Appointing, likeas His Majesty, by these presents, Nominates, Constitutes, and Appoints the said *George* Duke of *Gordon*, *James* Duke of *Montrose*, *Thomas* Earl of *Haddington*, *James* Earl of *Lauderdale*, *George* Earl of *Aberdeen*, *Archibald* Earl of *Rosebery*, *William* Earl of *Mansfield*, *Robert* Viscount *Melville*, *Charles Hope*, Sir *William Rae*, Baronet, *David Boyle*, Sir *Samuel Shepherd*, Knight, *William Adam*, *George Cranstoun*, Sir *James Wellwood Moncreiff*, Baronet, Sir *Walter Scott*, Baronet, *John Hope*, *Thomas Taylor*, *George Cook*, *John Lee*, and *Henry Home Drummond*, to be His Majesty's Commissioners for Visiting the Universities and Colleges of Scotland,—hereby conferring upon the said Commissioners all the power and authority conferred upon them by the herein before recited Letters Patent or Commissions; with full power to them, which they are hereby required to do, to carry on and to terminate their said proceedings in all respects as if the said demise of the late King had not happened; and with full power to the said Commissioners to meet, at what time or times, place or places, they shall think fit to appoint; with power unto them, or any five of them (who are to be their Quorum), as His Majesty's Commissioners

Commission by His Majesty William IV.

12 October 1830,

in that behalf, to visit, if necessary, the Universities and Colleges of St. Andrews, Glasgow, Aberdeen, and Edinburgh: And for the more effectual attainment of that end, His Majesty hereby authorizes and requires the said Commissioners, at one of their General Meetings in Edinburgh, to make choice of and appoint so many of their own number as they may think fit, as Committees, to repair to St. Andrews, Glasgow, and Aberdeen respectively, for holding particular Visitations of the Universities and Colleges therein respectively situated; to whom, or a Quorum of them, which is always to consist of three at the least, His Majesty commits full power and authority to visit, by virtue of these presents: And His Majesty hereby authorizes the said Commissioners and their said Committees to cite the respective Principals, Professors, Regents, and Masters and others bearing office in the said Universities and Colleges, to appear personally before them, at such time or times, and under such certification in case of disobedience as to them shall seem expedient; and to examine them as to all Statutes, Rules, and Ordinances now in force in the said Universities and Colleges, and especially such as relate to the granting of Degrees, whether in Arts, Divinity, Law, or Medicine, and to the management and ordering of the said Universities and Colleges, and as to the manner of teaching therein, and as to all things else relating thereto, as they the said Commissioners or their Committees shall think meet; and to look narrowly into the Rentals and Revenues of the said Universities and Colleges, and the management thereof, and into the Laws, Privileges, Immunities, Burdens, Fabrics, and Libraries of the said Universities and Colleges; and also into the Fees of all descriptions exacted from Students therein; and to revise the respective Foundations, Mortifications, and Donations bestowed on them or any of them; and the Powers, Jurisdictions, and Privileges of the Chancellors, Vice-Chancellors, Rectors, Deans of Faculty, Professors, and all other Members and Office-Bearers in the said Universities and Colleges; as also of their University and Faculty Meetings, as well with respect to the Government, Policy, and Discipline, as to the management and disposal of the Revenue; and also to enquire into the mode of electing or choosing the said Officers; and to decide and determine all Controversies, Pleas, and Disputes which shall have arisen in regard to the Rules for granting Degrees, or upon whatever other allegeance, ground, or cause whatever; And further, to do all other things belonging to the office of Commissioners for Visiting Universities or Colleges by the law or custom of Scotland: And His Majesty hereby further authorizes and requires the said Commissioners, or their Quorum, to form a Code or Codes of fit and proper Rules, Statutes, and Ordinances, for regulating the teaching of youth, and granting Degrees in the said Universities and Colleges, and also for the exaction of Fees, and for the management of the Revenues thereof; and which shall be consistent with the laws and government of Church and State, as now by law established: And His Majesty hereby further requires the said Commissioners, or their Quorum, on or before the 1st day of November in the present year 1830, to make a Report to His Majesty on the matters thus entrusted to them, setting forth the state of each University and College, and the Rules, Statutes, and Ordinances which they may propose to be established therein, and suggesting any further improvements, connected with the said Universities and Colleges, which the powers hereby conferred may not be deemed sufficient to sanction: And when such Rules, Statutes, and Ordinances shall have been approved of by His Majesty, they shall be inserted in a Book or Books, to be signed by the said Commissioners or their Quorum; which Book or Books, and a copy of all the Minutes of the meetings and proceedings of the said Commissioners, shall be lodged with His Majesty's Clerk-Register of Scotland, to the end that the same may be preserved among the public Records; and a Duplicate of such Rules, Statutes, and Ordinances shall be issued by the said Commissioners, or their Quorum, as the Statutes of the Royal Visitation appointed by His late Majesty, and by His Majesty, to be had of all the Universities and Colleges of Scotland, and shall be sent to the Universities and Colleges respectively to which the same shall be applicable, signed by the said Commissioners or their Quorum; and such Rules, Statutes, and Ordinances shall thereafter be observed in all time coming in such Universities and Colleges, until altered or revoked by the authority of His Majesty, His Heirs or Successors, and this notwithstanding any prior Rules, Laws, or Customs to the contrary: And His Majesty Declares, That this present Commission shall continue and endure during His own pleasure only, and until His Majesty shall think fit to revoke the same under His Royal Sign-Manual; and if not sooner revoked, shall cease and be determined as soon as the purposes herein before expressed shall be accomplished, and the Statutes of Visitation issued as aforesaid. Given at His Majesty's Court at Saint James's, the 12th day of October 1830, in the First Year of His Majesty's Reign.

(Signed) ROBERT PEEL.

49

MINUTES AND PROCEEDINGS

OF THE

ROYAL COMMISSIONERS FOR VISITING THE UNIVERSITIES AND COLLEGES OF SCOTLAND.*

College of Edinburgh, 31st August 1826. — 31 August 1826.

PRESENT—

The Earl of Aberdeen.	The Lord Justice-Clerk.
The Earl of Rosebery.	The Solicitor-General.
The Lord Viscount Melville.	The Dean of Faculty (Cranstoun.)
The Lord Binning.	The Reverend Dr. Taylor.
The Lord President.	The Rev. Dr. Cook.
The Lord Advocate.	

COMMISSIONERS NOT PRESENT.

The Duke of Gordon.	The Earl of Mansfield.
The Duke of Montrose.	The Lord Chief-Baron.
The Marquis of Huntly.	The Lord Chief-Commissioner.

Chairman.—The Earl of ABERDEEN elected Chairman of the Commission.

Commission.—His Majesty's Commission read from the Chair; ordered to be engrossed in Sederunt Book. (*Printed.*)

Clerk.—Mr. Aitken nominated Clerk to the Commission.

Requisitions.—The Solicitor-General submitted, for consideration, a List of Requisitions for Returns and Heads of Inquiry. (*Printed.*)

Expense of Commission.—The Commissioners request their Chairman to apply to the Secretary of State in regard to the expense of printing, and other necessary disbursements connected with the Commission, and request the Lord Advocate to apply to the same quarter for a short-hand writer to minute the Evidence.—(*Adjourned.*)

College of Edinburgh, 5th September 1826. — 5 September 1826.

Commissioners Present—Same as in former day's Sederunt.

The Earl of ABERDEEN in the Chair.

Requisitions.—The Requisitions for Returns, prepared by the Solicitor-General, read.—Certain alterations made thereon, and finally adjusted; and ordered to be answered by all the Colleges, on or before the 27th of September next.—(*Adjourned.*)

College of Edinburgh, 27th September 1826. — 27 September 1826.

Commissioners Present—Same as in last day's Sederunt, excepting the Lord Justice-Clerk, the Dean of Faculty, and Dr. Cook.

The Earl of ABERDEEN in the Chair.

Additional Commissioners.—Lord Melville intimated that His Majesty had appointed five additional Commissioners, viz.

The Earl of Lauderdale.	Henry Home Drummond, Esq., Advocate.
Sir Walter Scott, Bart.	James Moncreiff, Esq., Advocate.
The Rev. Dr. Lee.	

Controversy between the Town and the University.—Papers from Principal Baird, relating to certain Controversies between the Town-Council and the University of Edinburgh, presented.

Answers to Requisitions.—Answers to the Requisitions by all the Colleges, excepting that of Edinburgh, presented.

College of Edinburgh.—Commissioners resolve to proceed in their inquiry, in the first place, with the University of Edinburgh.

Committee for Printing.—The following Commissioners appointed a Committee to examine the Returns and Papers presented; and to order such parts thereof to be printed, as to them may appear necessary:—

The Earl of Aberdeen.
The Lord Binning.
The Solicitor-General.

---

* Lists of the unprinted Returns and Papers laid on the Commissioners' Table, from the commencement of their proceedings down to the 30th day of April 1827, have been already printed, and therefore the presentation of these papers is not again repeated in this Record, unless when special orders for their production have been made. In this case they are noticed, as well as the fact of their having been ordered to be printed by the Committee for printing, when such order was given. The words "Return printed," or "Return not printed," for the sake of brevity, are to be understood to mean that the Order for the Return was complied with, and the Return presented on a subsequent day, and ordered to be printed or not printed, as the case may be. The Minutes, subsequent to the 30th April, however, record the presentation of every paper laid before the Commissioners.

Universities and Colleges, Scotland.

Minutes and Proceedings.

27 September 1826,

Committee on Accounts.—The following Commissioners appointed a Committee to examine the various accounts regarding the Property and Revenue of the College of Edinburgh, and to Report:— The Earl of Rosebery.
The Lord President.
The Lord Advocate.

Bursaries.—Ordered, from the Town of Edinburgh, a Return, to the twelfth Requisition, of the number of Bursaries under their management. (*Return printed.*)

Principal Baird called, and explained the cause of the delay in answering the Requisitions sent to the College of Edinburgh.—(*Adjourned.*)

---

30 September 1826.

College of Edinburgh, 30th September 1826.

Commissioners Present—Same as last day.

The Earl of ABERDEEN in the Chair.

The following persons examined:—
Mr. Carlyle Bell, one of the City Clerks.
Mr. Ar. Bruce, Accountant to the City,—both examined in regard to the College Property, &c.

Deeds of Mortification.—Ordered, Copies of all Deeds of Mortification, of every description, in favour of the College of Edinburgh. (*Abstract of Return printed.*)—(*Adjourned.*)

---

5 October 1826.

College of Edinburgh, 5th October 1826.

Commissioners Present—Same as in last day's Sederunt, with the addition of Dr. Lee and Mr. Moncreiff, two of the Additional Commissioners.

The EARL of ABERDEEN in the Chair.

Papers presented—

Additional Commissioners.—His Majesty's Commission, appointing the five Additional Commissioners, read from the Chair. Ordered to be engrossed in Sederunt Book.

Answers to Requisitions.—Answers by the College of Edinburgh to the Requisitions, presented.

Answers to Requisitions.—The answers to the Requisitions, received from the United College St. Andrews, returned for amendment.

Controversy, &c.—The Commissioners having considered the Papers from the Senatus Academicus of the University of Edinburgh, relating to certain controversies and discussions between the Magistrates and Town-Council, and having deliberated thereon, requested the Chairman to prepare a Resolution, declaratory of the opinion expressed by the Commissioners in regard to these controversies.

Printing Committee.—Mr. Moncreiff added to the Committee for printing.—(*Adjourned.*)

---

7 October 1826.

College of Edinburgh, 7th October 1826.

Commissioners Present—Same as last day, excepting Dr. Taylor.

The Earl of ABERDEEN in the Chair.

Paper presented—

Controversy, &c.—The following communication from Principal Baird, viz.—"*University Chambers, October 7,* 1826.—MY LORD, By the authority of the Senatus Academicus, I have the honour to transmit to your Lordship the accompanying communication from the Town-Council, in answer to the late renewed proposal of the Senatus for the submission of the existing pleas between these Bodies to the Royal Commission. I have the honour to be, with great consideration, My Lord, &c. (Signed) GEO. H. BAIRD.—(Addressed) Right Hon. the Earl of ABERDEEN."——(Communication referred to.)—"*City Chambers, 4th October* 1826.—REV. SIR, I have to acquaint you, that the Minute of the Senatus Academicus, transmitted to me in your letter of the 21st ult., containing a renewed proposal on their part to make a reference of 'all Pleas and Controversies' between the Patrons and the Senatus Academicus, to the decision of the Commissioners lately appointed by His Majesty for the Visitation of the Universities and Colleges of Scotland, was this day submitted to the Magistrates and Town-Council; and they, having considered the said Minute, and having heard the former proposal, with the opinions of Counsel on which that proposal was declined, approved entirely of the answer made by me in my letter of the 15th ult., resolved to adhere thereto, and authorized me to make an answer, declining to accede to this renewed proposal. I have, &c. (Signed) W. TROTTER, Lord Provost and Rector."

Controversy between the Town and the University.—The Earl of Aberdeen read a Resolution in regard to the Controversies between the Town-Council and the University; approved of, and is as follows:—

"Resolved, That differences having arisen between the Lord Provost, Magistrates, and Town-Council of this City, as Patrons of the University, and the Principal and Professors of the College, forming the Senatus Academicus, touching their respective rights and powers derived from the Charters of Foundation, and the original Constitution of the said University; and also, that differences having arisen respecting the due exercise of these rights, in whomsoever vested; and the Commissioners being further informed that an action of Declarator has been raised before the Lords of Council and Session, to the end that these differences may be submitted to legal adjudication, and that such process is now pending before the said Supreme Court, the Commissioners

do not think it expedient to pronounce any opinion or judgment on the matters at issue between the contending parties in this suit, with the view or intent of interfering with the free exercise of the right of either party to prosecute the same. But the Commissioners, nevertheless, in virtue of their Visitatorial powers, and in virtue of all other powers granted to them by His Majesty's Warrant of the 23d day of July 1826, and again of the 28th day of September 1826, resolve to proceed in the Examination of the affairs of the said College, and, in obedience to His Majesty's commands, to inquire narrowly into the Revenues of the same, their management and expenditure, and to review the whole system of government, discipline, and education as at present existing in the said College; and in all matters connected therewith, to give such orders as to them shall seem most consistent with wisdom and justice; and to make such laws and regulations as may be best calculated to promote the advancement of sound learning, and the encouragement of religion and virtue; and all this as freely and as fully as if no such action, as is before mentioned, had ever been raised. The Commissioners have the more readily adopted the present resolution, from the consideration, that if the matters which they may feel it to be their duty humbly to report to His Majesty, and the measures which in their discretion they may suggest for adoption, should be found to interfere illegally with the rights, powers, or immunities claimed by any person or persons, the same may be remedied in due course of law; and in case the same should be found to belong exclusively to the exercise of His Majesty's Royal authority and prerogative, His Majesty may be humbly advised to withhold his Royal sanction from such injustice. 7 October 1826.

Examinations.— Mr. Cuninghame, one of the City Clerks, } (Both examined regarding the
Mr. Ar. Bruce, Accountant for the City, } College Property, &c.)
Principal Baird.—(*Adjourned.*)

College of Edinburgh, 9th October 1826. 9 October 1826.

Commissioners Present,—

The Earl of Rosebery.	The Solicitor-General.
The Lord Binning.	Dr. Cook.
The Lord President.	Dr. Lee.
The Lord Advocate.	Mr. Home Drummond.

The Earl of Rosebery in the Chair.

Printing Committee.—Mr. Home Drummond added to the Committee for Printing.

Examinations.— Professor Dunbar. Professor Brown.

Degree of M.D.—Ordered, A Copy of the Representation by the Faculty of Arts to the Senatus Academicus of the College of Edinburgh, requiring a more extended Education previous to conferring the Degree of M.D. (*Return printed.*)—(*Adjourned.*)

College of Edinburgh, 10th October 1826. 10 October 1826.

Commissioners Present,—Same as last day, with the addition of Lord Melville.
The Earl of Rosebery in the Chair.

Examinations.— Professor Wallace. Professor Wilson.—(*Adjourned.*)

College of Edinburgh, 11th October 1826. 11 October 1826.

Commissioners Present,—Same as yesterday, excepting Lord Melville.
The Earl of Rosebery in the Chair.

Dr. Chalmers.—Representation from Dr. Chalmers, in regard to the Returns from the United College of St. Andrews having been sent back for amendment, read. The Commissioners came to the following Resolution thereon, and request the Chairman to transmit a copy to Dr. Chalmers:—"*Resolved*, That the Commissioners, having considered the Representation from Dr. Chalmers, are of opinion, that whatever assistance Dr. Chalmers may be able to afford to the Commissioners, in order to render the state of the Funds and Expenditure of the United College of St. Andrews more distinct, or to render the Returns upon any other point more complete and full, it is his duty to give, in co-operation with his Colleagues: That if Dr. Chalmers, or any other Member of the College, is dissatisfied with any statements contained in the Returns from the College to which he belongs, he will have an opportunity of stating his opinions, and the grounds of his difference from his Colleagues, to the Commissioners; and that it is competent to Dr. Chalmers, if he thinks fit, to record his Dissent from the Answers to be returned by the United College to the Commissioners."

Examinations.— Professor Leslie.
Sir William Hamilton—(his Evidence not printed, on account of the extensive alterations made by him thereon, when sent for verbal correction—to be re-examined.)

The following Returns ordered:—

1. *Philosophical Apparatus.*—A Return of all the sums the Patrons of the University of Edinburgh have given for the Instruments, or other Philosophical Apparatus of the respective Classes in said University, and of the dates at which said sums were given during the last 50 years. (*Return printed.*)

Universities and Colleges, Scotland.

Minutes and Proceedings.

11 October 1826.

2. *Philosophical Apparatus.*—A Return of all the Petitions or applications for Instruments or Philosophical Apparatus, from any of the Professors to the Town-Council, and of the deliverance thereon, during the same period. (*Abstract of Return printed.*)
3. *Examiners for Degrees.*—Copy of the Memorial on the subject of the appointment of the Examiners for Degrees granted by the University of Edinburgh. (*Return printed.*)
4. *Professorship of Universal History.*—A Copy of the Report of the Faculty of Arts, on the Petition of Sir William Hamilton to have the Class of Universal History included in the Faculty of Arts. (*Return printed.*)
5. *Royal Infirmary.*—A Copy of the Resolution of Royal Infirmary, as to Preparations sent therefrom to the College. (*Return printed.*)
6. *College of Edinburgh.*—A Copy of the Signature of Confirmation of 1688, in favour of the College of Edinburgh, prepared, but not passed the Seal. (*Return not printed.*)
7. *Professorship of Public Law.*—A Copy of the Royal Grant in 1707, establishing the Professorship of Public Law. (*Abstract of Return printed.*)
8. *Library.*—A Copy of the printed Rules regulating access to, and the use of the Library to Students. (*Return printed.*)
9. *Divinity Hall.*—A Copy of the Regulation of the General Assembly, with respect to attendance at the Divinity Hall. (*Return printed.*)
10. *History Class.*—Information to be given of the reason for changing the name of the History Class, of which Sir William Hamilton is Professor. (*Return printed.*)—(*Adjourned.*)

---

12 October 1826.

College of Edinburgh, 12th October 1826.

Commissioners Present—

The Lord Viscount Melville.	The Solicitor-General.
The Lord President.	Dr. Cook.
The Lord Advocate.	Dr. Lee.

Lord Melville in the Chair.

Examinations.— Professor David Ritchie. Professor Jameson.

Professor William Ritchie being unable to attend from indisposition, the following Commissioners appointed to examine him at his own house:—The Solicitor-General, Dr. Cook, Dr. Lee.—(*Adjourned.*)

---

16 October 1826.

College of Edinburgh, 16th October 1826.

Present—

The Earl of Rosebery.	The Solicitor-General.
The Lord Binning.	Dr. Cook.
The Lord President.	Dr. Lee.
The Lord Advocate.	

The Earl of Rosebery in the Chair.

The Solicitor-General reported Examination of Professor William Ritchie.

Examinations.— Professor Brunton. Professor Meiklejohn.

Opinions of Professors.—The Commissioners requested the Chairman to communicate to Principal Baird, that the Commissioners intended to obtain the opinions of the Professors by means of *vivâ voce* Examinations, and not through the medium of written communications.—(*Adjourned.*)

---

18 October 1826.

College of Edinburgh, 18th October 1826.

Present—

The Earl of Rosebery.	The Lord Advocate.
The Lord Binning.	The Solicitor-General.
The Lord President.	Mr. Moncrieff.

The Earl of Rosebery in the Chair.

Printing.—Letter from Sir David Hunter Blair, addressed to Lord Melville, representing that the King's Printers had a right to print for the Commission, as the expense was to be defrayed by the Crown—and that by the University Printer being employed, he conceived that proceeding to be an infringement on the patent of the King's Printers, which expresses that they "have a right to print every thing that is published in Scotland under Royal Authority,"—was read; and the Commissioners requested the Lord Advocate to answer the communication by stating, that the printing referred to is intended solely for the private perusal of the Commissioners, and not being published, does not appear to come within the meaning of the Patent.

Examinations.— Professor Irving. Professor Bell. Professor Napier.

Ordered—

1. *Sommerville's Mortification.*—A certified Copy of Deed of Mortification of 2600 merks by R. Sommerville, contained in the books of the Town-Council of Edinburgh in 1639; and a Copy of Acts of Council, dated 11th August 1641, 13th February 1643, and 4th August 1658.—(*Abstract of Return printed.*)
2. *Church Attendance.*—A Copy of the recent Report from the Committee of the Faculty of the University of Glasgow as to attendance at Church. (*Return printed.*)—(*Adjourned.*)

College of Edinburgh, 23rd October 1826. 23 October 1826.

PRESENT—

The Earl of Lauderdale.	The Solicitor-General.
The Earl of Rosebery.	Dr. Lee.
The Lord Binning.	Mr. Home Drummond.
The Lord Advocate.	Mr. Moncrieff.

The Earl of ROSEBERY in the Chair.

Examination.— Professor Alison.—(*Adjourned.*)

College of Edinburgh, 24th October 1826. 24 October 1826.

Commissioners Present,—The same as yesterday, with the addition of the Lord President.

The Earl of ROSEBERY in the Chair.

Sir William Hamilton's Evidence.—Letter from Sir William Hamilton, stating, that on perusing the Minutes of his Evidence, he found much repetition; many of the Answers not adequately applying to the interrogatories, or not sufficiently exhausting the subject, and requesting to be re-examined. The Commissioners resolved, in consequence of his request, not to print these Minutes; and that they will take an opportunity of re-examining him.

Examinations.— Professor Alison (*farther.*) Professor Duncan, senior.
Professor Duncan, junior.—(*Adjourned.*)

College of Edinburgh, 26th October 1826. 26 October 1826.

PRESENT—

The Earl of Lauderdale.	The Lord Chief Baron.
The Earl of Rosebery.	The Solicitor-General.
The Lord Binning.	The Dean of Faculty.
The Lord Advocate.	Dr. Lee.
The Lord Justice-Clerk.	Mr. Moncrieff.

The Earl of ROSEBERY in the Chair.

Examinations.—
Professor Alison (*farther.*) Professor Duncan, junior (*farther.*)—(*Adjourned.*)

College of Edinburgh, 27th October 1826. 27 October 1826.

PRESENT—

The Earl of Lauderdale.	The Solicitor-General.
The Lord President.	The Dean of Faculty.
The Lord Justice-Clerk.	Dr. Lee.
The Lord Chief-Baron.	

The Earl of LAUDERDALE in the Chair.

Examinations.—
Professor Alison (*farther.*) Professor Home. Professor Graham.—(*Adjourned.*)

College of Edinburgh, 30th October 1826. 30 October 1826.

PRESENT—

The Earl of Rosebery.	The Lord Chief-Baron.
The Lord Binning.	The Solicitor-General.
The Lord President.	The Dean of Faculty.
The Lord Advocate.	Dr. Lee.
The Lord Justice-Clerk.	Mr. Moncrieff.

The Earl of ROSEBERY in the Chair.

Examinations.— Professor Hope. Professor Monro.—(*Adjourned.*)

College of Edinburgh, 31st October 1826. 31 October 1826.

Commissioners Present,—Same as yesterday, excepting the Earl of Rosebery, and the Dean of Faculty.

The Lord BINNING in the Chair.

Dr. Lee added to the Committee for Printing.

Examinations.— Professor Hope (*farther.*) Professor Russell.—(*Adjourned.*)

College of Edinburgh, 1st November 1826. 1 November 1826.

PRESENT—

The Earl of Rosebery.	The Solicitor-General.
The Lord Binning.	The Dean of Faculty.
The Lord President.	Dr. Lee.
The Lord Chief-Baron.	

The Earl of ROSEBERY in the Chair.

Examinations.—
Professor Christison. Professor Monro (*farther.*) Professor Ballingall.—(*Adjourned.*)

Universities and Colleges, Scotland.

Minutes and Proceedings.

2 November 1826.

College of Edinburgh, 2d November 1826.

PRESENT—

The Earl of Rosebery.	The Solicitor-General.
The Lord Binning.	The Dean of Faculty.
The Lord President.	Dr. Lee.
The Lord Advocate.	Mr. Moncrieff.
The Lord Justice-Clerk.	

The Earl of ROSEBERY in the Chair.

Examination.— Professor James Hamilton, junior.—(*Adjourned.*)

---

7 November 1826.

College of Edinburgh, 7th November 1826.

Commissioners Present,—Same as yesterday, excepting the Lord Advocate and the Lord Justice-Clerk.

The Earl of ROSEBERY in the Chair.

Examinations.—

Professor Christison (*farther.*) Professor Ballingall (*farther.*) Professor Graham (*farther.*)

Ordered—

1. *Astronomical Institution.*—Copies of any proceedings of the Senatus Academicus of the University of Edinburgh, in December 1811, in consequence of a Communication from the Town-Council, in regard to the proposal for the Establishment of an Astronomical Institution on the Calton Hill. (*Return printed.*)
2. *Colleges in Convention.*—A Copy of the Regulations or Resolutions of the Scotch Universities in Convention. (*Return not printed.*)
3. *Bursars.*—A Statement of the Names of Persons holding the situations of Bursars in the University of Edinburgh, and when appointed. (*Return printed.*)
4. *Students of Divinity.*—A Statement of the Number and Proportion of Regular and Irregular Students at the Divinity Halls, in the different Colleges of Scotland, for the last 25 years. (*Return printed.*)
5. *Diplomas in Surgery.*—A Copy of the Regulations of the Royal College of Surgeons, Edinburgh, for Granting a Diploma in Surgery. (*Return made; Letter of President of the Royal College, and Statement by Dr. William Wood, printed. Regulations not printed.*)

Intimation to be made to the following persons, that the Commissioners will request their attendance for examination:—

Bishop Sandford.	Dr. Abercromby.
The Rev. Sir H. W. Moncrieff, Bart.	Dr. John Thomson.

Universities and Colleges, Scotland.

Minutes and Proceedings.

29 December 1826.

Examination.—The Solicitor-General offered Mr. George Bell's Evidence; received and ordered to be printed.

Visitation at Glasgow.—The Commissioners having specially under consideration the clause in His Majesty's Commission, authorizing and requiring them, at their General Meeting in Edinburgh, to make choice of and appoint so many of their own number, as they may think fit, to repair to St. Andrews, Glasgow, and Aberdeen, for holding particular Visitations of the Universities and Colleges therein respectively situated, to whom, or a Quorum of them, which is always to consist of three at the least, His Majesty commits full power and authority to visit, by virtue of these presents; and having resolved, that it is expedient to hold a Particular Visitation at the University and College of Glasgow, They do hereby, in pursuance of the foresaid authority, make choice of and appoint

The Earl of Lauderdale,	The Solicitor-General,
The Lord Binning,	The Dean of Faculty,
The Lord Advocate,	Dr. Taylor,
The Lord Justice-Clerk,	Dr. Lee, and
Lord Corehouse,	Mr. Home Drummond,
Sir Walter Scott,	

or a Quorum of them, to be Commissioners for holding a Particular Visitation at the University of Glasgow; and direct and empower them to meet within the College of Glasgow, on Thursday the 4th of January next, at 12 o'clock noon.

Leys Bursaries.—Sir Robert Burnett's Petition, presented on 4th December, ordered to be answered by King's College, Aberdeen.

Petition of Divinity Students.—Petition of a Committee, appointed by the Students of Divinity of the College of Edinburgh, in regard to the Theological Library, presented, and the Principal and Professor of Divinity ordered to answer the same.—(*Petition, with the Answer, printed.*)

Ordered—

College of Glasgow Accounts.—Accounts, for 50 years, containing the Receipt and Discharge of the Revenue of the College of Glasgow, presented; and the Accounts applicable to the years 1777, 1783, 1784, 5, 6, 1788, 1793, 1798, 1802, 3, 1809, 10, 13, 14, 15, 17, 1820, 21, 22, 23, and 24, ordered to be immediately printed.

1. *Theological Library.*—A Copy of the Will of Dr. Campbell, formerly Professor of Divinity in the College of Edinburgh, or of the Deed or Writing by which he left his Library, or part thereof, for the purpose of instituting a Library for the Divinity Hall in the said College.—(*Return printed.*)
2. *Theological Library.*—A Copy of all other writings, by which, at any time, Books have been made over or bequeathed to the Library at the Divinity Hall.—(*Return printed.*)
3. *Theological Library.*—A Copy of the Accounts of the Divinity Library for the last 20 years.—(*Return not printed.*)

College of Edinburgh, 13th January 1827.

13 January 1827.

PRESENT—

The Lord Binning.	Lord Corehouse.
The Lord President.	The Solicitor-General.
The Lord Advocate.	The Dean of Faculty.
The Lord Justice-Clerk.	Dr. Lee.

The Lord BINNING in the Chair.

Visitation at Glasgow.—Minute, appointing Visitation at Glasgow, read. Chairman reported verbally the Proceedings of the Visitation.—Approved of. Evidence taken to be printed, excepting that in reference to Dr. Millar's Memorial.

Dr. Millar's Complaint.—In giving an account to the Commissioners of the proceedings that had taken place at Glasgow, the Chairman said that he felt it to be his duty to call their attention to the subject of a Memorial presented to the Committee during their visit to that University, by Dr. Millar, the Lecturer on Materia Medica, complaining that his Lectureship had not been raised to the station of a Regius Professorship, when the other Lectureships were so raised; and attributing his disappointment therein to the refusal of the Chancellor of the University to recommend him to the Crown.

This Memorial had led to the examination of Dr. Millar himself, of the Principal, and two other Gentlemen.

The Memorial and the Evidence were then read, and the Commissioners having deliberated thereupon, Resolved—

1*st.* That the Chairman be directed to write to his Grace the Duke of Montrose, to inform him of the presentation of the said Memorial, and of the proceedings had thereupon, and to furnish his Grace with a copy of the Memorial and Evidence.

2*d.* That all further proceedings be suspended until the Duke shall have had an opportunity of affording such information, and making such observations as he may think fit, upon the said Memorial and Complaint.

Intimations.—The Commissioners directed an intimation to be put up on one of the public entrances to the College of Edinburgh, similar to that ordered to be upon the gate of the College of Glasgow, on the 5th of January current. They also directed one, of which the following is a copy, to be put up in the public entrance to the Common Hall of the University of St. Andrews, and on the public entrances to King's College and Marischal College, Aberdeen, viz.:—

"His Majesty's Commissioners, appointed for the Visitation of the Universities and Colleges of Scotland, are transacting business at Edinburgh, and are ready to hear all concerned, in regard to all matters relating to the University and College.

"The Commissioners intend, in the course of the year, to hold a particular Visitation of this University and College. Any communications, duly authenticated, may be transmitted to their Secretary, 29, Queen Street, Edinburgh.

"13*th January* 1827." (Signed) "BINNING, *P.*" 13 January 1827.

Prize Essay.—The Commissioners, considering that it would be very desirable that they should afford an opportunity to the Students of this University of displaying their talents and acquirements by a competition for a public Prize; and being anxious to take an early occasion of manifesting their sincere wish to promote the interests of Learning and Science, by every means within their power,—*Resolved*,

"1*st*, That they will give a sum of One Hundred Guineas, as a Prize for an Essay in this University, to be read by the Author in presence of the Patrons, the Principal, Professors, and the whole University, on Friday, the 6th of April next, on which occasion the Commissioners will attend.

"2*d*, That the competition be open to all the Students now attending the classes.

"3*d*, That the Principal, and the Professors composing the Faculty of Arts, be the Judges of the comparative merits of the said Essays, and do award the Prize.

"4*th*, That it be remitted to the same Gentlemen to fix the time within which the Essays must be given in.

"5*th*, That the subject of the Essay will be fixed by the Commissioners, and communicated as soon as it is decided upon.

"6*th*, That the Chairman do forthwith communicate the said Resolutions to the Patrons and Principal."—(*Adjourned.*)

College of Edinburgh, 23*d January* 1827. 23 January 1827.

PRESENT—

The Lord Advocate. Dr. Lee.

Examination.— Mr. Playfair, Architect, (College Buildings.)

Ordered—

1. *Lecture-Rooms.*—A Return of the Number of Lecture-Rooms in the College of Edinburgh; of the hours daily during which each Room is occupied; and of the Number of Students each Room is calculated to contain. (*Return printed.*)
2. *Lecture-Rooms.*—A Return of any Circular Letter, or other Communication, from or authorized by, the Senatus Academicus, to the Architects, or College Commissioners, concerning the Accommodation required for Lecture-Rooms and other purposes. (*Return not printed.*)—(*Adjourned.*)

Universities and Colleges, Scotland.

Minutes and Proceedings.

2 April 1827.

College of Edinburgh, 2d April 1827.

PRESENT—

The Lord President. The Solicitor-General.
The Lord Advocate. Dr. Lee.
The Lord Justice-Clerk.

The Lord PRESIDENT in the Chair.

College Chapel at St. Andrews, &c.—Two Petitions of certain Students of St. Andrews, complaining of the Regulation requiring the attendance of Students at the College Chapel, and as to the Election of Rector, and a Paper from Dr. Chalmers on the same Regulation as to attendance at the College Chapel, and on other College matters, read. The matters complained of to be inquired into by the Commissioners of Visitation when at St. Andrews.

Library, &c., Glasgow.—Petition of certain Students of the University of Glasgow, in regard to the Library, and other matters connected with said College, read. To be inquired into by the Commissioners of Visitation when at Glasgow.

Cambridge Examinations.—Letter from Mr. George Patton, Scholar of Trinity College, Cambridge, offering the Commissioners a perusal of his Collection of Cambridge Examinations. Papers read. Answered. Offer accepted.

Prize Essay.—The Resolutions of 13th January last having been read, the Commissioners, considering that the subject of the Prize Essay not having been fixed by them till now, have this day come to the following *additional* Resolutions in regard to said Prize :—

Resolved—

1. That the subject of the Essay be, " On the National Character of the Athenians, and the Causes of those Peculiarities by which it was distinguished."

2. That the Competition be open to all the Students who have matriculated and attended any of the Classes of the College of Edinburgh during this current Session, whether they shall attend the next Session of College or not.

3. That the successful Essay shall be read by the Author, in presence of the Patrons, the Principal, Professors, and the whole University, in such place as shall afterwards be fixed and duly intimated, on Friday the 9th day of November next, on which occasion such of the Commissioners as can conveniently do so, will attend.

4. That by the said Resolutions of 13th January, the Principal, and the Professors composing the Faculty of Arts, are to be the Judges of the comparative merits of the Essays, and award the Prize.

The Commissioners recommend that these Gentlemen do immediately fix the time within which the Essays must be given in, and also frame such other regulations as may appear to them to be necessary, in regard to the *manner* in which the said Essays are to be transmitted to them; the said Principal and Professors taking adequate and satisfactory means to ascertain that the Essays so given in have been composed by the Students whose names they respectively bear.

5. That the Principal of the University do communicate these Resolutions to the Professors and Students of said University, without delay.

6. That the Chairman do forthwith transmit a copy of the same to the Patrons and Principal.—(*Adjourned.*)

Universities and Colleges, Scotland.

Minutes and Proceedings.

10 July 1827.

Proceedings in London.—The Earl of Rosebery stated, That in pursuance of a wish, verbally expressed by the Commissioners, to have the evidence of Sir James M'Grigor, Director-General of the Army Medical Department, along with any other Medical Gentlemen of great eminence, taken at London by any of the Commissioners who might be there, the Earl of Aberdeen, the Lord Binning, the Lord Advocate, and his Lordship (Lord Rosebery), had accordingly, on the 1st of June last, examined Sir James, and Dr. William Burnett, Medical Commissioner of the Navy; and his Lordship having laid upon the table Minutes of their Evidence, the Commissioners approved of what had been so done, and ordered the Evidence taken to be printed.

Proceedings—Theological Library.—Dr. Lee stated, That at a Meeting of Commissioners, fixed for Tuesday, the 29th of May last, a Quorum did not attend; but that as Professor Alexander, of St. Andrews, the Rev. Matthew Leishman, of Govan, the Rev. George Hamilton, of Kirkcudbright, the Rev. Thomas Brown, of St. John's, Glasgow, and the Rev. Andrew Bullock, of Tulliallan, were in attendance in consequence of a request made to them, the Commissioners present resolved to examine them in regard to the Theological Library of the College of Edinburgh, and to offer their Evidence to the Commission. Their Evidence laid on the table; the Commissioners approved of its being taken, and ordered it to be printed.

Commission.—His Majesty's Warrant appointing Commission,—to be printed.

Visitation at St. Andrews.—The Commissioners appointed (*in the same form as adopted on 29th December, regarding Glasgow*) the following Commissioners, or a Quorum of them, to visit the University and Colleges of St. Andrews, on the 31st of July 1827:—

The Earl of Lauderdale.	The Solicitor-General.
The Earl of Rosebery.	The Dean of Faculty.
The Lord Viscount Melville.	Dr. Taylor.
The Lord Binning.	Dr. Cook.
The Lord President.	Dr. Lee.
The Lord Advocate.	Mr. Home Drummond.

Visitations at Aberdeen and Glasgow.—The Commissioners were of opinion, that a Visitation should take place of the Colleges of Aberdeen on the 17th of September, and another at Glasgow on the 9th of October; and direct a notification to be sent to each of the Commissioners to communicate this intention, with a request to know whether the time proposed will be convenient for him, and whether his name may be put down as one of the Committee for visiting both, or one or other of those Universities.

Short-hand Writer.—The Commissioners requested the Lord Advocate to apply to the Secretary of State for having a Short-hand Writer sent from London, to minute the proceedings of the Commissioners.

---

27 July 1827.

College of Edinburgh, 27th July 1827.

PRESENT—

The Earl of Rosebery.	The Lord Advocate.
The Lord Binning.	The Solicitor-General.
The Lord President.	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Papers presented—

British Museum.—Printed Paper, containing directions respecting the Reading-room of the British Museum. (*Not printed.*)

Museum.—Petition of the Council of the Royal Society of Edinburgh, in regard to the Museum, read. (*Printed.*)

Museum.—A Letter from Captain Brown, in regard to the Museum, read. (*Not printed.*)

Examination.—Professor Jameson.—(*Museum.*)

Museum.—The Commissioners having under consideration the Memorial of Captain Brown,—*Resolved*, "That he be permitted to enter the said Museum, in order to draw from the various specimens and articles therein, for the purpose of completing the work on General Ornithology, which he is now engaged in publishing, under such regulations as may be deemed necessary by Professor Jameson, to be expressed in writing; and a copy of which to be transmitted to the Royal Commissioners.

"That a copy of the above Resolution be sent to Professor Jameson and Captain Brown."

Visitation at Aberdeen.—The following Commissioners, or any of the others who may be able to attend, or a Quorum of their number, appointed (*nearly in the same form of words as used on 29th December, regarding Glasgow*) to visit the Colleges of Aberdeen on the 17th of September:—

The Duke of Gordon.	Lord Corehouse.
The Earl of Aberdeen.	The Solicitor-General.
The Earl of Rosebery.	The Dean of Faculty.
The Lord President.	Dr. Taylor.
The Lord Binning.	Dr. Cook.
The Lord Advocate.	Dr. Lee.

Visitation at Glasgow.—The following Commissioners, or any others who may be able to attend, or a Quorum of their number, appointed (*nearly in the same form of words as*

used on 29th December, regarding Glasgow) to visit the College of Glasgow on 9th October :—

The Duke of Montrose.	The Solicitor-General.
The Lord Viscount Melville.	The Dean of Faculty.
The Lord Binning.	Dr. Cook.
The Lord Advocate.	Dr. Lee.
The Lord Justice-Clerk.	Mr. Home Drummond.
Lord Corehouse.	(*Adjourned.*)

College of Edinburgh, 18th August 1827. 18 August 1827.

PRESENT—

The Earl of Rosebery.	The Lord Advocate.
The Lord Viscount Melville.	The Solicitor-General.
The Lord President.	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Visitation at St. Andrews.—Minute appointing Visitation at St. Andrews, read. Lord Melville reported verbally, Proceedings of the Visitation. Approved of. Evidence taken, directed to be printed.

Drs. Hunter and Gillespie.—In reference to the account given, in regard to the inadequate allowance made by Dr. John Hunter, of St. Andrews, to Dr. Gillespie, his Assistant, the Commissioners requested Lord Melville, Chancellor of the University, to communicate with Dr. Hunter on the subject, and report the result to a subsequent Meeting.

Papers presented—

Colleges of St. Andrews.—Letter from Alexander Bower, Edinburgh, communicating some information collected by him regarding the ancient Constitution of the College of St. Andrews. (*Not printed.*)

Dutch System of Education.—Letter from Alexander Thomson, Esq., Dean of Faculty, of Marischal College, Aberdeen, transmitting an Account of the System of Education pursued in the Universities of Holland. Answered, returning thanks for the communication. (*Account printed.*)

Leys Bursaries.—Reply from King's College, Aberdeen, to Sir Robert Burnett's Petition, regarding Leys Bursaries. Copy to be sent to Sir Robert, with a letter, stating that the Commissioners will be ready to hear him or his Agent when they visit Aberdeen.

Edinburgh College.—Petition from the Graduates of the last Session (1826-7) of the College of Edinburgh, containing several suggestions in regard to the Management of that College. (*Printed.*)

Museum.—In pursuance of the Resolutions of last Meeting, regarding the admission of Captain Brown to the Museum, a set of Regulations were presented from Professor Jameson, and two Papers from Captain Brown on the subject; read. The Commissioners remitted to Lord Viscount Melville, the Lord President, and the Solicitor-General, or two of them, as a Committee, to meet with Professor Jameson, to revise and finally adjust the Regulations for the admission of Captain Brown to the Museum.

Museum.—The Commissioners requested the Earl of Rosebery to communicate with Principal Baird, Dr. Hope, Professor Jameson, and Dr. Alison, for the purpose of their jointly framing, for the consideration of the Commission, a set of General Regulations for the admission of Scientific persons to the Museum.

Accounts of Colleges.—The whole accounts transmitted by the Colleges of St. Andrews, Glasgow, and Aberdeen, in regard to their Property, Revenue, Bursaries, &c., were remitted to the Account Committee to report thereon.

Parochial Teaching.—The Earl of Rosebery, at the request of the Commissioners, stated that he will address a circular letter to the different Presbyteries of Scotland, requesting them to transmit a Return of the number of Schoolmasters capable of teaching the higher branches of Education, stating the branches actually taught within the several Parishes of their Presbyteries respectively.

The following is a copy of the Letter sent :—

"*Edinburgh, 28th August* 1827.

"SIR,—In the course of the inquiries prosecuted by the Commissioners appointed by His Majesty for Visiting the Universities and Colleges of Scotland, it has appeared that it would be of great consequence to ascertain to what extent the Parochial and other Schools, in this part of the United Kingdom, are capable of carrying on the preparation of young men with advantage in a course of liberal study before commencing attendance at the Universities; and it is thought that the most satisfactory and expeditious mode of obtaining this information, in a form sufficiently accurate and authentic, is through the medium of the Presbyteries of the National Church.

"You are, therefore, requested to lay before the Presbytery, of which you are Clerk, at its first meeting, this Letter, with the Schedule annexed on the 2d and 3d pages, and to solicit the earliest possible return to the Queries comprehended in it. In order that the Members of the Royal Commission may be enabled to make the necessary use of the information now requested, before they complete their investigation, it is hoped that the Returns may be forwarded early in the course of this Autumn.

"The most convenient method of transmitting the Answer will be by returning this Letter, when the columns are filled up, addressed to the Clerk of the University Commission at Edinburgh.

"The Members of the Royal Commission are persuaded that they may safely rely

Universities and Colleges, Scotland.

Minutes and Proceedings.

18 August 1827.

on the assistance which they now solicit from the Presbyteries of the Church of Scotland, in obtaining information on matters bearing very essentially on the consideration of the important subject of Academical Education, in the improvement of which the Church of Scotland has so deep an interest.

"I have the honour to be, Sir, your most obedient Servant,

"ROSEBERY, *Chairman.*

"*Note.*—It is requested, that in filling up the subjoined Schedule, one line may be devoted to the Parochial Schoolmaster of each Parish, and a second line to other Teachers. If the number of lines be too small for containing all the Parishes, another Sheet may be added, divided into the same number of columns, and ruled uniformly with the printed Schedule.

"In cases, in which no Students are actually taught Greek, the Presbyteries are requested to mention, whether the Schoolmasters are *capable* of teaching Greek. It is wished that the Returns should contain, not only the Parochial, *but all other* Schools within the bounds, respecting which the Presbytery can obtain information."

The following are the Queries in the Schedule annexed to the Circular:—

Names of Parishes?—Number of Teachers?—How many years have any of the Teachers attended a University?—How many Pupils are at present studying Latin? Greek? Mathematics? Geography?—In what Number of years do they complete the Study of Latin?—What Greek Grammar is taught?—What Latin and Greek Classics are read?—What Elementary Books of Mathematics are used?—What other Branches are taught in any of the Schools?—And any other Remarks which the Presbytery deem material.

Ordered—

1. *Revenue of the Colleges of St. Andrews.*—A Copy of a Memorial from the University of St. Andrews to the Lords of the Treasury, about the year 1810, complaining of the diminution of their Revenues by the allocation of their Teinds. (*Return printed.*)
2. *Revenue of the Colleges of St. Andrews.*—Also Copy of another Memorial from the same to the same, within these few years. (*Return printed.*)
3. *Revenue of the Colleges of St. Andrews.*—Also Copy of Reports of the Barons of Exchequer on the above Memorials, to the Treasury. (*Return printed.*)
4. *Museum.*—A Return of the Presses or Cases, or other compartments in the Museum of Edinburgh College, the contents of which are said to be private property; and the names of the individuals to whom they are said to belong. (*Return incomplete, 23d October.*)
5. *Bursaries.*—A Return of the present state of the Funds attached to the Bursaries founded in the different Colleges, the funds of which are not administered by the Colleges; of the security on which the said funds are vested, and of the annual payment to each Bursar, and any variation of the same; and of all fees, allowances, and deductions of every sort upon the said Bursaries. (*Return in the course of being received, 23d October.*)
6. *Rental of Marischal College.*—A Return of Marischal College, Aberdeen, of a copy of the Rental made out in 1716, for a former Commission of Visitation, and referred to in the Return No. 7. (*Return printed.*)
7. *Property of King's College.*—A Return from King's College, Aberdeen, containing a special enumeration of the Buildings, stated in Return No. 69, to be erected within the precincts of the College; of the date of the Grants or Titles on which the same are built, and of the persons to whom, and the terms and conditions on which the ground was feued, sold, or let; and the authority under which the same was done; and the price or annual payment obtained therefor; and the purposes for which the buildings are now occupied, and whether there is any restriction on the use to which they may be converted. (*Return printed.*)

The following Returns from both of these Colleges respectively:—

8. *Properties of Colleges of Aberdeen.*—A distinct enumeration of the whole *Properties, Estates, Funds, Rights of Debts,* or other sources from which the income of the College is derived, exhibiting the amount drawn from each; the date when, and the deed by which the same was acquired by the College; with the names and designations by which the estates were acquired, and are now known; and stating whether any portion of such acquisitions has been at any time, and if so, when and how and by what authority alienated, and in what manner the price is secured; and in cases where any part of the income is derived from the interest of money, stating in what manner such sums are secured or invested. (*Returns printed.*)
9. *Titles of Aberdeen College.*—Inventory of the Writs, Title-deeds, and other Evidents of the College. Book containing those from King's College exhibited and returned to College. (*Return* from Marischal College *not printed.*)
10. A Return of the amount of lands or sums destined or mortified for each Bursary, with the present amount of rents or interest, or other annual payments arising from the property or funds so mortified; the manner in which the property or funds is vested and managed, stating also the qualifications for the Bursary, the mode of management, and leading conditions required for the deed of Mortification and Endowment.

    N.B. The Return to keep the particulars to each Mortification or Endowment separate; and it will be observed, that the allowance to the Bursar is not what is wanted. (*Returns printed.*)
11. *Bursaries of Aberdeen Colleges.*—A Return of the Deeds of Mortifications or Endowments for Bursaries, Lectureships, or other Establishments at the College, or certified copies thereof. (*Not printed.*)
12. *Students of Aberdeen Colleges.*—A Return of the Number of Students attending the College during the last Session, stating also the number at each Class, and the number of regular and irregular Students at the Divinity Hall. (*Returns printed.*)

College of Edinburgh, 5th October 1827. 5 October 1827.

PRESENT,

The Earl of Aberdeen.
The Lord Viscount Melville.
The Lord Binning.
The Lord Advocate.
The Dean of Faculty (Sir James W. Moncrieff, Bart.)
The Solicitor-General.
Dr. Lee.
Mr. Home Drummond.

The Earl of ABERDEEN in the Chair.

Visitation at Aberdeen.—Minute appointing Visitation at Aberdeen, read. Chairman reported, verbally, an account of the Proceedings of the Visitation. Approved of. Evidence taken, to be printed.

Papers presented—

Marischal College Buildings.—Lectures on Mental Diseases. Letter from the Marquis of Lansdowne, respecting an application from Marischal College for a Parliamentary Grant, referred to the University Commissioners; another from his Lordship, transmitting a Memorial from Dr. Morrison, regarding the establishment of a Regius Professorship in the University of Edinburgh, for the delivery of Lectures on Mental Diseases, also referred to the Commissioners, read. Commissioners requested the Chairman to acknowledge the receipt of the same, and to state, that the subjects to which they relate will be taken into consideration by the Commissioners, when they make up their General Report to His Majesty.

Commissioners' Report.—The Commissioners having had under consideration the direction contained in His Majesty's Commission, to make their Report to His Majesty on or before the 1st day of January 1828,—Resolved,

1. That it will be necessary to request an extension of the period assigned for the preparation of their Report, to the 1st day of January 1829, in order to afford sufficient time for completing their inquiries, and for full and careful deliberation.
2. That it is desirable that the Commissioners should fix, so far as it may be practicable to do so, a particular time for the meetings at which the preparation of their Report must be taken into consideration; and they agree to hold their meetings for that purpose in the course of the month of July in the ensuing year, (if they obtain an extension of the time within which they are at present directed to make their Report,) with a view of affording sufficient time for the preparation and adjustment of their Report after such meetings.
3. That their Chairman, the Earl of Aberdeen, be requested in the interval to prepare, for the consideration of the Commissioners, the Heads of a Report, in order to bring under the view of the Commissioners the different points to which their attention should be directed, and to facilitate the deliberations of the Commissioners.

Museum.—Sir James Moncrieff, Bart. was added to the Committee named at last meeting for adjusting the Regulations for the admission of Captain Brown to the Museum, with directions to the Committee to take into consideration the state of the Museum.

Ministers of Edinburgh.—A copy of the two Memorials of the Ministers of Edinburgh, presented on 5th and 27th of September 1826, to be transmitted to the Town-Council of Edinburgh to answer the same.

Drs. Hunter and Gillespie—St. Andrews.—The Commissioners having had under their consideration the application of Dr. Gillespie, and the communication in reference thereto by Dr. Hunter to the Chancellor of the University, are of opinion, that independently of any objection which may exist according to the laws of the Church of Scotland, to Dr. Gillespie continuing to hold the Living of Cults, under the circumstances stated in the several letters from Dr. Hunter and him, the constant residence of Dr. Gillespie at St. Andrews during the Session of the Colleges is indispensable, which the Commissioners conceive to be incompatible with the regular discharge of his parochial duties. They are therefore farther of opinion, that if Dr. Gillespie is called upon to teach both the Humanity Classes, it may be proper that he should receive from Dr. Hunter an allowance of £200 per annum; and a copy of the Minute, in so far as it regards this subject, to be transmitted to Drs. Hunter and Gillespie.

Dumbarnie Church.—Ordered—A Return of the Sum received for the Patronage of the Church of Dumbarnie, sold in 1820; stating the authority by which it was sold, and the way in which the purchase-money was appropriated.—(*Adjourned.*)

College of Edinburgh, 6th October 1827. 6 October 1827.

Commissioners Present—Same as yesterday, excepting Lord Melville.

The Earl of ABERDEEN in the Chair.

College Buildings.—The Commissioners inspected the College Buildings.

Account Committee.—Mr. Home Drummond added to the Committee on Accounts.

Commissioners' Report.—With reference to the Resolutions of yesterday, and with a view to prepare matters for the future and final deliberations of the Commission, the Commissioners appoint,

The Earl of Aberdeen,
The Earl of Rosebery,
The Lord Binning,
The Lord Advocate,
Lord Corehouse,
Sir James W. Moncrieff, Bart.
The Solicitor-General,
Dr. Lee, and
Mr. Home Drummond,

Universities and Colleges, Scotland.

Minutes and Proceedings.

5 October 1827.

a Committee, of which the Solicitor-General to be Convener, for the purpose of considering the Curriculum of Study in the different Universities and Colleges; the arrangement of Classes, and order of attendance which may be necessary in each College during the several years of the attendance of the Students, and other matters connected therewith, with directions to prepare a plan of a Curriculum for each College, and to obtain the opinions and suggestions of the Professors of the several Colleges thereon, in such way as may appear most convenient; and to accompany that Report with reference to the evidence on which any part of their proposals may be framed.

General Reid's Will.—The Commissioners having had under consideration the terms of General Reid's Will, deem it to be necessary to intimate to the Principal and Professors of the University of Edinburgh, that as doubts may be entertained in regard to the institution of a regular Professorship, by virtue of any such deed, and of the right of the Principal and Professors to institute any such Professorship, or to nominate and appoint any person thereto, without the sanction of the Crown, they are of opinion, that, in the event of the death of the party life-renting the money left by General Reid's Will, the said Principal and Professors ought, as they are hereby required and ordained, to intimate that event to the Members of the Royal Commission of Visitation, if the Commission shall be in force, in order that provision may be made for any arrangements which may then become necessary, by competent authority.

Appoint a copy of this part of the Minute to be transmitted to Principal Baird.—(*Adjourned.*)

---

17 October 1827.

College of Edinburgh, 17th October 1827.

PRESENT,

The Earl of Rosebery,	The Lord Advocate,
The Lord Viscount Melville,	Sir James W. Moncrieff,
The Lord Binning,	The Solicitor-General,
The Lord President.	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Visitation at Glasgow.—Minute appointing Visitation at Glasgow, read. Lord Melville reported verbally an account of the proceedings of the Visitation. Approved of. Evidence taken to be printed.

Papers presented—

General Reid's Will.—Answer from Dr. Duncan, junior, transmitting an Extract of the Minutes of the University of Edinburgh, in regard to the eventual erection of a Professorship of Music, under the Will of General Reid; stating that it had been the intention of the University to comply with the order of the Commissioners.

Building going on at the College of Glasgow.—Report from Mr. Reid, the King's Architect for Scotland, in regard to the Building at present in progress in the College of Glasgow; and Letter from Principal Macfarlan, Glasgow, transmitting an Extract of the Faculty Minute, in answer to the Order issued by the Commissioners at Glasgow, prohibiting the farther progress of said Building, read. The said Extract is as follows:—"*Glasgow College, 12th October* 1827.—The Principal laid before the Meeting two extracts from the Minutes of the Royal Commissioners of Visitation, containing orders respecting the Feus and Buildings of the College, of the following tenor: (*see these in the Minutes and Proceedings of the Second Visitation at Glasgow.*) After mature deliberation, the Faculty, desirous to express their high respect for his Majesty's Commission, and for the Noblemen and Gentlemen of whom it is composed, —Resolved, That the Additions at present in progress on the house lately possessed by Mr. Mylne, and now appropriated to Mr. Sandford, be immediately discontinued, and that no more work shall be done on them for three weeks from this day, unless they be sooner inspected and approved of by the King's Architect; and the Principal is authorized to give directions for discontinuing the said Additions accordingly.

"The Faculty, at the same time, felt it incumbent on them, in the discharge of the duty they owe to themselves, their successors in office, the Corporation of this College, and the Public, to declare, that in their complying with the order of the Royal Commissioners, they do not recognise any right or power in the said Commissioners, acting under their present Commission, to issue such an order, or to give specific directions as to the management of the College Property, the administration of which is, by the Constitution of this College and the law of the land, vested exclusively in the Principal and Professors of the College, subject to the direction and control of the Ordinary Visitors.

"The Principal was appointed to transmit an extract of the Minute to Mr. Aitken, Secretary to the Royal Commissioners for visiting the Universities and Colleges of Scotland."

Extracted from the Minutes of the Faculty of the College of Glasgow, by

(Signed) JAS. COUPER, *Cler. Coll.*

Examination.— Mr. Reid, King's Architect, (*on his Report.*)

Building, &c.—The Commissioners having taken into consideration the proceedings adopted by the Committee appointed for a special Visitation of the University of Glasgow, with regard to certain Buildings and alterations in the College there, of which the said Committee, by their Minute of the 10th instant, prohibit the progress, entirely approve of these proceedings, and the Resolutions taken in consequence of them; and the Commissioners having also taken into consideration the Report of Mr. Reid, King's

Architect for Scotland, to the Lord Advocate, with reference to the said alterations and Buildings, which he was directed to inspect by the above-mentioned Minute, and having examined him in farther explanation thereof,

Resolved—

17 October 1827.

"That a communication be made to the Principal of the College of Clasgow, in order to be laid forthwith before the Faculty, desiring that the further progress of these alterations be stopt, and not recommenced without authority from the Commission, and that the Principal be requested to intimate the acquiescence of the Faculty in this Resolution, on or before the 25th instant. The Commissioners farther direct, that a copy of this Resolution, the Report and Evidence of Mr. Reid and Mr. Herbertson, be transmitted to Principal Macfarlan, for the information of the Faculty and Professors of the University of Glasgow, and also to the Lord Rector and Dean of Faculties of that University; and the Commissioners appoint a Meeting to be held on Saturday the 27th instant, at 12 o'clock, for the purpose of receiving Principal Macfarlan's answer to this Resolution.

The Commissioners, in the event of the Faculty of the College of Glasgow refusing to obey the preceding order, directed that all the Papers relating to the subject should be laid before the Lord Advocate, Sir James Moncrieff, Dean of Faculty, and the Solicitor-General, in order to obtain their opinion as to the powers of the Commissioners to enforce the order (see Order in Glasgow Minutes) given by their Committee in Glasgow; and the most expedient course of proceeding in relation to this matter.

Ordered—

Library.—A Return of the total number of Books at present amissing from the Library of the University of Edinburgh, distinguishing the number amissing as at 1st January 1826.

Books borrowed by Professors.—A Return of all Books entered in the Receipt-Books of the Libraries of the Universities of Edinburgh, St. Andrews, and of Aberdeen, prior to the date of this order, as borrowed out by the Professors respectively; specifying the Titles of the Books, and the number of Volumes of the same, the year when such borrowing took place, the name of the Borrower, and distinguishing such as may appear in the Receipt-Books to have been borrowed by any Professor for the use of other persons, together with a list of the Books which may have been returned to the Library by the Professors respectively at the date of the Return thus ordered.—(*Adjourned.*)

College of Edinburgh, 18th October 1827. 18 October 1827.

PRESENT—

The Solicitor-General. Dr. Lee.

Examinations.—The Rev. Dr. Robert Gordon. The Rev. James Gordon.
The Rev. Patrick Clason.

Their Evidence to be offered to the Board.

College of Edinburgh, 20th October 1827. 20 October 1827.

Commissioners Present—The same as on 18th, with the addition of
The Lord Advocate.

Examinations.— Professor Cheape. Dr. David Brewster.

Their Evidence to be offered to the Board.

College of Edinburgh, 25th October 1827. 25 October 1827.

Commissioners Present—The same as on 20th.

Examinations.— Dr. Coventry. Dr. Carson.—(*Adjourned.*)

Their Evidence to be offered to the Board.

College of Edinburgh, 26th October 1827. 26 October 1827.

Commissioners Present—The Solicitor-General and Dr. Lee.

Examinations.—Daniel Ellis, Esq. The Rev. James Marshall. Professor Napier.

Their Evidence to be offered to the Board.

College of Edinburgh, 27th October 1827. 27 October 1827.

PRESENT—

The Lord Binning. The Solicitor-General.
The Lord Advocate. Dr. Lee.
Sir James W. Moncrieff, Bart.
The Lord BINNING in the Chair.

Examination.— The Rev. John Williams, Rector of the Academy, Edinburgh.

Papers presented—

Commissioners' Report.—Letter from the Marquis of Lansdowne, stating, in answer to the Earl of Aberdeen's communication, that a new Commission will be forthwith issued, extending the period at which the Commissioners were commanded to make their Report to His Majesty, to the 1st of January 1829.

Books borrowed by Professors—Marischal College.—Return from Marischal College, Aberdeen, as to Books borrowed by Professors, ordered on 17th current.

Universities and Colleges, Scotland.

Minutes and Proceedings.

27 October 1827.

Mr. Farquhar's Will.—Extract received from Marischal College, Aberdeen, from the Will of the late J. Farquhar, Esq. of Fonthill Abbey, bequeathing certain sums to the Scotch Universities.

Buildings at Glasgow College.—Letter from Principal Macfarlan, transmitting the following Extract of the Faculty Minute, in answer to the Resolution of the Commissioners of the 17th current, read:—"*Glasgow College, 22d October* 1827.—The Faculty resumed the consideration of the communications from the Royal Commissioners for Visiting Universities and Colleges, when, after full deliberation, and attending particularly to the Examinations and Report communicated to them by the Royal Commissioners of Visitation, it was resolved to take no further step in the work to which these communications refer, till they shall have heard again from the Commissioners on the subject. At the same time, they feel themselves bound to declare, as they wish to do in the most respectful terms, that they yield this compliance solely on the ground stated in their Minute of the 12th October 1827, and that they are not to be held as, by this compliance, in any degree compromising or abandoning the privileges and rights of which, by their Charters, and the Laws and Ordinances of the Realm, they are constituted the Guardians. The Principal was appointed to transmit an extract of the above Minute to the Royal Commissioners."

An Extract from the Minutes of the Faculty of the College of Glasgow, on this and the preceding page, by (Signed) Jas. Couper, *Cler. Coll.*

The Commissioners, having taken into consideration the Answer from Principal Macfarlan to the Resolution of the Commissioners of the 17th curt.,—are decidedly of opinion, that the measures recently adopted by the Faculty of the College of Glasgow, without the express advice and consent of the Ordinary Visitors, in regard to the alterations in the College Buildings, and the application of the College Revenue to such purposes, have not been proceeded in, conformably to the powers of the Faculty as administrators, as these are defined in the charter of Nova Erectio, and by the express terms of the decree of the Court of Session in A.D. 1771 and 1772; and that it is within the powers and duty of the Commissioners of Royal Visitation to take cognizance of every irregularity and transgression of the laws of the College, and to see that any mischief or inconvenience thereby produced shall be duly remedied: But further, considering that the said Buildings cannot be allowed to remain in their present state,—Resolve, That the injunction given by the Committee on the 10th curt., and subsequently approved of by the Commissioners, in so far as the same regards Mr. Sandford's house, be withdrawn, so soon as a Report shall have been received from the Ordinary Visitors of the College,—bearing, that a plan has been adopted by the Faculty, with the assistance and advice of the King's Architect for Scotland, and approved of by the said Visitors, for taking down and re-constructing the Building in the outer Quadrangle of the College, in such a form as may sufficiently correspond with the other tower in the same Quadrangle, and with the style of architecture of the adjoining Buildings; and farther, that the said plan does also provide a mode for completing the other proposed alterations consistently with the safety of the fabric; and the Commissioners request His Majesty's Advocate to communicate with the King's Architect, in order to carry this Resolution into effect, by affording to the Faculty any aid, in furnishing plans or otherwise, which they may desire, and to state to the Barons of Exchequer the wishes of the Commissioners that the expenses of the Architect may be defrayed.

The Commissioners direct a copy of this Resolution to be transmitted to the Principal of the College of Glasgow, in order to be laid before the Faculty, and also to the Lord Rector and to the Dean of Faculties.

Proceedings, &c.—The Solicitor-General stated that Dr. Lee and he had, on the 18th current, examined the Rev. Dr. Robert Gordon, the Rev. James Gordon, and the Rev. Patrick Clason; and on the 20th and 25th current they, with the Lord Advocate, had examined Douglas Cheape, Esq., Professor of Civil Law, Dr. David Brewster, Dr. Coventry, Professor of Agriculture, and Dr. Carson, Rector of the High School, Edinburgh; and on the 26th instant Dr. Lee and he had examined Daniel Ellis, Esq., the Rev. James Marshall, and Macvey Napier, Esq., Professor of Conveyancing, and laid on the Table Minutes of all these Examinations,—the Commissioners approved of the Evidence being taken, resolved to receive the same, and ordered it to be printed.

Prize Essay.—A communication was received from Principal Baird, in regard to the Prize Essay, and the following statement, containing an extract from said communication, was directed to be immediately inserted in four of the Edinburgh newspapers, with an intimation from the Commissioners:—

"*College, Edinburgh, October* 26, 1827.

"The Principal and the Professors of the Faculty of Arts having attentively examined twenty-four Essays on the Character of the Athenians, &c., submitted to them in the competition for the Prize proposed by the Royal Commission, were unanimously of opinion that the preference was due to that which had for its motto—

'Ars utinam mores animumque effingere posset:
Nam miranda magis nulla tabella foret.'—*Altered from Martial,* x. 82.

And having opened the sealed letter, bearing the same motto, they found the name of the author to be John Brown Patterson, Student of Divinity.

"The Principal and the Faculty of Arts feel it to be their duty to add, that among

the other Essays there is a number of highly creditable performances; and that they consider the three, with the following mottoes, as peculiarly entitled to praise:—

1. ‘ ——— Res antiquæ laudis et artis
Ingredior, sanctos ausus recludere fontes.’
2. ‘ ’Ει μη τεθεασαι τας ’Αθηνας, στελεχος ’ει.’—*Lysippus in Dicæarcho.*
3. ‘ Athens, the eye of Greece, Mother of Arts
And Eloquence.’—*Milton.*

27 October 1827.

“ George H. Baird, *Principal.* David Ritchie.
Andrew Brown, *Dean of Faculty.* William Wallace.
John Leslie. John Wilson.
George Dunbar. James Pillans.”

“ The Commissioners have great pleasure in communicating the result of this competition. They are desirous of being enabled to publish the names of the three gentlemen whose Essays have been so honourably mentioned by the Faculty of Arts. If it suits the wishes of these Gentlemen that their names should be made known, they will have the goodness to recommunicate them to the Principal of the College without delay.

“ *College of Edinburgh, 27th October* 1827.”

Ordered—

Library.—1. A Copy of the Contract between the University of Edinburgh and the Royal College of Surgeons, in regard to the use of the Library.

2. *Library.*—A Copy of the Memorial and Documents connected with said Contract.

3. *Library.*—A Return of the number of Surgeons who borrow books from the said Library, and of the works out by them at the date of this order.

4. *Acts of Visitation.*—A Return of all the Acts of Visitation, and papers connected therewith, in possession of the United College of St. Andrews.
(The original papers to be sent, marked A. H., St. Leonard’s. Miscellaneous papers, St. Salvator’s.)

5. *Class Fees, &c.*—A Statement of the whole Expense which must be incurred by every Student in the Universities of Edinburgh, St. Andrews, and Aberdeen, passing through the Course of Study preparatory to the Degree of Master of Arts, including Class Fees, Price of Books, Library Money, Dues of Graduation, and all other necessary charges.

6. *Libraries, Edinburgh, &c.*—A Return of the number of Students who have availed themselves of the use of the Libraries of these Universities, during Session 1826-7, with the number of volumes taken out by each during that period.—(*Adjourned.*)

College of Edinburgh, 2d November 1827. 2 November 1827.

Present—

The Lord Binning. The Solicitor-General.
The Lord Advocate. Dr. Lee.
Sir James W. Moncrieff, Bart.
The Lord Binning in the Chair.

Examinations.—The Rev. Thomas Murray. Mr. William Roxburgh, Student.
The Rev. John Ramsay. The Rev. John Williams.

Prize Essay.—The Commissioners resolved, That the Member of Parliament for the City, the Patrons of the University, the Ministers of the City, Dr. Carson, Rector of the High School, and the Rev. John Williams, Rector of the Academy, be requested to attend on the occasion of Mr. Patterson reading his Essay, on the 9th current.—(*Adjourned.*)

College of Edinburgh, 5th November 1827. 5 November 1827.

Present—

The Lord Binning. The Solicitor-General.
The Lord Justice-Clerk. Dr. Lee.
Sir James W. Moncrieff, Bart.
The Lord Binning in the Chair.

Paper presented:—

Museum.—A Report from Principal Baird, Dr. Hope, Professor Jameson, and Dr. Alison, made in consequence of the Earl of Rosebery’s communication on the 18th of August, relative to the Museum.

Buildings at Glasgow College.—A Letter read from Principal Macfarlan, transmitting the following extract from the minute of the Faculty of the College of Glasgow, viz.—

“ *Glasgow College, 31st October* 1827.

“ The Faculty resumed consideration of the Minutes of the Royal Commissioners of Visitation, in terms of their adjournment of yesterday; and after mature deliberation, without acquiescing in the construction put by the said Royal Commissioners on the Charter of *Nova Erectio,* and decrees of the Court of Session in 1771 and 1772, Resolve to comply with the wishes of the Commissioners, by altering the staircase in the house allocated to Mr. Sandford, conformably to their said Minute of the 27th of October, in so far as shall be found practicable; and with that view, authorize the Principal to write to Mr. Reid, the King’s Archi-

Universities and Colleges, Scotland.

Minutes and Proceedings.

tect, informing him that the Faculty will be glad to receive any suggestion he may be pleased to offer towards effecting that object with safety and expedition; and appoint an Extract of the Minute to be transmitted to the Royal Commissioners of Visitation.—Extracted from the Minutes of Faculty of the College of Glasgow, by (Signed) "Jas. Couper, *Cler. Coll.*"

Ordered from the University of Edinburgh—

5 November 1827.

Museum.—1. A Copy of the Minute of the Senatus Academicus authorizing the borrowing of £3,000 from the Banks, for the purchase of the French Collection of articles of Natural History.

Museum.—2. The Papers as to the Loan of the £3,000 from the Banks, reported to be in the possession of the Senatus Academicus, or of Professor Jameson.

Museum.—3. Also Letters from the Principal, in Professor Jameson's possession, as to articles purchased for the Museum.

Museum.—4. Also the Ledger, or private book in which the articles of Natural History are entered.

Museum.—5. Also any List that may exist of articles transmitted through the Custom-House, or by means of any facilities afforded.—(*Adjourned.*)

9 November 1827.

College of Edinburgh, 9th November 1827.

Present—

The Earl of Rosebery.	Sir Walter Scott, Bart.
The Lord Binning.	Sir James W. Moncrieff, Bart.
The Lord Advocate.	The Solicitor-General.
The Lord Justice-Clerk.	Dr. Lee.
Lord Corehouse.	

The Earl of Rosebery in the Chair.

Examinations of Drs. Lorimer and Lee reported.—The Lord Binning having laid on the table Minutes of the Examinations of the Rev. Dr. Lorimer, Haddington, and of Dr. Lee, one of the Commissioners, taken on the 7th and 8th current, the Commissioners approved of the Evidence being taken, and ordered it to be printed.

Prize Essay.—The Commissioners having assembled, for the purpose of attending at the College, to hear the Prize Essay of Mr. Patterson read, were under the necessity of adjourning the same, in consequence of the crowd having prevented them from getting access to the Room destined for that purpose; and they appoint Saturday, the 17th inst., at one o'clock, for Mr. Patterson to read his Essay, in the presence of the Commissioners and the University.

In reference to the said Meeting, the Commissioners came to the following Resolution:—

"That the Principal do open the Meeting with a Latin Prayer: That the Principal and Senatus be enjoined to preserve the requisite order on the 17th, and to request from the Magistrates the assistance necessary to enable them to enforce it: That none of the Students of any former year be admitted, and only the Matriculated Students of the present year, up to the 9th of November, the Senatus making an arrangement of tickets, by which this regulation may be strictly adhered to: That the Principal and Professors do ascertain the number of Officers necessary to preserve order, and to keep the places reserved for the Royal Commissioners, the Patrons, and the Senatus Academicus, and others invited to the Meeting, taking care that no farther attempt be made to enter the room after it is filled; and to request the Magistrates to send the number which may be deemed necessary, at an early hour of the day, so as to prevent the repetition of any confusion.

"The Commissioners are under the necessity, from the utter want of accommodation within the College, of confining the right of admission to such of the Matriculated Students of this year as have been entered on the Books previous to the 9th of November, the day on which the Essay was originally appointed to be read. It is the only method that occurs to them, of rendering the public reading of the Prize Essay practicable. Having entire confidence in the good sense of the Students at large, the Commissioners are persuaded that they will bear in mind that the character of the University for order and discipline, will be compromised by any attempts on the part of those whom the Commissioners are unwillingly obliged to exclude, to obtain admittance into the room in which the Essay is to be read.

"That a copy of these Regulations be sent to the Principal and to the Lord Provost, and another copy be printed and stuck up at the entrances to the College."

Clerk's Disbursements.—The Chairman was authorized to apply to the Secretary of State for £250, to meet the Clerk's Disbursements.—(*Adjourned.*)

Eo Die.—College of Edinburgh.

Dumbarnie Church.—A Return from the Town-Council of Edinburgh, as to the Sale of the Patronage of Dumbarnie.—Ordered 5th October.

Library.—A Copy of the Contract between the University of Edinburgh and the Royal College of Surgeons, in regard to the use of the Library.—Ordered 27th October.

Library.—A Copy of the Memorial and Documents connected with said Contract.—Ordered 27th October.

Library.—A Return of the number of Surgeons who borrow books from the Library, and of the works out by them.—Ordered 27th October.

Books borrowed by Professors.—A Return from King's College, as to books borrowed by Professors.—Ordered 17th October.

Aberdeen Colleges—Class-Fees, &c.—Statements of the expense incurred by Students in King's College and Marischal College, passing through the Course of Study preparatory to the Degree of Master of Arts.—Ordered 27th October.

Aberdeen Colleges—Libraries.—Returns from both of these Colleges, of the number of Students who have availed themselves of the use of the Library during Session 1826-7.—Ordered 27th October.

Prize Essay.—The Commissioners proceeded to Dr. Hope's Class-room, to hear the Prize Essay read.

Having re-assembled, they feel themselves called upon to express their high admiration of it; and, impressed with the talent, erudition, and eloquence by which it is so eminently distinguished, they resolve, That it be printed.

That the above Resolution be communicated to Mr. Patterson by the Chairman, and a copy of this Minute be transmitted to the Senatus Academicus.—(*Adjourned.*)

College of Edinburgh, 17th December 1827. 17 December 1827.

PRESENT—

The Lord Binning.	The Solicitor-General.
Lord Corehouse.	Dr. Lee.
Sir J. W. Moncrieff, Bart.	

The Lord BINNING in the Chair.

Museum.—Captain Brown was called before the Commissioners, in consequence of further complaints from him of the want of adequate access to the Museum, and examined in regard to that matter.—(*The Examination was not minuted, there being no short-hand writer present.*)

The Regulations by Professor Jameson, presented on the 18th of August, regarding the same subject, were read. The Commissioners, before coming to any decision in regard to them, wished to hear Professor Jameson personally thereon, and in the mean time directed that Captain Brown be furnished with a copy of the same for his observations.

Theological Library, Edinburgh.—Ordered, a Return of the titles of books, belonging to the Theological Library in the University of Edinburgh, borrowed before the 1st of November 1827 and not yet returned, and the dates at which they have severally been borrowed.—(*Adjourned.*)

College of Edinburgh, 31st January 1828. 31 January 1828.

PRESENT—

The Lord Advocate.	Sir J. W. Moncrieff, Bart.
The Lord Justice-Clerk.	The Solicitor-General.
The Lord Chief Baron.	Dr. Lee.
Lord Corehouse.	Mr. Home Drummond.

The Lord JUSTICE-CLERK in the Chair.

Papers presented :—

Ministers of Edinburgh.—Answers for the Magistrates and Town-Council of Edinburgh to the two Memorials of the Ministers of Edinburgh.—Ordered 5th October.

Theological Library, Edinburgh.—A Return of the titles of books borrowed, belonging to the Theological Library of the College of Edinburgh.—Ordered 17th December.

Universities and Colleges, Scotland.

Minutes and Proceedings.

31 January 1828.

St. Andrews University Library.—A Return from the University of St. Andrews, as to books borrowed by the Professors.—Ordered 17th October.

St. Andrews University Library.—A Return of the number of Students who availed themselves of the use of the Library during the Session of 1826-7.—Ordered 7th October.

Class Fees, &c.—A statement of the whole expense which must be incurred by every Student in the United College of St. Andrews passing through the course of Study preparatory to the Degree of A.M.—Ordered same day.

Acts of Visitation.—Original Papers to the order of same day requiring a Return of all the Acts of Visitation, and Papers connected therewith, in possession of the United College of St. Andrews.

Clerk's Allowance.—A letter from the Clerk requesting the Commissioners to recommend some interim allowance to him.—Request complied with.

Printing Expenses.—An account due to the University Printers, for printing Papers for the use of the Commission, up to 31st December last, amounting to £820. 6*s.* was presented, and the same being reported upon by the Clerk, the Chairman was requested to transmit it to the Secretary of State, for the purpose of its being audited and passed in the usual way.

Glasgow College Buildings.

Glasgow College Buildings.—The Lord Advocate brought before the Commissioners the following Report from Mr. Reid, with the papers therein mentioned, viz.—

25 January 1828.

" *Charlotte Square, Edinburgh, 25th January* 1828.

" My Lord,—In conformity to your Lordship's directions, I yesterday inspected the alterations making on the College Buildings at Glasgow, and have the honour to report that these alterations are proceeding agreeably to the original design of them. The new square staircase projecting into the outer quadrangle of the College and the Venetian window which projects into the inner quadrangle have not been altered in their forms or dimensions; and these matters, as well as the other alterations and repairs formerly noticed in my Report to your Lordship, of date the 13th October last, are now seemingly completing in the manner originally intended. In order that your Lordship may be fully acquainted with the proceedings had by me in this business (arising out of the resolution of the University Commissioners, of date the 27th October last), I beg herewith to submit to your Lordship copies of the Correspondence which has passed between Principal Macfarlan and me, in relation to it, with copies of the sketches sent by me to the Principal.

" I have the honour, &c.

(Signed) " Robt. Reid,

" *The Lord Advocate.*" " *King's Architect and Master of Works.*

The following is the Correspondence referred to :—

Letter from Mr. Reid to Principal Macfarlan.

29 October 1827.

" 44, *Charlotte Square, Edinburgh, 29th October* 1827.

" Sir,—Referring to the resolution come to by the University Commissioners, dated the 27th inst., a copy of which has been transmitted to me, on the subject of the College Buildings at Glasgow, I beg respectfully to acquaint you that I will be ready to act in conformity with that resolution, whenever it suits the Faculty.

" I am, &c.

(Signed) " Robt. Reid,

" *Principal Macfarlan, College, Glasgow.*" " *Architect and Master of Works.*

Letter from Principal Macfarlan to Mr. Reid.

2 November 1827.

Glasgow College, 2d November 1827.

" Sir,—In answer to your favour of the 29th ult., I am authorized to say, that the Faculty of this College will be glad to receive any suggestion which you may be pleased to offer towards effecting the object recommended to them by the Royal Commissioners for Visiting the Universities and Colleges of Scotland with safety and expedition.

" I am, &c.

" *Robert Reid, Esq.*" (Signed) " D. Macfarlan, *Principal.*

Letter from Principal Macfarlan to Mr. Reid.

9 November 1827.

Glasgow College, 9th November 1827.

" Sir,—Referring to the letter which I had the honour of addressing to you about a week ago, I beg leave to say, that the Faculty of this College, in consideration of the unfinished state of part of their buildings, and the danger of being injured seriously by the weather, are anxiously desirous to receive any suggestions with which you may be pleased to favour them on the subject as early as possible.

" I am, &c.

" *Robert Reid, Esq.*" (Signed) " D. Macfarlan, *Principal.*

Letter from Mr. Raeburn, Mr. Reid's Assistant, to Principal Macfarlan.

10 November 1827.

" *Charlotte Square, Edinburgh, 10th November* 1827.

" Sir,—Referring to your letter to Mr. Reid, of yesterday's date, I beg to acquaint you that he has for some time been from home, and is returned so unwell that he is not able to

attend to business; but I shall, as his assistant, be in Glasgow on Monday to survey and make a plan of the College buildings in question.

" I am, &c.

" *Principal Macfarlan, College, Glasgow.*" (Signed) " JAMES RAEBURN.

Letter from Mr. REID to Principal MACFARLAN, transmitting Sketches.

" *Edinburgh, 20th November* 1827.

" SIR,—Referring to your letters to me on the subject of the alterations on the College buildings at Glasgow, I now beg respectfully to submit herewith sketches of what appears to me to be the best mode of completing those alterations. 20 November 1827.

" By the sketch No. 1 the stair is proposed to be constructed in an angular tower, similar in form, but somewhat larger in dimensions, to the one on the opposite side of the quadrangle. In this way the stair itself would be nearly as good as the one lately put up in the new square projection, while the original appearance and character of the edifice would in a great measure be preserved.

" The sketch No. 2 shows a new staircase, altogether in the interior of the building, with an angular entrance-tower, similar in style and dimensions to the one on the opposite side of the quadrangle. I am aware that the construction of a stair in the position here proposed would interfere with, and reduce considerably in dimensions, the adjoining room; but as that room is not only at present awkward in its figure and proportions, but likewise ill lighted, and as the projecting window which now lights it must either be removed or differently constructed, even with a view to the permanency of the structure, I conceive the sacrifice in this respect would not be great, more particularly when it is considered that a much better stair would thereby be obtained, and the dimensions of the angular entrance-tower would be made such as to admit of the old windows, one on each side of it, being restored, which are at present blocked up by the new projection.

" I have merely sent you these Sketches as showing what has occurred to me on the subject; and should they be at variance in any degree with the views of the Faculty in regard to the alterations in question, I beg most respectfully to state, that if the Faculty should be pleased to do me the honour to consult with me further on this subject, I will most readily either enter into further explanation of the Sketches now sent, or be happy to submit to them my opinion, professionally, or any other plans or suggestions which they may be pleased to communicate to me. I am, &c.

(Signed) " ROBT. REID,

" *King's Architect and Master of Works.*

" *Principal Macfarlan, College, Glasgow.*"

" *Note.*—No answer was received by Mr. Reid to this letter."

And the following Letter, addressed by his Lordship (Lord Advocate) to the Principal of the College of Glasgow, viz.:—

Edinburgh, 25th January 1828. 25 January 1828.

" REV. SIR,—On the 27th of October, the Royal Commissioners for Visiting the Universities and Colleges of Scotland, came to the following Resolution, of which a copy was, of that date, forwarded to you.—(*Here Commissioners' Resolution of 27th October* 1827 *is quoted.*)

" In answer to this Resolution, the Commissioners received a letter from you, enclosing the following Extract from the Minutes of the College of Glasgow."—(*Here the Minute of the Faculty of the College of Glasgow, dated 31st October* 1827, *is quoted*—See *preceding Minutes of 5th November.*)

" In consequence of the request made to me in the first of these Resolutions, I directed Mr. Reid, the King's Architect, to afford to the Faculty of the College of Glasgow every aid, in furnishing plans or otherwise, which they might desire; and having required him to report to me what steps had been taken in consequence, and what had been the result, I have now received a cammunication, of which I enclose a copy—(*The communication here alluded to is Mr. Reid's Report, and Correspondence therein referred to, all engrossed in the preceding Minutes of this day;*) and from which it would appear, that the views of the Commissioners respecting this matter, with which the Faculty promised compliance, have not been attended to.

" I intend to lay these documents before the Commissioners on Thursday next. I have thought it right to make this communication to you, so as the Faculty of the College may have it in their power to submit to the consideration of the Commissioners at the same time any explanation on the above subject which they may deem material. I have, &c.

(Signed) " WM. RAE."

(*To*) " *Very Rev. Principal Macfarlan, College, Glasgow.*"

And the Commissioners having deliberated thereon, Resolve, That the Very Reverend the Principal of the College of Glasgow be required to attend a meeting of the Commissioners at Edinburgh, on Wednesday next, at one o'clock, and to bring with him the Minutes of the Faculty of the College of Glasgow, from 1st January 1827, respecting the alterations recently authorized by the Faculty on Professor Sandford's house; and the Commissioners do hereby ordain and require the attendance of the said Principal, in terms of the foregoing order and citation; and the Commissioners request their Chairman to transmit a copy of the foregoing order to Principal Macfarlan.

Universities and Colleges, Scotland.

Minutes and Proceedings.

Glasgow College Buildings.

College of Edinburgh, 6th February 1828.

PRESENT—

The Lord President.	Sir J. W. Moncrieff, Bart.
The Lord Advocate.	The Solicitor-General.
Lord Corehouse.	Dr. Lee.

The Lord PRESIDENT in the Chair.

6 February 1828.

Glasgow College Buildings.—The following letter from Principal Macfarlan, in answer to the one of 25th January, addressed to him by the Lord Advocate, in regard to the alterations recently authorized by the Faculty of the College of Glasgow, was read.—(*This Letter did not reach the Lord Advocate until after the meeting of the Commissioners.*)

"*Glasgow College, 30th January* 1828.

"MY LORD,—Returning to-day from the country I found your Lordship's favour of the 28th (*should be 25th*), with its enclosures. You are aware, that in the department of College business to which they refer I am merely the organ of the Faculty, and can make only such official statements as they may direct. Your Lordship's communication shall be laid before a meeting of Faculty as early as it can be convened; and I am persuaded that no time will be lost in authorizing me to forward a satisfactory explanation.

"In the mean time, I beg leave as an individual to say, that the sketches transmitted by Mr. Reid were considered very deliberately by the Faculty—that another architect of the highest eminence was also consulted—that, as the result of the whole, a plan differing in various respects from that intended originally, was preferred—that sketches of it, for the consideration of the Lord Rector and Dean of Faculties, are in preparation—and that I understand the work recently carried on to be only such as was absolutely necessary to preserve the whole buildings from being injured irreparably by exposure, in an unfinished state, to the severity of the weather.

"I have the honour, &c.

"*Right Hon. the Lord Advocate.*" (Signed) "D. MACFARLAN.

Examination.—Robert Reid, Esq., King's Architect, was examined on the same subject.

Principal Macfarlan having attended this day, in pursuance of the order of the Commissioners, at their last meeting, having along with him the Minutes of Faculty then ordered, was called in and examined on the same subject.

The following is a copy of said Minutes produced by the Principal, viz.—

"EXTRACT of Minutes of the Faculty of the College of Glasgow respecting Repairs on "the House chosen by Professor Sandford.

7 May 1827.

"*Glasgow College, 7th May* 1827.

"A proposal was made that Mr. Herbertson should be called to give his opinion what improvements it would be expedient to make on the house to be left by Mr. Mylne. This was agreed to, and the Committee upon the Houses that were occupied by Mr. Jardine and Dr. Freer was appointed to consult Mr. Herbertson relative to the improvements that had been suggested respecting Mr. Mylne's present house. The Report to be ready to be laid upon the table before a Meeting to be held on Wednesday first at ten o'clock.

9 May 1827.

"*Glasgow College, 9th May* 1827.

"A plan of certain proposed improvements, with respect to the Principal's house and offices, having been laid before the Meeting, they agreed to take up the consideration of them on the 11th of June; and a proposed addition, for the improvement of Mr. Mylne's present house, should be considered at the same meeting."

9 June (*so in MS.*)

"*Glasgow College, 9th June* 1827.

"The Faculty took under consideration the improvements proposed to be made upon Mr. Mylne's present house, and estimates of the expense, amounting to £247. 1*s.* 11*d.*, having been produced, the Faculty agreed to have this improvement executed, provided the expense does not amount to more than £250.

"The Faculty then proceeded to consider the other necessary repairs on that house; and Mr. Sandford having made offer to execute these repairs in a sufficient manner for fifty guineas more, the Faculty agreed to accept of this offer.

"Thereafter Mr. Sandford chose that house, it having been declined by Dr. Couper, Mr. Walker, and Dr. Gibb."

12 October 1827.

"*Glasgow College, 12th October* 1827.

"The Principal laid before the Meeting of Faculty two Extracts from the Minutes of the Royal Commissioners of Visitation, containing orders respecting Feus and Buildings of the College, of the following tenor."—(*For these Minutes, see printed Minutes and Proceedings of the Commissioners of the Second Visitation at Glasgow, 9th and 10th October* 1827, *and the Edinburgh Minutes and Proceedings of 17th October thereafter.*)

16 October 1827.

"*Glasgow College, 16th October* 1827.

"The Principal reported that he had given orders to the tradesmen employed upon the additions to Mr. Sandford's house to stop working; and had, according to the appointment of the Faculty, transmitted to the Secretary of the Royal Commissioners an extract of the Minute of the 12th instant on that subject."

"*Glasgow College*, 19*th October* 1827.

"The Principal produced and read a letter from the Earl of Rosebery, as President of a Meeting of the Royal Commissioners for Visiting the Universities and Colleges of Scotland, held in Edinburgh on the 17th instant, containing an extract from the Minutes of that Meeting, of which extract the tenor follows:—(*This is the Commissioners' Resolution and Order of the* 17*th October* 1827.)

"There was also laid before the Meeting, copies of the Minutes of Evidence given before the Commission by Messrs. Herbertson and Reid, Architects—and of a Report by Mr. Reid, concerning the alterations at present in progress on the house lately possessed by Professor Mylne.

"The Faculty, after long reasoning, agreed to delay the farther consideration of this subject till Monday the 22d instant, at 1 o'clock."

19 October 1827.

"*Glasgow College*, 22*d October* 1827.

22 October 1827.

"The Faculty resumed the consideration of the communications," &c.—*See this Minute, printed in the Commissioners' Minutes of* 27*th October* 1827.)

"*Glasgow College*, 30*th October* 1827.

30 October 1827.

"This Meeting having been notified to the Lord Rector and Dean of Faculties,—the Rector was not present, and from the Dean of Faculties a letter was read, stating his inability to attend on account of previous engagements.

"A communication from the Royal Commissioners for Visiting the Universities and Colleges of Scotland, of date the 27th current, was read to the Meeting, the tenor whereof follows:—(*This is the Commissioners' Resolution and Order of* 27*th October* 1827.)

"After hearing this communication with all due respect, and after some discussion, the Faculty agreed to an adjournment till to-morrow at 10 o'clock, for the farther consideration of this matter."

"*Glasgow College*, 31*st October* 1827.

31 October 1827.

"The Faculty resumed," &c.—(*See this Minute, printed in the Commissioners' Minutes of* 5*th November.*)

"The Faculty agree to call in Mr. David Hamilton, along with Mr. Herbertson, to inspect the said house and staircase, and suggest the means which may occur to them for effecting the said alterations."

"*Glasgow College*, 14*th December* 1827.

14 December 1827.

"The Faculty resolved that a Meeting should be held on Monday the 17th instant, at 3 o'clock, in order to determine what shall be done respecting the staircase of the house intended for Mr. Sandford, as is absolutely necessary in order to prevent its suffering by being exposed, in its present unprotected state, to the injuries of the weather.

"*Glasgow College*, 17*th December* 1827.

17 December 1827.

"This Meeting having been appointed by adjournment of the 14th instant to determine what shall be done respecting the staircase of the house intended for Mr. Sandford,—after considerable discussion, the following motion was made and seconded, viz.—

"The Faculty having deliberated on the subject of the alterations proposed on Mr. Sandford's house, and having had the assistance of the King's Architect, and of Mr. David Hamilton in Glasgow, another very eminent Architect,—Resolve, That the plan proposed by Mr. Hamilton seems to them to be the most practicable in the present circumstances; they therefore adopt that plan, as harmonizing with the style of the present buildings, and as consistent with the spirit of the wishes expressed by the Royal Commissioners. And as these buildings are, at this season, in great danger of being completely destroyed, they further resolve, in the meantime, to roof in the building, in conformity with Mr. Hamilton's plan, understanding, that if it shall turn out that the building, when finished, shall not appear to be consistent with the other buildings, it may be afterwards taken down, and re-constructed.

"The Faculty having heard this motion, Resolved to resume the consideration of it to-morrow, at half-past 3 o'clock, to which time they adjourned their Meeting."

"*Glasgow College*, 18*th December* 1827.

18 December 1827.

"The Faculty resumed the adjourned consideration of the plans given in respecting the proposed alterations in Mr. Sandford's house. Anxious to meet the wishes of His Majesty's Commissioners for visiting the Universities and Colleges of Scotland, they had availed themselves of the advice and suggestions of Mr. Reid, King's Architect for Scotland, and of Mr. David Hamilton of this city; and these gentlemen having favoured them with three different plans, two of them by Mr. Reid, and the third by Mr. Hamilton,—the Faculty, after mature deliberation, are of opinion, that, in the particular circumstances of the case, the plan suggested by Mr. Hamilton is, upon the whole, the preferable one; they therefore agree to adopt it, and to transmit it, with Mr. Hamilton's explanations, as well as copies of Mr. Reid's two plans, to their Ordinary Visitors, and to His Majesty's Commissioners, for their inspection; and, considering the urgency of the case, that Mr. Sandford and other Members of Faculty are put to expense and inconvenience, and the interior of the unfinished building itself exposed to serious injury from the weather in consequence of the delay—that one of the Visitors is in London—and that the Commission is not at present sitting,—Resolved to proceed with Mr. Hamilton's plan, in the hope, that having shown their deference and respect for His Majesty's Commissioners, by complying with their wishes, so far as circumstances rendered it practicable, the Commissioners will not construe, into any mark of disrespect, their proceeding with a measure which the urgent necessities of the case will not allow them to defer.

Universities and Colleges, Scotland.

Minutes and Proceedings.

Glasgow College Buildings.

Dr. M'Gill's Dissent.

18 December 1827.

"Dr. M'Gill craved leave to enter his dissent against the above resolution of Faculty,—because he considered it to be directly inconsistent with all the requisitions made by His Majesty's Commissioners, before removing the prohibition respecting the staircase complained of, and also with the declarations which we transmitted to the Commissioners, by which we promised to comply with their wishes, and to alter the said staircase, conformably to their Minute, as far as was practicable. By this Resolution, we proceed to execute the plan of Mr. Hamilton, which has not been laid before our Ordinary Visitors, nor received their approbation, and on which they have had no opportunity to report to the Commissioners, agreeably to what was required of us, and the plan which we have thus resolved to execute, does not correspond with the wishes of the Commissioners, to which we had professed we would conform. In the course of a few days, necessary steps might have been taken, and the opinion of the Commissioners been received, which, independently of other considerations, our declaration to them had rendered necessary before we proceeded to execute a plan, which, however expedient we might conceive it, was so different from their expectations.

"Dr. M'Turk desired it to be marked, that he did not vote for the above Resolution."

1 February 1828.

"*Glasgow College, 1st February* 1828.

"There were laid before the Meeting, a Letter addressed to the Principal, from the Right Honourable the Lord Advocate, of date the 25th of January, accompanying extract of a Report by Mr. Reid, the King's Architect, on the present state of the house in the College Buildings, allocated to Mr. Sandford, and desiring an explanation of the steps lately adopted by the College with respect to it; and also a letter from the Right Honourable the Lord Justice-Clerk, enclosing a Minute of the Royal Commissioners for visiting the Universities, &c., ordering the Principal to attend them at Edinburgh on Wednesday next, and to produce all the Minutes of Faculty on the subject of that house, from the 1st of January 1827 down to this date.

"The Faculty expressed their regret that the delay which has taken place on the part of the persons employed to make out copies of Mr. Hamilton's plans and report, for the information of the Ordinary Visitors and Royal Commissioners of Visitation, should have prevented their Minute of the 18th December last from being laid before the said Commissioners, and thereby left unexplained the steps which the College have taken with regard to the alterations on Professor Sandford's house. They therefore order extracts of said Minutes, together with their Minute of this day, to be forwarded immediately to the Lord Rector, the Dean of Faculty, and the Commissioners of Visitation; direct copies of Mr. Hamilton's report and plan to be forwarded in like manner, as soon as they can be got ready; and appoint the Principal to wait on the Commissioners on Wednesday next, at Edinburgh, and to furnish what further information or explanation may be required on the subject referred to in the communication laid before them at this meeting. Extracted from the Minutes of the Faculty of the College of Glasgow, upon this and the fifteen preceding pages, by

(Signed) Jas. Couper, *Cler. Coll.*"

Principal Macfarlan, while under examination, was directed to furnish—

1*st*. A copy of Mr. Hamilton's Report, together with the Plans therein referred to.

2*d*. A Ground-plan (accompanied by a scale) of the outer Quadrangle of the College of Glasgow, exclusive of the buildings generally, but including a ground-plan of the staircase on the south-east corner.

3*d*. A Geometrical Elevation of the Buildings on the eastern side of said Quadrangle, including that of the said staircase.

4*th*. A like Geometrical Elevation of the Buildings on the south side of said Quadrangle.

Resolution & Order.

The Commissioners having had under consideration the following papers, relating to the alterations in the Buildings in the College of Glasgow, viz.—Mr. Herbertson's Examination of 10th October, the Minute of the Committee of Visitation of the same date, Mr. Reid's Report of the 13th October, and his Examination relative thereto—the Minutes of the Commissioners, dated 17th, 27th October, and 31st January last—the Report of Mr. Reid, dated 25th January, with the papers therein mentioned—the Letter of the Lord Advocate to the Principal of the College of Glasgow, dated 25th January, and the Principal's answer thereto, dated 30th January—the Minutes of the Faculty of the College of Glasgow relating to the subject, together with the Examinations of Principal Macfarlan and Mr. Reid, taken this day; and having deliberated thereon,—Do decidedly disapprove of the conduct of the Faculty of the College of Glasgow. By the terms of the Resolution and Order of the Commissioners of the 27th October, it was expressly intimated that the injunction formerly laid on the Faculty of the College should be withdrawn, so soon as a report shall be received from the Ordinary Visitors of the College, to the effect mentioned in the Minute. In that Resolution, the Faculty intimated their acquiescence. But it appears, that of the same date, and before the Faculty had any communication whatever with Mr. Reid, they resolved to call in Mr. Hamilton, in order to receive suggestions from him. The plans from Mr. Reid were received by the College about the 21st November, and whatever objections may have been entertained to Mr. Reid's plans, none were communicated to him, although he professed his readiness either to afford further assistance, or to state his opinion on any other plans or suggestions which the Faculty might communicate to him. But on the 14th of December, a Meeting of the Faculty was called, not for the purpose of carrying into effect the order of the Commissioners of the 27th of October, but, as the Minute bears, "in order to determine what shall be done respecting the staircase of the house intended for Mr. Sandford, as is absolutely necessary, in order to prevent its suffering, by being exposed, in its present unprotected state, to the injuries of the weather."

For that purpose, any temporary covering would have been amply sufficient. But the pro-

ceedings of the 17th of December mark, in the strongest manner, that the object of the Faculty was to evade compliance with the orders of the Commissioners, and to complete, in a permanent manner, the present building, before either the plan had been seen by the King's Architect, or approved of by the Visitors. The motion made upon the 17th December is to approve of a plan proposed by Mr. Hamilton, not as any temporary measure, but distinctly on the ground that it was in all respects the best. On the 18th of December, the Faculty came to the resolution that the plan proposed by Mr. Hamilton is upon the whole the preferable one, and they agreed to adopt it, without the advice and assistance of the King's Architect; and the Faculty further proceeded to act upon the same, and to carry it into execution, without the approbation of the Ordinary Visitors, or any Report to the Commission, notwithstanding that the Resolution of the Commissioners, of the 27th of October, expressly bore that the injunction would be withdrawn only when the Commissioners had received a Report from the Ordinary Visitors upon the subject. No communication of this proceeding on the part of the Faculty was made, either to the Ordinary Visitors or to the Commissioners; and it does not appear that any steps were taken to make any such communication, until the matter was taken up by the Commissioners, upon the Report of Mr. Reid to the Lord Advocate. The Commissioners cannot approve of the reason stated in the Minute of the 18th December, that the Commission was not then sitting—no communication or notice to that effect having been made to the Faculty, it being matter of notoriety that the Commissioners at all times received papers transmitted to them, and met for the consideration of the same.

The Commissioners must express their strong disapprobation of the whole of these proceedings. The Order of the 27th of October had expressed the decided opinion of the Commissioners in regard to the powers of the Ordinary Visitors, and of the manner in which the application of any part of the College Revenue for such purposes ought to be made; and the Orders of the Commissioners, of that date, further distinctly declared, that the injunction previously laid on the Faculty would be withdrawn when a Report should be received from the Ordinary Visitors, "bearing that a plan has been adopted by the Faculty, with the assistance and advice of the King's Architect for Scotland, and approved of by the said Visitors, for *taking down and reconstructing* the building in the outer quadrangle of the College, in such a form as may sufficiently correspond with the other tower in the same quadrangle, and with the style of architecture of the adjoining buildings; and further, that the said plan does also provide a mode for completing the other proposed alterations, consistently with the safety of the fabric."

In every one particular, the Faculty have attempted to evade the above resolution of the Commissioners, although the effect of the measures which they adopted was pointed out to them at the time by the dissent of one of the members of Faculty, recorded in their Minutes.

The plan which they proceeded to carry into effect, did not *profess* to provide for *taking down and re-constructing* the building, but was deliberately adapted for the object of permanently finishing the building formerly commenced, with trivial and nominal alterations. The execution of the plan adopted by the Faculty cannot be justified by any supposition of the necessity of temporary protection from the weather, and the Minutes of Faculty distinctly show that the plan was adopted, not for any temporary purpose, but as the final execution of the work, unless subsequently disapproved of.

While the proceedings of the Faculty have shown a neglect of every one of the forms prescribed by the Commissioners, in order to insure the due fulfilment of their object, the plan itself is a manifest deviation from, and evasion of, the Order of the Commissioners, which mark in the plainest manner the necessity of taking down the objectionable building. What directions were given to Mr. Hamilton, or by whom any instructions to him were communicated, as to the plan which he was to furnish, does not appear on the Minutes of the Faculty; but the Commissioners cannot believe, that if Mr. Hamilton had been directed to furnish a plan for taking down and reconstructing the building, in terms of the Minute of the 27th October, he would have prepared a plan for the purpose of showing how that building might be permanently finished.

The Commissioners therefore are called upon to censure the Faculty for the proceedings of the 18th of December 1827, and for the measures taken, in the terms of that day's Minute; and they are hereby censured accordingly.

And the Commissioners do farther, of new, most strictly prohibit, interdict, and discharge the Faculty of the College of Glasgow from taking any steps whatever, either in finishing, or in proceeding further, to any extent whatever, with the Buildings to which the Order of the 27th of October refers, under certification, that in the event of non-compliance, the Commissioners will proceed to exercise the high Visitatorial powers belonging to the office of Royal Commissioners for visiting Universities and Colleges in Scotland. And the Commissioners further declare, that the said Interdict shall continue until they receive a Report from the Ordinary Visitors, bearing that a plan has been adopted by the Faculty, with the assistance and advice of the King's Architect for Scotland, and approved of by the said Visitors, for taking down and reconstructing the building in the outer Quadrangle of the College, in such a form as may sufficiently correspond with the other tower in the same quadrangle, and with the style of architecture of the adjoining buildings; and farther, that the said plan does also provide a mode for completing the other proposed alterations, consistently with the safety of the fabric; and the Commissioners request His Majesty's Advocate to communicate with the King's Architect, in order to carry this resolution into effect, by affording to the Faculty any aid in furnishing plans, or otherwise, which they may desire; and to state to the Barons of Exchequer the wishes of the Commissioners, that the expenses of the Architect may be defrayed.

The Commissioners direct a copy of this Minute to be transmitted to the Principal of the

Universities and Colleges, Scotland.

Minutes and Proceedings.

Glasgow College Buildings.

1 February 1828.

College of Glasgow, to be communicated without delay to a meeting of the Faculty; and do direct the same to be engrossed, of the date when the same is communicated, as part of that day's minute, in the ordinary Minute-Book of the Faculty of the College, in which the minutes of the proceedings of the Faculty are engrossed and recorded: and the Commissioners farther direct copies of all their Minutes, relative to the subject of the Minutes of the Faculty of the College, together with the other papers herein referred to, to be transmitted to the Lord Rector and Dean of Faculties of the College of Glasgow, for their information; and the Commissioners do confidently rely on the judgment of the Ordinary Visitors, in regard to this matter, and on their cordial co-operation in effecting a final termination of this matter, in conformity with the Resolutions of the Commissioners, and in a manner creditable to the character of the College under their superintendence.—(*Adjourned.*)

(The following Minutes of the Faculty of the College of Glasgow have been received in answer to the preceding Resolution and Order):—

22 February 1828.

"*Glasgow College, 22d February* 1828.

"A meeting of Faculty being duly summoned and convened—

"Present—The Principal, Dr. M'Gill, Dr. Jeffray, Mr. Mylne, Dr. Couper, Dr. M'Turk, Dr. Gibb, and Mr. Buchanan,

"The Principal laid before the Meeting a communication from the Royal Commissioners for Visiting the Universities and Colleges of Scotland, which he had received on the 20th inst. The Faculty, considering the importance of the subject, and that there are at present only a bare Quorum of their Members, adjourn till to-morrow at three o'clock for the consideration of this business, in the hope that every Member will make a point of being present at that hour."

23 February 1828.

"*Glasgow College, 23d February* 1828.

"A Meeting of Faculty being duly convened, according to adjournment—

"Present—The Principal, Dr. M'Gill, Mr. Millar, Mr. Mylne, Mr. Walker, Dr. Couper, Dr. Gibb, Dr. M'Turk, Mr. Sandford, Mr. Buchanan, and Dr. Badham,

"The communication from the Royal Commissioners for visiting the Universities and Colleges of Scotland, dated the 6th of this month, having been again read,—The Faculty, from the respect they feel for the character and office of His Majesty's Commissioners, direct the above communication to be recorded in their minutes.

"Against which Resolution Mr. Sandford begged to enter his protest, because he considers the censure conveyed in that document unjust, and its language disrespectful towards the body to which it is addressed.

"The Faculty cannot help again lamenting the undesigned, but very unfortunate delay which occurred in transmitting to the Commissioners their Minute of December 18th, a Minute which respectfully explains, and which was intended timeously to submit, for the consideration of the Commission, their reasons for proceeding, under existing circumstances, with the building of Mr. Sandford's house, according to the alterations suggested by Mr. Hamilton.

"Had this Minute, as contemplated by those who proposed it, been immediately transmitted to the Royal Commission, the unpleasant occurrences which have since taken place, would, as the Faculty flatter themselves, have been prevented: and they regret that the Commissioners should for one instant have imputed to design what they solemnly declare was purely the effect of accident, and was not even known to the Faculty till the Lord Advocate's letter of the 25th of January was laid upon their table.

"They farther resolve to stop all proceedings with regard to the Building in question, and to request that Mr. Reid, King's Architect for Scotland, would favour them with his presence and suggestions for carrying into effect the wishes expressed by the Commissioners, on the earliest day that suits his convenience; and direct their Clerk to transmit a copy of this Minute to the Royal Commissioners, the Lord Rector, and the Dean of Faculty; as also, to communicate to Mr. Reid this their resolution and request.

"The Principal desired that his dissent from the above Resolution of Faculty, for reasons hereafter to be given in, should be marked.

"To which dissent Mr. Sandford also adhered."

Extracted from the Minutes of the Faculty of the College of Glasgow, by

8 October 1828.

College of Edinburgh, 8th October 1828.

Present—

The Earl of Haddington (formerly Lord Binning),	Sir James Wellwood Moncrieff, Bart.
The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,—and
	Dr. Lee.

The Earl of Rosebery in the Chair.

Papers presented:—

Medical Jurisprudence—Edinburgh.—A Letter from Professor Christison, containing an addition to his former Statement in regard to the Chair of Medical Jurisprudence in the University of Edinburgh.

Rector—Glasgow.—A Petition from the Students of the College of Glasgow, praying that no change should be made in the present mode of electing the Rector of that University.

Remuneration for College Returns.—Letters from Professor Paul, King's College, and Professor Cruickshank, Marischal College, written by direction of their respective Colleges, in regard to their being allowed payment of the expense for making out returns ordered by the Commissioners.

Divinity Class, Edinburgh—Fees.—A Memorial from the Magistrates of Edinburgh, respecting the inadequacy of the Emoluments of the Divinity Chair in the College of Edinburgh, and as to the Professor thereof exacting Class Fees, was read. The Commissioners having considered the same, are of opinion, that the determination of the Commissioners in regard to the propriety of the Divinity Students paying Fees to the Professors of Divinity, must form part of the General Report of the Commissioners; and that it is not expedient that any intermediate order should be pronounced on the subject, with reference to the situation or emoluments of any individual Professor; and the Commissioners directed the Clerk to intimate this Resolution to the Lord Provost, for the information of the Town-Council.

Grant for finishing Edinburgh College.—A Memorial from the Commissioners for rebuilding the College of Edinburgh, in regard to a grant of public money from Government, for completing the College Buildings, was read. The Commissioners directed that the College Building Commissioners be requested to prepare and transmit a Statement, containing, shortly and in detail, the objects and expense of each of the operations respectively contemplated by them, which they consider will be required for finishing the University Buildings.

Professor Badham—Graduation Fees.—A Letter from Professor Badham, Glasgow, complaining that the Senate of that University had not allowed him so large a proportion of the Graduation Fees as his predecessor received, was read.

The Commissioners directed, that Professor Badham should be acquainted that his communication had been laid before the first meeting of the Commission after its receipt, and that a copy thereof should be transmitted to Principal Macfarlan, to be communicated to the Senate, for their observations.

The Solicitor-General—Committee on Curriculum of Study.—The Solicitor-General, Convener of the Committee appointed for the purpose of considering the Curriculum of Study in the different Universities, stated that the Committee had frequently met, and had had much discussion on the subject and matters connected therewith; but, as it was found that the subjects of their inquiry involved questions on which the decision of the Commission itself was necessary, before any Report could be prepared, the Committee had thought it better to refer the whole matter to the Commissioners.

The Lord President—Repairs on Professor Sandford's House.—The Lord President stated, that a Letter had been received from Principal Macfarlan, dated 12th May last, transmitting a Resolution of the Faculty, with the plans therein referred to, in regard to completing the repairs on Professor Sandford's House, and requesting the immediate sanction of the Commissioners for commencing the operations: That, as a meeting of the Commissioners could not then be held, he had directed that the following Minute, which was approved of by all the Commissioners then present, should be transmitted to the College, viz.—"The Commissioners having considered the communication from Principal Macfarlan, request the Lord President to transmit a copy of this Minute to the Reverend Principal, expressing their entire approbation of the Resolutions of the Faculty, communicated by the Principal; and their opinion, that the Faculty have most faithfully complied with the wishes of the Commissioners in regard to the proposed building, which the Commissioners consider that the Faculty are now fully authorized to commence as proposed by them, according to the plan transmitted by the Faculty.

The Commissioners approved of what had been so done.

Dr. Cook—Reports on Aberdeen Colleges.—Dr. Cook stated, that he had, at the request of Lord Aberdeen, prepared Reports respecting the two Aberdeen Colleges, printed copies of which had been already distributed to the Commissioners. Copies of these Reports were laid by him upon the table, and ordered to lie for consideration.

Dr. Thomson's Class-room, inadequate.—The Clerk stated, that having in February last, received a memorial from Professor Thomson, Glasgow, complaining of the inadequate size of his Class-room, he had communicated the substance of that memorial to Principal Macfarlan, there being little prospect of a meeting of the Commission for a considerable time; that a reply had been received from Principal Macfarlan, stating, that the Committee to which the Faculty had referred the subject were then about to recommend a purchase ofa property adjoining the College, suitable for the object in view.

The Commissioners approved of what the Clerk had so done.

Chairman—Future proceedings of Commission.—The Chairman stated, that at a meeting of the Commissioners, called for the 5th of September last, a Quorum did not attend; that the meeting had, however, resolved that the Commission should again assemble on this day, and that his Lordship had agreed, at the request of the meeting, to write to the Commissioners individually, requesting a full attendance; and that afterwards they should meet frequently, and begin with taking into consideration the system to be proposed for University Education, proceeding regularly to those other points which will form the basis of their Report to his Majesty.

Curriculum of Study considered.—A copy of this letter having been read, the Commissioners accordingly proceeded to the consideration of a proper Curriculum of University Education, and the preparation connected with it, previous to entering the College.

Universities and Colleges, Scotland.

Minutes and Proceedings.

9 October 1828.

College of Edinburgh, 9th October 1828.

PRESENT—

The Solicitor-General,
Dr. Taylor,
Dr. Cook,
Dr. Lee,—and
Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Professor Badham—Graduation Fees.—An Answer (to Dr. Badham's complaint) from Dr. Couper, transmitting Extracts of Minutes of the Senate of the University of Glasgow, in regard to the division of the Fees for Medical Degrees, was presented, and ordered to lie on the table for consideration.

Mr. Home Drummond added to Committee on Degrees in Arts.—Mr. Home Drummond was added to the Committee for digesting and forming a Plan for the Examination of Candidates for Degrees in Arts.

Curriculum of Study considered.—The Resolution, appointed 9th October, to be taken into consideration this day was read; and the Commissioners having deliberated thereon, amended the same, and directed it to be set apart with the other Provisional Resolutions which the Commission may in future adopt.

Theological and Law Curricula considered.—The Commissioners then proceeded to the consideration of proper Theological and Law Curricula of Study.

{ *Universities and Colleges, Scotland.*

Minutes and Proceedings.

15 October 1828.

Theological Curriculum considered.—The draft of the Resolution on the subject of a proper Curriculum for Theological Study farther considered.

Constitution of the Universities.—The Commissioners then entered upon the consideration of the existing Constitutions established, and the modes of government followed in the several Universities in Scotland; and they are of opinion, That it is expedient under these heads to introduce an extensive change and reform in all of them, the basis of which ought to be the institution of some system whereby an extrinsic and effective control should be exercised over, and be independent of, the ordinary University authorities.

The draft of a scheme for carrying this purpose into effect was read, and ordered to be printed for the use of the Commission, and to be taken into consideration at a subsequent meeting.

Royal Visitors.—The Commissioners are also strongly impressed with the persuasion that it would add much to the efficient operation of any such Scheme, as well as be of the greatest service in promoting and securing all the other improvements which may be suggested to his Majesty by the Visitation now sitting, were a Board of Royal Visitors appointed, with authority both to superintend the execution of the Regulations to be approved of by the King in the Report of the present Commission, and to modify or extend such regulations, subject to the sanction of his Majesty, as circumstances may appear to require.

Union of the two Aberdeen Colleges.—The Commissioners are also of opinion that it is advisable, upon the general principles stated in the Report of King's College, Aberdeen, to unite the two Universities of Old and New Aberdeen; the necessary details for effecting this object in the most beneficial manner being subject to future consideration.

Chapel in Edinburgh College.—The Commissioners are also of opinion that additional accommodation is required in the University of Edinburgh for attendance on Divine Worship; and that if a Common Hall were erected, which is much wanted for other purposes, it might be so constructed as to be well adapted for a Chapel to that University.

Remit—Class Hours.—The Commissioners remitted to Drs. Taylor, Cook, and Lee, to take into consideration the subject of Hours for the attendance of the Classes forming the Faculty of Arts, and to report thereon, in the form of a Table, to the Commissioners at a subsequent meeting.

College of Edinburgh, 16th October 1828. 16 October 1828.

PRESENT—

The Earl of Haddington,
The Lord President,
Lord Corehouse,
Sir James Wellwood Moncrieff, Bart.
The Solicitor-General,
Dr. Taylor,
Dr. Cook,—and
Dr. Lee,

The Lord PRESIDENT in the Chair.

Papers presented:—

Universal History Class.—A letter from Sir William Hamilton, Bart., Professor of Universal History in the University of Edinburgh, on the subject of his class.—(*Printed.*)

Fees—Certificates—Degrees in Arts—Hours.—Reports from the Committees appointed in regard to Fees, Certificates, and a plan for the Examination of Candidates for Degrees in Arts, and on the subject of Hours, were ordered to lie on the table for consideration.

The Commissioners had under consideration the following subjects, on which a paper, containing proposals, was submitted to the meeting, and ordered to lie on the table for farther consideration.—(*These proposals printed.*)

1. *Catalogue.*—In regard to calling a Catalogue in the Classes.
2. *Syllabus.*—In regard to Professors publishing a Syllabus, or outlines of the general subjects of their course.
3. *Right of Property in Apparatus.*—In regard to the Professor's right of property in collections of Instruments and Philosophical Apparatus attached to classes.
4. *Professorial Librarian, Factor, &c.*—In regard to enacting that no Professor shall hold the situations of Librarian, Factor, or other responsible office in the University.
5. *Joint Professors, &c.*—In regard to appointment of Joint Professors, or of Assistants and Successors.
6. *Chapel Service.*—In regard to the performance of Divine Worship in the Universities.
7. *Confession of Faith.*—In regard to the subscription, by Professors, of the Confession of Faith and Formula of the Church of Scotland.
8. *Qualification of Professors.*—In regard to enacting that no person shall be eligible to a Professorship unless he have had a Degree from a Scottish University.
9. *Christmas Vacation.*—In regard to the length of the Christmas Vacation.

College of Edinburgh, 17th October 1828. 17 October 1828.

PRESENT—

The Earl of Rosebery,
The Lord Viscount Melville,
The Lord President,
The Lord Advocate,
Lord Corehouse,
Sir James Wellwood Moncrieff, Bart.
The Solicitor-General,
Dr. Taylor,
Dr. Cook,—and
Dr. Lee.

The Earl of ROSEBERY in the Chair.

Universities and Colleges, Scotland.

Minutes and Proceedings.

17 October 1828.

Papers presented:—

Expense of passing Curriculum, Edinburgh.—A Return from the College of Edinburgh to the order of 27th October 1827, in regard to the expense incurred by Students passing through the Course of Study preparatory to the Degree of Master of Arts.—(*Printed.*)

St. Andrews College Fabric.—Lord Melville presented a copy of his Letter to Mr. Herries, then Chancellor of the Exchequer, dated the 28th December 1827, relative to the Buildings connected with the University and Colleges of St. Andrews. The Plans for repairing and restoring them were inspected by the Commissioners, and approved of; and the Chairman was requested, in the name of the Commission, to transmit to the Right Honourable Henry Goulburn, present Chancellor of the Exchequer, copies of the Minute of 31st July 1827, by the Committee of Visitation at St. Andrews, with the evidence of Mr. Balfour, for his information, along with a Letter, stating that the Commission coincide in the Report of their Committee, and approve of the Plans laid before them.

Endowments of certain Chairs inadequate.—The Commissioners, having taken into consideration the amount of Emoluments received by the Professors in the several Universities, are of opinion that some of the Chairs are very inadequately endowed, and they determine to report, that in the University of Edinburgh, the office of Principal, with the Professorships of Divinity, Church History, and Oriental Languages, are more particularly subject to this observation, and ought to have their Salaries increased.

Emoluments of St. Andrews and Aberdeen Professors.—The Commissioners refer to Dr. Cook to draw up a statement of the Emoluments derived by the Professors in Aberdeen; and to Dr. Taylor, to draw up a similar statement with regard to St. Andrews.

Union of Chairs.—The draft of a proposition for resolving that the Chairs in the several Universities shall not, in future, be united with the Ministry of a parish, was given in, and ordered to be printed for the use of the Commission; and the Commissioners determine that the discussion upon the principle contained in the above-mentioned paper (*see printed Proposals for Consideration*) shall be taken under separate heads—1*st*, As to the expediency, or not, of allowing a Union between the Language and Philosophical Chairs, and the Ministry of a Parish; 2*dly*, Whether or not such a Union should be permitted with Chairs in the Theological Faculty; and 3*dly*, As to the incompatability or not of the Professors of the Language or Philosophical Classes being engaged in an active secular employment.

Tutors—Latin and Greek Chairs, Edinburgh and Glasgow.—A paper, containing proposals on the two following subjects, was submitted to the meeting, and ordered to lie on the table for farther consideration:—1*st*, In regard to having Tutors in all the Universities; and 2*d*, In regard to the expediency of having two Professors of Latin, and two Professors of Greek, in each of the Universities of Edinburgh and Glasgow.

10 November 1828.

College of Edinburgh, 10th November 1828.

PRESENT.

The Earl of Rosebery,	Lord Corehouse,
The Lord President,	The Solicitor-General,
The Lord Advocate,	Dr. Lee,—and
The Lord Justice-Clerk,	Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Papers presented:—

1. *Rector, St. Andrews.*—A Letter from the Rector of the University of St. Andrews, in regard to the mode of electing the Rector of that University.
2. *Professor Badham's Complaint—Graduation Fees.*—An Answer from the College of Glasgow in regard to Professor Badham's Representation, about the allowance made to him of the Graduation Fees.
3. *Theory of Medicine, Glasgow.*—A Letter from Professor Badham, intimating his proposed Course on the Theory of Medicine.
4. *Edinburgh College Buildings.*—An Answer from the Commissioners for rebuilding the College of Edinburgh, containing a statement of the estimated expense of completing the College Buildings.—(*Printed.*)
5. *Emoluments of Aberdeen Professors.*—A Report from Dr. Cook, in pursuance of the remit made to him on 17th October, in regard to the Emoluments derived by the Professors of Aberdeen.—(*Printed.*)
6. *Expense of passing Curriculum, Glasgow.*—A Return from the College of Glasgow, to the order of 9th October 1827, in regard to the expense incurred by Students passing through the Course of Study preparatory to the Degree of Master of Arts.—(*Printed.*)
7. *Books missing—Books borrowed—Use of Libraries, Edinburgh and Glasgow.*—Returns from the Colleges of Edinburgh and Glasgow to the orders dated 9th, 11th, 17th, and 27th October 1827, in regard to—1*st*, Books amissing from their respective Libraries 2*d*, Books borrowed by Professors; and 3*d*, The number of Students using the Libraries.—(*All printed.*)
8. Returns from the College of Glasgow to the following orders of 10th and 11th October 1827, viz.—

Hastie's Bursary.—For the Minute of Faculty, appointing a Bursar on Hastie's Foundation.

81

Lawsuit—Degrees in Surgery.—For the Minute of the Senate, as to the application of any of the Fees arising from Graduation in Surgery, to the maintenance of any lawsuit.

Chapel Service.—For the Minutes of Faculty as to the manner of performing Chapel-service; and for the Minute of Faculty electing the present Preachers.

Examiners for Medical Degrees.—For the Minute in 1818, relative to the Examination of Candidates for Medical Degrees by the Regius Professors.

Examinations in Greek, of Logic Students.—For the Minute of Faculty respecting the Examinations in Greek, of Students intended as public Students in Logic.

Private Students.—For a Return of the Private Students at the Logic, Moral, and Natural Philosophy Classes during the last ten years.

Regulations as to Professors' use of Library.—For the Minutes of the Senate respecting the Professors' use of the Library.

Books borrowed by Professors.—The Commissioners directed that the printed abstract of the number of Books borrowed by the Professors of the several Colleges from their Libraries, should be transmitted to the Colleges respectively, with a letter, requesting that measures may be immediately adopted for recalling and securing to the Library the books not yet returned; and that a Report should be made to the Commissioners on or before the 25th of December next, containing an abstract of the then state of the Library in regard to this subject.

Medical Curriculum.—The Commissioners had under consideration the subject of a proper Medical Curriculum of Study, on which a paper, containing a scheme of instruction, was submitted to the meeting, and ordered to lie on the table for farther consideration.

Constitution of the Universities.—The Commissioners had also under consideration the scheme in regard to the Constitution and the mode of government in the Universities, presented on the 15th of October.

Interim Report of Commissioners.—The following Report, prepared by the Earl of Rosebery, the Chairman, at the request of the Commissioners, was read and approved of; and the Commissioners requested his Lordship to transmit it, after being signed by a quorum of their number, to the Secretary of State for the Home Department, along with a letter, requesting that the time for giving in the final Report may be prolonged:—

"*To the King's Most Excellent Majesty.*

"By virtue of Your Majesty's Commission of July 23d 1826, by which we were (with others) appointed Commissioners for visiting the Universities and Colleges in Scotland, and in obedience to the directions contained in that Commission, and in a renewed one to us of October 12th 1827, we now offer to Your Majesty a Report, which will first refer to those branches of the investigation we were called upon to make, which have been brought to a conclusion, and will next notice the several other points which are still undergoing examination or discussion, and which have not, therefore, yet assumed so complete a form as to enable us to comply with Your Majesty's injunctions to give a full Report on these matters previous to the 1st of January 1829.

"We beg, in the first place, to lay before Your Majesty all the documentary papers which we have collected from the several Universities and Colleges in Scotland, of such importance as to have been ordered to be printed for the use of the Commission, together with a large mass of evidence taken before us, given by the Professors in each University, and by various other persons whose intelligence, general views, or acquaintance with subjects of this nature, entitle their testimony to great weight, either in pointing out the existing defects in the Universities of Scotland—in suggesting those remedies and reforms most applicable for their correction—or in proposing plans for introducing an improved system of discipline, education, and control in all these Institutions.

"We request also to mention, that Committees of our number have, in conformity with Your Majesty's instructions, made special Visitations to the Universities of Glasgow, St. Andrews, and Aberdeen, to which a great part of the evidence, and many of the documents, more immediately relate.

"We beg humbly to state to Your Majesty, that we are proceeding in the farther objects to which Your Majesty has directed our attention, with all the dispatch consistent with the difficulty of a subject involving many various considerations.

"We are, at present, engaged in framing, for the future government of all the Universities in Scotland, a system to correspond with what we deem to be the best advice offered in the evidence which we are now submitting to Your Majesty, and with the opinions we have formed, after much reflection, on every particular of consequence connected with the large field of inquiry devolved upon us by Your Majesty's Commission. We have proceeded, likewise, to draw an outline of the Course of Study which we intend to recommend in the different Faculties, with detailed regulations necessarily consequent on the changes about to be proposed for Your Majesty's approbation; and we have advanced no inconsiderable length in coming to Provisional Resolutions, which will form the groundwork both of the Regulations which we shall advise Your Majesty to direct to be enforced in the Universities and Colleges in Scotland, and of the Code of Laws which Your Majesty has desired us to compile for them. But the deliberate revision and ultimate adoption of these Resolutions, with the due consideration of the Regulations and Laws which will result from them, to be embodied in so complete and perfect a form as would justify our requesting Your Majesty's sanction to them, being objects which require much time, and demand great attention, we are obliged humbly to ask a further prolongation of the period now given us for the presentation of our definitive Report to Your Majesty.

Universities and Colleges, Scotland.

Minutes and Proceedings.

10 November 1828.

"We beg to add, for Your Majesty's information, that a full Report of the present condition of the Universities of Old and New Aberdeen, comprehending various suggestions for their improvement, has been already made; that similar Reports of the state of each of the Universities of Edinburgh, Glasgow, and St. Andrews, are in progress; but that we have thought it our duty to abstain from presenting to Your Majesty the Report on the Universities of Aberdeen, until we are enabled, by the completion of the others, to lay all of them at one time before Your Majesty.

1. *Books borrowed by Professors in Marischal College.*—A Return from Marischal College of Aberdeen, to the order of 10th November current, in regard to the Return of the Books borrowed by the Professors.
2. *Theory of Medicine—Glasgow.*—A Memorial from Professor Thomson, Glasgow, in regard to the inadequacy of Dr. Badham's course on the Institutions of Medicine.

Curriculum of Study.—The Provisional Resolutions in regard to a Curriculum of University Education, and the preparation connected with it, previous to entering the College, and also those respecting Examinations of candidates for Degrees in Arts, being again under the consideration of the Commissioners, were farther amended in various particulars; and the Chairman was requested to transmit them to each of the several Universities, with a letter, desiring the deliberate opinion of the Senatus Academicus thereon.

---

29 November 1828.

College of Edinburgh, 29th November 1828.

PRESENT.

The Earl of Haddington,
The Earl of Rosebery,
The Lord President,
The Lord Advocate,
The Lord Justice-Clerk,
Sir James Wellwood Moncrieff, Bart.
The Solicitor-General,—and
Dr. Lee.

The Earl of ROSEBERY in the Chair.

St. Andrews College Fabric.—An answer from Mr. Dawson, one of the Secretaries of the Treasury, to the Chairman's communication, in regard to the University Buildings of

St. Andrews, stating that the Treasury had authorized the Barons of Exchequer in Scotland to proceed with the proposed works, was presented, and ordered to lie on the Table.

Ogilvie Bursary.—A letter from Professor Scott, of King's College, Aberdeen, in regard to the appropriation of the funds attached to the Ogilvie Bursary, was read; and the Commissioners referred to the Lord Advocate and the Solicitor-General to frame an answer to that communication.

29 November 1828.

Theological, Law, and Medical Curricula.—The Provisional Resolutions in regard to the Theological, Law, and Medical Curricula of Study, were severally under the consideration of the Commissioners, and amended in various particulars.

College of Edinburgh, 6th December 1828. 6 December 1828.

PRESENT—

The Earl of Rosebery,
The Lord Advocate,
The Lord Justice-Clerk,
Lord Corehouse,
Sir James Wellwood Moncrieff, Bart.
The Solicitor-General,—and
Dr. Lee.

The Earl of ROSEBERY in the chair.

Emoluments of St. Andrews Professors.—A Report from Dr. Taylor, in pursuance of the Remit made to him on 17th October last, regarding the Emoluments derived by the Principals and Professors of St. Andrews, was presented, and ordered to be printed.

There was read—

St. Andrews New College Fabric.—A Letter from Sir Henry Jardine, King's Remembrancer in the Exchequer of Scotland, stating that the Barons of Exchequer had received a communication from the Treasury, mentioning that the Lords of the Treasury had under consideration a Letter from the King's Remembrancer respecting the repairs of the University Buildings of St. Andrews; and also their Lordships' Minute of 19th October 1826, with the correspondence between Lord Melville as Chancellor of the University and the Earl of Rosebery as Chairman of the Commissioners for visiting the Scottish Universities, accompanied by the Minute taken by the Committee of Visitation on a personal inspection, in July 1827, of these Buildings, and of the Evidence given by the Architect whom they called before them—and stating that the Lords of the Treasury had authorized the Barons to proceed with the works recommended in the Report of the Commissioners; but that as the Barons had no copy of that Report, &c. Sir Henry had it in command to request that the Commissioners would transmit a copy of the same for their information.

The Commissioners directed that the above request be complied with.

Theological, Law, and Medical Curricula.—The Provisional Resolutions in regard to the Theological, Law, and Medical Curricula of Study, being again under the consideration of the Commissioners, were farther amended in various particulars: and the Chairman was requested to transmit a copy of them to each of the Universities, with a letter, desiring the deliberate opinion of the Senatus Academicus of each thereon.

Baron Hume—Faculty of Advocates—Law Curriculum.—The Chairman was also requested to transmit a copy of the Resolutions in regard to the Law Curriculum to the Honourable Baron Hume, late Professor of Scots Law in the University of Edinburgh, and to the Faculty of Advocates, with a request that they will consider the same, and favour the Commissioners with their sentiments thereon.

College of Edinburgh, 13th December 1828. 13 December 1828.

PRESENT—

The Earl of Haddington,
The Earl of Rosebery,
The Lord President,
The Lord Justice-Clerk,
Lord Corehouse
Sir James Wellwood Moncrieff, Bart.—and
The Solicitor-General.

The Earl of ROSEBERY in the Chair.

Interim Report—Commission extended as to time.—There was read a Letter from Mr. Secretary Peel, acknowledging the receipt of the Report of the Commissioners to his Majesty, with the various printed Returns, Documents, and Evidence, by which it was accompanied, and stating that he had laid the same before his Majesty, and that his Majesty had been pleased to allow an extension of time for the Commissioners drawing up their definitive Report to the 1st of April, 1830.

Edinburgh College request Copies of Curricula.—A Letter from Principal Baird, acknowledging the receipt of the Provisional Resolutions in regard to the Law and Medical Curricula of Study, and requesting that a copy thereof should be transmitted for each Professor, was read; and the Commissioners directed, that as many Copies as the Senatus require be furnished.

Constitution of College of Edinburgh.—The Commissioners had under consideration the Scheme proposed for the Constitution of the Universities—and a Scheme applicable to the University of Edinburgh was made out.

College of Edinburgh, 17th January 1829 17 January 1829.

PRESENT—

The Lord President,
The Lord Advocate,
The Lord Justice-Clerk,
Lord Corehouse,
Sir James Wellwood Moncrieff, Bart.—and
The Solicitor-General.

The LORD PRESIDENT in the Chair.

Universities and Colleges. Scotland.

Minutes and Proceedings.

17 January 1829.

Papers presented:—

Books borrowed by Professors.—Returns from the Universities of Glasgow and St. Andrews, and King's College of Aberdeen, to the Order of 10th November last, in regard to the return of the Books borrowed by the Professors.

Baron Hume—Law Curriculum.—A Report from the Honourable Baron Hume in regard to the Law Curriculum of Study.—(*Printed.*)

Professor James Miller.—A Letter from a Mr. Robert Lamond, Glasgow, addressed to the Clerk, requesting advice in regard to a complaint proposed to be presented in relation to Professor James Miller, by certain Students of Glasgow College, was read, and the Clerk directed to return an answer, stating, that the Commissioners were of opinion that they could give no advice or direction as to how the matter ought to be proceeded in, or authorize any answer to be made to Mr Lamond's Letter of Inquiry, having no direct Petition before them, on which any deliverance could be grounded.

Account Committee.—Dr. Lee was added to the Committee appointed to report on the Properties and Revenues of the several Colleges.

Estimate of Expense for completing Commission.—The Secretary presented a letter from the Under Secretary of State, bearing, that the Lords Commissioners of his Majesty's Treasury having signified to Mr. Secretary Peel their Lordships' opinion, that it will be advisable to submit to Parliament an Estimate of the expense which may be incurred for the various Commissions of Inquiry at present in existence, in preference to making the expense of such Commissions a charge upon the vote for Civil Contingencies; and referring to Mr. Peel's letter of the 6th of December, addressed to the Chairman—in which it was notified that his Majesty had been pleased to allow an extension of time to the 1st of April 1830 to the Commission for visiting and reporting upon the Universities in Scotland, to enable them to prepare their definitive Report, and to frame the Code of Laws and Regulations to be in future observed in the respective Universities, and stating that Mr. Peel requested to be furnished, at as early an opportunity as might be convenient, with an Estimate of the expense that will probably be incurred in completing the business of the Commission.

Which Letter being read, the Secretary took that opportunity of stating, that in consequence of the favourable recommendation of the Commissioners, as engrossed in the minutes of 31st January 1828, for an allowance to him, as Secretary to the Commission, the Treasury had issued a warrant for payment to him of an allowance for seventeen months, viz. from 31st August 1826, being the first sitting of the Commission, to 31st January 1828, at the rate of £600 per annum. That this remuneration appeared to him so very liberal, that he was led to suppose that, in fixing the amount, the Treasury had in view that the Commission was to terminate on the 1st of January 1829, and were thus induced to make the allowance more liberal than they would have been disposed to do had they foreseen that the Commission was to be continued till April 1830. In these circumstances, he begged leave to represent, that he in noways expected that the same rate of allowance as that which he had thus received would be made him for his subsequent and future services, and that he would be entirely content with whatever recompense the Lords of his Majesty's Treasury might be pleased to award him, however limited in amount.

The Commissioners having considered the above representation by their Secretary, which places his character and conduct in so respectable a light, take the opportunity of again expressing the just sense they entertain of his valuable services, and their opinion that the remuneration which he has already received, although liberal, is not greater than the time and labour which he bestowed during that period justly required, especially as, during nearly the whole of that period, it was necessary for him to employ an assistant for arranging, copying for the press, and superintending the printing of the voluminous Documents and Evidence now before them;—but, now further considering that there will be comparatively less trouble in such matters, and that the chief business now remaining is the preparation of their final Report to his Majesty, and the arrangement of the Retnrus yet to be completed, they leave the propriety of their Secretary's suggestion for the consideration of the Lords of the Treasury, with the above expression of opinion, and referring to their former minute, of date 31st January 1828, a copy of which was at the time transmitted to the Secretary of State.

The Secretary laid before the Meeting the following state of expenses already incurred and not yet paid:—

Printing	£236	18	3
Stationery for short-hand writer, &c.	18	17	6½
Secretary's Disbursements, being sums paid to Mr. Dow, short-hand writer, fees of Exchequer warrants, postages, and other miscellaneous charges, from 9th November 1827 to 14th January 1829	102	3	6½
Copyings, 929 sheets	46	9	0
	£404	8	4
Secretary's Allowance			
Sum	£		

The Commissioners, on considering the amount of expense incurred during the last year, and the extent of business likely hereafter to come before them, are of opinion that the actual expenses to be incurred till the expiry of the Commission, on any view of the business likely

to come before them, will not exceed £400, independently of the salary to be allowed to their Secretary.

Estimate of the expense that will probably be incurred in completing the business of the Commission :—

Expense of printing, postages, stationery, &c. . .	£400 0 0
Secretary's Allowance	
Sum . . .	£

The Chairman was requested to transmit a copy of the preceding Minute, in answer to the Secretary of State's inquiry.

College of Edinburgh, 19*th May* 1829. 19 May 1829.

PRESENT—

The Lord President, Sir James Wellwood Moncrieff, Bart.
The Lord Justice-Clerk, The Solicitor-General,—and
Lord Corehouse, Dr. Lee.

The LORD PRESIDENT in the Chair.

Papers presented :—

1. *Prizes.*—A Letter from Dr. Gillespie, Assistant Professor of Humanity in the United College of St. Andrews, on the subject of Prizes.
2. *Allowance to Dr. Gillespie.*—Another communication from him, in regard to the amount of the allowance made to him as Assistant Professor of Humanity.
3. *Theological Curriculum.*—A Letter from Principal Brown, of Marischal College, Aberdeen, in regard to the Scheme of Theological Study.
4. *Curriculum of Arts.*—A Letter from Professor M'Gill of Glasgow, transmitting a copy of his Dissent from the Report made to the Commissioners by the College of Glasgow, in respect to the Curriculum of Study for Arts. (*This Dissent is comprehended in the Printed Report on the Provisional Resolutions.*)
5. *Practical Astronomy.*—A Letter from Principal Baird, transmitting an extract of a Minute of the Senatus Academicus of the University of Edinburgh, in regard to the Chair of Practical Astronomy in that University.
6. *Pathology.*—A Communication from Dr. John Thomson, late Professor of Military Surgery in the University of Edinburgh, in regard to teaching Pathology in a separate Course—in which he recommends the use of coloured delineations of morbid alterations of structure.
7. *Provisional Resolutions as to Curricula of Study.*—Reports from the Universities of Glasgow and St. Andrews on the subject of the various Schemes of Study embraced in the Provisional Resolutions, transmitted to them for deliberate opinions, were presented, and ordered to be printed; and the Clerk was directed to apply for and print the Reports on the same subject from the other Universities.

Secretary's Allowance.—A Letter from the Under Secretary of State, dated 30th January last, stating that the Extract from the Minutes of the Commission, transmitted on the 20th of January, had been laid before Mr. Secretary Peel; and that having taken into consideration the expression contained in the Minutes of the Commissioners of the valuable services of their Secretary, and that the remuneration which he has already received, although liberal, has not been greater than the time and labour which he has bestowed during the period of his employment justly deserved, Mr. Peel had been pleased to approve of his receiving a further remuneration of £600, for his continued services up to the period allowed for the completion of the labours of the Commission, viz. the 1st of April 1830,—was read, and ordered to lie on the table.

Surplus or Diet Money—St. Andrews.—The Commissioners took into consideration the state of the question brought before them by the Memorial and other communications of the Reverend Dr. Chalmers, relative to the application of the surplus funds of the United College of St. Andrews—and, understanding that, under feelings of scruple and delicacy, Dr. Chalmers had declined to receive, for the period while he held the office of Professor of Moral Philosophy, the proportion of the sums allotted by the previous Resolutions of the College to that Professorship, and that a large sum remains due to him on that account—are of opinion, and hereby resolve, that, under all the circumstances, there is no good reason why Dr. Chalmers, who has now ceased to be a Professor in the University of St. Andrews, should not receive and accept of the sums so due to him: and they, therefore, instruct their Secretary to communicate a copy of this Minute and Resolution to the Principal of the United College and to Dr. Chalmers.

College of Edinburgh, 18*th August* 1829. 18 August 1829.

PRESENT—

The Earl of Haddington, Lord Moncrieff (Sir James W. Moncrieff,
The Earl of Rosebery, now a Lord of Session),
The Lord President, The Solicitor-General,
The Lord Advocate, Dr. Taylor,
Lord Corehouse, Dr. Cook,—and
Dr. Lee.

The Earl of ROSEBERY in the Chair.

Universities and Colleges, Scotland.

Minutes and Proceedings.

18 August 1829.

Papers presented :—

1. *Professor Badham—Study of Medicine.*—A Letter from Dr. Badham, Glasgow, in regard to the Study of Medicine.
2. *Principal Brown—Subjects of his Course.*—A Paper from Principal Brown, of Marischal College, Aberdeen, in regard to the subjects of his Lectures as Professor of Divinity.
3. *Dr. Kidd, as to inadequate Salary.*—A Letter from Dr. Kidd, Professor of Oriental Languages in that College, in regard to the smallness of his salary, on account of the reduction in the rate of interest.

The eight following Communications were ordered to be printed :—

1. *Universal History Class.*—A Letter from the Rev. Dr. Brown, Dean of the Faculty of Arts in the University of Edinburgh, transmitting a Minute of the Faculty in regard to the Universal History Class.
2. *Dr. Chalmers—Preliminary Education.*—A Paper from the Rev. Dr. Chalmers, now Professor of Divinity in said University, in regard to the Provisional Resolutions respecting Preliminary Education.
3. *Professor Dunbar—Preliminary Education.*—A Paper from Mr. Dunbar, Professor of Greek in said University, respecting the same subject.
4. *Professor of Rhetoric—Class of Rhetoric.*—A Paper from Dr. Brown, Professor of Rhetoric in the said University, in regard to his own Class.
5. *Medical Study.*—A paper on the subject of Medical Study.
6. *Rector—Marischal College.*—A Letter from Mr. Davidson, Dean of Faculty in Marischal College, transmitting Extracts of Minutes in regard to the election of a Rector in March last. The Chairman was requested to inform Mr. Davidson, that the Commissioners will take the subject into consideration, and communicate to him the result.
7. *Books borrowed by Professors, &c. Edinburgh.*—A Letter from Mr. Bain, Under Librarian in the University of Edinburgh, transmitting a Return of Books borrowed by Professors and Surgeons previously to 17th October 1827, and not returned as on 26th May 1829.
8. *Proposed University at Dumfries.*—A Letter from Mr. Secretary Peel, transmitting, by the commands of His Majesty, copies of Letters which have passed between Mrs. Crichton, Mr. Hope Johnstone, and himself, on the subject of the appropriation of a considerable bequest in establishing a College at Dumfries; which bequest is placed at the disposal of Mrs. Crichton, with the consent of Trustees, by the late Mr. Crichton of Friars' Carse, her husband. The Chairman was requested to write to Mr. Peel, acknowledging the receipt of this communication, and stating that the subject thereof will be taken into consideration.

   A Letter from the said Mrs. Crichton, transmitting a copy of a Letter written by her to Mr. Peel, in regard to the same subject, was presented, and ordered to lie on the table. The Commissioners directed that an answer should be returned, stating that the matter will be taken into consideration.

Edinburgh College Buildings.—There was read a letter from Mr. Carlyle Bell, referring to papers formerly transmitted to the Commission, respecting a grant of public money for completing the Buildings of the College of Edinburgh,—and the Clerk was directed to state, in answer, that the subject has not yet come to be considered by the Commissioners, but that it will be taken into consideration before they make their Report on the State of that University.

Dr. Gillespie, as to inadequate Salary.—There was read a communication from Dr. Gillespie, Assistant Professor of Humanity in the United College of St. Andrews, in regard to the allowance made to him by Dr. Hunter—and the Commissioners directed that the papers be transmitted to Lord Melville, Chancellor of that University, for his consideration.

Reports on the University of St. Andrews and of Edinburgh.—A Report respecting the University and Colleges of St. Andrews, prepared by Dr. Taylor, and another respecting the University of Edinburgh, prepared by Dr. Cook—of both of which Reports printed copies had been already distributed to the Commissioners—were severally presented, and ordered to lie on the table for consideration.

Reports on Provisional Resolutions.—Printed Reports from the Universities of Edinburgh and Aberdeen on the subject of the various Schemes of Study embraced in the Provisional Resolutions which had been transmitted for their deliberation, were presented, and ordered to lie on the table for consideration.

Report of Senat. Acad. Edinburgh, on Provisional Resolutions.—The Commissioners having directed their attention to that part of the Report containing Considerations submitted by the Senatus Academicus of the University of Edinburgh, in which the Senatus express disappointment that nothing has been communicated to them of a design on the part of the Commission to frame a Constitution for the University of Edinburgh, then assume that this important measure has been lost sight of, and afterwards call upon the Commissioners to resume an enquiry into it, intimating, at the same time, that the establishment of a Constitution for that University was the primary object for which His Majesty appointed the existing Visitation,—Resolved to enter upon their Minutes the following observations :—

1. That as the Senatus could not be in possession of authentic information from which it became them to offer any remark on the proceedings of the Commissioners, with the exception of the Resolutions sent to them, the foregoing observations, which

proceed upon that which is wholly erroneous and unfounded, are at once unnecessary, irregular, and uncalled for.

2. That the Commissioners, instead of overlooking the important duty devolved upon them by His Majesty, of framing regulations for the government of the University of Edinburgh, had obtained much evidence on this point from the Professors in the University and other persons of eminence, and were exclusively occupied during many of their sittings last year in forming a scheme for this object, prior to the adoption of the Provisional Resolutions relative to the Course of Study transmitted to the Senatus.

3. That, although the formation of a Constitution for the University of Edinburgh is one of the purposes for which His Majesty was pleased to grant the present Visitation, it was neither the main object which led to it, nor the principal, though a most important command of His Majesty, in the Commission under which the Visitors act; and that, although the Commissioners judged it expedient and advantageous to solicit the opinion of the Senatus on the Course of Study proposed to be adopted in the Universities, they are not aware that it is their duty to do the same with regard to the Constitutions and various other matters connected with the administration and government of the several Universities in Scotland, to be hereafter submitted to the King for His Majesty's approbation and sanction.

Constitution of the College of Edinburgh.—The Commissioners resumed the consideration of the scheme of a Constitution for the University of Edinburgh.

College of Edinburgh, 19th August 1829. 19 August 1829.

PRESENT—

The Earl of Haddington,	Lord Moncrieff,
The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,
Lord Corehouse,	Dr. Lee,—and

Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Constitution of the College of Edinburgh.—The Scheme of a Constitution for the University of Edinburgh was further considered by the Commissioners.

The Commissioners, having resumed the consideration of the undermentioned subjects, came to Resolutions thereon, as follows:—

Joint-Professors, Assistants, and Successors, &c.—That in future no appointments should be allowed of Joint-Professors, or of Assistants and Successors, except in the case of the insanity of the Incumbent, as hereinafter provided for:—

That, in the event of a Professor becoming unfit for the discharge of his duties, in consequence of infirmities or of old age, he should be entitled, in the Universities of Glasgow and Edinburgh, after resignation, to draw a certain proportion of the Fees payable to his Successor; provided always, that the expediency of such resignation, and the terms in which it is to take place, shall be approved of by the University Court:—

That, in order to accomplish the same object in the other Universities, it will be necessary that some provision should be made for a retiring allowance for a Professor, in the above circumstances:—

That it should be in the power of the University Court, upon proper cause shown, to direct the resignation of any Professor when he shall become unfit for the duty of his office, and to give him right to the provisions above suggested; or, in the event of insanity, to authorize the appointment of a Joint Professor on the same footing as in the event of resignation.

Subscription of Confession of Faith.—That the subscription to the Confession of Faith and Formula of the Church of Scotland, by the Principals and Professors before their induction, should be enforced, in terms of the Act of Parliament.

Librarian, Factor, &c.—That neither the Principal, nor any Professor, should be Librarian, Factor, or hold any other subordinate situation in the Universities.

Right of Property in Apparatus.—That when a Professor is appointed to any particular Class, to which any collection of instruments, philosophical apparatus, models, drawings, or preparations, or any collection intended for the purposes of the Class, is attached, a distinct catalogue, descriptive of the articles of such collection, should be made out, subscribed by the Professor and Principal, and carefully preserved: That Professors making use of any articles belonging to themselves, and deposited generally in the University, should annually give in to the Principal a list of the same: That, in the event of the death of any Professor, all articles in the Collection, belonging to any Class, should be taken to belong to the University, when the same do not appear in the said lists of articles belonging to the individual Professor, unless they can be proved to be acquired or brought to the College by him since the date of the annual list given in during the preceding year.

The Reports given in respecting the different Universities, were referred for Examination to a Committee, consisting of

The Solicitor-General,	Dr. Lee,—and
Dr. Taylor,	Mr. Home Drummond,
Dr. Cook,	

Universities and Colleges, Scotland.

Minutes and Proceedings.

20 August 1829.

College of Edinburgh, 20th August 1829.

PRESENT—

The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,
Lord Corehouse,	Dr. Lee,—and
Lord Moncrieff,	Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Constitution of the College of Edinburgh.—The Scheme of a Constitution for the University of Edinburgh was further considered.

Latin and Greek Chairs.—The Commissioners, having had under consideration a Proposal submitted on 17th October 1828, came to the following Resolution thereon:—

That it is expedient that each of the Professors of Humanity and Greek, in the Universities of Glasgow and Edinburgh, should have an Assistant for the discharge of his duties: That the Assistant should receive such remuneration from the Emoluments of the Professor as the latter may fix, with the approbation of the Senatus Academicus: That the Professor should frame Regulations specifying the duties to be performed by himself and by his Assistant, respectively, subject to the revision of the Senatus Academicus.

---

21 August 1829.

College of Edinburgh, 21st August 1829.

PRESENT—

The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,
Lord Corehouse,	Dr. Lee,—and
Lord Moncrieff,	Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Captain Grant.—A note from Captain Grant, late of the 78th Regiment, requesting an audience of the Chairman, and stating that he was desirous of laying a complaint before the Commissioners, was read, and Captain Grant was requested to reduce his complaint to writing, and transmit it to the Commissioners, who would see him on the subject, if they should deem that necessary.

Constitution of College of Edinburgh.—The Commissioners having again resumed the consideration of the scheme of a Constitution for the University of Edinburgh, came to the following Resolutions thereon, and requested the Chairman to transmit a copy thereof to the absent Commissioners, for their opinion on the same, viz.—

I. That there should be a CHANCELLOR, to be named by the Crown, and to continue in office for life—through whom all communications from the University Court, or Senatus Academicus, to the Crown, shall pass—To be entitled to preside in all University meetings, and, on application, or for the consideration of any matters concerning the University, to summon and direct a University Court to be held:—

In the absence of the Chancellor, the Principal to preside at the University meetings:—

University Meetings to be composed of the Chancellor, of the Members of the University Court, of the Senatus Academicus, and of Examiners for Degrees:—That these Meetings shall only be assembled for the Installation of the Chancellor—for the Induction of the Rector, and of the Principal and Professors, to their respective offices—for the conferring of Degrees by the Senatus Academicus—and for the distribution of General Prizes—at which the Lord Provost, Magistrates, and Council of the City of Edinburgh, the other Patrons of the University, and the Graduates and Students thereof, shall be entitled to be present in places to be assigned to them respectively by the University Court:—

II. That there should be a UNIVERSITY COURT, in which the General Superintendence and Government of the University, as hereafter mentioned, shall be vested:—

This Court to consist of—

1. A RECTOR—as the Head or President of the Court:—

The Rector to be chosen by the Principal, Professors, and the Graduates of the University, at a meeting to be assembled for this purpose, at which the Principal, or, in his absence, the senior Professor shall preside—and, in the event of an equality of votes, the President shall have a deliberative and a casting vote:—The Rector to continue in office seven years, and to go out of office on the 31st of December, seven years after his election, and the new Rector to be chosen in the month of October preceding; the day of election to be fixed by the University Court—of which three months' previous notice to be publicly given:—The Rector may be again eligible for the same office:—

That, for the first Election of Rector, the Chancellor should name the day on which the Principal shall assemble a meeting for that object:—

The Rector, by acceptance, to undertake personally to perform the duties of the office, and to be present at the University Courts when not necessarily prevented from attendance:—

That neither a Principal nor a Professor in any of the Universities should be eligible to the office of Rector:—

2. The Principal of the College for the time being:—

3. An Assessor, not being a Principal or Professor in any University, to be nominated by the Chancellor:—

4, 5, 6. Three Assessors, one to be named by the Rector, one by the Town-Council of Edinburgh, and one to be elected by the Principal, Professors, and the Graduates—all to be chosen for the space of seven years. The qualification of the last-named Assessor to be—a Member of any of the Learned Professions, Church, Bar, or Medicine—if of the latter, to be a Member of the Royal Colleges of Physicians or Surgeons, or a Professor in the University, or a Graduate thereof, of not less than ten years' standing:—

Four to be a Quorum, and the Court to have the power to adjourn at all times:—

The Rector to have a deliberative and a casting vote, and, in his absence, the Members to preside according to the above order; and in the latter case, if there be an equality of votes, the consideration of the matter to be adjourned to a day to be named, of which notice to be given to the Rector, and if on that day the Rector cannot attend, the presiding Member to have a deliberative and a casting vote:—In the event of the death or resignation of the Rector during the foresaid period of seven years, the vacancy shall be filled up by a new election, to take place within six months, on a day to be fixed by the Chancellor; and, in the event of the death or resignation of any of the Assessors, the vacancy to be supplied within the same period by their respective constituents:—

University Court—

— to have the power to review all Regulations and decisions of the Senatus, and to be a Court of Appeal in every case, except as hereafter provided for:—

— to have power to originate and carry into effect all improvements in the internal system of the University, not inconsistent with the Statutes of Visitation, after due communication with the Senatus Academicus, and with the sanction of the Chancellor:—

— to have power to issue directions to Professors, in order to enforce punctual attention to all the regulations which may be enacted in regard to the mode of teaching in the Universities, or other duties imposed on the Professors:—

— to have power to fix and regulate, from time to time, the Fees in the several Classes:—

— to have power to receive and dispose of all Representations from the Senatus Academicus, Professors, or Graduates, and all complaints from Parents, Students, or others, not inconsistent with the Regulations for the ordinary discipline of the University, as hereinafter vested in the Senatus Academicus:—

— to have power, after due investigation of the case, to censure a Professor, or to suspend him for a period not exceeding a year; and, during such suspension, the Senatus Academicus to have power to make due provision for teaching his Class:—

— to have power, after a similar investigation, with the sanction of the Chancellor, to suspend a Professor for a longer period than a year, or to deprive him of his office:—

— to have power, after a similar investigation, to remove the Librarian, Janitors, and other inferior officers of the University:—

— to have power to rectify any other abuses to which their attention may be called:—

— to have power to enquire into and control the Revenue, Expenditure, and all pecuniary concerns, including Funds mortified for Bursaries, or other purposes:—

The Rector to have power to call a University Court when necessary, but to have no power to act, except by and with the advice, and through the medium, of the Court:—

The Rector to be also empowered to call a University Court, to reconsider any acts and decisions of any meeting of the Court at which he may not have been present—such Court to be summoned within one month from the time that the act or decision to be reconsidered was communicated to him:—

The Installation of the Chancellor to take place within a year after his appointment, and the Induction of the Rector within three months of his election:—

A University Court to be held immediately after the Induction of the Rector; due public intimation having been previously given:—

And a University Court to be held once a year, in the month of April, after intimation, of at least fourteen days, being published on the College gates:—

Regular Minutes of the proceedings of the Court to be taken and preserved, by a Secretary to be appointed by the Court:—

III. That the ordinary Discipline of the University should be vested in the Senatus Academicus; an appeal from their sentences to the University Court being competent in cases relating to the dismissal or expulsion of Students, or to Students being prevented from proceeding in the usual manner through the Curriculum of Study:—

The Principal to preside in the Senatus Academicus, and to have a deliberative and a casting vote:—

— to have the constant and ordinary inspection of the Professors:—

— to be empowered at all times to superintend the several Classes of the University, and to visit each, not less than twice each Session:—

The Principal to be present at the distribution of Class Prizes:—

— to have a general inspection of the Education and Discipline of all the Students:—

In the event of the Principal being absent from a Meeting of the Senatus Academicus, when there is an equality of Votes, the consideration of the matter to be adjourned to a day to be named, of which notice to be given to the Principal, and, in case of his continued inability to attend, the subject to be moved into the University Court:—

The Meetings of the University Court, when sitting in a judicial capacity, to be open to

Universities and Colleges, Scotland.

the Public, unless, in the opinion of the Court, the peculiar nature of the case should render publicity improper.

Minutes and Proceedings.

The Reports from the Universities on the Provisional Resolutions were severally taken into consideration.

21 August 1829. *Elementary Greek Class—Curriculum of Arts.*—The Commissioners then resumed the consideration of the Provisional Resolutions, in regard to the abolition of the Elementary Greek Classes in the different Universities, to the Preliminary Education to be required before entrance to the College, and to the first year of the Curriculum of Study; and came to certain Resolutions thereon, and directed them to be entered in the Minutes, when the system for the remaining years of the Curriculum shall have been resolved upon. (*See Minutes of 25th August.*)

---

22 August 1829. *College of Edinburgh, 22d August* 1829.

PRESENT—

The Earl of Rosebery,	Dr. Taylor,
The Lord President,	Dr. Cook,
Lord Corehouse,	Dr. Lee,—and
Lord Moncrieff,	Mr. Home Drummond.
The Solicitor-General,	

The Earl of ROSEBERY in the Chair.

Paper presented:—

Dr. Hope—Chemistry.—A paper from Dr. Hope, Professor of Chemistry in the University of Edinburgh, in regard to the Chemistry Class, was ordered to be printed.

Rector—Marischal College.—The Commissioners, having had under consideration the question stated in the Minutes presented on the 18th instant, in regard to the election of Rector in Marischal College—Remitted the subject to a Committee, consisting of Lord Corehouse, Lord Moncrieff, and the Solicitor-General, to report thereon.

Curriculum for Arts—The Commissioners having then resumed the consideration of the second, third, and fourth years of a Curriculum of Study, the farther consideration thereof was adjourned till Monday the 24th instant.

The following Returns were ordered from the different Universities:—

1. *Number of Students.*—A Return of the number of Students entered in the University; distinguishing the number attending each Class, in continuation, to the close of last Session, of a similar Return formerly transmitted to the Commissioners.
2. *Certificates.*—A Return of the number of Students who, for the last five years, have obtained Certificates from the Professors before the end of the third last week of the Session.
3. *Graduates.*—A return of the number of persons who have graduated, in continuation, to the close of last Session, of similar Returns formerly transmitted to the Commissioners.

24 August 1829. *College of Edinburgh, 24th August* 1829.

PRESENT—

The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,—and
Lord Corehouse,	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Curriculum for Arts.—The Commissioners having resumed the consideration of the second, third, and fourth years of a Curriculum of Study for Arts, the farther consideration of the subject was adjourned till to-morrow.

Theological Curriculum.—The consideration of the Provisional Resolutions, in regard to a Course of Theological Study, having been also resumed, the Commissioners revised and amended them, and adjourned the farther consideration thereof till to-morrow.

---

25 August 1829. *College of Edinburgh, 25th August* 1829.

PRESENT—

The Earl of Haddington,	Lord Moncrieff,
The Earl of Rosebery,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,—and
Lord Corehouse,	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Paper presented—

Captain Grant.—A Memorial from Captain Grant, in regard to a Bequest as therein detailed, was presented, and the Commissioners directed that an answer should be returned, stating that they were unable to come to an opinion on the subject without an inspection of an accurate copy of the Deeds referred to in the Memorial.

Proposed University at Dumfries.—In reference to the communication from the Secretary of State, in regard to the proposed institution of a University at Dumfries, Mr. Hope Johnstone, of Annandale, attended the Commissioners at their request, and engaged to transmit to them a written statement of the grounds for recommending that Institution, and of the benefits likely to result therefrom.

Curriculum for Arts.—The Commissioners, having resumed the consideration of the 2d, 3d, and 4th years of a Curriculum of Study for Arts, came to certain Resolutions thereon, which, with the Resolutions come to on the 21st inst. relative to the Elementary Greek Classes, &c., are as follows:—

That it is the opinion of the Commission, That the discontinuance of the Elementary Greek Classes, as at present existing, in the several Universities, would tend in a high degree to raise the Standard of Classical Literature in Scotland:—

And the Commissioners are, therefore, farther of opinion, that in future the business of the First Greek Class in each of the Universities should commence with the reading of some of the Greek books or Classics now in use:—

That the Rudiments of Grammar in the Greek Language should not be taught on any plan or system for the first instruction of persons not previously acquainted with the Elements of the Greek Grammar; and that the Professor should not occupy the time allotted to the business of the class, as above described, in teaching the Elements of Grammar to any such persons:—

That, at the commencement of the Session, the Students professing to be qualified for the business of the class as thus constituted, should enter themselves as public Students; that the privileges connected with the attendance of this class as a part of Academical Education should belong to those Students only who shall be so entered; that to them alone certificates of attendance should be given; and that the system of instruction should be conducted exclusively with reference to the improvement of persons thus presumed to be possessed of such attainments before entering the class:—

That persons who may be desirous of attending the first Greek Class, but who may not think themselves fully qualified to enter as public Students on this principle, should notwithstanding be allowed to attend the meetings of the Class; and that any such persons who may have so attended regularly from the commencement, or from the date of the enrolment of the public Students as after mentioned, should be entitled, at any time in the first week after the Christmas vacation, to intimate to the Professor, that they are willing to be examined by him in presence of the Class, in order that, if they shall then be found to have attained such a knowledge of the Elements of Greek as to qualify them for the business of the Class as public Students, they may be enrolled as such; and that, unless they shall be so examined, found qualified, and enrolled accordingly, within the time above specified, such persons so attending the Class shall not be entitled to the privileges of public Students, or to receive any Certificates of attendance: Reserving, however, to all such persons their right to become public Students in the same first Greek Class, and to enjoy all the privileges thereof, by regularly entering themselves in that character, and attending the Class in any other Session:—

That all persons intending to enter themselves as public Students in the first Greek Class in any Session, should, on or before the 20th day of October in each year, give in their names to the Professor, who shall keep a separate roll of public Students:—That this roll of public Students should be given in to the Secretary of the University, on or before the 1st day of February in each year, in order to be entered in the University books:—

That all Students professing themselves, on entering the University, to be competent to commence with the second Latin and the second Greek Classes, should be subject to a private Examination by the Examiners for Degrees; and if, in the opinion of the Examiners, their proficiency is sufficient, they should be entitled to become public Students in these Classes, with the same privileges as if they had attended the Classes of the first year:

That it is further the opinion of the Commission, that the existing practice in the several Universities, of devoting the first class of Mathematics to instruction in the first Elements of that Science, tends to lessen the general usefulness of that Class, and to retard the progress of the great body of the Students in Mathematical knowledge:—

And they are therefore of opinion, That all Students proposing to attend the first Class of Mathematics in any University should previously have acquired a competent knowledge of the first four Books of Euclid, and of the Science of Algebra, as far as Simple Equations:—

That Students professing to have such knowledge should enter themselves as public Students on or before the 20th October in each year:—

And, That no person who may attend the Class should be entitled to a Certificate, or to the Academical privileges connected with such attendance, unless he has been so enrolled as a public Student:—

That all Students professing themselves to be competent, on entering the second year's attendance of the Curriculum, to commence with the second Mathematical Class, should be allowed to enter themselves as public Students in that class, and attend it in the same year with the second Latin and second Greek Classes, provided they undergo a private Examination by the Examiners for Degrees:—

Universities and Colleges, Scotland.

That the change of practice proposed in the foregoing Resolutions should not come into actual operation till three years after the date at which the Report of the Commission, if sanctioned by His Majesty, shall have been notified to the several Universities.

Minutes and Proceedings.

25 August 1829.

THAT the following should be the Curriculum of Study for taking a Degree in Arts, and should be imperative only on Students who are to take that Degree in the Universities of Scotland :—

1*st Year.*—That the Curriculum of Study for the first year of attendance at College should include the first Latin and first Greek Classes, which shall commence on the second Wednesday in October, and continue till the first day of May following :—

That each of these two Classes should be taught two hours each day, five days in the week.

2*d Year.*—That the Curriculum of Study for the second year of attendance at College should include the *second Latin, second Greek,* and *first* Mathematical Classes :—

That each of the second Greek and second Latin Classes should be taught two hours each day, five days in the week; and the first Mathematical Class one hour each day, five days in the week.

3*d Year.*—That the Curriculum of Study for the third year of attendance at College should include a second Mathematical Class, and a Class of Elementary Logic and Rhetoric:—

That the second Mathematical Class should be taught for one hour each day, five days in the week :—

That the Elementary Logic and Rhetoric Class should be taught two hours each day, five days in the week—one hour being employed in Lecturing, and the second hour in Examinations, Exercises, Themes, Composition, &c.

4*th Year.*—That the Curriculum of Study for the fourth year of attendance at College should include the Classes of Natural Philosophy and Moral Philosophy :—

That each of the Classes of Natural and Moral Philosophy should be taught two hours each day, five days in the week—one hour being employed in Lecturing, and the second in Examinations, Exercises, Themes, &c.

That the Examinations, Exercises, Themes, &c., in the Logic, Natural Philosophy, and Moral Philosophy Classes, should be imperative on all the Students, except on those who have obtained an exemption from the Professor to be reported to the Senatus; and that no Student so exempted should be present at the Examination hours, or should be entitled to a Certificate of attendance on the Class, or be admitted as a Competitor for Prizes, or a Candidate for Degrees.

Dissent.

From which Resolutions Drs. Cook and Taylor gave in a Dissent, as follows :—

" Drs. Cook and Taylor, considering the arrangement as to the Rhetoric and Logic, " the Moral Philosophy and Natural Philosophy classes, as sanctioned by the Com- " missioners, calculated to injure the interests of Education,—Dissent from that arrange- " ment, and reserve to themselves liberty to make an humble and separate representa- " tion to the Crown in relation to this most important question."

Theological Course.—The Course of Theological Study having been again under the consideration of the Commissioners, they came to the following Resolutions thereon :—

Professor of Systematic Theology.

First Class.—Evidences of Natural and Revealed Religion—comprehending the genuineness, authenticity, and inspiration of Scripture, and its sufficiency as a Rule of Faith. To meet one hour each day, for five days of the week,—three days for Lecture, and two for Examination.

Second Class.—Theology strictly so called—embracing the great Doctrines of Revelation, and the ground upon which they rest—View of Systematic Theology—and the Qualifications and Duties of the Pastoral Office. Three Lectures each week; and two hours for Examinations upon Lectures, or upon standard Theological Works appointed to be read by the Students. That the Professor of Divinity do complete the Course of this Second Class in two Sessions.

Professor of Oriental Languages.

First Class—Elements of Hebrew, and translation of the Historical Books of the Old Testament. One hour for five days of the week.

Second Class.—Poetical and Prophetical Books of the Old Testament, Chaldee and Syriac—and occasional Lectures on Hebrew Antiquities. One hour, for five days of the week.

Professor of Ecclesiastical History.

First Class.—Historical View of the Old Testament Dispensation—Introduction of Christianity—Apostolic age, and Historical and Critical Account of the Apostolic Fathers. To meet five hours a-week; four for Lecturing, and one for Examination.

Second Class.—History of the dissemination and establishment of Christianity—of the opinions which have been entertained as to its Doctrines and morality, and of the various forms under which it has been administered. The Polity, Laws, and Government of the Church of Scotland. Five hours a-week; four for Lecturing, and one for Exercises and Examination.

Professor of Biblical Criticism.

Two Classes—Each of these two Classes to meet five hours a-week; three for Lecturing, and two for Examinations and Exercises. The Critical Discourse, denominated Exercise and Addition delivered by the Students, according to the requisition of the Church, to be heard by this Professor.

The Session for the Theological Classes to last for six months.

Distribution of the Theological Course.

First Year.—First Class of Theological Professor.
First Hebrew Class.

Second Year.—Second Theological Class.
Second Hebrew Class.

Third Year.—Second Theological Class continued.
First Biblical Criticism.
First Class of Ecclesiastical History.

Fourth Year.—Second Class of Biblical Criticism.
Second Class of Ecclesiastical History.

The Discourses of the Students required by the Church—after assigning the Exercise and Addition to the Professor of Biblical Criticism—to be delivered before the Professor of Divinity, the Professor of Ecclesiastical History, and the Professor of Hebrew if a Professor of Theology, or one or more of them, in such manner as the Theological Faculty may arrange.

That the hours for the different Theological Classes should be fixed by the Senatus Academicus:—

That the Lectures of all the Classes in the Theological Faculty should be open to all Students, although not enrolling themselves as Students of Divinity, on paying the usual fee for the Classes in Arts,—the separate hours for Exercises and Examinations, excepting in the Hebrew Class, being devoted exclusively to Students of Divinity.

Degrees in Divinity.—That the Degree of Bachelor of Divinity should be conferred only on Students of irreproachable moral character who have regularly attended the Theological Course, after a strict Examination on the Evidence and Doctrine of the Christian Revelation—on Biblical Criticism and Ecclesiastical History, and in Hebrew, provided they have previously taken the Degree of Bachelor of Arts; or, if they have not obtained that Degree, after they have likewise undergone a strict Examination in Classical Literature and Philosophy, such as is required from Candidates for the Degree of Bachelor of Arts—the Examinations in both cases to be conducted as specified in subsequent minutes:—

This Degree to be conferred only on those who have subscribed the Confession of Faith and the Formula of the Church of Scotland:—

The Degree of Doctor of Divinity not to be conferred on persons who have entered the University after the Regulations of the Commission shall have taken effect, unless they have obtained the Degrees of Bachelor of Divinity and Master of Arts:—

This Degree not to be conferred till five years have elapsed after the Candidate has obtained the Degree of Bachelor of Divinity.

Fees.—The Commissioners are of opinion, that Fees should be paid by Divinity Students according to the following Table:—

1st Year.—First Theology		£2 2 0
First Hebrew		2 2 0
2d Year.—Second Theology		2 2 0
Second Hebrew		1 1 0
3d Year.—Second Theology		0 0 0
First Ecclesiastical History		2 2 0
First Biblical Criticism		2 2 0
4th Year.—Second Biblical Criticism		1 1 0
Second Ecclesiastical History		1 1 0
		£13 13 0

First Session	£4 4 0
Second Session	3 3 0
Third Session	4 4 0
Fourth Session	2 2 0
Total	£13 13 0

That the above fees should be paid by all persons who are enrolled as Students of Theology, whether attending regularly or otherwise.

The Commissioners, having also resumed the consideration of certain subjects, came to Resolutions thereon as follows:—

Class Prizes.—That there should be a plan of giving Prizes in all the Classes.

Political Economy.—That a separate Chair should be endowed in each of the Universities of Edinburgh and Glasgow, for teaching Political Economy, the right of presentation to the Chair being vested in the Crown; and that in the Universities of St. Andrews and Aberdeen, in the event of there being sufficient encouragement, Political Economy should be taught by the Professor of Moral Philosophy, as a separate class, and at a separate hour, and, in case of his declining this duty, it should devolve upon such other Professor as the Senatus of these Universities may nominate for the purpose.

Natural History.—That a Professorship of Natural History, in those Universities in which such Class does not now exist, ought to be established.

Universities and Colleges, Scotland.

Minutes and Proceedings.

26 August 1829.

College of Edinburgh, 26th August 1829.

PRESENT—

The Earl of Haddington,	Lord Corehouse.
The Earl of Rosebery,	Lord Moncrieff,
The Lord President,	The Solicitor-General,—and
The Lord Advocate,	Dr. Cook.

The Earl of ROSEBERY in the Chair.

Papers presented:—

Captain Grant.—An Answer from Captain Grant, in reply to the communication which the Commissioners yesterday directed to be made to him.

The following papers were presented and ordered to be printed:—

1. *Royal College of Surgeons.*—A Copy of the Regulations to be observed for obtaining Diplomas from the Royal College of Surgeons, Edinburgh:—
2. *Professor Wallace.*—Observations by William Wallace, Esq., Professor of Mathematics in the University of Edinburgh, in regard to his class:—and,
3. *Graduates.*—A Return of the number of persons who have graduated in said University, in 1827 and subsequent years.

The Commissioners having resumed the consideration of certain subjects, came to Resolutions thereon, as follows:—

Degree of B.A.—That Students who have completed the Curriculum of Study prescribed for four years, as stated in the Minutes of yesterday, should be qualified to be Candidates for the degree of *Bachelor* of Arts:—

That this Academical Honour should be conferred only on those Candidates who have had a Regular University Education, as there laid down, and after a strict Examination conformable to the subjoined Regulations:—

That full attendance of not less than all the terms of a University year at Oxford and Cambridge, and at Trinity College, Dublin, should be allowed as one Session to Candidates from these Universities, under this condition, that, in all cases, attendance during the fourth Session of the Curriculum in the Universities of Scotland, should be required in order to entitle such Candidates to obtain the Degree of *Bachelor* of Arts.

The Commissioners, thinking it highly desirable to raise in public estimation the value of Degrees in Arts, and to establish a uniform system in the requisite Examinations in the several Universities, propose the following plan:—

That, in order to obtain the Degree of Bachelor of Arts, the Candidate must undergo an Examination with credit in the following requisites:—

Latin.—That, in Latin, he should be examined in two Decades of Livy, or in the Orations of Cicero, and in the whole of Virgil, or Horace, or Juvenal—translating the same either *vivâ voce*, or in writing, or both, as the examiners may prescribe, and shall be called to perform Exercises in Latin composition:—

Greek.—That in Greek he should be examined in three Books of Thucydides, or in Demosthenes, or in Aristotle's Ethics or Rhetoric, in Prose—and in two Tragedies of Sophocles, or of Euripides, in Poetry:—

That, with regard to the Latin and Greek Examinations, the Candidate to have his choice in which of the above mentioned Authors he will be examined; the Examinations comprehending both Prose and Poetry:—

Mathematics.—That, with regard to Mathematics, he should be examined in the 11th and 12th books of Euclid—Spherical Trigonometry—Conic Sections—Algebra, including Equations of the Higher Denominations:—

Logic, - -
Natural Philosophy,
Moral Philosophy,
} That in these branches of Study, the Candidate should be examined in the subjects of the courses of the several Classes:—

In Logic, Mathematics, Natural Philosophy, and Moral Philosophy, the Examinations to be conducted, partly in writing, under the inspection of the Examiners.

That those who take the Degree of Bachelor of Arts with Honours should be arranged in two classes—One Class—entitling Candidates to *Honourable Distinction*:—
Another Class—to be called the *Highest Class of Honours*:—

That it is not expedient to specify any particular subjects of Examination by which Candidates may be entitled either to Honourable Distinction or to *Highest* Honours; but that Candidates for either of these Classes cannot be enrolled in them, unless those for *Highest* Honours undergo an examination in a greater number of works or subjects than those claiming Honourable Distinction; nor in the latter Class, unless their Examination be in a greater number of works or subjects than will form the Examination of Candidates for Bachelor of Arts merely:—

That for *Honourable Distinction*, excellence in Latin Composition and in all the written exercises prescribed, should be particularly required:—

That in addition to what entitles Candidates to be classed for Honourable Distinction, the *Highest Honours* may be taken either in Classical or Scientific attainments:—

That if *Highest* Honours are desired in Classical attainments, good Greek, as well as Latin Composition in prose, should be required; the Candidate, also, undergoing an Examination in a greater number of Latin and Greek Authors (to be selected by himself) than for Honourable Distinction:—

95

Universities and Colleges, Scotland.

Minutes and Proceedings.

26 August 1829.

That the necessary proofs of proficiency in Composition must be given under the inspection of the Examiners, the Candidates being enclosed for that purpose:—

That if *Highest Honours* are desired in Scientific attainments, the Candidate must undergo an Examination in some of the higher and more difficult Branches of Science.

Degree of M.A.—That previously to the Degree of *Master* of Arts being conferred, attendance should be required in the Classes of Natural History, Chemistry, and Political Economy (where there are such Classes), and that the said Degree should not be conferred until after the lapse of at least one year subsequent to the four years' Curriculum enjoined for the Degree of Bachelor of Arts:—

That the Degree of Master of Arts should be conferred only on Bachelors of Arts of the Universities of Scotland, with the exception of Bachelors of Arts of Oxford and Cambridge, and of Trinity College, Dublin, who should attend the additional Classes above prescribed and undergo the requisite Examinations:—

That the Degree of Master of Arts should only be conferred after Examinations conducted in the same manner as Examinations for the Degree of Bachelor of Arts:—

That after attendance on the additional Classes above mentioned as necessary for the Degree of Master of Arts, an Examination should take place in the subjects of the Courses of these Classes—But

That the principal Examination to entitle to that Degree should take place in any branch of Literature, Philosophy, or Science, which the Candidate may select—the Examination to be conducted in such a manner as to secure very high attainments.

Certificates.—That the Certificate to be granted to Students leaving the Classes should comprehend the following particulars, as stated on the margin:—

I hereby certify, that A. B. was enrolled a Student in the Logic Class of the University of Edinburgh, Session 182 : That he attended regularly, never having been absent from any of the meetings of the Class—or never absent, except from sickness or some sufficient cause—or that his general attendance was regular—or that he did not attend regularly, having been frequently or often absent without a sufficient cause: That he was examined not fewer than times in the course of the Session, and answered in a manner most gratifying to me—or ably—or evincing much acquaintance with the subjects to which the Examination related—or simply that he was examined so many times: That he performed with much ability, or creditably—or simply performed all or so many of the Exercises required, the actual number required being stated—and gave in Essays (the nature of them to be specified) on all the subjects prescribed, or on a certain number of them to be specified: That his behaviour in the Class was uniformly proper—or generally proper—or was frequently such as to require censure; and that his general conduct, in so far as known to me, was correct or exemplary.

Enrolment.
Attendance.
Examination.
Performance of Exercises and Composition of Essays.
Behaviour in Class.
General Conduct.

One Form of Certificate.

I hereby certify, that A. B. was enrolled a Student in the Moral Philosophy Class of the University of Edinburgh, Session 1829-30: That he attended regularly, never having been absent from any of the meetings of the Class: That he was examined not fewer than times in the course of the Session, when he answered in a manner most gratifying to me, and evincing much acquaintance with the subjects to which the examinations related: That he performed with much ability the Exercises required, and gave in Essays upon all the subjects prescribed, written with much ability, and displaying considerable powers of composition: That he was uniformly most attentive in the Class; and that his general conduct, in so far as known to me, was exemplary.

C. D. *Professor.*

Fees.—That in all the Classes of the Universities forming the Curriculum of Study for Arts, the Fee to be paid by a Student should be £3. 3*s.*, besides 7*s.* 6*d.* for the Library; and that the fees already established in the Universities by proper authority, if higher than those mentioned, should still be paid:—

That there should be no distinction of rank among Students—no Primars, Secondars, or Ternars:—

That no Professor of any of these Classes should be entitled to charge more than £3. 3*s.* from any Student for one Session:—That any Student who has attended the First and Second Classes of a Professor, should not be required to pay for a third year's attendance in any of his Classes:—

That such Fee should be exigible in every University from all Students, including Bursars, unless the exaction should be found to be inconsistent with such foundations of Bursaries as are obligatory upon the respective Universities:—

That applications for gratuitous attendance should be made to the Professor of each Class respectively, who is to judge of the circumstances of the case, and decide accordingly:—

That the other Class-dues should be regulated by the proper Academical authorities.

General Prizes.—That certain annual Prizes open to competition among all the Public Students of the Classes ought to be instituted.

The following Returns were ordered, from the University of Edinburgh:—

1. *Dr. Fellowes' Prize.*—A Copy of any Documents transmitted to the Senatus Academicus of the University of Edinburgh, or to any Professor thereof, respecting the Endowment by Dr. Fellowes for a Prize or Prizes in said University.

Universities and Colleges, Scotland.

Minutes and Proceedings.

27 August 1829.

2. *Botanical Garden.*—A Return of the whole amount of the Sums annually received by the Professor of Botany for defraying the Expenses of the Royal Botanical Garden,—specifying the sources from which the same are paid,—the authority by which such sums have been granted, with the dates of the different grants.

College of Edinburgh, 27th August 1829.

PRESENT—

The Earl of Haddington,
The Earl of Roseberry,
The Lord President,
The Lord Advocate,
Lord Corehouse,
Lord Moncrieff,
The Solicitor-General,—and
Dr. Cook.

The Earl of ROSEBERY in the Chair.

Papers presented:—

Royal College of Surgeons.—A Letter from William Wood, Esq., President of the Royal College of Surgeons, Edinburgh, transmitting copies of the Regulations referred to in the Minutes of yesterday, was presented; and the Chairman was requested, in acknowledging the receipt of the communication, to return to him the thanks of the Commissioners.

Qualification of Professors.—The Commissioners, having had under consideration a Proposition that no person should be eligible to a Chair in any of the Universities, unless he had taken a Degree,—are of opinion, that it is not expedient to recommend any enactment on the subject.

Tutors.—The Commissioners, having also had under consideration a Proposition for establishing a System of Teaching by Tutors, are not prepared to recommend such a system to be adopted in the Universities of Scotland.

The Commissioners, having resumed the consideration of certain subjects, came to Resolutions thereon, as follows:—

Examiners for Degrees.—THAT Examiners for Degrees, not being Professors, should be appointed by the Senatus Academicus, for not less than three, nor more than five, years, and be eligible for re-appointment to this duty:—

That some Endowment should be made for the said Examiners:—

That previously to Degrees being taken under the regulations provided by the Commissioners, the Senatus Academicus should appoint either Graduates or other persons properly qualified to be Examiners; but that after Degrees have been taken under the said regulations, such Examiners should be Graduates of one or other of the Universities of Scotland, and in all cases the Examiners to subscribe the Confession of Faith and Formula of the Church of Scotland:—

That such Examiners should be Members of University Meetings:—

That in the event of any Professor, or of the Senatus Academicus, not being satisfied in regard to the result of the examinations or classification of any Candidates, it should be competent for the Senatus Academicus to re-examine any person either rejected or passed at such Examinations, and review such decision of the Examiners:—

That in the Universities of Edinburgh and Glasgow, there should be four Examiners for the Degree of Bachelor of Arts, and two for the Degree of Master of Arts—and in the other Universities there should be three Examiners for the Degree of Bachelor of Arts, and two for the Degree of Master of Arts, unless a greater number should be found necessary:—

That the Examiners for the Degree of Master of Arts should themselves be Master of Arts or Doctors:—

That every Examiner should be precluded from examining any Candidate who has been one of his own Pupils:—

That the Senatus Academicus of each University should have the power to appoint Examiners for any special case, in which there may not be a sufficient number of Examiners, on account of disqualification or from any other cause:—

That the Senatus Academicus of each University should have the power to appoint any two of the four Examiners for the Degree of Bachelor of Arts, to be Examiners for the Degree of Master of Arts, if otherwise qualified:—

That the Examiners should take the oath *de fideli*, to be administered by the Principal or other Preses of the Senatus Academicus:—

That the Examinations for Degrees should be open to all who may choose to attend:—

That the Examinations should take place annually, at such times as the Senatus Academicus may appoint, and the hours of Examination to be from ten till four:—

That not more than six Candidates should be examined in one day:—

That in order to be entitled to Honourable Distinction, or *Highest* Honours, in taking the Degree of Bachelor of Arts, Candidates should be examined on several days, and as often as the Examiners may deem necessary:—

That the names of all the Bachelors and Masters of Arts should be published—distinguishing, in the case of Bachelors of Arts, in separate Lists, those who take *Highest* Honours, and those who take the Degree with Honourable Distinction:—

That the Degrees of Bachelor and Master of Arts should be conferred publicly at a University Meeting:—

That until persons shall apply for Degrees who have entered the University after the Regulations of the Commissioners shall have taken effect, the Regulations recently enacted in the Universities, and now in force, to continue in operation.

From these Resolutions, in so far as they relate to the appointment of Examiners who are not Members of the Senatus Academicus, Dr. Cook dissented.

Law.—That the Course of the Study of Law should include attendance for three Sessions:—

Civil Law.—That in the first year Civil Law should be taught for one hour each day, for at least five days in the week,—besides three hours in the week for Examinations, Exercises, &c.:—

Scotch Law.—That the Course of Lectures on Scotch Law should extend to two Sessions, and be taught one hour each day for six days in the week, five being for Lecture, and one for Examinations, Exercises, &c.:—

That all Students in Law should submit to Examinations in order to entitle them to a Certificate of attendance:—

That during the first year's attendance on the Law Classes it is expedient that the Class of Civil Law alone should be attended—and that, to secure this object, the Class of Civil Law, and the first Class of the Professor of Scotch Law, should meet at the same hour:—

Conveyancing.—That the Class of Conveyancing in the Universities, where it exists, should be attended in the third year of the Course, and should be taught one hour each day, six days in the week, five for Lecture, and one for Examinations, Exercises, &c.:—

That the Session for the Law Classes should be six months.

Dissent.
27 August 1829.

Catalogues.—That a Catalogue of the Students enrolled should be called in all the Classes of the Universities at each hour of meeting; and that in those most numerously attended, this may be done by calling in sections one-fourth or one-fifth of the number of the Students, according to some arrangement by which they may not know previously the order that is to be observed with respect to the calling of their names: That Certificates of Attendance should only be granted to those Students whose names are enrolled and called in the Catalogue of the Class.

Christmas Vacation.—That the Christmas Vacation should be from the 24th day of December to the 2d day of January.

Syllabus.—That each Professor should publish a brief Syllabus or Outline of the General Subjects of his Course of Lectures, within three years after his appointment.

Chapel Service—That accommodation should be provided for Students to attend Public Worship on Sundays in all the Universities of Scotland; and that one of the Professors should always be present on these occasions.

Public Law Chair.—The Commissioners having taken into their consideration that there has been no Class taught in the University of Edinburgh by the present Professor of Public Law and of the Law of Nature and Nations, and that for many years his predecessor did not teach one, by which it appears that there is little or no demand for Lectures on the subjects which would belong to this Professorship—are of opinion, that it is expedient, on the death or resignation of the present incumbent, that the Chair be suppressed.

---

28 August 1829.

College of Edinburgh, 28th August 1829.

PRESENT—

The Earl of Haddington,	Lord Corehouse,
The Earl of Rosebery.	The Solicitor-General,
The Lord President,	Dr. Cook,—and
The Lord Advocate,	Dr. Lee.

The Earl of ROSEBERY in the Chair.

Paper presented:—

Graduates.—A Return from the College of Glasgow of the number of Degrees conferred by that University during the years 1827, 1828, and 1829, ordered on the 22d current, was presented, and abstracts of the numbers ordered to be printed.

Ministers of Edinburgh.—A copy of the Answers made by the Town-council of Edinburgh to the memorials by the Ministers of the City, in regard to the right of avisamentum claimed by them, was ordered to be transmitted to the Ministers, in order that they might reply thereto, on or before the 28th of September next, if they considered a reply to be necessary.

Baliol Exhibitions, Forfar and Irving's Bursaries.—The copies of the deeds founding the Exhibitions at Baliol College, Oxford—and the Forfar Bursary in the University of Glasgow—as also the papers relative to Irving's Mortification in Marischal College—were ordered to be printed.

Baliol Exhibitions.—The Chairman was requested to write to the Secretary of State for an account of the present state of the Fund on the Foundation of John Snell for Exhibitions at Baliol College, Oxford—the nomination to which is vested in the Principal and other members of the University of Glasgow.

Dr. Morrison.—The Chairman was also requested to write to the Secretary of State, in order to ascertain whether the sum of £1,200 mentioned in Dr. Morrison's Memorial has been, or is intended to be, paid over to Government, for the purposes proposed to be carried into effect by the institution of a Regius Professorship for the delivery of Lectures on Mental Diseases.

Museum.—The Committee appointed to report upon the state of the Museum in the University of Edinburgh were requested to give in their Report to the Commissioners when they meet in October next.

Universities and Colleges, Scotland.

Minutes and Proceedings.

28 August 1829.

Libraries—Bursaries.—The Commissioners stated that a Committee should be appointed at the meetings in October, to take in consideration the subject of the Libraries in all the Universities; and also, that the subject of Bursaries should then be considered.

Rector, Marischal College.—Lord Corehouse, from the Committee appointed on the 22d current in reference to the election of Rector in Marischal College, reported as follows:—That the Committee had, in pursuance of the remit, taken the subject into consideration—that the Charter of Marischal College appeared to contain no provision for the case of an equality of votes, and the Senatus state that "there was no precedent "in the University to rule the case:"—That Mr. Hume, the late Rector, had not taken the oath of office during the year for which he was chosen, and that, though he had, he could only give a vote in person; and that his casting vote, even if there was no doubt of the Rector possessing that privilege, could not be allowed:—And, on the whole, the Committee were of opinion, that under the circumstances in which an equality of votes occurred on that occasion, it ought to be held that the Election is void, and that, in consequence, a day should be now appointed for electing a Rector for the present year.

The Commissioners approved of the above opinion, and requested the Chairman to communicate it to the Dean of Faculty in Marischal College.

General Report.—The Commissioners, in reference to the General Report to be made to His Majesty, requested Dr. Cook to prepare the same, and appointed the following Commissioners as a Committee, in order to assist in its preparation, viz.

The Earl of Rosebery, Lord Moncrieff,—and
Lord Corehouse, The Solicitor-General.

Medical Curriculum.—The Commissioners, having resumed the consideration of the Provisional Resolutions in regard to a Medical Course of Study, amended the same in various particulars.

Agriculture.—There was ordered,—

A copy of the Deed founding the Professorship of Agriculture in the University of Edinburgh.

---

20 October 1829.

College of Edinburgh, 20th October 1829.

PRESENT—

The Earl of Rosebery, The Solicitor-General,
The Lord Advocate, Dr. Cook,—and
Lord Corehouse, Mr. Home Drummond.
Lord Moncrieff,

The Earl of ROSEBERY in the Chair.

Papers presented:—

Dr. Fellowes' Prize.—A Return from Professor Leslie, to the Order dated 26th August last, in regard to the endowment by Dr. Fellowes for a Prize or Prizes.

The following Returns were ordered to be printed:—

1. *Botanical Garden.*—A Return from Professor Graham, to the order of same date, of all the sums annually received by him for defraying the expense of the Botanical Garden.
2. *Number of Students—Graduates.*—Returns from the Universities of St. Andrews and Aberdeen, to the Orders dated 22d August last, of the number of Students at these Universities, and of persons who have graduated, in continuation, to the close of last Session, of similar Returns formerly transmitted to the Commission; and also,
3. *Certificates.*—Returns from these Universities in regard to those Students who had obtained Certificates before the end of the third last week of the Session.

Professor Russell.—A Letter from Professor Russell, Edinburgh, to the Chairman, referring to his opinions on the Medical Curriculum, was read; and the latter was requested to state in answer, that the Commissioners are ready to receive any written communication which he might deem it material to lay before them.

Rector, Marischal College.—A Letter from Mr Davidson, Dean of Faculty in Marischal College, to the Chairman, with a Minute of the Senatus Academicus in regard to the Election of Rector in that College—was read; and the Chairman was requested to send an answer, stating, that the Commissioners adhered to the opinion formerly communicated on this subject, and that it appeared to them, that, in the event of an Election for Rector being held previously to March next, all the Matriculated Students attending the Classes at the time of the Election will be entitled to vote.

Royal College of Physicians.—A Memorial from the Royal College of Physicians in Edinburgh, in regard to the refusal of a request made by them to the Town-council of Edinburgh, that the resident Fellows of the College of Physicians might have access to the Library of the University of Edinburgh—was read; and the Commissioners directed that an answer should be returned, stating, that the Commissioners see no reason to differ from the opinion expressed by the Town-council on the subject.

Exhibitions at Baliol College.—The answer being read, received from Mr. Secretary Peel, in regard to the Funds on the Foundation of John Snell, for exhibitions at Baliol College, Oxford, stating, that as the Secretary of State apprehended that he had no authority to require the information wanted, he wished, before proceeding farther, to be informed whether any communication had been made to that College on the part of the University of Glasgow, and whether the Master and Fellows had stated any objection to

give an account of the amount of the Funds, and of the nature of the Estate settled by Mr. Snell:—The Commissioners directed, that the Principal of the University of Glasgow be requested to apply to the Masters and Fellows of Baliol College for the information referred to, together with an account of any proceedings (if any) which may have taken place in the Court of Chancery in respect to this Endowment, and to state that he makes this application at the request of the Commissioners.

Dr. Morrison.—An answer was read from the Secretary of State's office, transmitting a copy of a Letter from Dr. Morrison on the subject of the investment of £1,200 on account of a course of Lectures on Mental Diseases, referred to in his Memorial transmitted to the Commission by the Secretary of State—in which answer it is stated, that the allowance arising from the investment is payable to such persons as may be appointed to deliver the Lectures: That since the Memorial was presented, these Lectures had been annually delivered in Edinburgh; but that few students having attended, it is proposed in future to deliver the Lectures in London.

Property, &c. of Colleges.—The Earl of Rosebery, from the Committee appointed to report in regard to the Property, Revenue, and the Bursaries, attached to the different Universities, presented a Report from that Committee—drafts of which had been previously revised by the Factors of the respective Colleges; which Report was ordered to be inserted as the Revenue-Sections in the accounts respectively of the different Universities.

A Reply from the Ministers of Edinburgh in respect to the right of avisamentum claimed by them, was presented, and the Commissioners, having taken under consideration the Memorial from the Ministers on this subject, and relative papers, were of opinion—

1*st*, That the terms of the Charter are not sufficiently precise to enable the Commissioners to state that any specific right was originally vested in the Ministers of Edinburgh for the object claimed:

2*d*, That no practice has been established, either to explain the meaning of the Charter under this head, or to support the Ministers of Edinburgh in the claim they have preferred: And therefore, the Commissioners see no grounds for giving effect to it, and direct that a copy of this part of the Minutes be transmitted to the Town-council and to the Ministers of the City.

Constitutions of the Universities of St. Andrews, Glasgow, and Aberdeen.—The Commissioners, having had under consideration the subject of the Constitutions of the Universities of St. Andrews, Glasgow, and the proposed united one of Aberdeen,—a draft of Resolutions thereon was made, and ordered to lie on the table for farther consideration.

Union of Aberdeen Universities.—The Commissioners were of opinion, that for the purpose of carrying into effect the Union of the Universities of Aberdeen, it is expedient that the following should be the number and character of the Professorships in the United University:—

1. Principal.

Theology.

2. Professor of Divinity and Systematic Theology.
3. Professor of Divinity and Biblical Criticism.
4. Professor of Church History.
5. Professor of Oriental Languages.

Law.

6. Professor of Law.

Medicine.

7. Professor of Theory and Practice of Physic.
8. Professor of Anatomy and Surgery.
9. Professor of Chemistry.
10. Professor of Materia Medica.
11. Professor of Botany.
12. Professor of Midwifery.

Arts.

13. Professor of Moral and Political Philosophy.
14. Professor of Logic and Rhetoric.
15. Professor of Natural Philosophy.
16. Professor of Mathematics.
17. Professor of Natural History.
18. Professor of Greek.
19. Professor of Humanity.

And that adequate compensation on account of the loss of Fees, ought to be given to those Professors who, in the event of the proposed Union taking effect, may be deprived of their Classes.

Duke of Cambridge.—There was ordered from the University of St. Andrews, a copy of the Minutes in respect to the election of His Royal Highness the Duke of Cambridge as Chancellor of that University and to his ceasing to hold that office, along with any other information on the subject that the University may deem necessary.

Universities and Colleges, Scotland.

Minutes and Proceedings.

21 October 1829.

College of Edinburgh, 21st October 1829.

PRESENT—

The Earl of Rosebery.	Lord Moncrieff.
The Lord President.	The Solicitor-General.
The Lord Advocate.	Dr. Cook,—and
Lord Corehouse.	Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Papers presented:—

Constitution of Edinburgh College.—A Letter from the Earl of Lauderdale, a Commissioner, in reply to the communication made to his Lordship and other absent Commissioners, as referred to in the Minute of 21st August last, in regard to the Scheme of a Constitution for the University of Edinburgh, was read and ordered to lie on the table.

University at Dumfries.—A Communication from Mr. Hope Johnstone of Annandale, in regard to the proposed University at Dumfries, was presented, and ordered to be printed.

Medical Curriculum.—The Provisional Resolutions in regard to the Medical Curriculum were farther considered and amended in various particulars, and the farther consideration thereof deferred.

Edinburgh.

Biblical Criticism—Surgery.—The Commissioners, having had under consideration the different Professorships in the University of Edinburgh, were of opinion, that the following new Chairs should be instituted in this University, viz.—

Professorship of Biblical Criticism;
Professorship of Surgery.

Practical Astronomy.—The Commissioners were of opinion, that no Professor should be appointed by the Crown to the Chair of Practical Astronomy in this University, until an adequate Observatory for the use of this Chair should be provided.

Rhetoric.—The Commissioners were farther of opinion, that the Rhetoric Class in this University should not be continued as a separate Professorship, but united with the class of Logic.

Glasgow.

Biblical Criticism—Theory of Medicine.—The Commissioners also, having had under consideration the different Professorships in the University of Glasgow, were of opinion that the following new Chairs should be instituted in this University, viz.—

Professorship of Biblical Criticism;
Professorship of Theory of Medicine.

Materia Medica.—The Commissioners were farther of opinion, that the Lectureship on Materia Medica, in this University, should be raised to a Professorship.

St. Andrews.

Civil History.—The Commissioners, having had also under consideration the different Professorships in the University of St. Andrews, and having ascertained that the present and former Professors of Civil History, in the United College, had never succeeded in procuring the attendance of an adequate Class—were of opinion, that the subjects of the Course should be changed to those of Modern Languages, a Class much wanted in this University; and that this Professorship should be reduced to a Lectureship, having the same endowment as to salary as that attached to the Professorship.

Second Master in St. Mary's College.—The Commissioners were farther of opinion, that the Second Master in St. Mary's College should be styled "Professor of Divinity and Biblical Criticism."

22 October 1829.

College of Edinburgh, 22d October 1829.

PRESENT—

The Earl of Rosebery.	Lord Moncrieff.
The Lord President.	The Solicitor-General.
The Lord Advocate.	Dr. Cook.
Lord Corehouse.	Dr. Lee,—and

Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Paper presented:—

Agriculture.—A Return from the Town-council of Edinburgh, to the Order of 28th August last, for a Copy of the Deed founding the Professorship of Agriculture in the University of Edinburgh.

Union of Chairs with Church Livings.—A Letter to the Lord Advocate from the Lord Justice-Clerk, one of the Commissioners, suggesting a farther delay in coming to a resolution on the subject of the Union of Professorships with Church Livings—was read, and the consideration of the matter was postponed till the meeting in December next.

Books borrowed by Professors.—The Commissioners having before them the List of Books taken out from the Library of the University of Edinburgh by Professors, previously to 17th October 1827, and not returned as on 26th May last, directed that a copy of this List be transmitted to the Principal of this University, along with a letter

expressing the Commissioners' surprise that adequate measures had not been adopted for recalling and securing to the Library these books, in pursuance of the communication made to him on the 10th of November 1828, and requesting that a Return should be made, not later than the 8th of December next, showing the number of *said* Books which may not have been returned to the Library on the 1st day of that month.

Examination, M. D.—The Commissioners, having had under consideration the subject of Examination of Candidates for Medical Degrees, came to Provisional Resolutions thereon, which were to be farther considered at the meeting in December.

Professorships endowed by private individuals.—The Commissioners were of opinion, that it is expedient to have declared, in an effectual manner, that no individual or public body founding any Professorship in any of the Universities, shall hereafter have the nomination thereto beyond the life of the Founder, as the nomination to all such Professorships ought afterwards to be vested in the Crown;—

And that hereafter, on any Professorship being founded by an individual or public body, the Professor so appointed shall not be a member of the Senatus Academicus without the consent of the Crown.

Alienation of College Property.—The Commissioners, having adverted to the alienation of property by several of the Universities;

Resolved—

That no sales, feus, or alienations of any description whatever, of any part of the Property belonging to the Colleges, or the granting of any building or beneficial leases of any part thereof, ought to be allowed without the authority of Parliament.

Endowments of Professorships.—The Commissioners, having had under consideration the subject of the Endowments of the several Chairs in the Universities of St. Andrews, Aberdeen, and Glasgow—were of opinion, that the Professorships in St. Mary's College appear to be inadequately endowed:— St. Mary's College.

That although the Emoluments of the Chairs in the United College vary in amount, all of them appear to require some addition: United College.

That some of the Chairs in the United University of Aberdeen will require additional Endowment after the Union of the Universities shall take place; but the Commissioners are not able to state more specifically what particular Professorships will be in that situation, until these Universities are actually incorporated. Aberdeen University.

That as it appears that at present a Surplus Revenue belonging to the University of Glasgow exists, the Commissioners propose to leave to the University Court to exercise at a future period their discretion as to making a representation with regard to the inadequacy of the Endowments of any of the Professors.

College Fabrics.—The Commissioners, having referred to the Evidence with regard to the state of the Buildings of Marischal College, Aberdeen, wherein the architects examined declare them to be unfit for repair, and that repairing them adequately would equal the expense of rebuilding them: and, those Commissioners who attended the special Visitation at Aberdeen, and inspected those buildings, concurring in that opinion,—

Resolved, That in the event of no union of the Universities of Aberdeen taking place, it will be necessary to reconstruct Marischal College, with accommodation for the Medical School; but that if a union of these Universities be formed, as recommended in a former Minute, a building for the accommodation of the Medical School only will be required:—

That if a union of the Universities of Aberdeen take place, the site of the United University ought to be at King's College, Aberdeen, where considerable additions and extensive repairs have recently been made, partly by a grant of money from Government, and partly by private subscription.

Houses of Professors in Glasgow College.—The Commissioners were of opinion, that one house should be set apart for each Chair in the College of Glasgow, the Professor of which is at present provided with a house, and that such appropriation and all arrangements connected with the same, should be under the control and direction of the University Court.

Libraries, Museums, Bursaries.—The subject of forming regulations relative to the Libraries, Museums, and Bursaries, of the different Universities, was referred to the Committee on the General Report, with the addition of the Lord Advocate and Dr. Lee, to report thereon to the Commission in December.

University at Dumfries.—The Commissioners, having referred to Mr. Hope Johnstone's Letter to the Chairman on the subject of the proposed University at Dumfries, with the papers relative to it, transmitted by Mr. Secretary Peel, were of opinion, that it is very desirable to appropriate the funds at the disposal of Mrs. Crichton to the Foundation of a University at Dumfries:—

And Resolved, That the Committee nominated for making Regulations for the University Libraries, Museums, and Bursaries, be a Committee for framing the heads of the plan for carrying this measure into effect, as directed by Mr. Peel, and to report the same to the meeting of the Commissioners in December.

Universities and Colleges, Scotland.

Minutes and Proceedings.

16 January 1830.

College of Edinburgh, 16th January 1830.

PRESENT—

The Earl of Rosebery.	Lord Moncrieff.
The Lord President.	The Solicitor-General.
The Lord Advocate.	Dr. Taylor.
The Lord Justice-Clerk.	Dr. Cook;—and
Lord Corehouse,	Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

The Commissioners ordered it to be stated in their Minutes, that it was inconvenient for them to attend on 22d December last, to which day the Meetings had been adjourned.

Papers presented:—

1. *Professor Russell.*—Remarks by Professor James Russell on the Provisional Resolutions regarding Medical Education.
2. *Duke of Cambridge.*—A Return from the University of St. Andrews to the Order of 20th October 1829, regarding His Royal Highness the Duke of Cambridge as Chancellor of that University.
3. *Marischal College Ground.*—A Letter from Mr. John Smith, architect, Aberdeen, enclosing a Sketch of the Ground belonging to Marischal College, Aberdeen, on the north-east side of Broad Street, comprehending the site of the College Buildings.

The four following Communications were ordered to be printed:—

1. *Divinity Students paying Fees.*—Letters to the Clerk from the Professors of Divinity in the Colleges of Glasgow and Edinburgh, in regard to Divinity Students paying Fees.
2. *Baliol College Exhibitions.*—A Return from the University of Glasgow to the Order of 20th October 1829, in regard to the Funds on the Foundation of John Snell, for Exhibitions at Baliol College, Oxford.
3. *Universal History Class.*—Minute of the Senatus Academicus of the University of Edinburgh regarding the Class of Universal History in said University.
4. *Books borrowed by Professors.*—A Return from the same Body, to the Order of 22d October 1829, regarding Books borrowed from the Library by the Professors.

Transcription of Returns, &c. to be paid.—There having been read a Minute from the Senatus Academicus of the University of Edinburgh, requesting reimbursement of an account of £73, incurred by them for transcription of Returns made to the Requisitions of the Commissioners, and of an account of £42, incurred for printing the Observations made by that body on the Provisional Resolutions, the Commissioners directed that the first of these accounts should be paid by the Secretary, as well as the charge for printing, provided that the copies of the printed Observations be delivered up to the Commissioners.

The Commissioners also directed that the accounts of similar charges for the transcription of Returns, which have been presented by the Aberdeen Colleges, should be paid by the Secretary.

M'Nee's Complaint.—There having been read a Petition from John M'Nee, writer in Edinburgh, in regard to Professor Pillans having refused him admission to his class, the Commissioners directed that a copy thereof should be transmitted to the Senatus Academicus of the University of Edinburgh, and another to Professor Pillans, in order that they, if they think proper, may submit observations on the Complaint, previously to the Commissioners forming any opinion upon this subject.

Ogilvy Bursary.—There having been read a letter from the Secretary of King's College, in reply to the communication made to him respecting the appropriation of the Funds of the Ogilvy Bursary, the Commissioners directed that a copy thereof should be transmitted to Mrs. Ramsay, in order that she may have another opportunity of offering to the Commissioners any explanations which she might think proper in regard to the subject.

Ramsay Mortifications in Marischal College.—There having been read a letter from the Secretary of Marischal College, in regard to the manner in which the funds belonging to the Mortifications for the Professorship of Oriental Languages, and for the Ramsay Bursaries in that College, are secured, the Commissioners directed that an application should be made to Mr. Crombie, Aberdeen, in order to ascertain the present situation of these funds.

Glasgow College Report.—A Report respecting the University of Glasgow, prepared by Dr. Lee, was presented, and referred for examination to the Committee appointed to examine the Reports respecting the other Universities.

Mr. Cheek—Museum, Edinburgh.—A petition of Henry Hulme Cheek, Gardner's Crescent, Edinburgh, regarding the Museum of Natural History in the University of Edinburgh, having been presented, was ordered to be printed, and referred to the Committee on that Museum.

Museum, Edinburgh.—Mr. Home Drummond was added to that Committee, with power to the Committee to examine Sir George S. Mackenzie and other persons, in relation to that Museum.

Code of Laws for Universities.—The Committee for preparing the General Report were requested, along with Dr. Lee and Mr. Home Drummond, to frame a Code of proper Rules, Statutes, and Ordinances for the Universities, in terms of the Resolutions, as directed by His Majesty's Commissions.

Theological Degrees.—The Commissioners having had under consideration the subject of Examiners for Theological Degrees, Resolved, That the Examiners in Divinity for these Degrees shall be the members of the Senatus Academicus; and the attainments of the candidates in Classical Literature and Philosophy shall be ascertained by the Examiners for Degrees in Arts.

Medical Curriculum.—The Commissioners having resumed the consideration of the Scheme for Medical Study, came to the following Resolutions thereon:

That the general attainments of Candidates for the Degree of M.D. should embrace a competent knowlege in Latin, Greek, Mathematics, and Natural Philosophy—and that this knowledge should be ascertained by an Examination, to be conducted by the Examiners for Degrees in Arts, in such Works as shall be fixed by the Faculty of Arts, which Examination must take place previously to the Examination for the Medical Degree, except in the cases where the Candidates have the Degree of Bachelor of Arts.

That the Medical Course should be as follows:

1*st Year*, Winter—Anatomy, Chemistry, Materia Medica.

Summer—Practical Chemistry, and Practical Pharmacy, which may be taken with a Private Teacher or Lecturer.

2*d Year*, Winter—Anatomy, Practice of Medicine, Theory of Medicine.

Summer—Clinical Medicine, and attendance on such Hospitals as the Medical Faculty may deem sufficient.

3*d Year*, Winter—Surgery, Midwifery—and either Clinical Surgery or Clinical Medicine, or attendance onthe ordinary Physicians of the Infirmary, when there is no Professor of Clinical Medicine or Surgery giving Lectures in the Infirmary.

Summer—Clinical Surgery or Clinical Medicine, in such Hospitals as the Medical Faculty may deem sufficient.

4*th Year*, Winter—Practice of Medicine, Infirmary, Clinical Medicine.

One Course of Practical Anatomy in either of the last three Winters—one course in the second or third Summer.

Two Courses of Clinical Medicine, and one of Clinical Surgery, to be required. The other Clinical Course may be either Clinical Medicine or Surgery, as the Student may prefer.

Botany to be attended in the University during any Summer of the Course.

The Commissioners recommend attendance upon a Course of Clinical Midwifery; and upon the three following Classes in the University, viz. Natural History, Medical Jurisprudence, and Military Surgery, which may be attended during any period of the Course after the first year—and a second Course of Chemistry in the University.

That if, from bad health, or any other particular reason, a Student should find himself precluded from attending any class in the above order, he may apply to the Senatus Academicus, who, if satisfied with the reason specified, may dispense with his attending that class in the prescribed year, and permit him to attend it in one of the subsequent years.

That in order to entitle attendance with a Private Teacher or Lecturer to be taken into account, such Lecturers must adapt their system of instruction and the length of their Course to the Regulations of the University—must adopt a form of Certificate to be prescribed by the Senatus of each University, and must report themselves to the Senatus as intending to do so; and when irregularities occur, it shall be in the power of the Medical Faculty to report the same to the Senatus, as a ground on which the latter may hold the attendance on such Private Teacher or Lecturer not to be adequate.

That the Winter Session should be six months, and the Summer Session four months.

That a Catalogue of the Students enrolled should be called in all the Medical Classes at each hour of meeting; and that in those most numerously attended, this may be done by calling in sections, one-fourth or one-fifth of the number of the Students, according to some arrangement, by which they may not know previously the order that is to be observed with respect to the calling of their names: That Certificates of attendance should only be granted to those Students whose names are enrolled and called in the Catalogue of the Class.

That Examinations in the Medical Classes should be imperative on all Students enrolled in the several Classes for the first time, and also on those enrolled in the Classes of Anatomy and Practice of Medicine for the second time, but with the exception in all cases, of persons not enrolling themselves as Medical Students—in which latter case, the attendance not to qualify for any Medical Degree, and Certificates not to be granted to such, as Medical Students.

That all the Medical Professors should belong to the Medical Faculty.

That the Hours for the meeting of the different Classes in the Medical Faculty should be so arranged as to give effect to the Regulations prescribed in the preceding Course of Study for a Medical Degree.

That there should be a separate hour for Examinations on three days of the week, in the following Classes, viz.

Anatomy.	Theory of Medicine.
Chemistry.	Surgery.
Materia Medica.	Botany.
Practical Chemistry and Practical Pharmacy.	Practice of Medicine.
	Midwifery.

That no Medical Degree should be granted to a person under 21 years of age.

That no Medical Degree shall be conferred by any University where there are not Professors teaching the several Classes of one or more of the years of the above Curriculum.

That there should be instituted a separate Professorship of Surgery in the University of Edinburgh, by separating Surgery from Anatomy.

That a separate Professorship for the Theory of Medicine should be instituted in the University of Glasgow.

That the Examination of Candidates for the Medical Degree should be in the English Language.

That Candidates for that Degree should not be obliged to prepare or print a Thesis; but that they should have permission to do so, in whatever language they may select.

That the Medical Professors should be the Examiners of Candidates for that Degree.

That the Fees paid for obtaining it should be collected into a Fund, out of which a fixed salary or remuneration shall be given to the Medical Examiners, under the authority of the University Court.

Constitutions of the Universities of St. Andrews, Glasgow, and Aberdeen.—The Commissioners having also resumed the consideration of the existing Constitutions of the Universities of St. Andrews, Glasgow, and the proposed united one of Aberdeen,—Resolved,—That the following should be the Scheme for each respectively, to be submitted to His Majesty:—

1 *For St. Andrews.*

That the Chancellor should be elected as at present, and be chosen for life.

That there should be a University Court, to consist of—

1. A Rector, not being a Principal or a Professor of any University, to be elected by the Principals, Masters, Students of Theology, and Students of Philosophy of the 3d and 4th years, and also by the Graduates who have received Degrees since 1825.
2. } The Principals of the two Colleges.
3. }
4. An Assessor, to be nominated by the Chancellor, } Neither of these two Assessors to be a Principal or a Professor of any University.
5. An Assessor, to be nominated by the Rector, }

Three to be a Quorum.

2. *For Glasgow.*

That the Chancellor should be elected as at present, and be chosen for life; but without the power of naming a Vice-Chancellor.

That there should be a University Court, to consist of—

1. A Rector, not being a Principal or a Professor of any University, to be chosen by the Principal and Professors and the Matriculated Students, and also by the Graduates of the University who have received Degrees since 1825.
2. The Principal.
3. The Dean of Faculties.
4. The Minister of Glasgow, not being the Principal or a Professor.
5. An Assessor, to be elected by the Graduates who have received Degrees since 1825, } None of these three Assessors to be a Principal or a Professor of any University.
6. An Assessor, to be nominated by the Chancellor, }
7. An Assessor, to be nominated by the Rector, }

Four to be a Quorum.

That the office of Vice-Rector ought to be abolished, and that the Ordinary Visitors shall no longer exercise the separate jurisdiction conferred upon them by the former Constitution.

3. *For King's College, and Marischal College, Aberdeen, when united into one University.*

That the Chancellor should be elected for life by the Senatus Academicus, consisting of the Principal and Professors.

That there should be a University Court, to consist of—

1. A Rector, not being a Principal or a Professor of any University, to be chosen by the Principal and Professors and the Matriculated Students, according to the mode adopted in Marischal College, and also by the Graduates of both the present Universities at Aberdeen who have received Degrees since 1825, and by the Graduates of the United University.
2. The Principal.
3. An Assessor, nominated by the Chancellor, } Neither of these two Assessors being a Principal or a Professor of any University.
4. An Assessor, nominated by the Rector, }
5. And an Assessor, nominated by the Senatus Academicus, who may be a Professor of the University.

Three to be a Quorum.

The above Officers and Courts in the Universities of St. Andrews, Glasgow, and Aberdeen, to possess the same powers, and to be under the same regulations, as those detailed in the Scheme proposed for the Constitution of the University of Edinburgh, with this exception, that the Officers of the University Court are to be chosen for four years only.

The University Courts of St. Andrews, Aberdeen, and Glasgow, to have the exclusive power of disposing of all Surplus Revenue and Funds, beyond what is appropriated to specific objects; and that in those Colleges in which it has been the practice to divide the whole Revenue, after certain fixed deductions, among the Principal and Professors as their Salaries, the average of the said divisible Revenue for the last three years shall henceforth be the fund for the Salaries of the Principal and Professors, and any sum accumulated beyond this shall be at the disposal of the University Court.

Union of Professorships with Parochial Charges.—The Commissioners having had under consideration the proposals contained in a paper brought before them on 17th October 1828, relative to the expediency of prohibiting the union of Professorships with other offices, and having deliberated generally upon the whole question—

"*Resolved*,—

"1. That it is not expedient, that any person holding a Professorship of Language, Philosophy, Mathematics, Medicine, or Law, should at the same time be a Minister of any parish church.

"2. That it is not expedient, that any person who holds a Professorship in any of the branches of Theology, including the Professorship of Oriental Languages, should at the same time be a Minister of any parish church.

3. That for the same reasons, though applying somewhat in a different manner and degree, it is not expedient, that any person who is Principal in any of the Universities, should at the same time be a Minister of any parish church.

"And in reference to the foregoing Resolutions, the Commissioners, farther considering the importance of preserving the connexion which has hitherto subsisted between the Universities and the Church of Scotland, and of effectually securing the purity of the Doctrines maintained by the Members of the Theological Faculties in the several Universities, and considering that it is not necessary or expedient for them to form any collective judgment or opinion on any controverted question which may exist as to the rights or duties of Professors of Theology as Members of the Church Courts, or as to their subjection under the existing laws to the jurisdiction of those Courts:—

"*Resolved*,—4. That without compromising or abridging the powers, whatever they may be, of the Church to exercise superintendence over all Professors in any of the Universities, under the existing laws of Scotland, in regard to the religious opinions they may disseminate, it ought to be an indispensable qualification in every Professor of Theology, including the Professor of Hebrew or Oriental Languages, that he shall be an ordained Minister of the Established Church of Scotland; and that, in case any such Professor in the Faculty of Theology shall, by any lawful proceeding in the Church Courts, be deposed from the office of the Holy Ministry, or shall be suspended in the exercise thereof, on account of Heretical doctrine, whether taught in the University, or otherwise promulgated, or on account of any other Ecclesiastical cause,—such sentence of the Church Court ought, *ipso facto*, to infer a deprivation of his office, or a suspension of his functions, as a Professor in the University: and that the same rule ought to apply to the Principal, except in the special case of a Layman being Principal of Marischal College, Aberdeen, as authorized by the Charters.—Such Suspension taking effect from the intimation of the sentence of the Church Court to the Senatus Academicus of the University, and such deposition by a sentence of the University Court, proceeding on the sentence of the Church Court.

"*And they Resolved*,—That a Law ought to be established for carrying these several Resolutions into effect.

"But the Commissioners, in coming to this determination, have had particularly in their view the Resolutions previously adopted by them, with regard to the inadequate endowment of several of the Offices and Professorships in the Universities, with special reference to the office of Principal in the University of Edinburgh, and the Professors of Theology in all the Universities except Glasgow:—And therefore they farther Resolved, That the above Resolutions concerning the inexpediency of the office of Principal or Professors of Theology being united with a Church Living, ought to be taken on the supposition that the Endowments of the offices therein particularly mentioned shall be increased, which the Commissioners earnestly recommend.

"*The Commissioners farther Resolved*,—5. That it is not expedient, that any person who is a Principal, or a Professor of the Theological, Language, or Philosophical Classes, should at the same time hold any official and permanent situation, or be engaged in any regular trade or profession, imposing duties which interfere with the full discharge of his duties as Principal or Professor.

Dissents.

The Earl of Haddington's Dissent.—The Earl of Haddington having asked, and obtained permission previously to his departure for the Continent, to record his Dissent from the regulations proposed in the foregoing Resolutions, in the event of the Commissioners agreeing to them, the same, as transmitted to the Chairman, was given in, and is as follows:—

"I entertain so strongly the opinion, that the existing connexion between the Church and Universities of Scotland ought to be entirely preserved, that I feel myself compelled to record on the Minutes of the Board, my Dissent from the suggestion, that would, if carried into effect, prevent in all time to come, any Chair, even those of the Faculty of Theology, from being filled by an actual incumbent of any parish in the Church of Scotland.

"I think the proposed alteration uncalled for by the interests of public Education, while I think that it would be injurious to the Church and to the Universities

"There are some Professorships in the Faculty of Arts, that it would be obviously so difficult for any beneficed clergyman to fill, without materially impairing his efficiency either as a Minister or as a Professor, that it seems quite impossible to suppose that any Patron would think of bestowing them on a gentleman having a cure of souls; while there are other Chairs in the same faculty that might be so filled without impropriety or inconvenience. I think therefore that the proposed interference with the existing law and practice is, to say the least of it, unnecessary.

"It appears to me to be desirable that the Principal should be a Clergyman in active connexion with the Church, unless extraordinary qualifications should point out some distinguished layman as pre-eminently fitted for that important office.

"I think that all the Chairs in the Faculty of Theology ought to be filled by persons solemnly connected with the Church, and actually subject to her discipline and control—as what are commonly called placed ministers. Strongly impressed with these views, I beg, with every feeling of respect for those with whom I may have the misfortune to differ, to record this dissent, and to express my conviction, that the interests we are all anxious to promote would be best served by leaving the connexion between the Church and the Universities unimpaired, and on its present footing. I think no enactment whatever is called for.

"*September 29th*, 1829. "HADDINGTON."

The Earl of Rosebery's Dissent.—The Earl of Rosebery gave in the following Dissent:—

"The Earl of Rosebery dissented from the second and third of the foregoing Resolutions, from not perceiving that the duties about to be imposed on the Professors in the Theological Faculty, or on the Principals of the several Universities, would be of necessity such as to preclude all of these officers, if any, from the faithful discharge of their Academical duties, and those belonging to the Ministry of a parish church—the power of holding any benefice, in these circumstances, being now limited by

Universities and Colleges, Scotland.

Minutes and Proceedings.

16 January 1830.

authority of the church, to the town wherein the University is situated. On the other hand, he feared that the immediate and injurious consequences of these Resolutions might be to weaken the existing connexion between the Church of Scotland and the Universities, which he was desirous to preserve entire, but which he conceives will be diminished, notwithstanding the arrangement proposed to guard against such an effect—to narrow the choice of men of the first eminence, by lessening the importance of the object sought for—and to incur the danger of lowering the rank and station which the Principals and Theological Professors ought to hold in the Universities, by recommending to the Crown the adoption of the principle of a strict prohibition against a union between these offices and the Ministry of a parish church, without any security that adequate endowments will be attached to the former."

The Lord Advocate and Dr. Taylor's Dissent.—In which Dissent the Earl of Rosebery, the Lord Advocate, and Dr. Taylor joined.

The Lord Justice-Clerk's Dissent.—The Lord Justice-Clerk also gave in the following Dissent:—

"I feel myself compelled to enter my Dissent on the Minutes of the Commissioners, from the Resolutions of the 16th of January 1830, which recommend that a law should be passed for preventing in future the Principals of the Universities, and the Professors in any of the branches of Theology, in the Universities of Scotland, from holding the situation of a Minister of any parish church, for the following reasons:—

"1. Because, while it appears to me to be of the greatest importance to the interests both of Religion and of Learning to preserve a continuance of the most intimate connexion between the Church of Scotland and the Universities within its bounds, it is by no means established that the functions either of Principals or Professors of Theology, even with the additional duties that are required of them in the opinions of the Commissioners, may not be satisfactorily discharged by the ministers of parishes within the limits or suburbs of the city in which each University is situated, and to which the union of such offices is now limited by the standing law of the Church.

"2. Because the nature of the studies in which he must engage, and the lectures that are delivered by a Professor of Theology, so far from being alien to, or likely to interfere with the proper discharge of a parochial minister, are in reality such as may enable him to exhibit in the pulpit a practical example of the utility of those doctrines and instructions which it is his duty to inculcate in his class.

"3. Because the resolutions recommending an alteration of the law as it now stands, proceed only on the supposition that proper endowments shall be secured to such Principals and Professors of Theology as are at present inadequately provided for, but as to the obtaining which there can be no certainty, nor even much probability; and even if the most ample endowments could be secured, it does not appear to me to be either desirable or expedient to withdraw entirely from the service of the ministry the most eminent members of the Church to fill the situations of Principals or Professors of Theology—experience having shown that the union of such offices, while affording a fair object of ambition to the Clergy of Scotland, has in no respect been found incompatible with the most faithful and successful discharge of the duties of both situations. "D. Boyle."

Earl of Rosebery.—The Lord President stated, that as this was probably the fullest meeting which would take place during the continuance of this Commission, he could not allow the opportunity to pass of calling the attention of the Commissioners to the obligations they were under to the Earl of Rosebery, for his services as their Chairman. That they must all have been struck with the extensive and accurate acquaintance which his Lordship had shown with the multifarious subjects which had engaged their attention, which had proved how admirably his Lordship was qualified for the duties of such a Commission as this: That they must all be sensible of the great talent and acuteness with which his Lordship had conducted the examinations of the witnesses, and of the able and candid manner in which he had presided over their deliberations, both at the General Board, and in the different Committees of which his Lordship had been a member, in all of which he had shown himself to be possessed of habits of business of the highest and most useful order.

That they had also all witnessed the decided and judicious, but conciliatory manner, in which he had constantly confined their deliberations to the point immediately in hand, whereby much time had been saved, and the business of the Commission greatly expedited.

That they had also seen the very great time and trouble which his Lordship had bestowed in drawing up the Minutes of their proceedings, the Resolutions, and other papers connected with the business of the Commission.

On all which accounts, and for his whole conduct as Chairman of this Commission, the Lord President moved, That the thanks of the Board be given to Lord Rosebery, for his valuable services in the important situation which he had so ably filled:—

Which motion was unanimously and cordially agreed to, and it was ordered that the Lord President's motion and this resolution be entered in the Minutes, and that the Lord President be requested to transmit a copy thereof to Lord Rosebery.

The LORD PRESIDENT in the Chair.

Museum, Edinburgh.—Lord Moncrieff reported to the Commissioners, that the Committee on the Museum of Natural History in the University of Edinburgh had, in pursuance of the Minute of last day's meeting, examined Sir George S. Mackenzie, Dr. Hibbert, Dr. Greville, Dr. Gillies, Mr. Cheek, and Mr. Ainsworth, in regard to that Institu-

tion; and his Lordship laid before the Meeting Minutes of their Evidence, along with the following requisition, which the Committee had considered it necessary to issue in reference to Mr. Cheek's Petition:—

Edinburgh, 25th January 1830. 25 January 1830.

"The Committee direct the Clerk to transmit a copy of the Petition by Mr. Cheek to Professor Jameson, and to request that he will send to the Committee an answer to the petition in writing—that he will therein state whether the facts represented in the petition are correct or not; and, if they are incorrect, that he will explain the particulars in which they are so—that, if it be correctly stated that Professor Jameson had asserted to Mr. Cheek, that any part of the Collection of Skeletons referred to is his own private property, he will particularly explain the grounds on which he founds this statement; and that, in answering this question, he will particularly advert to the individual Skeleton referred to in Mr. Cheek's petition; and further, that Professor Jameson will give any other explanations relative to the subject of the said petition which he may think material.

"The Committee further request Professor Jameson to state clearly whether he now considers any part of the Specimens of Natural History, deposited in the Museum, or within the walls of the College, to be his own property as an individual; and, if he does consider any part of them to be his own property, he will further state precisely what the articles are, from whom they were obtained and brought into the Museum, and where they are now deposited, which he holds to be of this description."

The Commissioners approved of the proceedings of the Committee, ordered the Evidence to be immediately printed, and adjourned the consideration of the subject of the Museum until the 6th of February, on which day the attendance of Principal Baird and Professor Jameson was to be requested.

College of Edinburgh, 6th February 1830. 6 February 1830.

PRESENT—

The Lord Justice-Clerk, Dr. Lee,—and
Lord Moncrieff, Mr. Home Drummond.
The Solicitor-General,

The Lord JUSTICE-CLERK in the Chair.

Papers presented:—

Professor Ballingall.—A Letter from Professor Ballingall, along with a copy of his Introductory Lectures, was presented, and ordered to lie on the table.

The three following communications were read, and ordered to lie on the table:—

1. *Claim by St. Mary's College for payment of Transcription of Returns.*—A Letter from Principal Haldane requesting payment of an account of £21. 12*s.* 11*d.*, stated to have been paid by St. Mary's College, for copying charters and other documents by order of the Commissioners.
2. *Expense of Returns, Town-Council, Edinburgh.*—A Letter from Mr. Carlyle Bell, one of the City-clerks of Edinburgh, in regard to the Town-Council being relieved of the expense occasioned to that body in making returns to the Requisitions of the Commissioners.
3. *Ramsay Mortifications in Marischal College.*—An Answer from Mr. Crombie, Aberdeen, stating that the sum mortified by Dr. Ramsay was £4,800; of this £500 was for endowing a School in the parish of Birse, £500 for the Poor of that parish, £1,000 for a Professorship of Oriental Languages, and £2,800 for Bursars of Divinity and Philosophy in Marischal College. That the sum of £800 is secured over lands in the neighbourhood of Arbroath for behoof of the Mortification, the interest of which had been regularly paid:—That the remaining £4,000, which had formerly been heritably secured, had been paid up at Martinmas 1828, to the Trustees of Sir A. Ramsay, whose affairs were then under trust:—That the Trustees were very desirous of reinvesting the money on heritable security, but, being unable to procure such security as they approved of at 4 per cent., and unwilling to lodge it in a bank at 2 per cent., the Trustees had retained the money, paying interest at 4 per cent. therefor since it came into their hands, and that they were anxiously endeavouring to have it reinvested for behoof of the Mortification, but hitherto without success.

Ogilvy Bursary.—There having been read a Letter from Professor Scott, of King's College, Aberdeen, by which it appears that he had been requested by Mrs. Ramsay to acquaint the Commissioners that she admits the truth of the statement communicated to the Commissioners in reference to the appropriation of the Funds of the Ogilvy Bursary, the Commissioners directed that the Principal and Professors of King's College be requested to take care to prevent all similar misappropriations of the funds of this or of any other Endowment connected with that College.

M'Nee's Complaint.—There was read a Letter from Dr. Duncan, transmitting an extract from the Minutes of the Senatus Academicus of the University of Edinburgh, in regard to the petition of John M'Nee; also an explanatory letter from Professor Pillans on the same subject. The Commissioners having had under consideration these papers, and having attended to the particular circumstances of the complaint as stated in Mr. M'Nee's petition, found that there were no grounds for the interference of the Commissioners in this particular case, and directed the Clerk to transmit a copy of this part of their Minutes to Professor Pillans and another to Mr. M'Nee.

Universities and Colleges, Scotland.

Minutes and Proceedings.

6 February 1830.

General Report.—Lord Moncrieff, from the Committee appointed to assist in the preparation of the General Report to His Majesty, presented a Draft of such Report, which was ordered to lie on the table for consideration.

Museums, Libraries—University at Dumfries.—His Lordship also presented Reports in regard to the Museums and Libraries of the different Universities, and also one in regard to the proposed University at Dumfries; which Reports were ordered to lie on the table for consideration.

Dr. Lee's Dissent.—From the Resolutions come to on the 16th of January last, respecting a union of Professorships with other offices, Dr. Lee, who was not present on that day, obtained leave to present the following Dissent:—

"From the Resolutions on the subject of conjoining Professorships in Universities with parochial charges in University towns, I dissent—

"Because, though I am well aware of the danger of permitting an indiscriminate union of such offices, and convinced that the practice has sometimes prevailed so as to occasion manifest detriment both to the Church and to the general interests of Learning, I cannot help expressing my belief, that the duties, both of a Minister of the Gospel and of a Professor, have in various instances been more successfully performed by a single individual than they could have been if the appointments had been necessarily separated; and I cannot perceive the propriety or expediency of legislating so as to prevent the recurrence of what, in my humble apprehension, has been highly beneficial in former cases, which have fallen under my own personal observation.

"*Edinburgh, Feb.* 6, 1830." "JOHN LEE."

The Earl of Rosebery.—There was read a letter from the Earl of Rosebery, in reference to the Resolution of the 16th of January, communicated to him by the Lord President; and the Commissioners having directed this letter to be inserted in their Minutes, the same is as follows:—

"*Dalmeny Park, January* 22, 1830.

"MY DEAR LORD,—Your letter of the 20th, with its inclosure, reached me last night. I can assure your Lordship that no event ever occurred to me more unexpected than the motion which you made when I was about to leave the Chair at the last meeting of the University Commission, nor any which, from the warmth and kindness with which you intimated the expression of your very flattering opinion of my conduct, and the sincere and cordial acquiescence in it manifested by every other Member of the Board, ever more gratified, or more overpowered my feelings. When, in consequence of Lord Aberdeen's early non-attendance, I was placed in the honourable situation of Chairman to the Commission, my anxious endeavour, from that period, has certainly been to perform, within the limits of my power, the duties attached to it: and to be informed, in terms so strongly expressed, and so handsomely conveyed, that in many particulars I have merited the commendation of such men as compose the Commission, is a source of real satisfaction and of just pride to me. I am not the less sensible, however, that my exertions have been far from equal to those of many of the other Commissioners—that to their services the country will be indebted for the improvements and benefits which, I trust, will be derived from our appointment by the Crown—and that their labours deserve, much more than my conduct in the Chair, the high encomiums which I am permitted to enjoy. I cannot accept the thanks which I so much value, without endeavouring to do justice to those who were associated with me, and who, in truth, are much better entitled than myself to any marks of approbation which the Board could confer; nor can I conclude without entreating your Lordship to be persuaded how strongly I feel your very great kindness, both when making the motion, and in the letter I have had the pleasure of receiving from you, and how much gratification I have, at all times, experienced from the friendly intercourse between your family and mine, which I trust and believe will never be interrupted.

"Believe me, with great regard, yours sincerely,

"*The Right Hon. Lord President.*" "ROSEBERY."

Dr. Cook.—There having been read a letter from the Earl of Rosebery, transmitting a copy of a letter which his Lordship had addressed to Dr. Cook, at the request of the Committee appointed to assist in the preparation of the General Report to His Majesty, the Commissioners approved of the Committee having made that communication, of which a copy follows:—

"*Dalmeny Park, January* 22, 1830.

"DEAR SIR,—I am happy to have received instructions from the Committee of the University Commission appointed to assist in forming the General Report to His Majesty, to express to you their sense of the trouble you have taken, and the ability you have shown, not only in the composition of the draft of that Report, but of those prepared by you on the History and Present State of the Universities of Edinburgh and Aberdeen, which are, and will always remain, most valuable records relative to those Universities. I must, also, add my persuasion that every Member of the Commission is fully impressed with the importance of your services, and justly appreciates the advantage we have derived at the Meetings of the Board from your information and suggestions.

"The Committee have taken the liberty of making many and extensive alterations upon your draft of the General Report; but I can assure you, that these have not been more than the frequent and reiterated changes which, from an earnest desire to do justice to the importance of the subject, the Committee have made upon their first amendments; and you will, I trust, believe that this anxiety has alone influenced our proceedings, and no want of courtesy towards you, nor indisposition to give full credit to the ability displayed in the paper we received from you. Allow me, also, from myself to state the sincere gratification I feel in being the medium for conveying to you these sentiments of my Colleagues, in which I entirely participate.

"The directions I have received from the Committee to address this letter to you, with a copy of it, I shall communicate to the first General Meeting of the Commission.

"I remain your sincere and faithful humble Servant,

(Signed) "ROSEBERY."

Dr. Cook.—A letter from Dr. Cook to the Earl of Rosebery, acknowledging the receipt of the above letter, was presented, and ordered to lie on the table.

Museum, Edinburgh.—Robert Jameson, Esq., Professor of Natural History and Keeper of the Museum in the University of Edinburgh, was called in, and examined in regard to the Museum.

College of Edinburgh, 13th February 1830. 13 February 1830.

PRESENT—

The Lord Advocate,	The Solicitor-General,
The Lord Justice-Clerk,	Dr. Lee,—and
Lord Moncrieff,	Mr. Home Drummond.

The Lord ADVOCATE in the Chair.

Papers presented :—

Astronomical Institution, Edinburgh.—There was read a letter from the Secretary of the Astronomical Institution of Edinburgh in regard to the vacant Chair of Practical Astronomy in the University of Edinburgh.

Dr. Home.—There was also read a letter from Dr. Home, Professor of the Practice of Physic in the University of Edinburgh, complaining of the want of a retiring-room.

Extension of Period to Report.—The General Report to His Majesty was taken into consideration.

The Commissioners, considering that full attendances of their number cannot at this season of the year be obtained, in consequence of imperative duties in which some of the Commissioners are now constantly engaged, and of its being necessary for others of them to attend their duties in Parliament, and that there were several points of great difficulty and importance which the Commissioners present thought it absolutely necessary to have amply discussed by full meetings of the Members of the Board, before coming to conclusive opinions upon those points, deemed it necessary humbly to apply to His Majesty for a prolongation of the time allowed for making their Reports.

The Commissioners therefore requested the Lord Advocate, after communicating with, and obtaining the sanction of, the Earl of Rosebery, to make an application to Mr. Secretary Peel, in order to obtain a prolongation of the time for reporting to the 1st day of November next.

College of Edinburgh, 3d September 1830. 3 September 183

PRESENT—

The Earl of Rosebery,	Lord Moncrieff,
The Lord Viscount Melville,	The Solicitor-General,
The Lord President,	Dr. Taylor,
The Lord Advocate,	Dr. Cook,—and
The Lord Justice-Clerk,	Dr. Lee.
Lord Corehouse,	

The Earl of ROSEBERY in the Chair.

Extension of Period to report.—The Chairman stated that, in consequence of the request to make application to be allowed a longer time than the 1st of April last for the Commissioners reporting, as stated in the Minute of 13th February last, he and the Lord Advocate had had an interview with Sir Robert Peel, who immediately gave directions to have the request complied with.

There was accordingly laid upon the table a Commission extending the period for reporting to the first day of November next.

An opinion having been expressed that in consequence of the demise of the late King a warrant from his present Majesty, continuing the present Commission of Visitation, might be necessary, the Commissioners requested the Chairman to apply to the Secretary of State for a warrant accordingly.

Medical Jurisprudence.—A letter from Dr. Christison, Professor of Medical Jurisprudence in the University of Edinburgh, stating that the number of Pupils attending his Class during summer 1830 had increased to 57; and that attendance on a Class of Medical Jurisprudence was at the beginning of last winter made imperative by the Dublin College of Surgeons on all Students who propose taking out the Diploma of that College, was read and ordered to lie on the table.

Reports relative to the Universities.—The Solicitor-General, from the Committee appointed to examine the Reports respecting the different Universities and Colleges, laid upon the table Drafts of Reports relative to the Universities and Colleges of St. Andrews, Aberdeen, and Edinburgh, which were ordered to lie on the table for consideration.

General Report —The Commissioners then resumed the consideration of the General Report, and, having made several amendments thereon, adjourned the further consideration thereof till to-morrow.

College of Edinburgh, 4th September 1830. 4 September 1830.

PRESENT—

The Earl of Rosebery,	Lord Moncrieff,
The Lord Advocate,	The Solicitor-General,
The Lord Justice-Clerk,	Dr. Taylor,—and
Lord Corehouse,	Dr. Cook.

The Earl of ROSEBERY in the Chair.

Dr. Collins.—A letter from Dr. Collins, Master and Resident Governor of the Lying-in-Hospital of Dublin, complaining of the regulation in the University of Edinburgh, by

Universities and Colleges, Scotland.

Minutes and Proceedings.

4 September 1830.

which no Certificates are received unless such be obtained from Lecturers connected with the University where Medical Degrees are granted, was presented, and ordered to lie on the table.

General Report.—The Commissioners resumed the consideration of the General Report, and, having made several amendments thereon, adjourned the further consideration thereof till Thursday the 14th of October next.

---

14 October 1830.

College of Edinburgh, 14th October 1830.

PRESENT—

The Earl of Haddington,
The Earl of Rosebery,
The Lord President,
Lord Moncrieff,
The Solicitor-General,—and
Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Graduates and Students.—Returns of the number of Graduates and Students of the different Universities for 1826-7, 1827-8, 1828-9, and 1829-30, in continuation of Returns formerly made to the Commissioners, were presented, and ordered to be printed.

Lord Justice-Clerk.—The Chairman stated, that he had received a letter from the Lord Justice-Clerk, expressing his regret that it would be inconvenient for him to attend the present Meetings of the Commissioners, and stating his acquiescence in the General Report, subject to certain alterations pointed out by him to the Chairman.

The Commissioners, after deliberation, came to the following Resolutions:—

Fees.—That the amount of the Fees to be paid by Students to the Professors in the Faculties of Law and Medicine should remain as it is at present, until altered by the University Court.

Degree of LL.D.—That the ordinary Degree of Doctor in Laws should not be conferred on any Candidate who is not a Bachelor of Arts: And that an Honorary Degree of Doctor in Laws should not confer on its possessor the privilege of a vote in any Election in which the Graduates have a right to vote.

Graduates.—That Graduates, when not attending any of the Classes, should pay 10*s.* for each time they claim to vote in any Election in which the Graduates have a right to vote.

General Report.—The Commissioners having resumed the consideration of the General Report, made several amendments on the same, and adjourned the farther consideration thereof till to-morrow at 12 o'clock.

---

15 October 1830.

College of Edinburgh, 15th October 1830.

PRESENT—

The Earl of Rosebery,
The Lord President,
The Lord Advocate,
Lord Moncrieff,
The Solicitor-General,—and
Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Lord Corehouse.—There was read a letter from Lord Corehouse, stating that unavoidable engagements prevented his attending the present meetings of the Commissioners.

Dr. Singers.—A paper from Dr. Singers, Moderator of the General Assembly, relating to Education, was presented, and the Chairman was requested to express to him the regret of the Commissioners, that their proceedings being about to be terminated, they could not enter upon the subject of his communication.

General Report.—The Commissioners then resumed the consideration of the General Report, and amended the same in various particulars.

---

28 October 1830.

College of Edinburgh, 28th October 1830.

PRESENT—

The Earl of Rosebery,
The Lord President,
The Lord Advocate,
The Solicitor-General,—and
Mr. Home Drummond.

The Earl of ROSEBERY in the Chair.

Commission.—There was read the Commission by his Majesty King William the Fourth, dated 12th October 1830, continuing the present Commission of Visitation.

Medical Curriculum.—The Commissioners having had under consideration the Medical Curriculum, came to the following Resolution:—

That the University Court shall have power to make such alterations, from time to time, in the Curriculum of Study for Medical Degrees, as they may deem necessary, provided that such alterations shall receive the sanction of the Chancellor, and, before being carried into effect, shall be duly intimated to the Crown.

Report, Glasgow College.—The Solicitor-General, from the Committee appointed to examine the Reports respecting the different Universities and Colleges, laid upon the table the Report relative to the University of Glasgow.

Code of Laws.—The Solicitor-General, from the Committee appointed to frame a Code of Rules, Statutes, and Ordinances for the different Universities, laid upon the table copies of a Code applicable to each University.

General Report.—The General Report was finally revised, and a MS. copy thereof appointed to be signed; and the Chairman was requested to transmit the same to the Secretary

of State, along with printed copies of the Code of Laws, and of the separate Reports respecting the different Universities and Colleges, and of such documentary papers and evidence as were not transmitted along with the Report of 10th November 1828.

The Commissioners directed that it should be stated in their Minutes, that in the General Report they have made certain alterations, chiefly verbal, on several of their Resolutions, and that a copy of said Report, as finally adjusted and printed, with a copy of the printed Code of Rules, Statutes, and Ordinances, and of the separate Reports as printed, be bound up, as forming part of the Commissioners' Sederunt-books.

Procedure.—The Commissioners also directed that it should be stated in their Minutes, that, with a view to avoid expense, only an abstract of their Minutes and Proceedings, down to April 1827, had been printed, excepting the Resolutions—all of which had been printed as adopted: And that for the same reason short Returns, although relating to different Colleges, have not in general been printed separately, but continuously, so that a number frequently forms one paper.

N. B.—The General Report in MS. was signed by the undermentioned Commissioners in the following order (subject to dissents on certain subjects appended to the same):—

Rosebery, *Chairman*,	D. Boyle,
Gordon,	Geo. Cranstoun,
Haddington,	James W. Moncrieff,
Aberdeen,	John Hope,
Melville,	Thomas Taylor,
C. Hope,	George Cook,
William Rae,	H. Home Drummond.*

* Dr. Lee declined subscribing the Report, because it contains many passages which he did not approve, and from which he had not found it convenient to enter his dissent at the proper time.

113

MINUTES OF EVIDENCE

TAKEN BEFORE

THE COMMISSIONERS FOR VISITING THE UNIVERSITIES AND COLLEGES IN SCOTLAND.

UNIVERSITY OF EDINBURGH.

Edinburgh, Saturday, September 30th, 1826. *University of Edinburgh.*

The EARL of ABERDEEN in the Chair.

Mr. *Archibald Bruce,* Accountant for the City of Edinburgh, and Mr. *Carlyle Bell,* conjunct, principal Clerk thereof, called in.

Mr. *Archibald Bruce* examined.

Mr. A. Bruce and Mr. C. Bell. 30 September 1826.

In the return of the accounts of the Chamberlain of the City of Edinburgh there is an account of the College revenue; can you furnish the Commissioners with an account of that portion of the City revenue which legally and properly belongs to the College?—It is in that account already before the Commissioners.

Does it contain the whole?—That account contains the whole.

Is there no other source of revenue applicable to the College except that?—None, except what is in that book.

Is it by the Charters that this portion of the revenue is so applied, or by any other document?—The funds were mortified for the payment of the bursaries, and other accounts specified in the deeds of bequest.

But do there not appear to be other sums in that account besides mortifications?—Yes, there do; some ground-annuals, feu-duties, and teind-duties.

But is there not also another very large sum mentioned (not consisting of either of those) for a bond?—That is the bond to which I allude, embracing these several mortifications.

Have you furnished the Commissioners with a copy of that bond?—Yes, I have.

(To Mr. *Bell.*) Does it give a history of all these mortifications?—I went over it with considerable care, and it does give a history of them.

(To Mr. *Bruce.*) How does it happen that no interest has been paid upon that bond from 1753 to 1799?—The interest was payable out of the city's ale-duty; but during the period specified, the revenues from the ale-duty were not sufficient for the burdens put on it by the Act of Parliament. Of course, during that period no interest was paid to the Chamberlain, and therefore it does not appear in those accounts. At the same time all the payments proper to the College account were disbursed as heretofore, and the balance exceeding the receipts brought forward in these years was paid out of the proper revenues of the city.

How came interest to be payable out of that particular fund and no other?—It was fixed upon the ale-duty, and included among the debts allowed by Acts of Parliament when those Acts were passed. In the period from 1775 to the 3d of October 1825, there is a statement given in to the Commissioners containing the balances in each year proper to the College revenue account, giving effect to that interest on the footing of its having actually been received; and the result of that statement shows a balance of principal (exclusive of any interest being stated on the balance) of £14,000, which apparent deficiency of the College revenue for its purposes has been made good out of the proper revenues of the town.

Have the proper revenues of the town always satisfied the deficiency of this interest?—On every occasion.

The sums mentioned in the bond had been applied by the town for particular purposes?—Yes.

Then, in point of fact, no capital remains in the hands of the town?—None whatever; it is a debt by the town, secured on the city's ale-duty, but for which, of course, the proper funds of the city are ultimately liable.

Explain the meaning of the following entry in page 1 of the account for the year 1824-5, whereby £66. 8*s.* 8*d.* is placed to the charge "to replace the sum short stated of the interest "at £5 per cent. on £11,451. 12*s.* 2*d.*, payable at Whitsunday and Martinmas 1823, and at "Whitsunday 1824, the interest paid at those terms having been calculated at lower rates "than £5 per cent.?"—I am cashier for the ale-duty; I reduced the interests on the several bonds at the same period that the Chamberlain reduced the interest due on the bonds chargeable against the proper revenue; and after that had gone on for a period, upon looking into the bonds, and seeing the interest on the particular bond in question in the College account ought to have been stated at the interest of £5 per cent., that sum was to replace the previous short statement of interest.

There is an article of charge, amounting to £387. 15*s.* 6*d.*, entered for the first time in the said year's account, stated as mortified money left by the Reverend John Penman; what is the history of that transaction?—That article was mortified money that the trustees who held it wished to get quit of, and they asked the town to take the money, and which they did, on the rate of interest being fixed at £4½ per cent.; and as the bursaries under the deed of bequest were some for the College and some for the High School, and as the whole bursaries connected

University of Edinburgh.

Mr. A. Bruce and Mr. C. Bell.

30 September 1826.

with the town are detailed in the College account, it was thought better to place also this mortified money to the College account than intermix it with the city's other transactions.

Was this a mortification received of the date of the 25th of November 1823?—It was received of that date by the town, and on page 14 of the last account there is a description of the mortification.

From the account thus referred to it appears the sum of £386. 15*s*. 6*d*. was granted in the year 1766; was this sum ever applied before November 1823?—I do not know; the latter date was the first time it appeared in the town accounts, and the revenue arising from it is put on the charge side of the College account, and the payment claimable out of it to the credit side of that account, to keep the whole bursaries under charge of the town in one account. The money was not lodged with the town till 1823; it had been in the hands of other trustees in Stirling, and they conducted the mortification for a certain period, and then they devolved it to the town.

Between 1764 and 1823 how was that money applied?—I know nothing about it; it never came into the hands of the town until 1823.

Does not the date of the mortification appear to be 1764?—The city's bond was granted in 1823, when the money was lodged with the city.

There is a mortification for a bursary by a Reverend James Stewart in 1811; do you know anything about that?—It will be found at the foot of the seventh page of the account; it is £603 on the charge side of the account.

There are four articles stated under the head of "compositions paid by vassals" in the year 1824, amounting altogether to 13*s*. 7*d*. one-eighth; can you tell on what principle those compositions were fixed, or if any other sum was paid at the same time?—There was no other sum; that is the whole composition by the terms of the charter: there is the annual feu-duty in the following folios of the book.

Are they fixed by the charter?—Yes, they are.

Was there no consideration-money received?—None.

Can you tell the Commissioners if those feu-duties were granted in that shape to the town in the way of mortification, or if these were lands feued out by the town?—I cannot give the origin of those sums, but they have been from time immemorial placed to the College revenue account.

You cannot say if any of these feu-duties arose from property formerly held by the town, which they feued out?—That may have been.

The town books will show the history of them, will they not?—Yes.

Will they show what consisted originally of lands held in property, but since feued out, and what feu-duties were conveyed in the mortifications?—Yes; by consulting the deeds that will appear.

Is it in your power to give to the Commissioners an explanation of the grounds on which the amount of feu-duty was fixed in any of these cases?—No, further than they seem to have been all done in the same way as the other property belonging to the town was done; and they seem to have been regulated by similar rules.

Do you happen to know the date of any of them among the latest?—No: in the year mentioned, however, there are some renewals of charters.

Was there not a feu granted, within the last 35 years, of a house which had been attached to the professorship of divinity?—I cannot say that I am aware of that.

(To Mr. *Bell*.) Do you happen to know when the property immediately opposite the College, and extending to the Infirmary, was feud?—It was feued by the South Bridge trustees.

Have you the means of ascertaining if any part of that ground had been originally mortified for the use of the professor of divinity?—Probably that could be ascertained in the minute books of the South Bridge trustees.

Will you endeavour to ascertain that?—I will.

(To Mr. *Bruce*.) There is a feu-duty of £1. 1*s*. paid by the Bank of Scotland; must not that be an old conveyance?—Yes.

Does that appear to have been paid for 15 years?—Yes; it is a ground-annual.

When was that feu granted?—There is a ledger will explain that.

Can you explain to the Commissioners the reason of the difference between the amount of the ground-annuals, and the difference appearing in the persons liable for them, in different years: for instance, the years 1806 and 1807, and 1824 and 1825?—In some years, no payment being made, they go into arrear; and those arrears, at a lapse of time, being received, will account for the receipts being larger in one year than another; and, in the course of the same period, the property may have changed proprietors, and have been parcelled out in smaller sums. On the other hand, a large revenue arose from teind duties, which now are almost entirely exhausted.

(To Mr. *Bell*.) Can you furnish the Commissioners with the dates of the augmentation of stipends by which those were exhausted?—I do not know that I can.

(To Mr. *Bruce*.) Does the account of ground-annuals before the Commissioners contain the whole ground-annuals payable on account of the College?—So far as it is possible to state them.

This last year?—Yes, this last year.

Or is it only the sum actually paid in the course of that year?—Previous to the Burgh Act being passed, the sums from ground-annuals and feu-duties were so trifling and so numerous, that the sums collected in the year were alone brought forward; but, from the terms of the Act, it became imperative to exhibit these; and an account was made up, so far as it was possible to make it, out of an old ledger, so as to exhibit the arrears of the previous year, the

revenue incurred during the year, the sum received during the year, and the arrear outstanding.

Then the last year's account exhibits the rental, and not the receipt merely?—The rental, so far as it could be made up.

From the account of 1806-7, it appears Lord Fincastle paid for arrears £1. 2*s.* 2*d.* per annum, up to Martinmas 1806, amounting in the whole to £88. 13*s.* 4*d.*, and also a composition of £381. 18*s.* 9*d.* As Lord Fincastle's name does not appear in the subsequent account, must not these annual payments be now in arrear?—Unless the property is disposed of.

You mean disposed of by the Town?—Yes; and the sum received from it entered in the College account. Before the Act was passed, the receipts only came into the account; there was no particular entry of the items, except in the ledger. The receipts were brought forward as they were received, and the sum in arrear was left, as stated in the ledger, but not exhibited in any account. There were 42 years got from Lord Fincastle at one time. The College account, as already mentioned, never contained a rental till within the last two years: everything went into the ledger which is entitled ground-annuals on feu and teind ledger.

You have stated that, previous to the last year, or previous to the passing of that Burgh Act, you only introduced into your account the receipts, and not the rental; but will you inform the Commissioners if the arrears that are on the face of the roll-rental, previous to that date, have ever been brought to the account?—So far as it has been practicable.

Is there any account of those arrears?—Yes, there is an account of them, and they were put into the hands of the agent of the city to make the most of them: numbers of processes were raised, and every means taken to make them effectual; and every one of them that could be recovered has been brought to account. And, with reference to the previous years, there will be seen in the accounts large sums received from time to time, to account, from the city agent and the others who had them in collection.

Is the amount of arrear now due under that head, which you have not been able to recover, considerable?—Some items have been due for 100 years; and it is not possible to trace the property.

As you say that you made up a list of arrears before you introduced a regular rental, and that you have recovered a great part of these, can you say if the amount which you have not been able to recover is considerable, or do you know what it is?—It is considerable.

Can you state from memory what the amount may be?—If I recollect right, it is in Scotch money the sums are stated. I would not venture to say the sum in sterling.

Can you state it in Scotch money?—No, I could not correctly; there is a great number of figures. But the last account of the rental can be exhibited to the Commissioners; but, of the items there detailed, only a part belongs to the College.

Has a return of that account yet been presented to the Commissioners?—No, nor of the ledger, which is in daily use.

What means did you take to inform yourself as to the total amount of the rental, or the source from which it was derived?—By going through the ledger.

Is it a very old ledger?—Yes, it goes back for a long period.

Does it contain the more recent mortifications?—Everything relating to the College account goes into that ledger, even of a more recent date.

If that property, for which Lord Fincastle had paid a ground-rent or feu-duty, has been sold, will the amount of the purchase-money appear on the face of the accounts?—It will.

Are you aware of any sales of superiorities, which had been part of the College revenue, having been made of late years,—within your recollection?—Some superiorities were sold.

It appearing from the accounts that, in 1812-13, the sum of £620. 5*s.* 11*d.*, in 1813-14, £509. 11*s.*, in 1814-15, £650, and in 1816-17, £961, were received as prices of superiorities, can you say whether those sums were applied to the purposes of the College?—They went into the College account: they were all applied to the purposes of the College account.

Or in liquidation of the balance?—Yes, in the years in which they were received.

Were the legacies of £1,000, £3 per cent., stated in the account 1810-11, and of £309. 2*s.* 2*d.*, stated in the account 1814-15, applied in the same way?—The legacies were applied in the same way; mortifications, again, were also applied the same way; but the City accounts, besides, annually for the interest required by the mortifications.

In the article of bursaries, the principal sum seems to be £6,949, where is that sum?—That forms part of the bond of corroboration.

Does it form part of the £11,451?—Yes, part of the £11,451; all those prior to the date of the bond of corroboration are included.

Are you sure they are all there?—There is one by Fraser stated separately.

Nothing is charged for the annual sum paid on the principal sum mortified, is the reason of that, because you consider the interest on the bond as coming in place of that?—Yes.

How came the sums paid to the bursars to fall short of the interest on the sums mortified for their use?—That may arise from their not calling for the payments till after the close of the account; indeed sometimes they don't call for a year or two, and there are vacancies, but they never lie any length of time vacant,—they are always filled up in a few months, and sometimes filled up before the vacancy occurs.

Is there no regulation for the specific application of the surplus for bursars?—I am not aware of any.

Is there a separate account kept for each bursary?—The account exhibits the situation of each bursary.

Is there a separate account kept of the charge on each fund, so as to show the surplus, not on the whole, but the surplus in regard to each mortification for a bursary?—No; there is not.

University of Edinburgh.

Mr. A. Bruce and Mr. C. Bell.

30 September 1826.

If three bursaries happen to be vacant, or the sums due to the bursars on those foundations, do not happen to be paid, are they mixed together as part of one general fund?—Yes, but I suppose few instances of the kind have occurred, if any.

Do you think that bursaries seldom remain vacant for any length of time?—That seldom occurs.

Are they or not of long standing?—They are not of long standing.

Then, if there is any short-coming in the application of the revenue appropriated to the bursaries in the course of a year, do you suppose that arises from individual bursars not claiming the payment of the sums due to them for the most part?—It does.

In looking over the accounts, it appears that the sums stated on the discharge side of the account as paid to bursaries, fall generally short of the interest of the sum appropriated to the bursaries, how do you account for that?—That may be accounted for to the extent of £50, at once. His late Majesty King William's allowance of £50 is stated in the charge, enumerating the several bursaries, although it is not received, and there is no corresponding sum stated in the discharge, that payment being now made by the collector of the bishop rents.

Will there then be an annual difference to that amount between the two sides of the account?—There will be an annual difference between the two sides of the account, unless it happened that the sum payable by the collector of the bishop rents had been paid over the Town, which was the case in prior years.

Can you inform the Commissioners if there have been any mortifications connected with bursars to the College since the year 1725, excepting that of the Reverend James Stewart in 1811, and Mr. Penman in 1823?—I don't know of any—I am sure there are none;—to my knowledge there are none.

Is there any legal provision for controlling or auditing the College accounts as between the Town and the College?—None: it is audited as between the Town and the Chamberlain, in the same way as other of the accounts of the Town are audited, and by reference to the docket, at the end of the account, it will appear; it is done by certain members of the College Committee, of which the third Baillie is Chairman. The Senatus Academicus is no party to this auditing.

(*To Mr. Bell.*) On the processes of augmentation being raised, in which claims are made by ministers for any part of the teinds mortified for the use of the College, has appearance always been made on the part of the Town on those processes?—I am not at present aware of a single instance of augmentation which affected the teinds payable for the College.

Are not the College made parties?—Not that I know of.

Has there been no appearance?—None that I recollect; not being agent for the town I cannot say.

As city clerk, can you inform the Committee, if, in the event of a sale of the superiorities, the consent of the College was given to the transaction?—Certainly not.

Do the Town consider themselves as the sole administrators?—Yes, as the sole administrators.

Do you know the history of any part of these superiorities—had they been superiorities mortified for the use of the College?—I am not very certain in what way they came into their hands.

Can a statement be furnished to the Commissioners from the titles of the superiorities, showing whether they have been superiorities mortified for the use of the College, or lands feued out?—Mr. Cunningham can give the Commissioners that information; it was before I was clerk.

Will you request Mr. Cunningham to furnish us with it?—Certainly.

And will you do so also with reference to the deeds of mortification under which the superiorities were placed under the Town, and as to the case of any feus of the College property by the Town?—Yes.

(*To Mr. Bruce.*) Do you recollect the first year you completed a rent-roll without reference to the actual receipt?—There is only one year of rental, the last year, from October 1824 to October 1825.

Was the interest of the bond you mentioned made chargeable on the ale-duty?—It has been in the ale-duty books since the bond of corroboration was granted.

(*To Mr. Bell.*) Could you ascertain from the books the origin and purposes of several mortifications?—Probably I should find some entries in the books, and they would state what the mortifications were at different periods, so by going through them, I might be likely to find the whole.

Edinburgh, Saturday, October 7, 1826.

The EARL of ABERDEEN in the Chair.

Mr. *Charles Cunningham*, Conjunct Principal Clerk for the City of Edinburgh, and Mr. *Archibald Bruce*, Accountant for the said City, called in.

Mr. *Archibald Bruce* examined.

Mr. C. Cunningham and Mr. A. Bruce.

7 October 1826.

Since the last Meeting, have you furnished the Commissioners with a rent-roll of the Revenues of the College of Edinburgh, dated 1747?—Yes.

There is one part of it, from which it appears that "the Council having perused the whole "council-books, town's accounts, and others, since the foundation of the College, at the sight "of the Regents and the College-Treasurer, by their act of this date (23d Jan. 1656), did "condescend on the several mortifications made to the College from 1579 to 1656, amounting,

"as per particular account thereof, showing also the purposes of each mortification, in the "Town's View-book, folio 83, to £71,000 Scots." Have you this View-book?—I have carefully searched for it, but I cannot find it; at the same time I may observe, that when going over the council-records, I discovered the act (the date of which is on the margin of the rental for 1747), and so far as I could decipher the writing, it appears to contain a detail of those mortifications.

Does this Town's View-book exist?—That is the book I alluded to as having searched for, but I cannot find it.

Have you any idea how this book to which you allude has been lost, or comes to be missing?—No. There are a great number of books, but that particular book does not appear among them.

Were there any papers or books lost at the time when the council-chamber was removed? I really cannot say.

Did you ever see this book in your time?—Never; and when I observed reference made to it in the minute of 1656, I searched very particularly for it; I was anxious to see it, as it must be a very curious document, and I should like much it could be found.

Are you aware that any other person has seen it, at any time?—None, excepting the parties alluded to in the minute of 1656.

There is a minute of council referred to; is it contained in that book?—I do not know whether the minute referred to is contained in that book, but the minute is engrossed in the council-records; and on turning them up, it will be seen (at least it appeared to me) that there is a history of the mortifications pointed at in that minute, and it very likely contains a copy of the account alluded to.

(To Mr. *Cunningham.*) Mr. Cunningham, can you furnish the Commissioners with a copy of that act, dated 23d of January 1656?—Yes, I could quite easily.

Have you any knowledge of this book, that is missing?—I never heard of it until this time.

Are there any other books belonging to the town of Edinburgh which are missing, that you are aware of?—I believe there are some of their old chartularies that have gone astray; at least I have not been able to lay my hands on them; they are not books of account at all; I have no charge of the books of account, and I know but little about them.

(To Mr. *Bruce.*) Can Mr. Bruce state if he knows of any other books of account which have been lost?—I am not aware of any; the whole books I have ever searched for, I have discovered, saving the View-book, except that in question.

Does not that, from the description of it, appear to be a general book?—A general book.

It is not one solely applicable to the college revenues, is it?—I should think not.

(To Mr. *Cunningham.*) Mr. Cunningham, have you looked into the states produced of the income of the College?—I have seen them generally, but I have not examined them minutely.

There appear to be a variety of feu-duties, forming part of the revenue of the College; can you inform the Commissioners if those feu-duties were granted in that shape in the way of mortifications, or if they were lands granted to the Town, and afterwards feued out by the Town?—About ten years ago I made a very extensive research into the property of the Town of Edinburgh; and my impression is, that most of the lands which appear in these rentals as feu-duties, were all feued out by the religious houses to whom they belonged, before they came into the hands of the Town of Edinburgh; in short, that they got nothing but superiority.

Can you give the Commissioners any information respecting the feu-farm of Spittalmill?—The superiority of it was sold by the Town to the late Lord Hopetoun.

Do you know the history of the farm belonging to Lord Leven in Fife?—I know there were two farms, Spittalmill and Uthrogill; Uthrogill belonging to Lord Leven, and Spittalmill to Lord Hopetoun.

Were those farms feued by the religious houses?—They belonged to the Provost and Prebends of Trinity College, Edinburgh, and are part of the property conveyed to the Town by the charter of the 7th of August 1612, at least they are in the confirmation of that charter, which contains a *Novodamus*. Those lands, I have reason to think, were feued out by the religious houses to which they belonged, before they became the property of the town.

Can you ascertain that, do you think?—I rather think I can, by tracing them back in the town's Chartularies. If I find the first charter, granted after they came into the possession of the town of Edinburgh, to be a renewal of the investiture by the town as coming in place of the Provost and Prebends of the Trinity College, to whom they previously belonged, then they must have been feued out before the town of Edinburgh got them. I shall examine into that. There are a great many other lands in similar situations.

Is there not some land which belonged to Lord Fincastle or Lord Dunmore?—There is Powis; that property is claimed by the Trinity Hospital of Edinburgh; it was part of the lands belonging to the Provost and Prebends of Trinity College, and also, so far as my memory serves me, was feued out previous to the Reformation; the property belonged to a family of the name of Rollo, and came by progress into Lord Dunmore's family.

How came that to be inserted as part of the College revenues?—I believe it is properly inserted in the College revenues; it is part of the lands contained in the charter 1612, and it rather appears to me to have been erroneously claimed by the Trinity Hospital.

(To Mr. *Bruce.*)—The entry of Lord Fincastle appears once in the year 1806-7, and it does not appear again afterwards; can you explain that?—The ledger produced to the Commissioners will show the situation of that article.

(To Mr. *Cunningham.*) The entry of Lord Fincastle appears once in the year 1806-7, and it does not appear again; can you explain that?—The superiority was sold in 1813; Lord Fincastle entered as a singular successor, after being prosecuted for non-entry by the town;

University of Edinburgh.

Mr. C. Cunningham and Mr. A. Bruce.

7 October 1826.

paying a composition, but the entail of the Dunmore family was recognized in that charter, and of course no composition will again occur so long as the entail exists.

The feu-duty does not appear again, does it?—The price of the superiority and feu-duty ought to appear when it was sold. If omitted, it is very likely to have happened thus: the feu-duty is trifling, some small sum, and it might not be annually collected; they would recover the arrear of feu-duty at the time the entry was taken out in favour of Lord Fincastle. It was sold in 1813; and the feu-duty, if not collected after that entry, would be got then.

(To Mr. *Bruce.*) Mr. Bruce, can you explain that?—Yes. The feu-duty incurred after the 24th of June 1807 (when the 42 years of arrears and the £381. 18*s.* 9*d.* of composition were received, per charter, dated 10th June 1807) is accounted for as follows: three years were received on the 14th of March 1810; two other years' feu-duty were received on the 6th of January 1812, another year's on the 19th November 1812, and the last year's feu-duty to Martinmas 1813 was received on the 9th of December 1813, about which time the property was sold. The purchase-money of the feu-duty at 30 years extended to £63. 6*s.* 8*d.*, and the valuation p. £446. 5*s.* 9*d.*, being at the rate of £1 sterling to each £1 Scots, making £509. 11*s.* which sum was received from Mr. Stewart Marjoribanks of London on the 22d day of September 1813.

Is that one of the superiorities sold that is accounted for?—Yes.

There are three or four mentioned as having been sold; is that one?—Yes. The feu-duty exigible from the property is regularly charged from the period the 42 years of arrears have been accounted for, and was received down to 1813, when the property was sold.

The purchase-money is brought to the account of the College in the year's account?—Yes, for the year 1814; but the rent-roll in 1747 fixes what is the proper revenue of the College, viz., £172. 4*s.* 5½*d.*, whereof £100 out of the ground-annuals, &c., and £72. 4*s.* 5½*d.* out of the teinds of Currie and Livingstone, which forms the whole revenue of the College under the head of "Ground-annuals, Feu and Teind-duties." With regard to the feu-duty and superiority of Powis, sold to Mr. Stewart Marjoribanks, the purchase-money of £509. 10*s.* is nevertheless brought into the College account under date 22d December 1813.

(To Mr. *Cunningham.*) In this and other entries, when subjects were sold, the price received for them was applied as part of the fund to defray the current expenses of the year; was this done by act of Council or merely by the College-treasurer?—I presume it was the act of the accountant in making up the town's accounts, for there was no particular instruction given by the Council; the money is stated to have been received, and the accountant, in making up the annual accounts, posts that to the proper head of accounts.

Is it the belief of the witness that all the subjects granted by King James to the College were feus at the time they were granted, and not lands?—My impression is that the lands in the country were all feued out previously; there might have been some houses belonging to the Provost and Prebends of the different colleges in Edinburgh which were not feued out, but were subsequently sold, but the country part of the property was all feued. My impression is generally so, but I think I should be able, by making investigation, to trace it back and to distinguish it.

With regard to superiorities, can you show what was conveyed in the shape of superiority alone, and what was land?—Yes.

Can you furnish the Commissioners with an account made in two columns, distinguishing the one from the other?—I will do my endeavour to make that account as correctly as I have the means of doing it.

There is one article of feu-duty payable by the Surgeons for their hall in Surgeons' Square; as it is a very late feu, do you know the history of that?—No, I do not at present.

Can you ascertain it?—I dare say that I can.

And can you ascertain how that land came into possession of the town?—It was part of the Kirk-of-Field.

Can you explain what became of the land in Kirk-of-Field?—This College, and I think the Infirmary and the High School Yards, and probably Surgeons' Square, would be part of them.

Does the town of Edinburgh give compensation, or do they pay feu-duties to the College for the High School Yards?—I am not aware.

Was that the site of the original King's School founded by King James?—I really don't know; I don't think it was.

Was the High School founded before the College?—I think it was; and if the High School was part of the property belonging to the Blackfriars, which it is likely it may be, from its vicinity to what is called Blackfriars' Wynd,—and I know the High School site comprehends the areas of some of the houses which belonged to the Blackfriars,—that property is accounted for, I believe, to the Trinity Hospital, and I think it belonged to them by a grant from King James.

Have you any document relative to the disposal of any part of the property belonging to the College termed the Kirk-of-Field?—Yes, I have. An Act of Parliament was passed in 1785 for opening a communication to the country on the south by a bridge over the Cowgate; and on the 6th of July 1785, the Town-council "agreed to dispone, without any recompense, to the "Trustees appointed by Act of Parliament for building a bridge over the Cowgate, the area "belonging to the community to the south of the College or Infirmary Street, so far as com-"prehended in the line described in the Act of Parliament, in respect that the public, and "particularly the College, will be greatly benefited by the communication being opened, and "also in respect of any profit by selling areas being to be applied for rebuilding the "University."

Were they so applied?—The Act contains some regulations as to the application of part of the money for rebuilding the University; and, in point of fact, I know the College Trustees

paid between £6,000 and £7,000 to tradesmen whose accounts had been postponed by the funds of the subscribers running short, and for work actually done at the College.

Does that refer to the ground on which the houses immediately opposite the College are built, between this and the Infirmary?—I do not exactly know whether it refers to the particular houses opposite, or generally to the profit by selling areas being to be applied for building the University, as prescribed by the Act.

Will you inform the Commissioners whether the ground you speak of is near to the Infirmary Street, or comprehends the whole space from that up to Drummond Street?—The ground granted by this act of Council comprehends the street running along the east front of the College and the areas opposite, on which houses are built, between the street and the Infirmary.

Are you aware whether there was a house belonging to the professor of divinity to the north of the College, and where the continuation of the South Bridge to Nicolson Street runs?—I think there was.

Was it at the corner of North College Street?—My impression is that it was in that situation. I do not recollect the house; but I have seen lately in some of the minute-books, or in some excerpts from the minute-books, an order by the committee of subscribers for rebuilding the University to take down that house; and in granting a commission to Dr. Hunter, who was professor of divinity in 1779, there was a reservation made of that house, in case it should be required for building the College.

Do you know in what way that house and the garden (if there was a garden connected with it) was attached or mortified for the use of the professor of divinity?—I think it was by a person of the name of Sommerville. There were some 6,000 merks, mortified by Sommerville, applied to the purchase of that house for the professor of divinity.

Did you not mention that in the commission to Dr. Hunter there was a stipulation that he personally should have no claim for the use of the house, in respect it might be necessary to take it down in rebuilding the College?—Yes.

Do you know if any part of the street occupies the site where that house stood, or is it occupied by any part of the ground on which the College is built?—I do not know.

Is there any plan in the possession of the Town-council showing the area and site of the old College, and the state of the ground in the immediate vicinity of the old College?—Not that I am aware of; there may be.

Do you know if there was any plan lodged in the Parliament office at the time this Act for building the South Bridge was carried through Parliament?—I think not; the standing orders at that time did not require that a plan should be lodged.

There was a process of multiplepoinding raised in 1805 by the South Bridge Trustees against the Magistrates and Town-council as patrons of the University, calling them, as Trustees for building the University, in regard to the disposal apparently of part of the price of the areas sold in carrying through that South Bridge; can you inform the Commission of the history of that transaction?—There is a final decree of exoneration pronounced in that process within these two years by the Court, and it was in the course of the proceedings in that process that the tradesmen who had laid out money in rebuilding part of the College, and who did not obtain payment from the subscribers, obtained decrees of preference over the funds in the hands of the South Bridge Trustees for the money actually laid out.

Was the money to which this process of multiplepoinding relates applied under those decrees of preference in payment of part of the expense of building the College?—In part. There was a full state of the affairs of the South Bridge Trustees made up by Mr. Claud Russell, accountant.

Can you furnish the Commission with that state?—The state was printed.

Can you furnish the Commissioners with a copy of it?—I shall obtain a copy of it.

Have you a copy of the agreement between the Town-council and Mr. Short, as to the Observatory erected on the Calton Hill?—I have no copy.

Can you procure and furnish the Commission with a copy?—If it is to be found in the Council's records I shall obtain it.

Are you aware of any arrangement between the Town-council and the Astronomical Institution recently instituted regarding the transference of the old Observatory and instruments, or was there any such agreement entered into?—There was some arrangement in regard to that, but what it is I do not recollect. I think it must appear on the records of the Council, and if so I will furnish a copy of the agreement.

Has any copy of the Golden Charter been transcribed for the use of the Commission by the town?—No; in a great measure many of the grants in the charter 1603 were resigned.

Is the charter granted in 1603 what is commonly called the Golden Charter?—It has been called so.

There are grants of certain churches disponed by that charter to the city for the College; were those grants of the teinds, or the patronage of the churches?—Both, I believe.

Is the patronage of Dumbarney now in the possession of the Town-council?—No, they sold it in 1820.

Do you know to what fund the proceeds were applied?—I do not know, but I presume to the account of the college.

(To Mr. *Bruce.*)—Mr. Bruce, can you ascertain that?—Yes; it is entered in the proper revenue account.

(To Mr. *Cunningham.*)—Was it sold to Mr. Craigie?—To Mr. Anderson; but it is now the property of Sir David Moncrieff, and not Mr. Craigie.

Do Dumbarney, Pottie, and Moncrieff form one parish?—I understand so.

When augmentations were brought of the stipends payable in those parishes, which were so disponed to the town for the college, was care taken that appearance should be made in those

University of Edinburgh.

Mr. C. Cunningham and Mr. A. Bruce.

7 October 1826.

processes of augmentation, in order that the court might be informed that those were college-teinds?—Whenever any citation is received by the Magistrates and Town-council, in a process of augmentation, it is sent to the agent to attend to the interest of the city; and I presume that care would be taken by the agent to state all proper defences.

Do you know yourself, personally, whether appearance was made or not?—No, I do not but I have no doubt that it was.

If there are any grants for the purposes of the college in the golden charter of 1603, will you furnish the Commission with a copy of that charter, taking it, if legible, from the original?—I am afraid the original is not legible.

Is there not some part of that charter blotted out?—Yes, I think there is. I will endeavour to furnish as correct a copy as can be obtained; but many of the grants and privileges in that charter were afterwards resigned; they do not now belong to the town of Edinburgh. The charter of Charles I., in 1636, is a charter that will show better what is actually in possession of the town than that in 1603.

Does it contain any college property?—I think it contains every thing that belongs to the college.

Does it bear reference to the preceding charter?—Yes, it does.

Has that charter 1636 been transmitted to the Commissioners, do you know?—Not that I am aware of, but they can have a copy.

Will you inform the Commissioners, with reference to another subject, what directions are made by the Town-council in regard to the intimation to them of vacant bursaries?—The accountant annually lays before the council the list of bursaries that are to fall vacant.

Are there any acts of council directing the manner in which the funds relative to the bursaries should be kept, viz., whether they are to be kept as one general fund, or whether there is a separate account for each bursary?—I am not aware that there are; but the accountant will be able to explain it.

(To Mr. *Bruce.*)—Are you aware of any acts of council regulating the manner in which the funds relating to the bursaries should be kept?—No, I am not aware of any acts of council regulating the manner of keeping the fund.

You stated on a former day that they were always kept in one account, did you not?—I did; it forms a branch of the college account. But the sum belonging to each mortification, and the respective number of bursaries under them, and the payment to each bursar, and the amount paid in each mortification, are detailed annually in the college account.

Did you state formerly, that if three bursaries remained vacant for any length of time, the total sum so unappropriated would be carried to the general fund?—Any sum so unappropriated falls into the college revenue, and is applied to other college purposes.

And it is not kept for the particular bursary?—No.

Does it go to any general bursary fund?—No.

(To Mr. *Cunningham.*)—Are you aware whether, besides the garden belonging to the professor of divinity and the principal, there was any free area surrounding the college, appropriated to the use of the college?—No, I am not.

In addition to the state made out by Mr. Russell, in the process of multiplepoinding, will you furnish the Commissioners with the interlocutors under which the sums of money you mention were appropriated to the purposes of the college, if you can obtain them?—I can produce the discharges of the individuals in which the decrees of preference are narrated.

(To Mr. *Bruce.*)—In the search you made, did you search for old processes in which the book you have referred to might be required to be produced before the Court?—No, I did not.

Is there anybody but yourself in whose custody those books are kept?—I am not sure; the principal books of account belong to the accountant's department exclusively, and no such book appears in the inventory of the books and documents in my custody.

Do you think it must have been lost a long time ago?—Yes.

(To Mr. *Cunningham.*)—Have you ever heard of that book?—No.

Or the account referred to?—No.

Will the witness inform the Commissioners if he is aware of the existence of any record known by the name of the Minutes of the Kirk-council?—I never heard of such an account; nevertheless there may be such in existence.

You alluded to the chartulary of the town; does that contain a record, under separate heads, of the purposes of the different grants or mortifications to the town?—No; the chartulary contains a copy of charters granted by the magistrates of Edinburgh.

Are they under separate heads?—No; it is not under separate heads; there is a separate chartulary kept for the new town.

Is there any old document of any sort or kind, from which it appears what was originally, at the time of the institution, or shortly after the institution of the college, the property appropriated for the maintenance and support of the college, going further back than this rent-roll of 1747?—I have never seen any detailed account of what was the property of the college; I am not aware if there is any such account.

Is there any old rental of the Black or Grey Friars?—I never saw any.

(To Mr. *Bruce.*)—Does the ledger, or any similar book you have in your possession, merely show what has been considered and taken to be college property in the understanding of the individuals keeping the book?—No; it contains all the property placed under the head of Ground Annuals, and Feu and Teind-Duties.

From what documents, or from what former books, is the accountant guided in ascertaining and alleging that those particular ground-annuals and feu and teind-duties are the only ones appropriated to the use of the college?—There is no state I have ever seen which shows the particulars of the sum of ground-annuals belonging to the college.

University of Edinburgh.

Mr. C. Cunningham and Mr. A. Bruce.

7 October 1826.

Does this ledger then guide you, according to the practice of preceding accountants, in showing you what you are to consider is to be carried to the account of the college funds?—It gives the accounts of the sums which have been carried to that account; but the actual college funds are not distinguished.

If any articles were omitted in the college accounts as college property, and carried to the proper city funds which had originally been intended for the use of the college, does that ledger give any information as to such errors, if any such exist?—It will; for this ledger contains the whole charge and discharge of the several ground-annuals, feu and teind-duties of the town.

From what date?—I think I can give a series of the book of ground-annuals, &c., back to the year 1698, and of the college accounts, containing the receipts from that source of revenue from the year 1640.

It was only very lately, was it, that you knew what the rental of the college was, from the feu-duties and the ground-annuals?—Yes, from looking into the old books, in consequence of the inquiry of the Commissioners; but a great deal of this property is disposed of now; a great part of the ground-annuals, belonging not altogether to the college but to the town, was disposed of by the new buildings opposite to the Lawn Market, and others.

Does this book contain the whole ground-annuals both of the college and the town?—Yes, and the rental in 1747 specifies what part of the amount is the proper revenue of the college, being £100 out of the ground-annuals, and £72 odds out of the teind-duties.

Is the only document, of any age, to which you can refer as fixing that proportion, this rental?—Yes, except what the prior college accounts from 1640 may instruct.

Does the first number of this series of account books contain any extract from the several deeds under which the lands are held?—I cannot speak as to that; but in the account book of 1747 there is a similar account of the whole ground-annuals, feu and teind-duties, as the one already produced to the Commissioners relative to the college revenue, and referring to the charters by which they were endowed to the town.

Is it a transcript of this paper (the rent-roll of the college account) which has been delivered in?—No, it is quite different; it regards the whole ground-annuals, feu and teind-duties belonging to the town, of which, in the college accounts prior to 1766, the £100 of ground-annuals, and the £72 of teind-duties are alone brought forward in the college account; and from 1766 downwards, of the whole ground-annuals, &c., handed over to be recovered, the whole sums received are brought forward into the college account.

Will you produce the first volume of that series of accounts?—Yes.

(To Mr. *Cunningham.*)—Do you happen to know that Mr. Constable is in possession of some papers which it might be useful to see?—I heard he had got some papers which were thrown out from the Old Parliament House at the time it was removed. All these ground-annuals mostly were secured by heritable bonds for the support of altars and religious establishments, and those were made over to the town.

The Very Rev. Dr. *George Husband Baird,* D.D., Principal of the University of Edinburgh called in and examined.

The Very Rev. Principal Baird.

Are the answers which you have returned to the questions sent to you by the Commissioners, the unanimous opinions of the Senatus Academicus?—They are the unanimous opinions of the Senatus Academicus.

Have you any further suggestions, in your individual capacity, to make, connected with the interests of the University?—There are various suggestions to be made, but it would be very desirable if the particular points or bearings of the questions on which the Commissioners desire to hear me should be stated. It is so broad a subject, involving the general constitution of the University—involving the powers of the Patrons and the Senatus Academicus, and the general regulations for the police and discipline of the University, that it would lead to a length of discussion, if I were to presume to enter upon the whole of these topics, that might be very unsuitable under such circumstances. But, upon any particular point which the Commissioners may have the goodness to suggest to me, I will endeavour to give such answer as may occur to me at the moment.

The questions which were transmitted to you, in common with other Universities, appearing to the Commissioners to comprise all the topics which occurred as necessary to be explained, and upon which information was desired, and with respect to the branch of the subject to which you allude, namely, the power of the Patrons, and the general government of the University, as connected with the differences of opinion prevailing between you and the Patrons, the Commissioners having also received a full statement, they wish to know if you have any thing to add to the information which you have already furnished to them?—If they would give me permission, I would look at the queries as they stand.

Will you inform the Commissioners if you have any opinion to communicate, or any statement to make independent of the answers given by the Senatus Academicus, or with regard to which you may differ or have views of your own?—Under these circumstances, then, I have simply to say that those answers, which are considered as full, contain distinctly and completely the views that I have upon the subject, and therefore it does not appear to me that I am called upon to detain the Commissioners with any statement on the subject. If there are any queries, which seem to require further information, upon the statement being made to us, we would be extremely happy as a body to make further returns.

Are there any explanations you would wish to make upon particular queries?—There are none that occur to me at this moment.

Has the Very Reverend Principal any views of his own to communicate, as to Discipline,

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

or Examinations, or as to Prizes or Premiums, or any thing that would stimulate the students to pay better attention to their duties?—Upon that subject I really must say, that I am not aware of any new regulations that are required; the regulations at present are such, that if duly followed up (which I believe them to be) by the Professors, they are sufficient for the purpose. In the Language and Philosophy classes (except I believe in the Moral Philosophy class), examination regularly takes place to a greater or to a less extent, and in a different form. In the Language classes, particularly, examination is carried on, and it consists with my knowledge that the Professors keep very regular catalogues of the students; that the greater part of them have each day the names of the students called over at the opening of the classes; in some, the whole of the names are not called over—being numerous, it is supposed that this would occupy too large a portion of the hour, and therefore they promiscuously select a few names from different parts of the catalogue, so as to leave it sufficiently uncertain to students whether their names will be called to-day or to-morrow. There are several of the Professors, I know, who keep a catalogue in this form, that they mark every answer that is given, whether it is good or indifferent, or whether it is an answer totally wrong. They have a short mark, which they make, so that at the distance of years afterwards they can say, they not only know for that session, but they can say at any number of sessions thereafter, what had been the proficiency of the boy, and the appearance he made at the class. Sometimes it happens, I believe in most of the classes, that in calling up the boys for examination in the class, the Professors do not call the names in the regular order in which they are marked in the catalogue, because they are afraid that in that case, a boy knowing his place in the catalogue, would prepare the lesson, and that lesson only, on which he knew he was to be examined, and therefore they call them promiscuously up. Probably on some occasions it may happen that calling them up promiscuously in that way, if they do not carefully look at each name at the time when he is called, the name of one may escape for a longer time than another, and they may not all be examined equally frequently. I know that in some classes, it has been said the examinations are not equal and regular among the students, and I know that in that class, which I have heard alluded to, more than with regard to any other, there have been parents, not one but many, who have come to me and said that they really began to be afraid for the general progress of education in their children, for that the enthusiasm that was excited in them for getting the lessons and performing the exercises of that class, were such as to prevent their going through the exercises of other classes with equal care. I know no regulation that could be made to ensure more absolute certainty and equal frequency of examination to each pupil (for that must always depend on the Professor for the time); but by their keeping regular catalogues, they have it in their power, and I have felt it my duty to suggest it at times that it would be desirable the catalogue should be gone regularly over, so that each pupil might have a stimulus to exertion every day of the course. It is to be considered too, that from the great number of students, probably towards 300 in a class, and meeting but one hour a-day, it is quite impracticable in fact that each could be very frequently examined in the course of the session. But there are censors appointed, and the boys are arranged, and this language class in particular goes on in a certain order. In each seat there is a censor placed, whose business it is to keep a note of those who are absent, and at the close of the week to give information to the Professor, and to notice all ill behaviour in the class; and if there is carelessness or any improper conduct, to let that be known to the Professor. So that I am quite satisfied the practical regulations are at present as perfect as it is possible to make them, for preserving order in the classes and for advancing the proficiency of the scholars. It must depend, as was said before, entirely on the individual Professor, and the manner in which he puts into practice the rules he has laid down for directing himself. I happen to know another Professor,—the Professor of Mathematics,—who endeavours regularly to call up each of his pupils with equal frequency, but sometimes being afraid he may have overlooked some, he asks them in the class if he has by accident overlooked any, and states that he is quite anxious and ready to examine the whole of them.

Are the boys composing a class generally nearly of the same age?—The greater proportion of them, on first entering to the college, which they do at an average from the age of 12 to 15, are nearly of the same age; at the same time, in the Language and Philosophy classes—in the Language classes particularly, there are considerable numbers almost every season of a more advanced age than the general body of the class; there are young men from the country in narrow circumstances who have not been able to get a regular early education, and they do not come up to town until 16—I have known them come at a later period; still they go into the classes, and most frequently they are not so far advanced, and not so accurately taught with regard to the elements of the language as those younger boys who have been at preparatory academies.

By what means do you compel regular attendance?—There is no means of compelling regular attendance except by the censor giving in a regular list of the boys of his own class, and the Master, either by a reproof or by fine, punishing the boy for delinquency.

In case of want of proficiency, what punishment is inflicted?—I believe no punishment.

How is his want of proficiency corrected?—I am not aware that there is any particular regulation as to punishment for want of proficiency in getting a lesson or giving in a theme, except the public disgrace and the reprehension of the Professor;—none. There would be a difficulty to distinguish whether want of proficiency proceeded from carelessness or want of talent, and it would be hard to fine a boy for mere want of intellectual capacity.

Does not the authority of the Professor extend to the imposing of additional labour in case of idleness or carelessness?—I presume so.

Is there any attempt at the imposition of additional tasks—do you know if that is practised?

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

—It may be, but it is not in my knowledge that it is. The Professors themselves will be able to give an answer upon that.

In the Language classes is there nothing to make up for the want of stimulus which arises at the High School or other schools which they have left, arising from their taking and losing of places?—No, nothing; but there are exercises prescribed with great frequency, and towards the end of the season prizes are given, not merely for the best prize-essay that may be given in, but on a general consideration of the comparative merits of those that have been given in during the season. Mr. Pillans, Professor of Humanity, means, as an excitement, to have a frame hung up with the names of those who are successful in gaining premiums, to remain a memorial in future times of the distinction they had acquired. Mr. Dunbar, in the same way, is extremely assiduous in doing every thing in his power to incite the boys that have talents, and indeed all the boys generally.

But if a boy of 13 or 14 years of age chooses to persevere in a course of idleness and neglect of those tasks that were imposed upon him, are there no means of correction or punishment short of public reprehension?—It would depend entirely, I presume, on the degree of negligence, and the disrespect shown to the Professor in not performing the exercises required of him. If they were of a gross nature and long continued, I should presume that the Professor would submit it to the Senatus Academicus, that there was a boy who had behaved discreditably for the University, and he would submit it to the Senatus what should be done in the case.

Would expulsion take place in consequence?—If there was simply negligence of class duty, without anything of insubordination or immorality in the boy's conduct, I do not conceive that expulsion would take place.

Is there any examination of the students before they enter a class, or at the commencement of a session, to ascertain whether the person is fit to receive benefit in that class?—There is no examination previous to admission. It is quite evident that it would be theoretically right and desirable that there should be such previous examinations, from the absurdity of a boy attending a class for which he is not prepared, nor qualified to improve by the instructions he receives—but in practice it is impossible. In the Humanity class there are 400 boys, and Mr. Dunbar has nearly as many. It would occupy a considerable portion of the session to examine each of these.

Would a person be admitted to Natural Philosophy, though he could not say he had studied Mathematics?—There are two classes of students; there are some students who are prosecuting their education with a view to a particular profession, the Church for instance. We have it in our power there, and we take care that they must have attended Mathematics before they go to Natural Philosophy; but with regard to individuals who have no particular professional object in view, but say they wish to take such a course, I do not conceive there exists in the Senatus Academicus, or in any body whatever, the power of prohibiting them from going. We may give them serious advice on the subject not to waste their time; but if they are studying merely for their own pleasure, and without any professional object in view, in consequence of which they would require certificates of having followed a certain course, then it is we hold that we are not entitled to prohibit their going to Natural Philosophy without Mathematics.

Are there Prizes or Premiums in every class?—There are prizes and premiums in every class of what is called the Faculty of Arts, in Greek, Latin, Mathematics, Logic, Natural Philosophy, and Moral Philosophy, and in Hebrew; there are none in the others.

Are they distributed at the end of each session?—Yes; during the last session Mr. Leslie obtained from Dr. Fellowes, in the neighbourhood of London, £75 to be distributed for a general Prize, to be competed for by all those students who have completed their studies within the last twelve years; and also £50 for Prizes to the advanced students, by competition, in the Natural Philosophy class.

Are there any General Prizes given by the Senatus Academicus itself, or by the Patrons of the College, apart from the particular classes?—No, none.

Referring the Reverend Principal to the answer to the 18th question, which relates to the hours of teaching by each Professor, and as to the separate hours of examination, it appears that in most of these classes there are no separate hours for examination; there are in six of them separate hours of examination, and there is no return at all from the Professor of Humanity on account of his absence abroad: Has the Principal any suggestion to make that, in his opinion, would tend to the improvement of the parties in any of those classes?—It is right to mention, that in the time of Mr. Bruce he appointed a separate hour for private examination, at which hour I myself endeavoured to attend when I could; but it was found that, though probably he had 70 boys at the private class, not a third part of them attended for examination. Dr. Finlayson attempted the same thing afterwards, and was obliged to give it up. When young men arrive at a certain period of life, and are a little aware that they might not answer the questions well, they dislike extremely to be exposed in the presence of their fellow-students, and therefore they do not attend, and I am quite satisfied that in no instance is a public separate hour for examination likely to succeed in the class of the more advanced students.

In the Moral Philosophy class is there not a separate hour for examination on Saturday?—Yes.

Is that for the purpose of criticizing essays?—Yes; the Professor does not put questions in the way they are put in the Language classes.

Has that been found to be beneficial in its consequences?—Yes, it is very beneficial to the students.

With reference to Logic, it appears it is chiefly carried on by Lectures, and there is no hour of separate examination; have you anything to suggest upon that?—Dr. Ritchie's mode meets

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

my own approbation more than having a separate hour; he takes the opportunity at the commencement of the hour, when he is quite sure that all his students are in attendance, and for a certain time, probably a quarter of an hour or twenty minutes, or ten minutes, just as the subject of the preceding day's Lecture furnishes materials to him. He is then certain of having the whole of them present; but even he is obliged frequently, in order not to give unnecessary pain to the young men, to put questions in such a way that they see what the answer ought to be; but then he does that intentionally, with the view (and they profit by it much)—he does it intentionally with the view of leading himself to give a new and further illustration of the subject; he takes that opportunity and that mode of bringing out from himself a renewed illustration of the subject on which he examines them.

Is it a recapitulation of the former lecture?—It is a recapitulation of the former lecture.

Are you present at any of these examinations?—No.

With reference to the answer to the 6th question, it is stated that the Professor of Agriculture received a "commission from the late Sir William Pultney, who sunk the money for endowing the Chair, that future vacancies are to be filled up by nine delegates, three to be chosen by the Judges of the Court of Session and Exchequer, and three by the Town-council;" is there any appointment of that Professor by the Town-council?—He received his commission direct from the Town-council, but they took the nomination from Sir William Pultney.

Is it not stated in the answer that the present Professor received a commission direct from the late Sir William Pultney?—It is a mistake in so far; there is a formal commission from the Patrons, but we understood, and have reason to believe, that he was a candidate nominated by Sir William Pultney.

Is there an act of Town-council instituting a Chair of Agriculture?—I am not aware of any formal act in their Records; they never communicate such acts to us; all our duty is to receive the Professor when they bring him to our table.

As to the answer to query 7, it is stated that the Professors of the Medical Faculty have some of them entered into an agreement, by which it is understood that in case any of them shall be appointed First Physician to His Majesty in Scotland, the salary shall be divided among them equally; is that a private understanding between the individuals themselves?—Entirely a private understanding.

Is it considered as an understanding binding as a matter of honour upon the successors?—I presume they would reckon it rather a matter of honour after it had been followed for a considerable period in the University.

Was it sanctioned by any act of the Senatus Academicus?—No, not by any act of the Senatus; it is entirely of the nature of a private arrangement among themselves.

In regard to the 14th and 15th queries, it is stated in the answers, that the examination of Graduates for Medical Degrees takes place by those Professors who in their commissions are styled Professors of Medicine; does it happen to be consistent with your knowledge, whether in any of the Crown commissions the Professors are appointed Professors of Medicine, or is that limited exclusively to the commissions granted by the Town-council?—I am certain, I think, that no Regius Professor merely has been styled Professor of Medicine; that is my impression at this moment, and I think I am correct.

It is stated in the 15th answer, "The only doubt in reference to the Faculty to which the Professorships of Clinical Surgery, Military Surgery, and Medical Jurisprudence belong, arises from the acceptation in which the word Faculty has generally been received in this University. They are always classed with the Medical department, and are summoned to all the meetings in which its concerns are discussed, with the exception of matters relative to Graduation;" can the Principal state to the Commissioners the ground or principle on which the Senatus Academicus have considered that the Regius Professors belonging to the Medical department were not entitled to examine candidates for graduation in Medical Degrees?—There are two qualifications which we think point out those who are to be members of the Medical Faculty.

Do you mean those who examine for degrees?—Yes, those who are styled in their commissions Professors of Medicine, and those who in their commissions are ordered or empowered to examine for graduation; those who have such commissions we hold are entitled to examine; but, where there is no power of that kind given, we do not, as a matter of course, consider it as binding on the Senatus Academicus to add them to the Medical Faculty, although they belong to the Medical department. The Commissioners will perceive from the answers that there never has been any regular institution of any one of our Faculties. They are rather Committees of the Senatus Academicus.

It is stated in the answer that a protest has always been taken by the Town-council on the occasion of the institution of any new class in the College by the Crown; is it the understanding (according to the apprehension of the Reverend Principal) in any degree of the Senatus Academicus, that the Crown has not the power to appoint Professors, with the privilege of examining for Medical degrees?—I do not recollect that question having ever been stated to me, or the idea occurring to me. The substance of the protest is simply that the admission of this Professor is not to hurt or prejudge the rights of the Patron. Now it follows clearly, I should think, from the general doctrine now, that there is no power in the Senatus Academicus, or in any other quarter, to appoint members of the Medical Faculty, as they hold that the direction of the *curriculum* for the Medical degree was entirely under their own direction and control.

Does the Reverend Principal understand that the exclusion of the Regius Professor from the privilege of examining candidates for medical degrees, is in the least way connected with any notion, which the Senatus Academicus entertain, that the Crown has no right to bestow that privilege?—I never heard the question discussed, either as a body or individually, by the Professors.

In the return to the 15th query, two classes are mentioned in which no lectures are delivered;

125

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

is the Reverend Principal aware that any statement of the reasons why those Professors do not lecture has been given to the Principal or the Senatus Academicus officially?—I am not aware of any special requisition having been formally made by the Senatus, or of the Professors having been brought before them to answer that question, but it was in the personal knowledge of all of us so fully what the reasons were, that we never thought it necessary to make it a formal object of discussion in the Senatus.

It is stated in the answer to the 16th question that the Professor of Practical Astronomy assigned as a reason why he did not lecture, that there was no Observatory; was that made officially to the Senatus Academicus, or is it a reason he has stated to you now in making up the returns?—It is a reason he stated to me individually very long ago. I have not talked lately to him on the subject, he is so seldom here; but he told me he had repeatedly applied to Government for funds to purchase an Observatory and instruments, as he was anxious to teach, but they had not been furnished to him, and that is the ground of his not teaching.

As that class was instituted in 1786, and is in the appointment of the Crown, has the Principal the means of transmitting to the Commissioners the commission of that Professor, or is it recorded in the books of the Senatus Academicus?—At this moment I could not precisely say; we insert a considerable number of commissions, and I rather think that that commission will be in the Minutes also, but I do not recollect that it is so.

If it is, will the Principal furnish the Commissioners with a copy?—Yes, I will.

Have you, as Principal, any authority over the conduct of the different Professors, or is it only the Senatus as a body,—in enforcing their attendance or correcting any other irregularity?—I have no authority further than those personal communications in a friendly manner which it is my wish and my duty to make to the Professors if any thing seems to require notice; but I have no authority as an individual, and I have never had occasion to think of exerting any such authority.

In case of neglect, however, or misconduct on the part of any Professor, would it be brought before the Senatus Academicus, and by what means?—In the first place, it would be my duty, as it has been my practice, to speak individually to the Professor, and then, if I thought it necessary afterwards to be laid before the Senatus Academicus, to do so. But we are totally uncertain at present of the rights which, as a Senatus Academicus, we possess.

What would be the course pursued by the Senatus Academicus, in the event of misconduct on the part of a Professor being established and proved?—In that case, if we thought any reprehension on our part would be effectual for putting an end to what appeared a delinquency, we would exert it certainly; and, if we did not think our powers adequate, we would report to the Patron.

In the 50th answer, the deliberative vote of the Principal has been called in question; will the Principal inform the Commissioners, whether the idea of his having a deliberative vote is grounded on practice merely, or on any principle recognized in any grant, or in any other more official way?—No, there is no recognition of it in any minute of ours, and, as far as I know of, none in the Town-council.

Was it ever called in question before the year 1824?—Never. I have now been 33 years connected with the University; for the first 30 years there never was a vote in the Senatus Academicus. In the votes that have occurred lately, on one occasion, there happened to be an equality of votes on each side; I gave my vote, and then a deliberative one. It is a matter the University really are taking no interest in; they are anxious the thing should be decided, in case a similar question should occur, but they do not view it as a matter of interest to themselves; neither they nor I care much which way it is decided.

Is this the only instance in which it has been acted on during your incumbency?—It is, and since the establishment of the University, I think.

You mentioned that a roll was regularly called in the classes; are you sure it is called regularly?—I do not know that it is regularly called.

In order to ascertain if they are present or not, is there any report kept by which the Professor can tell certainly if his student has been present or not?—In the Language class the means are taken through the censors, who give in their weekly reports.

Does it consist with your knowledge that this is effectual for the purpose for which it is intended?—I am not able to say that it consists with my personal knowledge, not being present in the classes; but my impression is that it is effectual; but from personal knowledge I cannot say. There is a certain number arranged by the Professor in each seat, and in each seat there is a censor who sits at the bottom of it, I believe so that they may all pass him, and he keeps a regular note of those who are absent.

Are those preserved, so that the Professor at the end of the session can tell certainly if there has been attendance by every individual?—It is my distinct impression that he can do so.

Is it not possible for a lad to get a certificate, though he has not been regularly attending?—I doubt it very much in those two classes; in the higher classes I do not know that it is possible to take means to ascertain whether each student is daily in attendance; and I have no reason to believe that means are so taken to ascertain it.

Then there are no such means in the Medical classes?—No.

No censors?—No, none. There is one mean adopted, if they are not able to go further; it is necessary for every medical student to enrol his name in the Album of the University every month, for it was found, some years ago, that occasionally individuals came down from England, and took out class tickets, and pleaded this as a ground of graduation; and now, by making them enrol their names once a-month, we are sure that at least six times in the course of the winter they are in town.

In the examinations for Medical Degrees, is there any inquiry as to their literary qualifi-

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

cations, apart from their medical knowledge?—I fancy not further than their knowledge of the Latin language, and such literary knowledge as may come under their consideration in connection with the various branches of the study, such as Chemistry and Botany, &c.; there is no specific examination as to literary qualification.

The examinations are in Latin, are they not?—Yes; and at the present time they examine in that language; and they write a Thesis in Latin in the course of their medical examination.

Was it ever the practice that the higher degrees, the degree of Doctor of Medicine, were preceded by the degree of Master of Arts?—There is no rule in this University that it should be so.

Do you know if it is ever the practice?—Not to my knowledge; I rather think not.

Are you aware of any privileges that are connected with the Degree of Master of Arts in the University?—None, but admission to the Divinity Hall; if they produce the certificate of Master of Arts, it secures them admission to the Divinity Hall.

Is the degree of Master of Arts essential to entitle them to go into the Divinity Hall, or does attendance on the class do equally well?—The Church requires a certain curriculum of study, or the degree of Master of Arts.

You have stated in answer 20 that there are no public general examinations of the students at the commencement of each session; at any period were there public examinations in the University?—There were, at the early periods of the University, public examinations when the number of students was extremely small, when they had probably 100 or 150 students; but, since they have become so numerous as they now are, there has been none in my recollection.

Do you recollect the latest period of those examinations?—I do not.

Does it not appear that in former times there were public examinations as connected with graduation?—I have no recollection of the particulars of those examinations; I have no recollection of public examinations as connected with graduation.

Are you aware that every class in former times was laureated in the presence of the Magistrates, and the Principal, and the Professors, and the whole body of the University, if they chose to attend?—I recollect that extremely well. On one occasion I believe the Lords of the Session, and the Barons of the Exchequer, and many advocates were present.

Does the Principal think that the revival of that, or any analogous custom, and the connection of examination with graduation, rendering it public, would tend to excite emulation, and be favourable to the interests of literature and science?—I am not aware that any such examination could be conducted now. I am not aware that there would be a disposition in those intending to graduate to submit to it; if they could be brought to it, there cannot be a doubt that it would be useful.

Why does the Reverend Principal think they could not be brought to submit to it?—Because we have on several occasions tried to introduce the practice even of public graduation, and we have found universally an aversion to it. In the first place, they thought it would be attended with expense; and, in the next place, they did not like the proficiency they had made to be inquired into by public examination; although there has been a wish to have our Graduations for Arts made public, we never have been able to accomplish it, upon feeling the general pulse of the students.

Does the Principal think that, if Degrees were refused, except on that condition, those examinations would be submitted to?—I should not be surprised at its bringing forward a certain proportion of the candidates, but not so many as would be disposed to take it without public examination.

Is this statement quite correct, which says in the Report, that "for a short time Theses were prescribed, which were also publicly defended." What is the exact meaning of "for a short time?"—I understood it was Dr. Blair who first introduced it—it was his proposition, as far as I know, that they should be public, and it was continued for some time after that; but our minutes are really in so mutilated and imperfect a shape for a long period, that from them we can derive very incomplete information only.

It has been stated, on the part of the College, that there is no general course of study or order for the attendance of classes prescribed for students entering at the College; but that the attendance upon certain classes is necessary for certain professions; are the Commissioners to understand by that, that if a very young boy goes to take out a ticket for the Logic or Moral Philosophy class, the ticket is granted to him as a matter of course, without reference to his previous studies?—I cannot conceive that any Professor would give a ticket to a boy of 10 or 12 years of age to go to Moral or Natural Philosophy. I cannot conceive it possible; but I know no regulation of the University, or any statute of the Town-council, prohibiting it.

Is it understood, then, that a person is entitled, without reference to any previous study, or any previous attendance at other classes in the College, to enter himself at any class he chooses?—I know no regulation that prevents that.

Is it your opinion that it would be of advantage that there should be in this University, or in other Colleges, a course of study or order for the attendance of the classes, prescribed for the students entering themselves in the College?—I have no doubt that it would be of consequence; but we do not conceive where a power exists to render it effectual. We have no compulsitor on them to take one course more than another. If they have not come for a particular profession, I do not see that we have any power as a Senatus Academicus to compel them.

In the classes you have mentioned, in which you state means are taken to procure regular attendance, must not that depend on the execution of the duty of the censors?—Not entirely; because, in the course of the session, from the time they have been there a month or six weeks,

127

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

and from calling them up by name, having them all immediately before him, the Professor becomes quite aware, by a glance at a seat, whether the boys are present or not, so that he is able himself to act as a check.

The censors are boys themselves?—Students.

But of an elder description from the classes in general, are they not?—They are so generally, on an average, of the same age, that I fancy there is no great difference, in point of years, between the censors and the others.

What may be the age of the students of the Humanity class generally?—I should suppose from 13 to 15; many of them enter much sooner.

Dy you allude to the First Humanity class?—Yes.

In the return to the 17th question, it is stated, with regard to the attendance of students of Divinity, they must attend three years regularly and one occasionally, or two years regularly and three occasionally, or one regularly and five occasionally; can you explain the nature of that occasional attendance; for how long a period of each session the attendance is required to make it sufficient to satisfy the regulation of the Church, or in what way that occasional attendance is watched and looked after by the Professor?—It frequently happens that what is termed occasional attendance may extend for two or three weeks, according as the student (generally from the country) is able to give time for being in Edinburgh; but, I believe, on some occasions, what is termed occasional attendance does not exceed two days. The student from the country makes an arrangement by letter with the Professor, what day he can assign to him to deliver a discourse, and he comes up chiefly with a view merely to deliver it. He is probably a schoolmaster in a remote situation, or a tutor in a family.

Are the Commissioners to understand that a student who attends one session at the Divinity Hall, and makes this arrangement as you now mention for attending two days in four subsequent sessions, is held to have passed through the regular attendances at the Divinity Hall?—He is held to have obeyed completely the law of the Church as it exists on that subject.

Is there any academical regulation on the subject?—None; we hold the Theological classes to be under the jurisdiction and direction of the Church, and endeavour to follow out their views.

The Church prescribes certain regulations by which they require particular attendance at the Divinity Hall, before the Presbytery shall be entitled to license those individuals to preach; but is there any thing to prevent the proper academical authority, whatever it may be, requiring that all students entering at Divinity Hall shall attend three sessions regularly, or four sessions, or whatever may be the period which may be thought proper for their attendance at Divinity Hall?—We do not conceive, as a Senatus Academicus, such power is vested in us over students in Divinity.

Are the Commissioners to understand that the acts of the General Assembly are communicated officially to the College, and are supposed to be imperative on the College in such matters?—I know of no such direct communication at any time having been made.

The acts of the General Assembly merely require certain qualifications which the Presbyteries must attend to before they license individuals coming before them to preach?—And those certificates the students always require from us, and they lay them before the Presbytery, and the Presbytery judge if the law of the Church has been fulfilled, and takes them on trial or not, as the case may be.

Then those acts of the Assembly are not transmitted to the University as imperative on them, or as forming part of the statutes of the College?—No, they are not; but the Clerks of the Assembly regularly transmit to the Professors of Divinity the acts of the Church, relative to Theological students, which are read from the Chairs at the time when the session is supposed to be most fully attended.

Can you state whether, in this University, there is any particular rule observed in practice for ascertaining what those occasional attendances of the students in Divinity shall be?—No, there is no rule.

Is the attendance of one day in each of the four sessions sufficient?—I conceive that such attendance is interpreted occasional attendance, and therefore is sufficient.

So that one who attends one session regularly, and one day in each of the four sessions, is held to satisfy the regulation as much as a student who attends three years constantly, and one session occasionally?—Yes, I understand so.

According to the regulations of the Church which have hitherto been in operation, was any attendance necessary?—Six years' enrolment, without regular attendance, was sufficient, as I understand the law of the Church to have existed.

Might an individual, therefore, who attended but one or two days in each of those six sessions, have been entitled to demand from the Professors of Divinity the certificates entitling him to be taken on trial by the Presbytery?—I understand so distinctly.

Then this regulation referred to in the return to the 17th query is one which has not yet come into operation?—It has not yet come into operation.

The Principal has stated that the acts of the Assembly are not communicated to the University; is it not a matter of fact that the University being represented in the Church by sending a member to the Assembly, receives the acts?—He ought to receive them, but certainly it has not been in the practice of the Representative in the Assembly to give a copy of them to the Principal.

Will the Reverend Principal say whether they are communicated to the University by the Assembly officially, to be obeyed by them in the same way as an Act of Visitation would be?—No, I do not apprehend they were.

Was there not a separate edition of the act regulating the course of Theological study required to be sent to all the Professors of Divinity?—It does not consist with my personal knowledge that it was so.

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

In the return to the 18th answer it is stated that certain essays are prepared at home and delivered to the Professors; are they ever shown by the Professors to the Principal?—They are not shown regularly in each session, but on several occasions they have been shown to me, and I have heard them read in their classes, but they are not regularly submitted to me for my opinion.

Is the opinion of the Principal at any time asked in regard to the distribution of Prizes?—No.

In the return to the 24th question there are several prizes mentioned as having been instituted by different bodies or individuals; is the Senatus Academicus in the habit of receiving all donations which may be given to them for prizes without reference to any conditions the individuals may have annexed to them?—I do not think it has ever been a subject of consideration or discussion in the Senatus itself; they are in general submitted to the Faculty of Arts, in whose classes they are given, and they regulate it.

Are there not a number of Professors who give prizes annually at their own expense?—There are.

It is stated that a certain sum is given annually by the Town-council to a variety of the classes for prizes; by whom are the subjects in those different classes for those different prizes fixed?—Always by the Professor of each class; the Professor of the class prescribes the subjects to the students.

Has it ever been under contemplation in the Senatus to apply to the Patrons to make any of those prizes general prizes, open to competition among all the students of the University?—No proposition of that kind has ever been made to the Senatus Academicus. At one time we found those prizes withdrawn; and it was by a second application they were continued to that extent.

Is it your opinion it would be an improvement if there were any general prizes, open to the competition of the whole students of the University?—I should conceive so. I have not the smallest doubt it would excite general emulation and exertions which are not made now when there is no prospect of distinction or reward, or anything of that kind.

Would it be advantageous, with a view to the same objects, if the prizes were conferred publicly in a meeting of the whole University?—I conceive that would be an excellent regulation, and would do great good. There is one, however, it may be mentioned, which will be decided next year, in consequence of a prize given by Dr. Fellowes for an Essay on Comets, that is open to the whole of the Students of the University.

It is stated, in answer to the 25th question, that the Society of Writers to the Signet have lately founded a prize of a Gold Medal, of the value of ten guineas, to be given annually to the best Latin scholar of the senior Humanity class, and that five competitors for the prize are chosen by the class by ballot; was it the condition of that foundation that the competitors might be chosen by the students?—I am not aware that that was a condition.

Do you know anything of the history of that regulation?—It was never submitted to me; it was a favour by the Writers to the Signet to the Humanity class.

In the same answer, in the Greek class, the students are allowed to give votes in favour of a few who may have distinguished themselves by their superior talents and progress, and in other classes the students have no voice in the appropriation of prizes; is that a regulation which the individual Professors have adopted on their own authority?—Yes, it was adopted on their own authority.

Was it without communication with the Principal?—Without communication with the Principal.

Is it understood, in the practice of the Academical Discipline of the University of Edinburgh, that those are matters as to which each individual Professor acts according to his own discretion?—There never has been any interference hitherto.

Each Professor adopts that plan which appears to himself to be most advantageous?—Yes.

In the answer to the 28th question, it is stated that in Lady Yester's Church there is a gallery for Students which will contain about 200 persons, and that there is a full and regular attendance of students. Does any Professor officially attend that Church?—None.

How is it ascertained that those who go to that gallery are all students?—There is no mode of ascertaining it but this; we sent our Janitor to keep the door of the gallery, and he is very well acquainted with the persons of the students.

Are you sure he attends to keep the door?—Not being there myself, I cannot say from my personal knowledge, but probably Dr. Lee can give that information. The Janitor is extremely regular in his duties within the College.

No means are taken to enforce their attendance?—No, none.

In the answer to the 30th query, as to the Medical students, it is stated that the records of the University do not enable the Senatus to specify the number of students from different countries before 1811, and it has not been found practicable to give more than three years in the intermediate period since 1811; but it is stated, that, if it is necessary, a full statement since 1811 will be sent; will you have the goodness to request that the statement referred to in the 30th answer may be made complete from 1811?—Yes, I will.

In the return to the 43d question it is stated that students who are officially reported to have been expelled from other colleges are excluded from that of Edinburgh; and then, in the 44th return, it is stated that students from other colleges are not required, according to the present practice, to produce any certificates of good conduct except in the Divinity classes; therefore, unless a student is officially reported to have been expelled, can the College of Edinburgh have any information on the subject?—We can have no means of information on the subject.

Would not the object of the acts of the former Visitation and the Parliamentary Commis-

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

sion in 1690 and subsequent years, be attained by requiring certificates of good conduct and attendance from other colleges?—To a certain extent it might, but it might be more easily attained if the Universities were desired, at the end of every session, to communicate to each of the other Universities what students had been expelled, and what their names were; but to require certificates of attendance from the immense number, 2,300 students, that we have, is a thing that is quite impracticable.

But would it not be so with reference to those who have completed part of their education at another college, and who intend to count that with the education they receive at Edinburgh, in graduation for degrees?—No; there is no certificate required. Whenever sufficient information is given to us of an expulsion, we take care to act on it. The only thing of the kind I know was through the late Lord Melville, from Lord Clare. A certain number of students' names was transmitted to us, of those who had been expelled from the College of Dublin, and we took means immediately that they should not be admitted here.

In point of fact, are you aware if you have received students who had been expelled from other Universities?—I know no number of students of that description.

In answer to the 16th query, when you were desired to mention the Professorships in which no lectures were delivered, you say, that in Practical Astronomy no lecture has been delivered; and in looking to the list of students (at page 21) attending the different classes, there appears to be a variety of classes in which no students appear to have attended for many years; for instance, the class of Civil History. The last students in Civil History seem to have attended in 1806-7, when 17 was the number. Can you explain the reason of that non-attendance?—The way in which the number in attendance is ascertained is, by every Professor, at the close of the session, giving in a list of the number of his students, which separate lists are entered in a book and kept. In the instance mentioned of Civil History, Mr. Tytler, who held the Chair during the years alluded to, failed to give in his lists. He went afterwards to the country, and we could not recover them; and several of the Professors have at times neglected it. I believe some of them scarcely kept a list of the names of the students for their own private use.

Are any lectures now delivered in the class of Civil History?—Sir William Hamilton is delivering lectures regularly; he taught during last summer; he teaches during the winter this season, and he is very ambitious to make it a good class.

Do you know how many students he had the last year?—I do not at this moment recollect to have heard.

There were a number of years in which no lectures were delivered in that class?—Two or three sessions; it was then brought before us by the late Mr. Playfair, that a requisition should be made to the Professor to teach. The Professor applied for us to allow his brother to read his lectures; he was allowed to read them, and after that year the Professor resigned in favour of Sir William Hamilton.

There is a Professor who is called a Professor of Public Law; are you aware by what authority the title and objects of that class have been changed?—I have looked into the book of Exchequer to the original commission, and he is there denominated Professor of Public Law, or the Law of Nature and of Nations.

The class of Universal History was formerly called the Professorship of Civil History and Roman Antiquities, in connection with the study of the Roman Law, and it belonged to the Faculty of Law; it is now called the Professorship of Universal History, and is said to have been transferred to the Faculty of Arts; by what authority was that done?—In general it has been considered from the commencement as being in the Faculty of Law, either because it was appointed by the Advocates for the illustration of Roman Antiquities in reference to the Civil Law, or because the late Professors had very generally been called to the meetings of the Faculty of Law. Of late he has been considered as a member rather of the Faculty of Arts.

Do you know how the title of the Chair became altered from that of the Professor of Universal History, and by what authority the title of that class was changed?—I do not know.

Are no lectures delivered in Agriculture now?—They have been delivered in several sessions past regularly; there have been occasions certainly when they were not delivered.

Does the Professor of Agriculture usually lecture, or have there been any seasons when he has not lectured?—I would say he lectures usually, but there have been sessions when he has not lectured, but in no great proportion to the whole.

Can you state the reasons for his not having lectured?—Sometimes I believe he found he was to be called to London as an evidence before Parliament, and there is some prospect of it this season that he will be called as evidence before Parliament in questions depending there, and he is disposed to think that a good ground for not lecturing.

In answer to the 63d query, it is stated that there are four Curators from the Medical branch of the University, four from the General branch, and one from the Theological, and that the General branch is kept separate, and also the expenditure of each, and the incomes arising from matriculation and graduation; are the Commissioners to understand from that, that the proportion of the funds applicable to the Library, arising from the Medical students, is wholly applied to the purchase of Medical books?—Yes, and books of Natural History, and the books supposed to be connected with the department of Medicine.

Is the income arising from what is termed the General branches of study applied to the purchase of books of general literature and science?—Yes, and it is understood that both branches bear the general expense of the Library.

Is that supposed to be a fit appropriation of the Library fund, or is there not an undue proportion of it given to the Medical department?—That has frequently been thought by many members of the Senatus Academicus, and not many years ago the Medical fund had accumulated to a considerable sum, while the General branch was rather in debt; everything was paid off from the general fund, but, on balancing the accounts, it was found that the one branch

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

owed the other, and a member of the Medical Faculty moved that from their funds the debt should be swept off, and the accounts equalized, which was done.

Is it your opinion that that species of management, the committing one branch of the University to particular Curators, while the other branches of the University are managed by others, is advantageous or useful?—We find that by that arrangement the business is conducted as advantageously as we conceive it would be conducted in any other way. The Medical Curators and the General Curators do not meet on separate occasions; they meet together, and the resolution is taken as to the books to be purchased for both branches.

It is stated that the incomes of the Medical and General branches from matriculation and graduation are kept separate, as is also the expenditure of each; dictionaries, and other books of reference, are bought at their joint expense; are the Commissioners to understand from that, that, without some authority from the Senatus Academicus, what may be termed the Medical fund must be solely applied by the Curators to the purchase of Medical books?—That is our understanding, and also our practice.

Unless there is a special authority from the Senatus Academicus?—Yes.

Have the members of the College of Surgeons a right to the Library?—They have.

Then there seems to be an appropriation of part of the funds of the Library to a particular department, without reference to the demands of the Library for books of that particular description, or to the number of books during the year, in that department of science, which may appear?—Unquestionably it is left to the discretion of the Curators to consider all the circumstances; but the money is put in their possession for the purchase of medical books.

With regard to the answer to the 67th question, as to the Professors' subscription of the Confession of Faith, and their taking the oath of allegiance, it is stated it has not been the uniform practice for Professors appointed by either the Crown or the Patrons to produce at their admission a certificate of having complied with this qualification; have any instances occurred since the appointment of the Principal in which such certificates have been produced?—I recollect one being produced by Dr. Duncan, junior, when he was appointed Professor of Medical Jurisprudence.

Was it produced by him voluntarily?—Yes; and laid on the table with the Commission.

Has it been required by the Senatus Academicus of the Professors?—No.

Have the Senatus Academicus any power to administer the oath of allegiance themselves?—No.

Has the Act of Parliament of 1707, in point of fact, been inoperative as to that in this University?—Yes.

Does the Senatus Academicus admit Professors?—It is difficult to answer the question. We go through the form of admission; whether we have power to admit or not, we do not know. When the Senatus is met, on the application of the Magistrates to meet for the reception of a Professor, the Magistrate comes in with the candidate, and gives his Commission to me at the head of the table, and the Senatus orders it to be recorded.

Upon the occasion of the admission of the Professor, is he not required to subscribe the Confession of Faith?—He is not.

Nor to produce a certificate of his having subscribed it anywhere else, or the oath of allegiance?—No.

Is it your impression that there has been any other instance, since your appointment as Principal, in which any of the Professors have produced any such certificate of having signed the Confession of Faith, except in the case of Dr. Duncan?—I should say at once I have no such recollection.

Do you recollect if it was produced by Dr. Hamilton or Dr. Hunter?—No.

In the return to the 70th question, in giving the cases of Appointments of Joint Professors, the appointment of Dr. Hamilton in conjunction with his father, in the year 1800, is not mentioned in the list returned; can you explain why that is omitted?—It must be a clerical omission merely.

In point of fact, was Dr. James Hamilton appointed in conjunction with his father?—Yes.

Was it about 1800?—Yes.

It is not stated, is it?—No; it is merely a clerical omission.

In regard to what are termed the Small Fees or Class-dues, which appear from one of the returns to be paid by the students to different Professors, is the Principal aware by what regulation, or on what authority, the exaction of those fees is founded?—Merely upon practice.

Is there any reference to the Principal, or to the Senatus Academicus, by the individual Professors, when there has been any increase of the small fees?—It is quite understood as the rule of the Senatus Academicus that no change can take place without an intimation to the Senatus by the individual Professor; but instances have occurred where, from inadvertence, they have made small changes without intimation to us.

Is it within the knowledge of the Principal whether any higher fees are taken by any of the Professors than those stated in the returns?—No, it is not consistent with my knowledge that there is any higher fee charged.

Or taken?—I really do not know that; it is impossible to say; it occurs to me also, that it is nearly impossible for a class-servant to refuse taking, if a student offers to give it voluntarily.

In the event of any change having taken place in those small fees by any of the Professors, on any intimation of it being made to the Senatus, is there an Act of the Senatus approving of it, or is the fact noticed on the minutes?—It is noticed on the minutes, I conceive, for I recollect intimations of that nature being made to the Senatus, and it would be recorded on the minutes as a matter of course.

Has the change usually been made in the first instance by the Professor?—It has been made by the Professors, and intimated to us immediately after, so that they might have been checked.

University of Edinburgh.

The Very Rev. Principal Baird.

7 October 1826.

It is stated in the return to the 50th question that there are no controversies, pleas, or disputes, now subsisting in the University in regard to the jurisdiction, powers, or privileges of the Chancellor, Vice-chancellor, Rector, and so forth: is not that answer framed on a denial of the claim of the Lord Provost to be Rector?—No intimation has been made to us of his being Rector, more formally than his sometimes adding to his signature the word "Rector:" we have no instance of an attempt to do a Rector's duty in any way.

In the return to the 55th question it is stated, none of the students live within the buildings or precincts of the College, nor are they under the observation and inspection of the Professors by any University statute or regulation, farther than while within the class-rooms and public area; in the event of any disorders being committed in the town by the students, although not within the area of the College, are they ever brought under the cognizance of the Senatus Academicus, and how?—I do not recollect an instance of its occurring but once, and notice was taken of it in the Senatus. It was in consequence of some riot in the Theatre, when the Magistrates were supposed to be insulted in some degree. The persons rioting, being students, were brought before them and remitted to us, and we threatened to expel them if they did not go to the Magistrates and make the proper apology and explanation, which was done.

Were the Magistrates satisfied?—Yes.

In regard to the questions formerly asked as to the discipline over the students whose proficiency had not been such as was approved of by the Professor, did you mention that any additional tasks in such cases were imposed?—I do not know of that mode of punishment being adopted.

When a Professor is appointed, is he left at full liberty to use the books that he may choose to select for the study of the young men, or is any particular course of study pointed out by the Senatus?—There is no particular course of study or list of books recommended or sanctioned by the Senatus Academicus: it is left entirely to the individual Professor; and it is their practice, at the close of a particular branch of their course, or sometimes at the commencement of it, to mention those books which they would recommend for the perusal of their students, and what those books shall be is left to the discretion and judgment of the Professor.

Edinburgh, Monday, 9 October 1826.

The EARL of ROSEBERY in the Chair.

Mr. *George Dunbar*, Professor of Greek, called in and examined.

Professor Dunbar.

9 October 1826.

Are you Professor of Greek in this University?—Yes, I am.

Do you concur in the General Report made by the Senatus Academicus?—I do.

Do you concur in every part of it?—So far as my knowledge goes, I certainly do.

Are there any fresh remarks or new matter you would wish to lay before the Commissioners with respect to the classes of which you are Professor?—Nothing in particular that I recollect just now, with the exception, perhaps, of some further encouragement being given to induce the students to prosecute their studies with greater diligence and success.

Will you state to the Commissioners what is the nature or description of improvement you are desirous of suggesting?—The principal defect under which my class, and some of the other classes labour, is the want of funds for prizes. They are very limited at present, and of course but little inducement is held out to the students to exert themselves. We have no scholarships; we have no bursaries to any extent; we have no fellowships to offer them to induce them to prosecute their studies with more diligence.

Do you think it would very much advance the objects of your classes to have prizes instituted?—I certainly do.

Do you mean prizes by way of emulation at the moment, or prizes to be given after the scholars have left you?—Perhaps it would be of the greatest advantage to them to have prizes given them at the conclusion of the courses.

Are the students who attend your classes generally very young in point of age?—Those who enter the first class are, I think, about 13 years of age; some are considerably older; but from 13 to 15 is the average age.

You mean at the time of entering?—Yes.

How long do they continue with you, generally speaking?—A considerable number who enter the first class never return; others join the second class the succeeding year, and some go on to the third class. Some attend the classes four years, a few continue five years; these, however, are but a very few.

What may be the average ages of the students of the two other classes?—They are of different ages in the second class—from 15 years of age to 18, and some even above 20. In the third class, of course, they are older.

Would you think it desirable to have prizes in each class?—At present I give prizes in each class. The sum allotted for prizes is extremely small; and I have found it necessary, to induce students to prosecute their studies with diligence and success, to add a little from my own funds. I gave for two years a gold medal for the best Greek Poem or best Greek Essay in the third or highest class.

Are there no prizes in the other two classes?—Yes; the small sum allotted by the Town is divided among the three classes.

Do you consider that inadequate to the object?—Quite inadequate.

Is that a sum of £10 annually?—Just £10.

Is there any distinction, as in the High School, in the way of taking and losing places in your class?—There is none in taking and losing places, for the students are all arranged in particular seats; and the only way to make them distinguish themselves, by my practice, is not to call them up individually, but two or three at a time. I generally take one of the best

University of Edinburgh.

Professor Dunbar.

9 October 1826.

of the scholars and another whom I know to be inferior, and, if the latter cannot answer the question, I put it to the one whom I consider his superior, in order to excite emulation.

Is there no other distinction except those very small prizes that you have mentioned in any one of the classes of your school?—The only other distinction is by calling up young men, who have given in good exercises or good essays, to read them in the classes.

When is that done?—It is generally done once in the week.

Is that done in all the three classes?—It is done in all the three classes.

Would you suggest what description of prizes, or to what amount, you think it would be desirable to have in your classes?—If there was a general examination of the students after they have gone through the regular course of classes prescribed by the Faculty of Arts, and prizes or scholarships were given to those who distinguished themselves, to be held for a certain number of years—two, or three, or four years—I think they would be attended with the greatest advantage, if they were to any amount. The best of our students are obliged to labour for themselves as tutors and teachers in families; their time is so completely occupied in that way that they cannot prosecute their studies with that advantage they would otherwise do.

Would you have those prizes distributed annually, or at the end of each session?—I should think annually.

Would you have the examination annual and public?—I would have it annual and public.

Do you at present have any examination that is public?—We have no public examinations at present.

Has it been the custom of late years for the Principal to visit your class?—The Principal has been once in my class since I was appointed, and it was by my own special invitation. He came to hear some of the prize essays read. There are always so many of them read at the end of each session; and I had some that I considered as very superior that season, and I wished the Principal to be present, with another Professor, to hear them read.

Do you conceive the Principal is entitled to attend the different classes of his own authority, without the invitation of the Professor, or without asking his concurrence?—I conceive he has the power without the invitation of any particular Professor.

But the Principal, you say, has only been present at your class once during your incumbency?—Only once.

How many years may that be?—Twenty years.

Will you specify a little more distinctly than you have hitherto been called upon to do, and distinguish between your different classes?—My First Class consists of those who have either no knowledge of the language, or who have made some progress in it; I am therefore under the necessity of dividing them into two parts. I put those who have made some progress, who have perhaps gone through the grammar, and have been reading a little, on one side of the class; and those who have had no knowledge, or very little knowledge, of the grammar on the other. I begin to read with the advanced students immediately, while at the same time they go through the grammar with the other class of students; and I carry them on in that manner: the one assists the other; those further advanced assist materially those who had just begun the study of the Greek language.

Is that with respect to the First Class you are speaking of?—Yes.

Go on, and specify the other classes with you?—In the Second Class it is presumed they have a considerable knowledge of the Greek grammar. I do, however, examine them in the grammar part of the hour on two days of the week; on Wednesdays I lecture, and on the other two days I give out lessons from my own exercises, to be read by the students before they commence reading, and are examined upon the books and the lessons prescribed in the class. On the Wednesdays I give a lecture, generally, as I have stated, on the subjects that are read in the class. These second class students are permitted, if they choose, to attend the Third Class; although they are not called upon to prepare the lessons of that class, yet in this way they have the advantage of hearing them read and examined, and a considerable number of them translate the lessons of the third, which they had previously heard read in the class. The third class is attended by students who have either been two years previously or who had entered the second class the year before; but very few enter the third class at first, that is, by passing over the other two classes; they read the higher authors, and exercises are prescribed to them once every week, and translations from the authors from Greek into English and from English into Greek, both prose and verse. Some of them are generally read once a week in the third class.

In the Return of the University to the eighteenth question, it appears the Greek class is divided into the junior class, the first private, and the second private; and, in the Return to a subsequent answer, the Greek is divided into the first and second class, without the mention of a third; will you explain that?—The reason why those two are classed together is from what I have already stated, that they generally meet together; they read at separate hours; but the second is allowed to attend when the third class meets, and I also permit the third class to attend when the second meets, though they do not join in the business. I am sorry to say many of them do not attend; in fact, I believe they can hardly do it.

Is that the occasion of their being called, in one instance, only two classes?—Yes; they should, however, have been stated as three classes even there; probably it was an oversight, for in the third class the business is quite different from that of the second.

Will you explain the use of the word private, in answer to the eighteenth question?—The reason why it is called private is, that it is not a class enjoined by the Patrons or the Senatus Academicus; it was a private class begun by the Professor himself, with the sanction of the Senatus.

When was it begun?—I believe the third was taught by my predecessor, and not previously; the second was taught earlier, I think.

It is not necessary for the *curriculum* of Master of Arts?—No.

Will you state to the Commissioners the number of students in each class,—the average number?—The number in the first class last year was 159 or 160; it varies perhaps from about 120 to 160. In the second class, I think about 150 is the average number, and in the third class about 70.

You stated that some of the students carried on their studies under you for as long a period as five years; must that be done by repeated attendances on the third class or the second?—On the third; when they have got through the third class, they do not attend either of the other two; if they attend longer, it is the third class, the highest class.

Do they never continue two years at the second class?—They do sometimes.

Do they ever continue two years at the first?—Very few indeed.

Have you stated to the Commissioners already all the information you have to give upon the subject of the age of the students in each class?—I can scarcely say anything further about their age. There are various ages certainly; there is a considerable number of young men who come from the country to my junior class who have been but imperfectly educated. As it is an elementary class, they can enter it without much previous preparation, and some of them are 20, and even upwards of 20, years of age.

Does it ever happen that boys come from the High School too far advanced to begin with your first class, and go at once to the second?—The greater part of those who come from the High School go at once to the second class.

Then does the first class stand in lieu of the school-learning of Greek?—It certainly does. I believe at first no Greek was taught in any schools in Scotland, and the first class was considered as forming part of the *curriculum* as a substitute for school education. I have a paper of one of my predecessors, Mr. Colin Drummond, who complained that the students entering the College passed over his class, which was considered as a necessary class, and joined the Philosophy classes. I have never insisted on that regulation, nor do I think it necessary. There is a paper in the College records, drawn up by the late Principal Robertson, stating, that he considered the introduction of Greek into the High School an innovation on the province of the Greek Professor in the University. I perhaps might state that there is an Act of the Privy Council of 1670 prohibiting the teaching of Greek in any private school in Scotland. When Greek was taught to a greater extent in the public schools, particularly in the High School here, my apprehension was that my first class would diminish considerably in point of numbers, as most of those educated at the High School would go to the second class; and in fact a greater proportion of them do at present go to the second class, but, contrary to my expectation, I found that my first class rather increased in numbers than diminished.

Is it a matter of option with the students, in all cases, which class they shall attend?—Yes.

But is it a matter of option with them which class they shall begin with, and which they shall afterwards continue to attend?—It has always been a matter of option; their friends sometimes ask my advice what class they should enter. I inquire of them what they have previously learned, and, if I think they are not sufficiently qualified to join the second class with advantage to themselves, I advise them to go to the first.

In your opinion, would it be desirable the Professor should have the regulation of the class to which each student should attach himself?—I really do not know if it would be advisable or not; we could not enforce it.

If authority were given you to enforce it, do you think it would be a salutary regulation?—With regard to the students in Divinity, perhaps it would; but there is a considerable number who join the Greek class, who have no view of pursuing their studies for any degree, or for entering the Church. They wish to obtain a knowledge of Greek, and I do not conceive any act would be imperative on them.

With reference to their wish to get a knowledge of Greek, if a boy who was only fit for the first class, knowing perhaps the fundamental principles of grammar very imperfectly, was to insist on going into the second class, would it not defeat his own end in attaining the knowledge of Greek?—Yes.

Do you not think it would be desirable if a Professor could have authority to say to him, You must go to the first before you come to the second?—I could only do that after examination, and at the time they enter it is impossible for me, from the avocations which call upon my time, to examine each individual privately, to ascertain what class he should enter. I have sometimes, after examining a boy in the second class, told him that he ought to have joined the first, and I give him the option of joining it, because I conceive it would be more for his advantage than remaining in the second.

After their knowledge and qualifications have been ascertained by partial attendance in any of the classes, are you of opinion it would be then advantageous if the Professor had the power to advance or degrade them accordingly?—It would certainly be for their advantage if he had that power, but I do not know that it would always be wise to exercise it.

Did not the Professor state, in the early part of his examination, that he did classify the first class previous to seating them, according to his view of their knowledge?—When they enter with me, they generally state what they have done, and according to their statement I classify them.

Could you not, if you had the power, do the same by the other two classes?—I could certainly make some distinction, but not the same as in the first.

Do you think it would be useful to have the power to make as great a distinction as you might think in your discretion it would be wise to exercise in those cases, with respect to the second and third classes?—The difficulty is, that the time is so limited, it would be hardly

University of Edinburgh.

Professor Dunbar.

9 October 1826.

possible to do the same with the second and third classes as the first. The first meets two hours, the second one hour, and the third one hour. If I were to divide the second into two divisions as the first, I could not overtake the business of the class to do justice to both.

Could you not, from information of the boys themselves previous to their being classed, ascertain whether they ought to belong to the first, second, or third classes?—I certainly could.

And could you assort them accordingly?—I certainly could do that.

But, in point of fact, is that done or not done, with respect to the second and third classes?—No, not with respect to them.

Do you or not conceive yourself authorized to do it?—I certainly do not.

Will you inform the Commissioners whether, in point of fact, it consists with your experience that many who enter the second class are really not qualified to go on in the second class?—No, I have never found that there were many that were not qualified for the second class. I make it in some measure elementary. I find it necessary to examine them in the Grammar, not to the same extent as in the first class, but merely to refresh their memories upon it.

Is that in consequence of a certain number entering, whom you would rather have wished to enter in the first instance in your first class, or in consequence of the length of the vacation partly making them forget what they may have learned at first?—It is perhaps partly from the length of the vacation; but then a considerable proportion of those who join my second class had never previously attended the first class. And one of my objects in view in going over the Grammar is, not so much to make them commit the rules to memory and apply them, as to make observations on the state of their proficiency in their grammar.

Would you give the same answer to a similar question with respect to the third class; that is, whether, in point of fact, many do attend who you think are unfit for that class?—There are fewer who attend the third class that are unfit than those who attend the second; for they have, with very few exceptions, previously attended the second class.

You have stated that in the first class you make a division between those who are to begin with the grammar and those who are capable of reading; does that part of the class that is capable of reading learn the same lessons?—It may perhaps be better to go more into detail as to my practice in the first class. I have already mentioned that some who enter my first class have a certain degree of knowledge of the Greek language; they have gone through their Grammar, and have been reading a little; they are put to read immediately, perhaps extracts from the New Testament or from the Septuagint. The unadvanced students cannot possibly read extracts from either of these, but they go through the Grammar also at the same time with those who are reading the extracts. I call upon the unadvanced students to read the portions which the others translate, and occasionally put questions to them. There are generally two or three called up at a time. I call upon some students on the unadvanced side, to decline nouns or conjugate verbs. According to their progress towards the end of the session, they are enabled to go on with the advanced students in reading extracts from several authors; and I have occasionally found some of them equal, if not superior, to those on the other side.

Have you generally found, in your experience, that at the end of the class the one set was as capable of going on to the second class as the other set?—Not the whole of them. A considerable number of them certainly were, but not the whole.

Do you conceive it as well for those who have begun with the Grammar at your first class, to go on to the second class, as it is for the others, or would it be more beneficial if they were to attend a second year at the first class?—A few have been more benefited by attending the first class the second year than by going to the second; but the most proficient are those young men who are most anxious to advance themselves. During the summer months they make a good deal of progress, and are as capable of entering the second class as those who were on the advanced side of the first.

With respect to the second class, do they all read the same books?—They do.

Do they do the same lessons and exercises?—Yes.

Is the same course adopted in the third class?—Yes.

Considering that among such a variety of young men there must be a great difference of proficiency, do you find no difficulty in managing so many with the same books?—I do not find any great difficulty in managing the whole of them; and, with respect to the second class, I frequently call up two, sometimes three, sometimes four students at once, and I put questions to all of them. If one cannot answer the question, it is put to another, and if he cannot, it is put to a third, and then to a fourth. If all cannot answer, it is put generally to the whole class, and any one may rise up and answer it, if he can.

It is obvious that it must be a great object with you to acquire as extensive a knowledge as possible of the proficiency of all the students in your class; by what means are you enabled to secure a point that appears so difficult, but so desirable as that?—By repeated examination.

Is that examination so extensive and so repeated as to enable you to call upon all the students in your class?—Certainly, I call upon every one of them without exception; and the way I take to ascertain that is this: I have a catalogue or list of the students lying before me; I put a mark at the name of every one that I call up, so that I can ascertain how often he has been called upon to read in that way; I never miss a single individual.

How often do you suppose in a week or a month each student may be called up?—It differs in the different classes. In my First Class, when I have two hours in the day, I get through the whole number once in the week. In my Second Class I cannot overtake them so often. I think, from the mark I put against their names, that every individual in the course of five months has been called up perhaps eight or ten times—I mean regular ex-

University of Edinburgh.

Professor Dunbar.

9 October 1826.

aminations (that does not include exercises; those are different). I do not mark when they are called to read the exercises.

Are you prompted to call upon a student by your knowledge of his deficiency as well as proficiency?—Frequently.

Have you found that that has had a beneficial effect?—It certainly has; and I sometimes inform the student, when he is very deficient in his lesson, that he must prepare it, and be examined on it a second time.

Is there any rotation in examination?—No, there is no rotation. From the way in which I mark them, I know the numbers I have called on.

Does a boy know when he is to be called up?—He cannot possibly know it.

Does it come upon him unawares?—It does.

Is every student quite sure that he will not be examined a second time, until all his fellow-students have been examined once, or do you come back a second time?—He presumes more frequently than he ought to do that he will not be examined till all the other students have been gone over. I sometimes deviate from the practice by calling students two days in succession.

Do you make the examination so irregular as to prevent their having notice that they are to be called upon?—I make it as irregular as possible.

What grammars do you use yourself, and recommend for study?—I use Moor's Greek Grammar; and I believe it is the grammar that is taught in all the Universities in Scotland.

Are you in the habit of recommending other grammars besides Moor's?—I recommend to the advanced students Matthias's Greek Grammar.

Will you specify what books you use in teaching your different classes, beginning with the first class?—In the first class I use Moor's Greek Grammar, my own Greek Exercises (the first part); the Collectanea Minora, which consists of extracts from the Septuagint; the Greek Testament; Xenophon's Cyropædia; a few Odes of Anacreon, and part of the first book of the Iliad. I do not mean to say I read all these, but parts of them.

Are those the books you use in the first class?—Yes.

What are the books you use in the second class?—In the second class I use the Grammar, which as I mentioned is revised, Extracts from the Anabasis of Xenophon; the Memorabilia of Xenophon; Herodotus, and sometimes Plato, with a book of the Iliad, and the second part of my Greek Exercises is read.

As those are the books in use in the first and second classes, will you state what books you use in the third class?—The higher authors are there read: frequently I change the subjects; the Medea of Euripides; the Œdipus Tyrannus of Sophocles; the Philoctetes of Sophocles; the Prometheus Vinctus of Æschylus; the Nubes and Plutus of Aristophanes; the Seventh Book of Thucydides; and the Oration of Demosthenes for the Crown. I do not say I read all these in one session, but I vary the course of reading in different years. I would add, that it will probably be understood better what I read in the third class, by stating what were the portions last season. I read the Philoctetes of Sophocles; and nearly the one half of the Oration of Demosthenes for the Crown.

Will you have the goodness to describe to the Commissioners what your Exercises are?—The Exercises consist of two parts:—The first part, which the junior students of the first class read, are exercises in the inflection of adjectives and nouns, and on the tenses of verbs; they generally also read the shorter examples under the Rules of Syntax in the second part. The second part consists of the Rules of Syntax, with examples under them, and a number of observations pointing out particular idioms. They are somewhat similar to the Latin Grammatical Exercises, or Mair's Introduction.

Are you in the habit of having themes and compositions in your class?—I am, as much as my time will permit.

In which of the classes?—In the second and third classes.

How often in the course of a month are you enabled to have exercises in Greek composition shown up to you?— Every week there are exercises shown up to me.

Is this a voluntary or a compulsory exercise on the part of the scholar?—It is compulsory; every one is bound to perform these exercises.

Are they bound to show you their exercises once a-week?—Yes.

Do you prescribe the subjects?—Yes, I do.

Are those exercises ever in verse, as well as in prose?—In the third class the exercises are in verse, as well as prose.

Is that also compulsory?—Yes, on all the regular students.

You require it of them; but suppose they do not comply, what steps do you take to enforce it?—There is a mark affixed to their names; and when they apply to me for a certificate I state in the certificate that they have not been regular in the performance of their exercises.

Have you anything to add to what you have already stated with respect to the prizes or other encouragements for proficiency?—None; I think I have stated all that I could say on that subject.

You have stated that the compositions both of prose and verse, if good, were read out in the class?—They generally are.

Do you think it would be a proper measure if the names of those who had shown great proficiency were exhibited by being framed and hung up in the class-room?—Perhaps it might; but it looks rather too much like a school exhibition.

Are the names of those who have distinguished themselves so as to gain prizes published in the newspapers?—They have always been published.

What means have you of enforcing attention to your teaching, in the way of punishment, in any of your classes?—There are no other means than public reproof in the class-room, or fines, if the neglect has been very great, and repeated.

University of Edinburgh

Professor Dunbar.

9 October 1826.

To what amount are fines imposed?—Not very great; perhaps half-a-crown; seldom exceeding that sum; sometimes not so much.

Are you in the habit of giving them extra exercises to do, or impositions, as a punishment?—Sometimes I am. If a young man fails in the exercise he is bound to give up, he is obliged to write it anew, and show it up in the course of the week again.

What means have you of enforcing discipline and order in your class, and respect to yourself?—I have no other means than reproving the students, if I find that they do not conduct themselves with propriety. I very seldom found it necessary to go further than to say that I would report them to the Senatus Academicus; but it never has occurred to me, in my class, that that was necessary.

Do you conceive that you have the power of expelling from the class, of your own authority, without reporting to the Senatus Academicus?—I should think I had not.

Will you inform the Commissioners whether the reproof is public whenever it is given?—It is sometimes public and sometimes private.

Would you explain to the Commissioners wherein you make the distinction, and on what grounds?—If a complaint is made to me by one student against another, I think it necessary to investigate that in private; but, if it is a failure in the performance of any exercise, I make it public in the class; and, in case of insubordination or improper conduct, it is necessary to make it public at once.

Then, in the case of taking a fine, as you have mentioned, are the names of those students who have been fined put up in the class?—I have never put them up in the class. I have a general Censor, who has a book to take down the names of those who have failed in their duty, and he is publicly ordered by me to put down the names of the individuals.

Who is that Censor?—He is one selected from the class for steadiness; but I may add that I also appoint Censors or Inspectors on the other seats; and the list of those who sit on the seat with each is put into his hands; and instead of calling the catalogue every day, which I once did, but which I found took up a great deal of valuable time, the Censor of each seat is called at a particular period, perhaps when the half-hour is expired, to rise up and read out the names of any of those who are absent. The general Censor is desired to take down the names of those gentlemen; and, when they return to the class, they are required to bring a written apology to me from their friends.

Have you found those means effectual for securing a good attendance at your class?—Upon the whole I have. There are some whom it is impossible to oblige to attend.

Is there anything you have to suggest in the way of additional power or authority to be granted or conferred on you, which you think would be beneficial respecting the discipline of your different classes?—I have always maintained discipline in my classes from the authority I conceived I possessed as a Professor, and I do not think it necessary I should be vested with any more power than I imagine I have hitherto had.

Then you think the system of discipline as now pursued is as complete as is desirable?—I think it is as complete as is desirable.

If the individual Professor in your class carries with him sufficient authority, you think his power is quite adequate to maintain subordination?—I certainly think it is. I have sometimes been under the necessity of stating to one or two refractory students that I should find it my duty, if they did not listen to my admonitions, to report them to the Senatus Academicus, and I have found that quite sufficient.

Is it the Professor's own fault if the class gets into a state of insubordination?—I should conceive it is.

According to the system pursued in your class and in the other classes in the University, do you think that it would be possible to have any other security than what now already exists for providing study without the walls of the College?—It would certainly be desirable, but I do not know how it could be well accomplished—it depends so much upon the young men themselves, and upon what superintendence they are placed under out of the College. If they have tutors, it is their business to assist them and look after them; if their friends do them justice, it is their business to see that they prepare their studies properly at home. I would wish here to explain, with reference to what I have already said of the attendance of the students of the second class upon the third class, that a very considerable proportion of them prepare the lessons which they have heard rendered in the third class, and I have generally allotted half an hour in the week to hear these lessons read by the students of the second class; and I consider these in the light of private studies, as they are voluntary.

Do you think good effects result from it?—Very good effects.

It appears by your own statement, and by the answer of the Senatus Academicus to the nineteenth question, that there are no public examinations in the University; is that the fact?—There have been none ever since I was appointed.

Do you think it would be attended with very great advantage if public examinations were instituted?—I think it would be attended with great advantage, provided we could induce the students to remain so long as the time when those examinations would necessarily take place.

Would it be the means of exciting a degree of emulation among the students, and a desire for honourable distinction, which might induce them of themselves to wish to remain, and their parents to permit them to remain?—I should think it would; but I have found that a very considerable number, from their very limited means, are under the absolute necessity of leaving the College before the session terminates.

Might not those examinations be in the middle of the session?—I scarcely think they could, for it would be the object of those examinations to show what they had done during the session. If they were made in the middle, the students would then be only in a state of progress.

137

University of Edinburgh.

Professor Dunbar.

9 October 1826.

Will you inform the Commissioners whether you think if after the third or fourth month they might not to advantage be examined upon the subjects which had been taught during the previous months?—They certainly might be examined at that period, and their progress to a certain extent might be ascertained, but I do not think it would have the same effect as an examination at the end of the session.

Might there not be an examination at the end of the session for those who remain the whole time?—There surely might.

Independent of those public examinations, do you think that it would be of advantage to have certain periodical or occasional examinations by the Principal in the class, or by any committee of the Faculty of Arts in the respective classes of the Arts?—I should imagine such an examination would be attended with very good effects, as the students would be aware that they would be examined in a more public way than they can be by the Professor himself.

Do you think that if a public examination at the end of every session, with a view to ascertain proficiency, were made voluntary, and accompanied with any system of prizes, that the desire of distinction would induce many young men to attend that examination?—I should think that it would.

Have you had occasion to look into the ancient history of the University of Edinburgh?—I have examined the records very carefully from the year 1733, and Crawford and Bower's History of the University.

Can you give the Commissioners any information as to the ancient practice of Laureation as connected with examinations and public proceedings thereupon?—When each of the Regents conducted his own class through the different branches of literature and science, there was a laureation at the end of every year in succession. I believe that was public. There is a pretty ample description of it in Crawford's History of the University in the year 1604, and also of the ceremony of conferring the degree of Master of Arts.

Was this done after public examination?—Yes, after public examination.

Do you think any custom of that sort, or analogous custom, might be revived to advantage in these times?—I do not know if it could be revived with advantage, for there is nothing following upon the degree of Master of Arts being conferred in this University; and, if we were to insist on high qualifications, I fear we should get few who would apply for the degree. For some time, the degree was little sought after; and it has only been within the last twenty years that longer attendance and higher qualifications have been required of Masters of Arts.

Without insisting upon such examination and public procedure, would the possibility of having resort to it in the case of those who were desirous of distinction be of beneficial effect?—I have no doubt that upon a few it would have a beneficial effect, but it would be upon a very few only.

Beginning with a few, do you think that the numbers would increase with time?—The numbers would increase if any higher inducements were held out. If the degree of Master of Arts was made a necessary step to obtain the degree of Doctor in Medicine, which in my opinion it ought to be, and for obtaining the degree of Doctor in Divinity; or if it led to preferment in the Church, I should conceive numbers would come forward, and we could insist on higher qualifications; but at present, in this country, it leads to nothing, and therefore a very few would be induced to come forward.

Is not the degree of Master of Arts considered an honour or a desirable object in this University?—It is considered as an honour; but, as it leads to nothing, very few have applied for it.

Without making the degree of Master of Arts of too difficult attainment for persons of ordinary attainments or acquirements, might not the public examinations they might be made to pass through for acquiring that degree have a good effect on the advancement of learning?—I have no doubt it would have a good effect on some, but I know, from my own recollection, that when we proposed to make the attainment of that degree somewhat more difficult, several who wished to obtain it drew back, because they were afraid to undergo the examination.

In some of the regulations of the Senatus Academicus which have been transmitted to the Commissioners, it appears that, about the middle of last century, it was on two different occasions prescribed that the degree of Master of Arts must be taken by all students previous to their entering the Divinity-hall; is it your opinion that it will be advantageous to revive that regulation?—I certainly do think it will be of great advantage to revive it. I believe there was an act of the Senatus Academicus, making it imperative on the Professor of Divinity not to receive any student without the degree of Master of Arts.

Do you know anything of the history of these regulations, and why they have not been enforced?—I do not. I should suppose it was found impracticable.

It is understood that it is required from students who intend to enter at the Divinity-hall that they must have previously attended the Philosophy classes?—Yes.

How many classes of Greek are they required to attend?—One certificate from me is quite sufficient.

With respect to the information you are able to obtain of the knowledge of the students of Divinity, is it your opinion that it would be desirable, with a view to their acquirements, that they should attend the Greek classes longer?—There are very few that go forward to Divinity who do not attend more than one session in the Greek classes; they generally attend two sessions, and a considerable number of them three; but they are not required to attend more than one.

Then, in point of fact, if their attendance at the Greek classes and Philosophy classes is such as to enable them to compete for the degree of Master of Arts, what hardship would

University of Edinburgh.

Professor Dunbar.

9 October 1826.

there be in enforcing a regulation that they must all take the degree before they enter at the Divinity-hall?—It would depend very much on the qualifications required to attain that degree. I fear, if we had it in view to make them higher than they are at present, and they should be so, a considerable number would be prevented from entering the Divinity-hall in consequence.

Have you ever understood that there was any objection on the part of the Church at the time those two regulations were enacted to the principle of the measure?—I never heard of any objections; there might have been, but I never heard any stated.

Can you state if it appears on the records of the Senatus Academicus, that there was any petition from the students of divinity, or any remonstrance against those enactments?—There is no petition or remonstrance appearing in our minutes with regard to them.

Are you aware if, in point of fact, there was any opposition given to the measure by the students?—I never heard of any.

Are you in a condition to state to the Commissioners any reason why those regulations have not been enforced?—I can state no other than what have been already mentioned.

You say they could not attend the Divinity-hall; is it not imperative on them to attend there, in order to prosecute their study in Divinity?—They must attend the Divinity-hall one or more sessions.

You said, if it was made a requisite that every student should take the degree of Master of Arts, many would not attend the Divinity-hall?—It would depend entirely on the qualifications required from the student; if these were of a high order, I conceive a considerable number would be excluded.

Do you think the number of applicants for degrees in Arts, in consequence of such a regulation being enforced, would be lessened?—They would be lessened if the qualifications required were higher. It would depend entirely on the qualifications.

But do you consider that the attendance on the First and Second Greek classes, the Humanity class, and other Philosophical classes, would enable any young man of ordinary talents to obtain the degree of Master of Arts, according to the standard of qualifications which is observable in the northern Universities?—I think if he prosecuted his studies diligently, and paid due attention while attending the classes, he might.

Would it operate as an exclusion against idlers, or persons of moderate and inferior talents?—Yes, I think it would.

Would it give an opportunity, on the other hand, to young men of greater industry and superior talents of taking the degree with higher honour?—Certainly it would.

Do you think that, without putting the qualifications so high as to be an exclusion to men in humble circumstances, that any thing which tended to heighten the standard of learning in the Church would in itself be a great benefit to the country and to religion?—I certainly consider it would be a very great benefit.

Do you think it would be advantageous if the students of Divinity, after entering the Divinity-hall, were required to attend any of the Greek or Philosophical classes for a longer period than is now required?—I certainly conceive it would be an advantage for many of them, if their other avocations would allow it; and I believe a considerable number do attend other classes during the time they attend the Divinity-hall.

Is the allowing an occasional attendance at the Divinity-hall a great obstacle to their attending the other classes?—I cannot speak very directly as to that, for I am not altogether well acquainted with the regulations. I believe they are obliged to attend one session regularly at the Divinity-hall, and the others irregularly; of course it can only be during the time of one session they can attend any of the other classes.

During your own time, has it been consistent with your knowledge that the students of Divinity might attend only one or two days during the season, and have no opportunity of attending other classes, after having entered the Divinity-hall?—Those that attend regularly may enter the other classes.

But those who have obtained certificates by occasional attendances only, were they deprived of the opportunity of attending other classes?—Those attending irregularly are not resident in the town at the time of the session, and of course they cannot attend.

Was there a considerable proportion in your time of that description of students?—A considerable number; I do not know the proportion.

With a view to facilitate the acquirement of the Greek language, have you ever thought of having recourse to a system of mutual instruction?—I do not think I could have recourse to it in my classes as they are constituted, as a considerable part of my examinations consists not merely of questions put to the students, but observations I myself make on the questions put, and the answers that are given; and I would conceive the system of mutual instruction in that case could not be of advantage to the students.

Is the Moor's Grammar you use in Greek and English, or in Greek and Latin?—In Latin and Greek; but Matthias's, which I recommend to the higher class of students, is translated from the German into English.

Do you think it would be any improvement to use a Grammar that should be Greek and English, with a view farther to facilitate the acquirement of the Greek tongue?—I consider the rules in Moor's Grammar so very simple, that any young man who comes to the University should be sufficiently acquainted with Latin as to master them without the least difficulty. From my own experience, I have never found any difficulty in making the students comprehend those rules, and applying them readily. In the course of my examinations in the first class, I generally go over the principal rules of the grammar three times; at the end of the session there are a few who do not understand them, and cannot apply them readily, and but a few.

139

University of Edinburgh.

Professor Dunbar.

9 October 1826.

Does it not frequently happen to many boys, beginning at the first class and knowing nothing about Greek, that their proficiency in Latin may be so slight as to make it a matter of difficulty to understand the Latin part of the rules?—During the 20 years experience I have had, I have only found three or four who told me they could not understand the rules; I do not think there have been more than three or four who have made that complaint, and in consequence I have explained some of the more difficult of the rules when I prescribe them in the class, that they might understand them thoroughly; but the greater number of those who join my first class are sufficiently acquainted with Latin to understand those rules without explanation, and can apply them as readily as English rules.

Then you do not think that it would very materially facilitate their studies if the suggestion was adopted?—From my own experience I would say not.

Does Professor Dunbar think that Latin or English rules are most permanently retained in the memory?—I would say that Latin rules are more permanently retained in the memory.

Why do you think the Latin rules are more permanently retained in the memory?—They are shorter and more comprehensive than English rules.

Do you think the obligation to learn them with more attention than if they were English, has an effect of impressing them on the memory?—Perhaps that circumstance may have an effect. I have compared Moor's Grammar with Valpy's, which is in English. The first part of Valpy's is nearly a translation of Moor's Rules, and I think I could much sooner learn Moor's Rules in Latin than Valpy's in English.

If the English Rules were in verse, as in the Port-Royal Grammar, would that be an improvement?—I do not think it would be an improvement. I may add, that some of the rules in Moor's Grammar, particularly the derivation of the New Testament, are not required to be committed to memory, because I conceive they are incorrect.

Do you substitute others in their place?—Yes.

You stated, in the early part of your examination, that there was a number of those who attended the first class that did not return; have you any idea of the proportion of those students that do not come to the second class?—There are more than one-half who do not return to the second class.

As matters are at present, would those students be graduated although they had not attended any Greek class but the first?—They would not receive the degree; at least I would not consent to it unless I examined them very strictly.

Do you, or do you not, think it would be desirable that it should be imperative on all those who are candidates for graduation to attend the second class?—It would be of advantage that they attended all the three classes.

Should not their attendance upon the second class be made a *sine quâ non*?—Assuredly, I think it would be quite right. I would add, that when a young man applies for a degree in Arts, if he has not attended my third class, I consider it my duty to examine him.

You mentioned, that you thought it would be an advantage if prizes could be increased; how do you mean that they should be awarded?—At present they are awarded by each Professor in his class; perhaps some other mode might be thought of to make them more public.

Is it the practice in your class that students should award prizes?—The students award a few prizes in my class to three or four who have distinguished themselves by the regularity of their attendance, their good behaviour, and their superior progress; but they do not with regard to the essays or poems which are prescribed, for I must examine these myself and decide upon them.

Is it your opinion that the additional prizes should be awarded by the Professor?—I think it would be safer in the hands of the Professor than in the hands of the students.

What is your opinion as to the system which has been introduced recently in some of our Universities, of allowing young men to decide upon prizes in general?—I should be afraid of partiality.

Would you not also be afraid, in some cases, of incapacity of judging?—There should not be much of that in the particular class in which they are awarded.

Is it by a majority of the students that these prizes are granted?—Yes, it is.

Do you consider it advantageous that the inferior scholars should judge upon the merits of the superior ones?—I think they might from this circumstance, that they have the opportunity in the course of the session of knowing what the superior students have done, and therefore they may in some measure be qualified to give their opinion with regard to their merits.

Is it your practice to give certificates to young men at the end of the session?—Yes.

Do you vary their certificates according to your opinion of the proficiency of the young men?—Certainly I do.

Is it agreeable to your experience to know that this has been a powerful stimulus to exertion in the classes?—I believe it is; and it is one of the inducements I state when I am under the necessity of animadverting on the conduct of an individual, that his certificate will not be such as he may wish to have, unless he exerts himself more than he has been accustomed to do.

Is it not of great importance that a Professor should be careful in granting certificates?—I think it is of the utmost importance. I had an opportunity of knowing this lately at an examination of candidates; I found the certificates were far above the qualifications of the individuals.

In your opinion, upon the whole, do you think it an advantageous or disadvantageous system for the students to vote prizes to any of the scholars in the class?—I think, upon the whole, it may be advantageous; but it can only be for prizes of merit that they can judge of the quali-

University of Edinburgh.

Professor Dunbar.

29 October 1826.

fications of individuals from what they have seen them perform in the class, and not from the other particular exercises of which they have not had an opportunity of judging.

Do you mean by that, merit with respect to proficiency, or merit with respect to good conduct?—With respect to both. When I state to my students that they shall have a voice in determining who are to obtain prizes, I tell them that they are to be given for regularity of attendance, for good conduct, and for superior progress.

Would you, or not, recommend that that system should be done away with?—No, I would not.

Have you ever found that students who, in your own opinion, were superior and ought to have obtained the prizes, did not obtain the votes of the majority from other causes, as unpopularity of manners, or from other causes of that kind?—I have observed only one or two instances of that kind.

In the course of twenty years?—Not so much; prizes have not been given for that period; it is not above fourteen or fifteen years since they were first instituted in this University.

Have you ever known instances of improper means being used in the way of canvassing, or giving entertainments to obtain the votes of the students?—I think it hardly possible that that can be done in this University; we do not allow them time for such a purpose. The Censor is ordered, on the day following the announcement, to collect all the votes of the students in his particular seat, and they are given in to the general Censor, who makes up the list, and in this way the majority is determined, so that they scarcely have an opportunity of using unfair means to obtain the votes of their fellow-students. I generally caution them not to be swayed or biassed by any partiality to an individual, but to decide according to the best of their judgment.

Might not such means be used out of the class and not within the class?—It might certainly.

Was that a regulation introduced by your own authority or by the Senatus Academicus?—Entirely of my own authority.

Is the time known when you are to require this return?—The day is fixed.

Is it fixed long before?—Not perhaps more than a day.

But is it in a particular month which occurs annually?—In the last month, about the beginning of April.

In matters of that sort is the Professor left entirely to his own discretion, without any interference of the Senatus or Principal?—Yes.

In every thing as to the system of teaching?—Yes.

Are there any regulations of the Senatus Academicus prescribing any course of study or any method of instruction in your class?—None that I know of.

Are there any directions given to you by the Principal of any sort or kind at your induction?—None.

Are you in every matter of that sort left as much to your own discretion as a private teacher would be?—Yes, entirely.

Do you conceive the Senatus Academicus would, or not, be entitled to give you any instructions or orders on the subject?—I think the Senatus Academicus alone would be entitled to do so.

In the return of your classes there is no mention of the numbers in the third class; does the return under the head of numbers in the second class include those of the third class likewise?—Yes.

Do you deliver certain Lectures in the course of the week?—Yes, in the second class they are delivered once in the week at the hour the second class meets.

Are those entirely voluntary on your part, or prescribed?—Entirely voluntary; I follow the example of my predecessor.

Are they given at extra hours?—They are not, except on Saturday.

Do you require attendance at that hour from the students?—I do not absolutely require attendance at that hour on Saturday; on Wednesday I do in the same manner as at other times.

You mention that when you find the students deficient, you direct them to prepare the exercises for the following day; are you ever in the habit of imposing additional tasks?—Not often. I find it quite impossible sometimes to get through the regular business of the day, in order to do justice to other students; I could not spend much time in examining the additional tasks; but with regard to the exercises, when the inspector informs me that some of them have been written carelessly, and comprehend a great number of errors, the students must show them up to me; and if they are very bad, I return them, and oblige the defaulters to write them again.

Is your selection of books which you wish the students to read in the different classes at all directed by your knowledge of the circumstances of many of your students?—I am directed not by the circumstances, but by the general knowledge which the students possess of the language.

You mentioned that you had occasionally compositions in English; what is the nature of them?—The subjects are frequently the same as those upon which I lecture; as in that way they acquire some knowledge of them, and I direct them to read certain books to acquire more information. The subjects of prize-essays are different; sometimes they are connected with the lectures I give, and sometimes not, and I frequently mention some books from which they may receive information.

Will you name some of the subjects of these lectures?—When I read Homer, I give lectures on Epic Poetry, and a critical analysis of the Iliad and Odyssey. When reading any of the tragedians, I give lectures on Tragedy, and a critical analysis of the play we are

University of Edinburgh.

Professor Dunbar:

9 October 1826.

engaged with. I give general lectures on the Antiquities and Institutions of the Greeks, on the Athenian and Lacedemonian constitution and government, upon the Philosophy of the Greeks, and the doctrines of the principal sects among them, as preparatory to the students entering the Logic and Rhetoric classes, and also on Eloquence; when I read Demosthenes, with an analysis of the Oration of Demosthenes for the Crown.

Do the English compositions you prescribe relate to those subjects on which you are in the habit of lecturing?—Yes, generally.

One lecture a week of those you deliver is entirely at an extra hour, and voluntary on your part?—These lectures are voluntary, and are delivered on Saturdays; it is only two years since I gave them; they are upon general grammar.

Are those independent of the lectures on the other subjects?—Quite independent. I allow not merely those students attending the Greek classes in that particular session, but any who have previously joined the Greek classes, to attend them.

You mean when you lecture especially on the Greek Grammar?—The lectures on the Saturday's hour have the Greek Grammar for their basis.

You mentioned you had some difficulty in enforcing the attendance of all the students to the close of the session; is there any considerable portion of the students who leave you before the termination of the session?—There is a very considerable portion; probably not one fourth remain till the end of the session.

To what time does your class continue?—The first continues till nearly the end of April; the second till the middle of April.

Do you understand that the same circumstances are observable in other junior classes of the College?—In the Humanity classes precisely the same as in my own.

Do they go away a considerable period before the termination of the session, or only during the last fortnight?—We made a regulation some time ago, that none should receive certificates if they left their classes before the 1st of April; but even that was insufficient to prevent them going away; they tell us that they are under the absolute necessity of going, that their means are exhausted. There is a considerable number who officiate as schoolmasters; they are allowed to have substitutes during so many months in the winter, to attend the classes, and they engage them for a certain period, and whenever that is ended they go to resume their employments.

Do you consider that any extension of the period of the session will be found practically to be attended with no general benefit?—I do not think it would, from the small number that remain at the end. I do not imagine it could possibly be extended farther than it is.

If there was any summer session of the junior Greek or Humanity class in the College, would that be attended by a considerable proportion?—I fear not; Mr. Pillans tried it one year, and not with much success, I believe.

Was it ever attempted in the Greek class, do you know?—I do not think it ever was.

Have you already stated that it would be desirable to make the Master of Arts degree a necessary qualification for higher degrees in the University?—I think it would be of the utmost importance.

Do you think it would be of importance both for Doctors of Law and Doctors of Divinity?—I do not know how it would apply to Doctors of Law—the Degree is Honorary; but as to the others I think it of the utmost importance. In the discussions which lately took place as to the *Statuta Solennia*, for fixing the classes necessary to obtain the degree of Doctor in Medicine, the Faculty of Arts gave in a paper to the Senatus Academicus representing the necessity and propriety of a more extended previous education. That stands upon record in our books.

If the degree of Master of Arts was altered in the way that it is suggested, would it be proper to make it imperative that students, previous to requiring it, should stay a certain period of time during the session?—All those who aim at obtaining the degree of Master of Arts are under the necessity of giving regular attendance during a certain time. We do not confer it unless they have done so.

Are they under the necessity of attending classes during the whole session in order to obtain the degree?—When they apply for a degree, they must produce certificates of regular attendance; we do not admit them without producing those certificates, and they very seldom get them previous to the regular time fixed by the Senatus Academicus.

But, in point of fact, do they sometimes get them without having kept the time so prescribed?—If they leave the classes a week, or perhaps two weeks, but not more; and if they state that they cannot possibly attend longer, that their means are exhausted, and that they are obliged to go and supply the places of their substitutes, we consider it a hard matter to refuse a certificate.

Do you not, in point of fact, often find that the young men who are obliged to go away under such circumstances, are as well deserving of a certificate as those who stay to the end?—Many of them are much more deserving; they are generally the most industrious of the students.

Have you, from your own information, the means of stating whether any considerable portion of the Medical students in this University have attended the junior classes of the College?—I do not think that of those who are going forward to the study of Medicine, more than four or five have attended the junior classes.

Or any of the Greek or Philosophy classes?—I do not know about the Philosophy classes; I speak as to my own.

Do you apply that to your own classes?—Yes, but I may be mistaken. I do not exactly know how many may go forward.

Do you mean four or five yearly of those who graduate as the Medical students?—Yes, as the Medical students graduate.

Of those who graduate, have you the means of knowing if they are your students or not?—

University of Edinburgh.

Professor Dunbar.

9 October 1826.

In looking over the list, I sometimes consider if they have attended my classes or not, and I must confess that I find but very few of them, perhaps not above three or four in the whole list.

Are those degrees conferred by the Senatus Academicus?—Yes.

Is there any examination as to Literature at the time the degree of Doctor of Medicine is conferred?—There is no examination that I know of upon general Literature.

Is it in your opinion expedient there should be such an examination?—I conceive it would be very desirable, at least that they should possess more general information than most of them do.

Do you derive that opinion from the observations you make at the time of the examination as to the attainments of those who are graduating for Medicine?—Not certainly from observations at the time, for I have seldom been present when they were examined. The Faculty of Medicine may examine, I believe. As the degree is conferred by the Senatus Academicus, it is in the power of any Professor who chooses to put questions. I can, however, only judge from some of the theses I have examined.

Is there no examination by the Senatus Academicus?—There is no general examination by the Senatus.

Have you examined many of those theses?—I have not examined many of them of late.

Is it your opinion that there ought to be an examination in the presence of the Senatus Academicus, of those who graduate for the degree of Doctor in Medicine?—I do not know whether it could possibly be done; I think it would be attended with beneficial effects, but I imagine a previous course prescribed would answer the purpose better.

Do you mean an attendance on the Philosophy classes?—Upon the Literary and Philosophical classes.

Must not any such regulation be confined necessarily to such Medical students as are natives of Scotland?—I am afraid that would make a distinction which could hardly be of advantage.

Is it consistent with your information that the Medical students from Ireland and England are generally accounted superior in their Literary and Philosophical attainments to the Medical students in Scotland?—I have heard the reverse. I cannot say from my own knowledge.

Upon what grounds was the recommendation of the Faculty of Arts to the Senatus Academicus rested?—It was grounded upon the idea that there was no regulation for enforcing the attendance on any of the classes, and that therefore we considered they should either obtain the degree of Master of Arts, or be obliged to attend certain classes previous to their obtaining the degree of Doctor in Medicine.

Is attendance at certain Medical Classes in some University prescribed by the *Statuta Solennia*, though they may not have attended any University in Scotland?—I believe the attendance is required.

Do you wish to extend the same regulation to an attendance on Literary and Philosophical classes?—Yes, we do.

Was that rested on any representation from the Medical profession at Edinburgh to the Senatus?—No. It was purely the act of the Faculty of Arts itself.

Do you understand if there is any general feeling on that subject among the Medical profession?—I have heard there is, but I cannot say to what extent.

Have you any means yourself of knowing the circumstance of the Medical students as compared with the students attending your own class?—No, I certainly have not.

Are you able to judge if there would be any hardship in such a regulation?—It would be a hardship on some; but as it is a degree followed by important consequences to the individuals who obtain it, they should purchase it by attendance on more classes, and by obtaining more general information.

Are you aware that, in the foreign Universities, the theses of Medical graduates are commonly composed in the language of the country or in the Latin?—I do not know.

In what way was the representation you have alluded to of the Faculty of Arts disposed of?—It was laid before the Senatus Academicus, but it was not approved of by them; it was not sanctioned by them as being necessary to form a part of the education of Medical students.

Does it appear upon the minutes?—It is upon the minutes.

Was it opposed by the Medical Faculty?—I do not recollect altogether if it was opposed by the Medical Faculty. The majority of the Senatus Academicus was against it.

You have stated that there is no general course of study prescribed for general students at the University of Edinburgh; do you concieve it desirable there should be an order prescribed, in which the classes should be attended?—I think it would be of advantage. They sometimes take one class before another which should naturally have come after the other. There is a regulation for students of Divinity; they must attend certain classes in order, but not for any other description of students.

Are you aware there is such an order prescribed in the University of Glasgow?—No, I am not.

Do not many students attend the University of Edinburgh, especially from England, who come with the view of attending one or two of the Philosophy classes and no others?—I believe there is a considerable number.

In such cases would it be possible to prescribe any such order?—No.

You find that evil results from students who are going through a course of attendance at the University of Edinburgh, taking one class before another, which they ought previously to attend?—I believe the evil does not extend to intended students of Divinity, for they are aware, in particular, of the classes they must attend, and to the others it is of little or no consequence. We prescribe the order of study for obtaining the degree of Master of Arts.

University of Edinburgh.

Professor Dunbar.

9 October 1826.

State the order of study prescribed for those who wish to take degree of Master of Arts?—The order of study is, for the first year, the Language class, the Humanity and Greek; there is no particular class mentioned; students may go to the first, second, or third. The second year, the Logic must be attended; they may take the Greek and Latin again, or the Mathematics. In the third year, Moral Philosophy is generally taken, and they may attend any of the other classes they choose along with it; and in the fourth year, Natural Philosophy, with any other of the preceding classes. The Rhetoric is a necessary class, but then it is not prescribed in any order; they may take it with any other classes. We have made the Rhetoric a necessary class for obtaining the degree of Master of Arts.

Is the degree of Bachelor practically known in this University?—No, it is not.

Are students foreign bred (that is, including those from England and Ireland) allowed to pass the Greek classes, and still to insist on proceeding to trials for degrees of Arts?—I do not know of any instance having occurred. None has occurred during my time.

Do you not understand it to be consistent with strict Academical law that they may do so?—No; I rather think we should require attendance in the Greek class here or elsewhere, as at Glasgow, or St. Andrews, or Aberdeen. I consider it necessary always to examine as to this.

Do you generally find students from England or Ireland, who attend your class, better prepared for attending the class than those who have been educated in Scotland?—No, I do not consider that they are; my prime students are from the High School. Those that come from England to attend my classes are generally young men somewhat advanced in life.

Probably they are not from superior schools?—No, not generally. I have had a few from public schools.

Is there a Dean of the Faculty of Arts?—Yes, there is.

In describing the former practice when the education was conducted by Regents, did you state that there was a public laureation every fourth year?—At the end of every fourth year.

Do you mean that every particular Regent, at the conclusion of the fourth year, had his class laureated, so that there was a laureation every year?—Yes.

You stated that you sometimes mentioned in the certificate that a student had not been regular in the performance of certain exercises; is that frequently necessary?—No, it certainly is not; I qualify the expression.

Is it stated expressly, or do you merely omit the certificate of the performance of exercises?—I state, if a young man has performed all the exercises, that he has done so; and if he has not, I state that he has performed most of them, or some of them.

You never state, do you, that he has not performed any exercises?—Very seldom; I am not often obliged to do so.

Is the system of imposing fines general in the junior classes of the College?—Yes, it is.

Is it a system of which you yourself approve?—I would much rather avoid it if possible, but I find it sometimes necessary.

Do you consider that it is a mode of punishment which has much effect?—It certainly has upon one class of students a considerable effect, those, namely, upon whom the fine bears hard.

Is that a class of students among whom you commonly find negligence or insubordination?—Not commonly in that description of students; there are idlers, however, of all descriptions.

In practical application, is it often intended for those whose circumstances are above the class to whom you have alluded?—I make a distinction: those who are able to pay a high fine are called on to do so; those who are not able, are not called upon to pay one so high: but I never impose a fine under sixpence.

Do you find it is a mode of punishment which creates much dissatisfaction?—I never heard any dissatisfaction expressed generally.

Is the total amount very small in the course of a year?—Not perhaps more than thirty shillings.

In the third answer it is stated that a regulation took place in 1736, by which the degree of Doctor of Laws was not to be given but on the trial of a candidate; in a subsequent answer it is stated that it has become an honorary degree, which has been confirmed by your evidence to-day. Can you state when that regulation was abandoned, or do you happen to know any of the circumstances connected with it?—No, I do not; it seems silently to have gone into disuse.

Ever since your time has it been merely an honorary degree?—Yes.

And is it conferred without examination?—Yes.

Do a great number of your students make use of the Library of the College?—Almost every one of them, I believe.

Are the students generally satisfied with the management of the Library, and the access which they have to the books?—Some of them are certainly not satisfied with the management of the library. They sometimes are detained a considerable time before they can get the books; and when they come into my class twenty minutes or so after the time of meeting, I find it necessary to question them where they have been. They sometimes tell me they have been detained in the library, and could not get books; but this does not attach blame to the librarians in the least, but it is from inadequate means to provide assistance.

Do you know if the system of deposits is complained of by the students much?—I never heard it complained of. I believe it is made as lenient as possible.

No complaints have been made to you?—None have been made to me in regard to it.

Have you ever heard complaints from the students that they are prevented from obtaining books owing to the severity of the regulation of deposits?—I never heard of any complaint.

Do you consider practically that the library is open to all the students of the College?—I certainly do.

University of Edinburgh.

Professor Dunbar.

9 October 1826.

Is that the case except where the value of the book is very great?—Some ofthe valuable books are not given out of the library, but may be consulted there.

Do you ever hear any complaint from the students, that when new books come out they go round to the professors, and do not find their way into the library again for a number of months?—Yes.

Are you of opinion there is any foundation for that complaint?—I can only answer for myself, I have given no occasion for it.

Are you one of the Curators?—I am one just now.

Is attention paid in the expenditure of the funds, so as to have a large proportion of those works in the library which the students attending the junior classes are likely to consult?—I believe the interests of the junior students have been consulted equally with the others in that respect; but the fund is so small, and so much is taken from it for the payment of officers, that we have but very limited means for the purchase of books.

Do you approve of the separation of that part of the matriculation and janitor fund which arises from the medical students and the philosophical students having a separate expenditure?—Yes; it prevents confusion.

Is there, or not, any undue proportion of medical books purchased?—I do not think there is

Is it the practice for the Professors to have the use of those books in the first instance however short a time they may keep them?—I really do not know that it is. They are brought into the library when ordered by the Curators. The Professors probably have the first access to them, and may occasionally take them away, but I do not think it happens generally.

Does it appear to you that the privilege of the library is extended as far to the students as is consistent with the safe preservation of the books?—I think it is; perhaps farther than in some respects it ought to be.

In looking back to the former regulations, does it occur to you that the privilege is more or less extended than it was formerly?—I rather think that it is fully as much extended now as it ever was.

Do you understand if originally the books were lent out from the library at all?—No, I rather think they were not.

Have you observed when the practice of lending out books first commenced?—I do exactly know the time when it commenced. I think it was soon after Principal Robertson's appointment, but I really cannot speak as to the time.

Is there any proportion of the books on which a *veto* is put as to lending?—There is a very considerable number of books which are not allowed to be given out, but the number of volumes I do not know. Books with valuable plates are not allowed to be taken out.

Are manuscripts allowed to be taken out upon any condition?—Sometimes they have been taken out.

But have they been lent out to students?—No.

Are any books prevented being given out on account of the opinions they contain?—I never heard of any, with the exception of some novels; these are kept separate.

Are the books in Stationers' Hall lent out in the same manner as all other books are?—Precisely in the same manner.

Does it ever occur that they have worn out in the course of a few years?—Some of them are worn out very speedily. Books in great demand are very soon worn out.

In that case, is not the purpose for which the privilege is granted to the University defeated, inasmuch as these books may not descend to future times?—I do not exactly know the precise purpose for which they were given to the University; I conceive it was for the advantage of the students.

Is any house attached to your Professorship?—There is no house at present; there was one. I am paid £35 a-year in lieu of a house by the town.

Was there not once a house attached to the Professorship of Greek?—Yes, there was.

Was it in the old College buildings?—Yes.

The Reverend *Andrew Brown*, D.D., Professor of Rhetoric in the University of Edinburgh, called in and examined.

The Rev. Dr. Andrew Brown.

Are you Professor of Rhetoric in this University?—Yes, I am.

Do you agree entirely with the statements that have been sent in to the Royal Commissioners from the Senatus Academicus?—Perfectly.

Have you any difference of opinion with regard to that Report?—None in the world.

Are there any observations or suggestions you would wish to make on any part of those answers?—None upon the answers. I have no observations.

Are there any observations or suggestions you would wish to make respecting your own particular class?—None; my class is not one of absolute necessity to the College, and a great body of our students, from the circumstances in which they enter life, and the course of literature, are compelled to satisfy themselves with absolute necessities. The things requisite for different professions are those to which they apply themselves. I have no great impression that, excepting under the influence of strong popularity, or the particular opinion of the day, a class like the Rhetoric class will be closely or frequently attended. I hold it, however, and have acted invariably on that conviction, that to a great majority of our young men it is of very essential importance, and in the upper ranks of society, if not the doctrines, at least the delicacies of taste are a part of domestic education, and that those of our youth who come forward under less favourable circumstances, much less need instruction on these subjects, for a few observations to acute minds serve as general laws.

145

University of Edinburgh.

The Rev. Dr. Andrew Brown.

9 October 1826.

Are there any improvements you would think it advisable to recommend to be made in your class?—If it were possible to introduce public examinations, I think it would be a great improvement.

Is there any difficulty, do you think, in attaining that object?—From the different ages at which young gentlemen come to me, and from the different standings in the course of literature, I do not know it would be very easy to introduce it, and it would require greater discipline than I can anticipate to render any institution of that kind very successful.

What may be the average ages of the young men who attend your class?—I have them from about 16 to 25 years of age.

Have you any private examinations in your own class by yourself?—I have never dared to introduce anything of the kind. There was no example of such a thing before me; and from the general failure of efforts to introduce that in other departments, I was certainly not encouraged to propose it.

Do you prescribe any subject for Essays?—There are three regular series of Essays prescribed in the course of the session. These are taken from three branches of the course, and I have in every instance delivered, not one subject, but a variety of subjects. Some of the young gentlemen attending are for the Law; a great body of them for the Church; and as an incidental remark, I may say, that for several of the last years (which is a circumstance I have not been very well able to understand), a great many more students come pointing to our different sectaries than those belonging to our own Church in proportion.

Do you prescribe Essays?—That there may be a considerable latitude of choice, I may venture to say, that from the particular circumstances of the constitution of that class, I have felt a greater degree of delicacy in awarding prizes than I find pleasant to myself. There are different ages: they have had different opportunities of improvement, and the work must be very unequal, and I have had it most conscientiously in view to make consideration for youth standing on the books of the College, and the advantages of different kinds. Until within the last two or three years I have resorted to the judgment of one or two friends for that purpose, but I find it so great a labour that it required more leisure than I could take, and it has been referred to myself chiefly. It has put me to a great deal of difficulty.

Is there a classification in your class for prizes?—I do in my own mind classify the young gentlemen according to what I conceive to be their relative age, their relative standing, and their relative advantages.

But are they so classed as to be known to each other?—No. But I have invariably stated, before the prizes were given, the principle on which I acted, and the various considerations that influenced my judgment; and I have never hesitated to say that I may err, and materially, but it was an error, not of design or of choice, but necessity.

Are the prizes given by yourself exclusively as Professor?—There is a grant of £10 annually from the City of Edinburgh, the Patrons of the University, and I have always added prizes myself.

Have the students ever a voice in the conferring of any prizes?—I have never yet introduced anything of that kind, and I do not well know how it could be done.

Is not the only prize that properly belongs to your class the sum of £10 per annum?—Yes. It is subdivided and distributed into several prizes.

But that is the only fund for prizes, is it not?—Yes, that is the only fund.

And you subdivide it according to your own discretion?—According to my discretion, certainly.

Do you take any means to ascertain or enforce regular attendance in your class?—I have never yet, from the circumstances of the class, ventured upon any means of that kind. Of late, however, I am extremely happy to say, the attendance has been both pointed and very correct, and certainly very pleasing to me. The last three courses were more gratifying to me than ever. I felt very much pleased with the attendance that was bestowed; and considering the circumstances of my class, I considered it highly flattering to myself.

What difficulties are interposed by the circumstances of the class to some method being taken for enforcing attendance?—In no one of the departments of life is my certificate necessary. The class from the beginning belonged to the Faculty of Arts. It was very low when I came to the College; and I felt, perhaps wrongly, for a great number of years, I might not even insist on the candidates for the degree of Arts attending my class, and I never exacted a certificate from any candidate that was coming forward to take the degree of Arts, though, from the beginning of the class, it formed a part of the *curriculum*. About ten or twelve years ago, I think it occurred to me, at the representation of some of my friends, that it was a duty which I owed to the class, to restore it again; and as it was a restoration considered as a restoration by the Senatus Academicus, the regulation was re-enforced. For four years it was in abeyance; it only took hold of the fifth year's students, and it has since been regularly attended by those who come forward for the degree of Arts.

Is a certificate from the Professor now necessary for the degree of Arts?—Yes. But there is no other department in literary life in which a certificate of mine is of the least use.

What may be the average number of students in your class?—For the last seven or eight years, the average number might be very fairly taken at from 27 or 28 to 37 or 38.

Will you explain a circumstance appearing on the face of the returns: For the last four years, from the year 1822 to the present year, the number of students in your class is left blank in the Return?—I have been negligent there; and I have four years return in abeyance. They will be given in; I have them all.

Do you think from 27 to 37 is the average number?—Yes, for the last seven or eight years.

Are the subjects for essays in your class of a very general character?—I may mention some

University of Edinburgh.

The Rev. Dr. Andrew Brown.

9 October 1826.

of them. They relate to what I account the fundamental principles of the science of criticism —the laws of those operations of our intellectual and sensible nature, that aspire to please in every production of art. The second relates to the English Language, with a particular view to the choice of diction, the structure of sentences, and a view of the better kinds of style. And the last part of the course consists of a general review of all the works of Literature, classed under their respective orders.

Is it your opinion that it would be a great incitement to students attending your class, and perhaps increase the attendance of the class, if the prizes or marks of distinction for such essays were conferred publicly before the whole University?—I have felt that, and I at one time called Principal Baird in to give a little more publicity and a little more effect to those essays. The essays of that year were creditable beyond measure to the students attending my class, and I have no hesitation to say, that there was more than one of them I have been proud to acknowledge. Certainly it is a labour to the Principal, and I would not be desirous of having his presence every year. I am sure from his kindness he would have done it, but I have not applied to him again, as it was not usual in the other classes, though I have a resolution in my own mind as often as possible to avail myself of the Principal's presence at least.

Would it be of any advantage if any of these essays or subjects which are prescribed were open to competition to the whole students of the University?—If essays were open to the competition of the whole University, I have no doubt it would be useful in general, and eventually useful to the Professor of Rhetoric in his class.

Are the subjects of essay in your class more adapted for general competition than the subjects prescribed in the other classes?—I humbly conceive so, for they relate chiefly to the philosophy of taste and the science of criticism.

At present is the merit of these essays known exclusively to yourself?—There is always a very great attendance on the days of the distribution of prizes; in general the class is full of strangers; the essays are read publicly beyond the hour; very often I have been there an hour and a half; but the necessities of the students compel them to go to other classes; but I have never made a remark on the regularity of their going out or coming in on that day, nor do I wish to do it.

If any honours were awarded before a general meeting of the whole University, the subjects falling under the department of your class would naturally be included in this competition?—I think they might, with some advantage, hold their own place, but no higher place than what is due to the class; and I believe I may say, from the experience of a great number of years, that if such prizes were instituted, I think it would be of great value to the young men coming forward into the business of life. It would obtain for them a general knowledge of merit and patronage, which they need; and would operate to excite them to distinguish themselves by zeal and application.

Is the certificate of attendance in your class required at the Divinity Hall?—No.

Would it interfere much with the attendance at the Divinity Hall if the students there attended your class?—From the prodigious labour arising in the Divinity Hall from the increase of students, and the necessity of hearing discourses, the Professor of Theology has, for a good number of years past, been obliged to have more than one hour; I believe in some instances two hours. The second hour interferes with the Rhetoric class; and I may venture to say, I have suggested it to Dr. Ritchie that the second hour interfered with the Rhetoric class; and but for that, probably the number of students in regular attendance at the Divinity Hall would have come to me. If they are regular students of Theology, I can expect none of those who are attending the full course at the Divinity Hall. I have suggested to Dr. Ritchie, that though the second hour was beneficial to the gentlemen and to the students in Theology, it did interfere with the opportunities of those young gentlemen who had other objects to pursue; but the necessities of his situation compel it, and it is fit that students of Theology should receive all the benefit of his criticism, which is most important to themselves.

Supposing the hours were so regulated as not to interfere with each other, is the nature of the course of study prescribed at the Divinity Hall such as would render it inexpedient to superadd, to that course of study, attendance at your class?—In reference to that I would speak with the utmost reserve and delicacy unquestionably. I may venture, however, to say, that it consists with my knowledge, so far as I can know anything of that kind, that the Professor is very much circumscribed in delivering lectures himself, when he hears 230 or 240 young men delivering discourses in a session of six months' duration. It can easily be conceived how much time will remain for him to teach Theology; that part of the labour cannot be superseded by anything whatever. It must be submitted to, and the Commissioners will learn that better from others; but from my own experience, having been 26 years here, I have not been unobservant of what has been going on. The number of students in Theology increasing the labour of hearing discourses, may be considered as prodigiously great, especially when it is known that the Professor so hears them that he is able to give a correct criticism (which I believe was never better done) on each discourse, pointing to its merits and its defects.

With reference to the course of study prescribed at the Divinity Hall, do you think the addition of attendance on your classes would impose too great labour or too great academical attendance on students of Divinity?—It is not the labour, it is the hours of teaching. It will be very easily understood, that from the immense number of classes, the difficulty of finding an hour suitable to each Professor is so very great that it is almost impossible to change without loss. I have never changed. As an old Professor, I have repeatedly had opportunities of choice of an hour; for when a young Professor comes in, in the same Faculty, that deference is shown to the senior Professor, that if one hour is more eligible to him he has his

147

University of Edinburgh.

The Rev. Dr. Andrew Brown.

9 October 1826.

option. I have never made an option, from the difficulty there is of taking another hour from the various branches of study which are prosecuted at the same time.

What hour is your class time?—Twelve o'clock.

Even at present do the hours interfere very frequently?—They do very often.

Are you a clergyman of the Established Church?—Yes.

Do you consider that it is a disadvantage to the students of Divinity that they have not the opportunity of attending your class?—Without speaking of myself, I have no hesitation in saying firmly, that, considering the department of study belonging to my class, I hold that it is an indispensable branch of the education of a clergyman; and, in the condition of the country, and the progress of refinement and delicacy of sentiment, all young men coming to our Church would be incalculably better for it, and some, if they had known what passes in the country, would be of my opinion.

Is there any other difficulty you foresee in requiring the attendance on your classes from the students of Divinity, except that which arises from the necessity of attending so much to hear the discourses of other students at the Divinity Hall?—Nothing distresses me so much as to compel students of Theology to attend this class in the College; and if I had the command of the whole Church of Scotland, and could get their unanimous vote, I would hardly be disposed to bring such a question forward, for it never would be acceded to in our Church; and I do not know, as the Church exercises a judgment of its own, by what authority anything of that kind could be established—I know of none; what powers there may be are unknown to me—I know of none.

Is that in consequence of the additional expense it might expose them to?—Yes, always the additional expense; and in our Assembly I have heard grave remarks on subjecting students of Divinity to expense at all.

Is there any other objection that you see?—So far as relates, in my humble opinion, to the general interests of learning and the general progress of education, none occur to me.

Or as relates to the interests of the Church?—None.

Do students of Law generally attend your class?—Not in a very great degree. For the Faculty of Advocates a large proportion do; but more have come pointing to the law from Ireland. Of the students attending the University of late years, more have come than I could have believed would have been attending this University as a separate body of students. Some of the best exercises in my class have been produced by Irish students for the law.

Will you inform the Commissioners whether there would be a very great difficulty in arranging the hours so as to allow students of Divinity to attend your class as well as the other classes they are bound to go to?—There would be a considerable difficulty, I apprehend, from the knowledge I have of the different hours of study, without they took a very early morning hour. There are hours in the College of a very early period; the Materia Medica, for instance, and some others of the kind, which begin early; but unless it would be an early hour, about nine or ten o'clock, I do not know that it could be easily arranged.

In your opinion, is the advantage that would be derived from it so great as to render it of importance to overcome that difficulty?—In looking forward to the probable business of a Rhetoric class in time to come, to the progress of knowledge and refinement in our country, and the necessity of every public man appearing to be unexceptionable, and to please, I do conceive it may be of high value. I may be mistaken, but the impression is strong on my mind.

Do you think any arrangement could be made by which it could be effected?—I have expressed a sense of difficulty from the vast number of courses that must be arranged, the limited hours of the day and the limited hours of teaching.

Would it not appear to Dr. Brown, that Rhetoric should be studied before Divinity rather than simultaneously?—In my discretion, I should think the proper place of Rhetoric would be before Logic; it relates to a popular subject; it is very intelligible in its principles: a great number of examples might be taken from writers with whom students were more familiar than at other times: in my opinion, it has always appeared to be the best course for introducing the students to the severer investigations of intellectual Philosophy.

In that case, could an arrangement of hours be more easily brought about if it preceded Logic?—If it could be appointed as a course for students to take Rhetoric before Logic, I believe it would be far easier; but as it is, it is left to the discretion of every individual to take or decline as he pleases.

Might it not be the best arrangement to have it in the same year with Logic?—There would be no difficulty in that at all, for originally it was included as one of the departments of Logic, and they would go very well together, in my opinion.

You mention that you were in the practice of prescribing three series of essays; is it for those essays you give your prizes?—The last series.

Do you examine those essays yourself?—I myself alone.

As you take them successively, have you had the satisfaction of seeing if there is great improvement in the composition of the students in the course of the session?—I may not say that all the students write all the essays, and I never precluded any student entering into competition for the Prize who did not give in a previous exercise, though I have invariably said I should like far better to see a first and second exercise from every student who enters the competition for Prizes.

Have you any idea of the proportion of students who do write essays?—A considerable portion in my class, a very considerable proportion indeed: the number being small, and the majority coming to me, being zealous for improvement of late years, the last year, I may venture to say, it was a considerable occupation to me.

If these young men possessed genius and talent in writing these essays, does it fall under your observation, so that you can state that there has been great improvement by writing the

University of Edinburgh.

The Rev. Dr. Andrew Brown.

9 October 1826.

essays, or if there has been a great difference between the first and the last of the series?—I am not prepared, from the recollection of the facts, to deliver a decided opinion upon that point. I dare say it did them no harm; but that there was a great and marked improvement, is a subject I would not like to give a decided opinion upon.

About what part of the session do you begin to teach, and how long does your class continue?—At the beginning of the session for four months.

Do you conceive that time amply sufficient for a complete course of Rhetoric?—I have hitherto finished it in that time.

If you began it at the commencement of the session, and went on to the end of the session, but lectured fewer days in the week, would not some of the difficulties perhaps be got rid of, as to the hours?—Greater difficulties in my opinion would arise; the body of the young gentlemen who attended my predecessors (I know, for I was acquainted with it at the time) had not hours for the two extra days in the week, and those hours were lost, though it was for the benefit of the young gentlemen the first year. I took the course whenever I had the command of a course. I lectured five days, and occupied their whole time, and was sooner done. I have no hesitation to say, in Rhetoric classes the attendance grows thin towards the close.

How soon after the commencement does the giving of essays begin?—The second week I introduce the subject with a general view of the course, and with a few practical rules directing exercises in composition, and in a day or two following the first series of essays is given out.

Do such as choose give them in?—I have no control over them.

Is it possible for any one to be advanced to the degree of Master of Arts who had attended the Rhetoric class, though he may have performed no exercises whatever?—In that case the examinations supersede all; they must submit themselves to examination, and the examinations preclude every thing of that kind.

Do you grant a certificate?—They have a certificate of attendance from me.

Do you mark on that certificate, more or less, your satisfaction with the attendance and conduct of the particular student who gets it?—Whenever students gain prizes, and write essays creditable to them, I have thought myself entitled to say so.

Do you mark irregular attendance, or deficiency of attendance?—Never, as I had no means, and I have never so done certainly.

In the case which has lately been put to you, might not the degree of Master of Arts be obtained by individuals who attended your class, and who had never given in any composition whatever?—I should not be disposed to say that that had not occurred.

Is there no composition required at the time the degree of Master of Arts is taken?—No; the Faculty of Arts some time ago laid on the table of the Senatus Academicus a proposition that would have made composition, or at least translation, necessary, but that proposition did not pass.

When was that proposition made?—I think it was at the breaking up of the College, either in 1823 or 1824,—perhaps 1824; the paper was returned, containing that proposition by the Faculty of Arts, and I should hope was on the table before the Commissioners.

Does Dr. Brown think it would be of advantage to revive public laureation?—I think it of great moment, if it could be done. We have been trying, I may say, ever since I belonged to the Faculty, to make that degree more respectable and more difficult of acquisition.

Do you remember the practice ever having occurred in this University?—I believe there were two or three theses given in and printed, and defended, and the graduation was, I believe, in the Common Hall. I have understood so, and I understood Dr. Blair was so laureated.

Of those who have taken degrees of Arts of late years, does Dr. Brown know if any portion had ceased to be resident before they took the degree?—We have given no degrees in absence lately, but about residence or non-residence I cannot say: I have no means of knowing.

Are there many instances in the University of the degree of Arts being taken by general students?—I think there are a good many of them general students. I am speaking from impression, and not from accurate examination, and I may speak with a good deal of latitude; if I were to speak from impression alone, without attaching much to it, I would say the fair half of them were for general education.

Edinburgh, Tuesday, 10th October 1826.

The EARL of ROSEBERY in the Chair.

William Wallace, Esq., Professor of Mathematics, called in and examined.

Professor Wallace.

10 October 1826.

Are you Professor of Mathematics in this University?—In signing Academical Diplomas, I call myself Professor of Mathematics and Astronomy.

Is that your designation in your commission?—No; simply Professor of Mathematics.

Do you entirely concur with the other members of the Senatus Academicus in the answers which have been given to the Royal Commission?—I believe so; I do not know that I have seen them all; but I shall state that I concur, for I am quite sure that nothing would be said that I would not concur in. I have given in my own; I say *primâ facie* that I concur.

Is there any thing that you would wish to add to or suggest in the shape of alteration to those answers?—Generally speaking, No.

With respect to those answers that relate to the Mathematical class, have you any alterations or additions to propose?—There have been so many meetings, I am not sure that I have seen them all; there have been meetings day after day, but I cannot say I have seen all the answers given in. I have seen my own answers.

Have you attended all the meetings?—No; many things came in the way that prevented me.

149

University of Edinburgh.

Professor Wallace.

10 October 1826.

Have you generally given your attendance on those meetings?—I attended as often as I thought there was any thing of importance.

Was it only at the meetings of the Senatus Academicus that the Professors had an opportunity of seeing the questions that were sent, or the answers that were returned by the whole Senatus Academicus?—I believe, if I mistake not, the answers were only concluded on Saturday, and the meeting was called on Saturday. The time for furnishing the answers was so short, that there was not much time to see them in any way. I will say I have nothing to add to the answers so far as I know them.

How many persons generally attend your class?—I have given in a return, and I can give the number that attended every year.

Generally speaking, what may be the average?—The average of six years is 188.

Does that comprehend all the classes?—All the Mathematical students.

All of the three classes?—Yes; beginning with 1819 and 1820, ending in 1824 and 1825, I find I have averaged them at 188.

What may be the average ages of your students, beginning with the first class?—I should say from thirteen to fourteen and upwards of all ages. I have had them of twenty years of age very often. I have had men who have been in His Majesty's service for years; for example, officers in the navy; but I say from thirteen to fourteen and upwards, probably to eighteen, may be the general average.

Is your class divided into three classes?—Yes.

About what age are the scholars that compose the first class?—It must be about fourteen or fifteen. They should come to me in the second year of their academical course.

How long do they remain in that class?—All the session. One session completes that class.

Then do they proceed usually from that class to the second class?—That should be the regular course, but many never return.

Is the second class composed of an older description of scholars?—Yes, rather; generally speaking, they may be a year or two older. I would add, many come to the second class who have not been at the first.

Is that the same with respect to the third class?—Exactly so; whatever applies to the first and second, applies to the third as to the time of coming.

What age do they enter the third class usually?—Some of them are considerably older; for instance, some of them practising engineers; some officers in His Majesty's service have also attended. That class is not so definite in its constitution as to age as the other two.

But still in the third class you have no very young boys?—No, none very young in the third class; certainly not.

Have you any system of giving Prizes, or classification for merit or proficiency in either of the classes, or all of them?—There is an allowance of £10 a-year given by the Patrons of the University for Prizes. I have hitherto confined that to the first and second classes; the sum is so small that it will not admit of being divided into three shares.

Then, in the third class, there is nothing in the shape of either prize or classification with a view to emulation?—Hardly. I have given prizes once or twice myself to excite emulation.

Is there any examination of any of the classes?—Yes; the first class is regularly examined every day. We begin the duty of the class by examining on the lesson of the preceding day; after that has been gone through, there is a lesson prescribed and explained for the following day.

And with respect to the second class, is there any examination?—It is pretty much the same. I would add, however, to that, the students being rather more advanced, I can place greater dependence upon their not neglecting their lessons; and the subject being considerably different, it is not so easy to examine them *viva voce;* but exercises are prescribed each day, and they are called upon on the following day to give the answers.

Are the answers in writing?—Sometimes they are delivered *viva voce;* sometimes in writing, according to their nature. I would add, that in the first class the elements of Geometry are taught, and afterwards Plane Trigonometry, with its application to the mensuration of heights and distances, also Mensuration in general. It is very easy to examine these branches, for a proposition is explained and prescribed as the lesson for the following day; and the students are called upon to demonstrate the proposition given out, and I record the number of times each has been examined, and the quality of his answer, whether it has been properly answered or imperfectly answered; in explanation I can show the Commissioners my catalogue; [the Professor here produced a catalogue to the Commissioners.] There are the students' names and the private marks: the + means that it is well answered; a single dash — means the answer is not good; the B means that the person excels; B B means that he excelled more than the other, &c.; there are little marks in pencil, indicating his absence from the class, and another mark indicates he was called on and did not answer, though very likely he was there.

Is the same course pursued with respect to the third class?—No; the subject is of a more difficult nature, and the students are more advanced in life. I generally spend the time in lecturing and illustrating every thing by numerous examples, but there are weekly exercises by which I ascertain the proficiency of each, and I record the number of these exercises also; but as some of the students are men come to the years of discretion, it is not so convenient to call these up.

Do you, in the examinations to which you refer, call every scholar up?—Yes, unless he requests that it shall not be done.

What do you mean by saying that you call every scholar up unless he requests it shall not be done?—One on entering the class may pray that he may not be examined. This happens

University of Edinburgh.

Professor Wallace.

10 October 1826.

very seldom. I do not know that I have had any in that state the whole of last session; perhaps there may have been one, but generally speaking every student is called, as may be seen by the list of names.

Will you inform the Commissioners whether they are called promiscuously or regularly?—Promiscuously.

Does any scholar know when he is about to be called upon?—No scholar knows when he is about to be called upon.

What is the reason of an individual asking not to be called?—I cannot tell—perhaps idleness, but I would not listen to that; sometimes perhaps bashfulness, sometimes from having a provincial accent, which makes him remarkable; or perhaps there is something awkward in his manner.

Do you sometimes acquiesce in the request, and sometimes not?—I always recommend to them, if they apply for that indulgence, to pass from their request as soon as possible. I may agree to it; but I say, I hope by and by they will allow me to examine them.

If they persist in that wish, do you agree to it?—I must agree. There is not above one in a year. Some are lads from the remote parts of the island; their manner is sometimes awkward, so that it is very painful to them to be called up. In this very year there was one of the best I had who got a prize, and who was hardly ever examined. He was a remarkable instance: he was a cotton-spinner who came from Manchester to Edinburgh to learn Mathematics; he never had been at a school in his life, but I was well assured of his proficiency by other means.

Did he get that prize without ever having been called?—He was called very seldom indeed; he got it for study. In such cases I cultivate an acquaintance with any one who is remarkable, and from my acquaintance with this one, I was well assured he was one of the best in his class; he attended all the classes.

Then did he get the prize, not from anything he did in your class, but from your source of private information?—I know he used to lie in bed and study the Elements of Geometry at home; he had figures drawn and hung up in his room—in that way he studied Geometry; and he went over all the books in Euclid in a few weeks after he came.

Was the knowledge upon which you proceeded, and from which he obtained the prize, gained by his appearance or conduct in your class?—By his conduct, certainly.

Then he obtained the prize not by examination?—Not by public, but by private examination.

Was it gained by exercises?—Yes, by exercises and private examination.

What was the prize given for?—It was for unwearied application, and for proficiency.

Did he perform the exercises of his class?—He performed the exercises; they were weekly exercises.

Have you any public examinations towards the close of a session, or at any particular period?—There are no examinations more public than in the class.

Have you any examinations towards the close of the session, so as to ascertain who are the ablest scholars?—Yes, there is a competition open to each class.

Does it happen once in every session?—At the end of the session the classes meet either together or separately, whichever I find most convenient.

Are those that are best, either for conduct or proficiency, classed separately from the others, or are they known to the rest of the classes?—I never give a prize for pure good conduct, for this reason, that a person who excels is most likely to conduct himself well too. I give the prizes for what is done on the day of competition, combined with what has been done in the course of the session. I take into account what is done on the day of competition, and what has been done in the course of the session, chiefly in giving answers to exercises.

Do you conceive you have any authority to enforce attendance, or to introduce any other kind of discipline in your class?—I have no exact notions of authority; I conceive I have authority to refuse a certificate to one who has not attended regularly.

Is the attendance on your class necessary for degrees?—For degrees in Arts and for students in Divinity.

Do you think you have authority at your discretion to refuse certificates?—I conceive so.

Do you practically exercise that authority?—Very seldom, indeed hardly ever; it is too great a punishment. In cases of great delinquency, a certificate is never asked for; but I seldom or ever refuse a certificate where there has been anything like a regular attendance. The punishment, I consider, is too severe to attach to a young person.

Have you any other mode of punishment short of refusing a certificate?—No, I inflict no fines; it has not been the practice in the mathematical class, for I consider my class as not altogether a junior one.

Do you ever grant a certificate to a young man who has never been called upon to answer?—I must have called upon him unless his case was very particular. I never would grant a certificate, I suppose, without some good grounds. I act with as much prudence as I can to prevent abuse, and at the same time to avoid producing evil consequences to young people.

Do you act without knowing with precision the full extent of your authority?—I know no rule; I have had no occasion to go beyond my own supposed authority.

Does the third class of Mathematics appear to have been much taught prior to the year 1820?—I was appointed in November 1819.

Have you regularly taught the third class during your appointment?—Regularly, except the first year. The numbers are very small, but I like the thing; and I wish to give every one an opportunity of acquiring the branches of the Mathematics taught in that class.

Do you know whether Professors Playfair and Leslie were in the habit of teaching a third class?—Professor Playfair was; he taught a third class. I cannot say for Mr. Leslie; I was not in Edinburgh in his time.

University of Edinburgh.

Professor Wallace.

10 October 182

Have you any means of knowing the subjects that were treated of by Mr. Playfair in the third class?—Yes.

What is the source of your information?—I attended one year, and in others I went into his class.

Have you a syllabus of his lectures?—Yes, I have; it was not his usual third class, it was a class out of the ordinary mode, and therefore I call it a third class.

Does he appear to have treated of Astronomy, Gunnery, and Fortification?—Yes, he did. That was, however, a peculiar class; I do not know that he gave it more than one year. I attended that course, but I left Edinburgh soon after that time.

In your third class, have you hitherto taught any part of Astronomy?—Never directly, excepting perhaps some applications of Spherical Trigonometry, but never as Astronomy.

Can you state if Professor Robison was in the habit of considering Astronomy as belonging to the class of Mathematics?—Yes, he did consider it as belonging to the class of Mathematics. I have got an extract from notes of his lecture, written by Principal Baird, which I have had in my hands for several years; it will be found written there, "The first object of attention, then, must be to determine the real motions from the apparent motions. This, I may observe, is not the proper business of this class."

Was that while he was Professor of Natural Philosophy?—Yes—"It is rather a branch of Natural History or pure Geometry; and, accordingly, it has been treated of in the third Mathematical class in this College; and if I had thought you had all attended these lectures, I should not have troubled you with anything here upon the subject."

Was that while he was Professor of Natural Philosophy?—Yes, and Mr. Dugald Stewart was Professor of Mathematics.

Have you had experience in teaching Mathematics before coming to this College?—Yes, I was seventeen years in the Royal Military College, and eight or nine years in the Academy at Perth.

Are the students of Divinity obliged to attend your class one year?—Yes; one year they are obliged to attend some one or other of the classes; and that accounts for many coming to the first and not to the second, and coming to the second and not to the first.

Which class do the students in Divinity generally attend?—I cannot exactly say. This I can say, that those who come to the second class, and not to the first, are very ill prepared, and make an indifferent figure. Those who make the best figure have attended the first and second.

Is there any law of the Senatus Academicus, or any regulation of the College, prescribing the teaching of a third class, or do you understand that to be voluntary?—I understand it to be entirely voluntary; it may be taught, or discontinued. I believe it was the practice of my predecessors to teach it in some years. I did it very much for the pleasure of the thing, and because I wished to disseminate the higher branches of Geometry among the youth of Scotland.

What subjects are treated of in the third class?—The Differential Calculus. I begin, however, with resuming some of the subjects in the second class, such as the Calculus of Sines, the Theory of Logarithms, Analytic Geometry, and other branches. Then I dedicate the rest of the session to the Differential Calculus. I lecture every day, whereas the practice of my predecessors had been only to give three or four lectures in the week. I lecture every day in the third class, from the beginning to the end of the session.

Do you lecture on Saturdays?—Not in the third class on Saturdays, but generally in the other two classes, if I can get them to attend; but it is not easy to do that.

Judging of the proficiency of the young men who came to your second class, were the young men whom you had occasion to know as well instructed in Mathematics as young men at the same time of life you met with formerly at the Military College?—The systems of instruction are so different, that there is a difficulty in giving an opinion, for the time allowed was much longer in the one case than in the other.

Was the time of attendance longer at Sandhurst?—Yes. The systems are so different, that they are not comparable in their effects.

Do you find many of the students leave you before the expiration of the session?—Very many, I reckon. The regular end of the session is about the middle of April, but before that time a great many are off.

What is the class of students who generally go?—The first and second class.

What description of students?—The poorer ones. It arises not from a dislike to learning, but the means of living in Edinburgh begin to get scanty at that time.

Do you find that that is the case with a considerable proportion?—A considerable proportion.

Do you consider that the length of the session for your first two classes is sufficient for the object of the course?—I can never get all in I would wish to take in, particularly in the second class; but the science is unbounded, and it would be the same if I were to teach a whole year: at any rate, I never get in all I would wish.

Have you any means of compelling the young men attending your classes to perform the exercises?—It is a voluntary act.

Is it entirely voluntary?—The honour of the thing is expected to stimulate them.

Of the average number attending you, what proportion do you suppose perform these exercises; does a third?—Yes, more than that. This book I have in my hand will show; but cannot say the exact number.

Do you suppose there is one-half?—Yes, more than a half, I should suppose, in the beginning; but they very often fail before they get to the end of the session.

That is as the exercises become more difficult?—I do not know the cause, but many begin and afterwards remit; probably that is one cause.

University of Edinburgh.

Professor Wallace.

10 October 1826.

When you find a young man does not attend your class, what means have you of enforcing attendance?—I have no means of enforcing attendance but by refusing my certificate. This book is the criterion by which I determine the quality of the certificate, either at the end of the session or at any after period. There is the mark by which I determine those entitled to certificates of approbation. [*The Professor opened a book and referred to a page.*] I dare say there is half who have got the mark of being good.

What is the mark of being good?—B; some have B B for a greater degree of excellence, and some B B B.

Have you recourse to any method for ascertaining if they do regularly attend?—I call the roll daily in the first and second class—almost always in the first, and generally in the second class, but not always; and never in the third, because there are not perhaps above a dozen or eighteen students in that class.

If you find that the third class (which you have regularly taught hitherto) should answer, and that young men continue to attend it, is it your intention to teach any part of Astronomy?—Certainly; I intimated that to the Senatus Academicus in the year 1822 (I think), that I intended to teach Astronomy alternately with the Differential Calculus. It is my intention to do so still.

What prevented you from doing it then?—I met with opposition from one of my Colleagues, which soured me a little on the subject. I applied for an Observatory to the Commissioners for building the College; they promised me an apartment for the Observatory, but they have not yet been able to perform it. I do not think it is their fault; they have not yet found it possible to perform it. This, and the unpleasantness of a controversy to which my proposal gave rise, were the circumstances.

What sort of a controversy do you mean?—My doing so was objected to by the Professor of Natural Philosophy.

On what ground was it objected to?—Upon the ground that it was an interference with his class.

Do you know when Astronomy was first taught in the College of Edinburgh?—Yes, from the very first institution of the chair.

In what year?—In 1674.

What chair did it belong to?—The chair of Mathematics.

Was it taught by Professor Gregory?—By the first James Gregory.

Was it taught subsequently?—It was, by every Professor down to Professor Playfair; it was taught by David Gregory, the successor of James, and it was taught by the second James Gregory.

What time was that?—He came into the chair in the year 1682. It was taught afterwards by M'Laurin, who was associated with him in the chair in 1725.

Was it taught by Professor Stewart?—Yes, it was taught by Matthew Stewart, and afterwards by Dugald Stewart, and again by Professor Playfair.

Was it taught uniformly down to the time of Professor Leslie?—Uniformly from the days of James Gregory, who was the first Professor of Mathematics, down to Professor Playfair inclusive; and Professor Leslie expressed his intention to teach it, but did not actually teach it.

Was it his intention while he was Professor of Mathematics?—Yes, his intention while Professor is well known.

How did Professor Leslie sign diplomas when he was Professor of Mathematics?—He signed himself Professor of Mathematics and Astronomy.

Is that consistent with your knowledge?—Yes, for I had one of the diplomas in my possession lately; and I can give the Commissioners other testimony, by referring them to the rules of the Astronomical Institution, which contain a list of the names of the members who belong to it; in which list there will be found that Mr. Leslie is called Professor of Mathematics and Astronomy (he is one of the proprietors of the institution), and this was assented to by Professor Playfair.

What became of this controversy before the Senatus Academicus; was there any deliverance thereon by the Senatus?—Yes, a deliverance was given; my announcement of my intention was recorded in the deliverance.

What was the purport of it?—That I was entitled to teach Astronomy.

Did that imply that the Professor of Natural Philosophy was not entitled to teach it?—No. He also applied for an Act of the Senatus Academicus to prevent me from taking the title of Professor of Mathematics and Astronomy; but the proposition was refused.

When you can prepare a course, is it your intention to teach it?—It is my positive intention to do so.

You stated that the class was established in 1674?—The class was established in 1674.

Do you know how Astronomy was taught before that time?—All branches were taught by the previous Professors or Regents. There were four Regents, each of whom taught every branch in the whole circle of the Sciences, as far as he knew, to his students; of these, there were three particularly designated Professors of Mathematics at different times; but I cannot say exactly where. I know they taught, for we have some of their lectures in the University.

Do you know what instruments Professor Playfair had?—I understand he had no instruments but his own, such as telescopes; but I do not know how many. He could hardly teach all the parts of Astronomy without instruments; he could explain their application.

Are there any instruments belonging to your class, which have been given by the Patrons?—There are no astronomical instruments, properly so called; there are some of the minor instruments that belong to the class; but I am unfortunately very poor in instruments indeed, and I have never applied to the Town for fear of being refused.

Will Professor Wallace inform the Commissioners, if he knows any thing of a Professorship

University of Edinburgh.

Professor Wallace.

10 October 1826.

in this University, which was known or called by the name of Practical Astronomy?—Yes, I know about it.

What is it you know about it?—Why, that it was never taught, I believe, at this University.

Do you know any thing of a Professorship of Astronomy?—Yes. Dr. Blair was appointed Professor of Practical Astronomy; and I have no doubt he would have executed the duties of the office. The office of Professor of Practical Astronomy was instituted by the Crown, and the Doctor was appointed first Professor about the year 1786; and I have no doubt he would have executed most faithfully the duties of his office. At that time he was a zealous student and cultivator of Astronomy and Optics; but he could not carry his views into execution, because Government declined to erect an Observatory for the use of the University.

Do you happen to know how it is that the name of Dr. Blair is not introduced in the list of Professors in the Appendix which has been returned to the Commission?—That must be accidental; he has never attended any of our meetings; he has not been in the University but once or twice for many years.

Is there a salary annexed to that office?—Yes, it is recorded; I think it is £100 a-year.

Can you give the Commissioners additional information respecting the history of an Observatory?—I can give the history from the beginning.

Can you give any additional information on the 62d answer in the Appendix?—I refer to the Appendix, to Number 62, page 58; and I beg further to state, that the three Professors *ex officio* members, should have the privilege of introducing their pupils to the present Observatory and Physical Cabinet, under such regulations as the members of the Astronomical Institution may form. No student to be admitted unless accompanied by the Professor under whom he studies.

Are those three *ex officio* members—the Professors of Natural Philosophy, Mathematics, and Practical Astronomy?—The Professors of Natural Philosophy, Mathematics, and Astronomy, and Practical Astronomy, are the three *ex officio* members of the Council.

Is there not a third class for Practical Mathematics, and do you devote any time to that?—Yes, in the first class I devote the Saturdays to Practical Mathematics; and the conclusion of the course is entirely practical, for it is the application of Geometry to heights and distances.

Has the attendance on the third class been as great as you anticipated when you commenced it?—Yes, it has been greater in fact. I have been told that Professor Playfair gave a course of lectures to five or six pupils in the third class; I lay it down as a rule to go on if I get five.

Did you state that your numbers had been from twenty to seventeen?—Not always so many; the exact numbers have been given. If I am asked if it is a profitable class, I would say it was not; I give many gratis tickets to deserving young men; I am always willing to give a gratis ticket as an inducement to one to attend.

How many gratis tickets do you give in a year?—It has been very various; I dare say the first year I might give from ten to twenty. I cannot tell exactly; I give always a certain number every year—in short, I never refuse any; if a person came and asked for a gratis ticket, I never once refused him.

With regard to the third class, you have stated it might be taught or not at the pleasure of the Professor. If it be omitted, is there any other way in this University in which the defect can be supplied?—No other way in this University, and this is a reason why I teach it, that there may be no reproach on the University that it is not taught.

Do you think this class is essential as a preparation for a course of Natural Philosophy?—No, I think it is not essential; a less degree of knowledge is sufficient.

When does Professor Wallace consider students capable of entering the class of Natural Philosophy—at the end of the first or the end of the second year?—I think they require both the first and a second year. I think the first and second years at the Mathematical class are necessary to enable them to acquire a correct knowledge of Natural Philosophy; but they ought to have one year at any rate.

Would it be attended with good effects, if, in granting a certificate to students, it were mentioned that the young man is capable of entering the Natural Philosophy class?—My granting a certificate of attendance will enable the Professor of Natural Philosophy to judge for himself, if the student is qualified.

Would it not be beneficial to students in Divinity, if their proficiency was ascertained before entering on the course of Natural Philosophy?—Yes.

Are you acquainted with the practice in the College of Glasgow, which is called the Blackstone Examination?—Very little.

Do you know, if, when a student enters himself at Glasgow for the Natural Philosophy class, the Professors of Mathematics and Natural Philosophy examine him in his proficiency in Mathematics, and if he is not qualified to go on with Natural Philosophy that they remit him to the Mathematical class?—I am not aware of that.

Would it be beneficial to introduce such a regulation into this University, in the case of those students from whom attendance on the two classes of Mathematics and Natural Philosophy is required for the respective professions for which they are intended?—I think it would be beneficial.

With regard to prizes, you have stated that they are confined to the first and second classes, in consequence of the limited means given to you; does it appear to you that there was less exertion in this University when no prizes were given?—I think so.

Was that the case when you studied yourself?—I cannot tell; but if I am asked if prizes are useful, I have no hesitation in saying they are highly useful.

Do the students appear to be anxious to obtain prizes?—Yes, they are all anxious to obtain prizes in one class or other.

University of Edinburgh.

Professor Wallace.

10 October 1826.

Is it possible for a student to obtain prizes by exercises which are not performed by himself?—No, not with me.

In cases where there is no examination, what other means does the Professor possess of ascertaining the real merit of the student, or detecting if an essay has been written by himself or others?—I intend that it should be understood that my classes are all examined, except the third class, in one way or other.

If an essay comes in to you which, from some circumstances, you have reason to suspect the student has not written himself, do you examine him on that essay to ascertain if he himself wrote it, or do you take any other means to ascertain it?—It often happens that I get two exercises much alike, and I am assured, from the principles of common sense, one has been copied from the other, but I cannot always say which of the two persons wrote the exercise; it would be a very unpleasant duty for me to call up the student in the class, and say, "You did not perform that exercise." But, however, I do practically the same thing; I write a remark on the exercise, and say, this is very like another exercise. That is all I can do; I am exceedingly tender of moral character.

You have been talking of two essays coming in, and suspected of being written by one hand; but suppose you get a remarkable good essay, which appears infinitely better than that student could have written from your previous examination or your knowledge of his proficiency, do you take means to ascertain whether he has, notwithstanding the apparent improbability, written that exercise?—I am afraid the nature of any one of my exercises is not sufficiently understood; it is not like a long essay that requires days for its composition; it is merely a proposition to be demonstrated, or a problem to be solved. The means by which I do it is by comparing one with another. If I find a person that I am sure copies his exercises, I give him no prize, nor anything of the kind. I would refuse his essay if I thought proper; but I am forced to do all these things in a gentle way, rather to correct the evil than make it known in the class.

Suppose an exercise was given in that you suspected a young man had not written, could you not, by putting a question to him without saying anything about it, know if he was capable of writing it?—I know, from other examinations, the exercises are not exactly on the subject of the day's lesson: but the nature of them I had better explain. On the Saturday I propose two propositions on Geometry or Algebra, and it is a voluntary act of the student to give solutions to these in the course of the following week, and they are all given in to me. I examine them, and, as well as I can, discover whether they are written by themselves or not. If I am sure that they are written by themselves, I bestow praise in the class when I return them; but I do not exactly say whether they are copied or no, for it involves a question of moral character, which I, as an individual, feel great delicacy in touching. I sometimes say in the class, "Gentlemen, I perceive that some of you copy from each other; but I do not mention the person's name."

Do you ever inquire of a scholar who you think has had his essay written by another, whether it is his own or not?—I make an insinuation to that effect on his exercise; I say there is another very like this, which is a hint to himself; that is all I do.

How are the prizes decided in your class, by the students or by yourself?—By myself.

Are they decided without any intervention of the students?—Without the least thing being said by them on the matter. I consider the person who performs most of the exercises as the person who gains the prize. The only exercises copied with me are weekly exercises; but the exercises for determining prizes cannot be copied from one another, for I am present when they are performed. I consider the weekly exercises a thing that I cannot take so much care of; but when I am determining prizes, I remain myself in the room during the competition.

Then no person can receive a prize who has had his exercise made by another?—No person can receive a prize who has had his exercise made by another, as I am present; they are convened in the class-room, and not allowed to go out after they come in, except on condition that they give their word of honour that they will not avail themselves of the opportunity of going out; they are all required, by every principle of honour, to act correctly. My class is peculiar: it is impossible for other classes to do the same thing; in these they write long dissertations at home, and hand them in, but in my class the exercises were performed, and the prizes determined, in my presence,

Does it appear to you that the giving a prize to a student whose merit is not satisfactorily ascertained by the rest of the class, could have any effect in exciting the exertion of others?—I should say no; but I would add, in my class the thing cannot happen.

Is it your opinion that it would be expedient to re-establish the ancient practice in conferring degrees of Arts in a public and solemn manner at the conclusion of a Philosophical course?—I think it would; but in practice the number of degrees in the University is so small, one would be unwilling at present to offer any obstacle to their taking degrees; there are only about a dozen in a year.

Would not the literary distinction thus attained, be a great inducement to those who could spare the time and means in acquiring it?—I think it would; every thing of that kind would be useful, only perhaps it would prevent many coming forward; certainly it would be useful.

In the case of a Professor being laid aside by occasional indisposition, how is his place supplied?—In my own case, I have had such good health I was never laid aside more than a week, and I cannot say what I would do were it otherwise.

Is there any rule, that in such a case you shall apply to your colleagues for assistance?—When Dr. Thomas Brown was taken unwell, he applied to the Senatus Academicus for permission to a certain person, whom he nominated, to read his lectures; that permission was granted, and the lectures were read.

Is it your understanding that you are entitled, as a Professor, to introduce any person in your class for that purpose, without the leave of the Senatus Academicus?—I believe not.

University of Edinburgh.

Professor Wallace.

10 October 1826.

Have you reason to suppose that such a practice at any time took place, of a Professor introducing any person without permission?—It is not in my recollection, but it may have happened; it has taken place in Divinity that some person has taught for another, I think—whether with the leave of the Senatus or not, I do not exactly remember; perhaps a Professor might read lectures for another without application, but I cannot say with certainty.

In the Appendix to 62, a variety of sums appear to have been dedicated to the erection of an Observatory; and the fund for that purpose was put into the hands of two persons, both of whom unfortunately became bankrupts; it previously appears that this fund was at the disposal of Mr. M'Laurin; do you know by whom the fund was put into the hands of these bankrupts?—I suppose by the University, as they had the management of the fund.

The same Appendix to No. 62 states, that there is a considerable dividend obtained out of the effects of these bankrupts, and that this fund, which was to be laid out for the accommodation of the University, was placed at the disposal of Thomas Short, on condition of his giving access to students, for a small gratuity, to his private Observatory; do you know by whose authority that sum of money was put at his disposal?—I suppose with the joint consent of the University and the Town-council.

N.B.—The Professor of Mathematics begged to refer the Commissioners to the Scots Magazine of the date of 1741, page 371, for an account of the University of Edinburgh, and the course of study therein; and the Professor was desired to furnish the Commission with an historical account of the class of Mathematics, which the Professor expressed his wish to transmit.

Professor Wilson.

John Wilson, Esq., Professor of Moral Philosophy, called in and examined.

You are Professor of Moral Philosophy in the University?—I am.

Have you had an opportunity of seeing the answers which have been given in to the Royal Commissioners by the Senatus Academicus?—I have not seen all of them.

With respect to those which you have seen, do you concur with the other members of the Senatus Academicus?—Yes, I do.

With respect to those answers which you have had the opportunity of seeing, do you wish to make any suggestions or alterations?—My attention has been principally given to the business of my own class; but I am ready to answer any questions respecting the general system of education in the University.

Is there anything with respect to your own class you would wish to recommend to the Commission in the way of alteration or amendment?—If any questions were put to me respecting the management of my class, perhaps I may throw out some hints in reply.

When you speak of the management of your class, do you allude to the discipline of your class, or to any different mode of division?—I allude to the discipline of the class—if I may use such an expression as discipline with regard to a class in which there are at present no examinations; at least nothing which absolutely deserves the name of examination.

In what manner would you suggest that that discipline should be improved, or that alteration which refers to discipline effected?—I suppose the question to be examination or no examination.

You have said that there are at present no examinations in your class. Is that so?—I meet my class on the Saturdays throughout the session, and then I bring with me the essays which the students have written from week to week. I read portions from them, and make observations on them as I go along, addressed to the writers; and I am always willing and ready to speak with the writers on the subject of their essays privately in the class-room. These Saturday meetings take place at twelve o'clock. I frequently remain in the class-room until three, and sometimes until four. I mention to the class that the students may come from twelve to one, or from one to two, or from two to three, as suits their own convenience. There is thus always an audience, and by that means I can overtake a great number of essays in the course of one meeting.

Would you wish to recommend a different kind of examination from that which at present prevails?—I think the subject is involved in very considerable difficulties. Generally speaking, I should certainly think that examinations are excellent things; and if they could be carried into effect, students of Moral Philosophy would derive considerable, nay great advantages from them; but I give that opinion with certain reservations.

Do you think that, practically speaking, such a mode of examination could be carried into effect in your class?—I do not at present see how it could be carried fully into effect. No voluntary public examination could, I think, comprehend anything like a majority of the class, and I ground that opinion upon the experiment which I have so far made at the Saturday meetings. These are as well attended as I had expected; but they do not comprehend perhaps above one-third of the class; and I therefore strongly incline to the belief, that if there were very frequent *vivâ voce* examinations on the whole business of the class, and attendance on those examinations on the part of the students voluntary, that attendance would be more scanty and irregular than on the Saturday meetings.

Were you rightly understood to say that a change in the form of examination would be beneficial in your class, or an enlargement of the examination?—I think that it would be beneficial, unless the numbers attending examination were small, in which case perhaps it might be unadvisable to have anything like public examinations at all; for in that case they might perhaps not be very highly valued by the students.

That opinion arises out of a doubt whether the numbers would not be very much reduced?—That is one reason for my opinion, and it is built upon what I may call the constitution of my class. The Moral Philosophy class is composed of several very different orders of students.

University of Edinburgh.

Professor Wilson.

10 October 1826.

I have stated, in the written answer to one of the printed queries, that perhaps two-thirds of my students are students in Divinity, or call themselves students in Divinity. A very considerable proportion of those students, in my opinion, would attend voluntary public examinations. Of the remaining third part of the Moral Philosophy class, some are gentlemen who have finished their education, and many who attend this or that class as it may suit their taste or convenience; some are officers in the army or navy, others men of fortune, or strangers who are remaining a few months in Edinburgh. These of course could never be expected to attend any examination. Some gentlemen likewise attend my class who are apprentices in writers' chambers. They are generally among the best of my students, both in regard to regularity and talent; but at the commencement of the session they frequently tell me that they cannot count upon daily attendance, for that their time is not their own. Those gentlemen could not say they could attend examinations, though I am inclined to think they would be very willing to do so if they were able.

You have stated that you think public examinations would be very beneficial under some qualifications; are those the only qualifications which you have just mentioned?—They are the only qualifications arising from that particular view of the subject: the general question, as to the advantages of public examination upon such a subject as Moral Philosophy, certainly brings one upon debateable ground. It has been the opinion of many distinguished men, and I know it was the opinion of my predecessor, Dr. Brown, that examinations could be of no use upon such lectures as ought to be delivered from the chair of Moral Philosophy in the University of Edinburgh. I remember having heard Dr. Brown speak upon that subject, long before I supposed I ever was to occupy his chair. I do not distinctly remember all the grounds on which he seemed to have founded that opinion, but his chief argument was, that many of the discussions from the Moral Philosophy chair were necessarily of a very abstract and metaphysical kind, and that it would be almost impossible to put questions regarding them, to which it would be reasonable to expect distinct and definite answers. I think that observation not without weight; but still I am of opinion that many subjects ought to be, and are discussed, in a plain and practical manner from the Moral Philosophy chair, on which examinations could very easily take place, and on which examinations might be very useful.

Upon the whole, would you recommend an alteration to the effect of having public examinations, to a certain extent?—I am inclined to favour such a recommendation; for though I endeavour to the best of my abilities to discuss many very difficult and nice subjects before the class, still I also endeavour to accommodate my lectures as much as possible to the talents and information of students of various ages, from seventeen up to twenty-two or twenty-three years of age. Therefore, perhaps, in my lectures, some of those extremely intricate questions are avoided which Dr. Brown or his illustrious predecessor may have discussed. I do not wish it should be inferred from such remark, that the character of my courses is what is vulgarly called *popular*, or that I sacrifice anything of its scientific character, but I wish to accommodate myself to the different talents, and even the different dispositions, of the different classes of students attending my lectures.

Are you of opinion that a plan of public examination for a part or the whole of your class could be digested so as to be of considerable benefit to it?—I cannot but be of that opinion. With respect to students in Divinity, it does not appear to me that it could be any hardship on them to attend public examinations. They are on their way towards the Divinity Hall, and they are on their way towards a profession which demands, in those who discharge its duties, a knowledge of the different theories and systems of Moral Philosophy that have prevailed in the world. Much good, I think, would arise from public examinations being made imperative on such students; and I think, if examinations of such students were well conducted, and if the system grew in favour with the public, that then other classes of students, who were not intended for the church, would, from an honourable spirit of emulation, attend the examination. The examinations would thus come to comprehend a greater portion of the class than on any other scheme that now occurs to me.

As you think it might be made imperative on students of Divinity, would you propose that it should be made imperative on students in other branches of literature?—I speak of examination being made imperative on students of Divinity, because their attendance in the Moral Philosophy class is imperative. They are the only class of students who are under the absolute necessity of attending my class.

May all other classes of students take degrees without attending your class?—No student can take a degree without attending the Moral Philosophy class. Those who intend to take degrees, and those proceeding on to the Divinity Hall, must attend it.

What are the ages of young men who are generally attending your class?—They are generally from seventeen to twenty-two. There are not many so young as seventeen. Occasional instances have occurred of boys of sixteen; and in those few instances the boys have been remarkably precocious, and have been among my very best students; but the common age is from eighteen to twenty-two.

How long do they usually continue with you?—There are not many instances of their attending my class two years. That happens almost always in the case of my ablest students, from a desire to master some difficulties that have occurred to them in the previous session.

Have you any Prizes in your class?—I have now Prizes in my class. The first session that I delivered lectures I had no prizes; the second session I gave no prizes of books, but I adopted a system of classification—first, second, and third classes of merit, according to the principle of the system at Oxford. One of the reasons why I gave no books at that time was, that no allowance was made by the town to the Professor of Moral Philosophy for prizes. The third year I lectured, I gave up the system of classing the students, for I found that it occasioned great mortification to such of them as were put lower than their ambition had

157

University of Edinburgh.

Professor Wilson.

10 October 1826.

expected; and as I wished to consult their feelings, if I could do so consistently with the principle of bestowing prizes at all, I gave up the plan. I paid for the books myself the first session, and since that time I have received £10 from the Town-council. I always add £10 to that, and give a five-guinea medal besides to the most distinguished student throughout the year. I give a great many prizes, for this reason,—that I wish to encourage as much as possible the writing of essays; and I think it hard on those students who may have worked indefatigably through the session, even if they should not have displayed very eminent abilities, to let their conduct pass without any public or permanent token of my approbation. I therefore give a great number of prizes, placing the names of the students according to the order of merit. The first ten or twelve prizes are most keenly and vigorously contended for, and the others are gained principally by diligence, propriety of behaviour, and perseverance. In determining prizes, I divide my class into junior and senior.

How many prizes may there be in the whole, from the subdivision of the £20?—I think last year I gave twenty-six or twenty-seven prizes in books.

Do you give them besides the medal?—Yes.

That is given according to whom you conceive to be the best scholar?—Yes; I mention at the commencement of the session that I shall not give the gold medal to any student who has not written at least six essays. This rule makes many students to write six essays; and a very great number wrote from six to sixteen long essays, so that I receive 300 or 400 essays during each session.

Are you still of opinion that giving prizes, or the classification according to merit, is the best plan permanently to be valuable?—I am inclined to think that giving prizes is the best plan to follow in any one class. If there were a vast number of competitors from all the different classes, as at Oxford from the different colleges at examination for degrees, the system of classification would, I think, be the best. But the pain and mortification and heart-burnings that seemed to be occasioned by that system, when brought into operation on thirty, or forty, or fifty rivals, seemed to make it on the whole unadvisable, or at least it seemed capable of being carried into effect only with some painful feelings to myself as the Professor making the classification. Neither was the system of classification well understood. The young men did not seem heartily to enter into it; and they felt themselves more happy in the possession of any small volume which they could show to their friends when they went home, than the mere insertion of their names in a printed list.

Do you consider that giving prizes produces a very beneficial effect in the way of emulation and industry?—I am inclined to think it does. I scarcely think the same intense study would have been bestowed by so many students in my class upon moral and metaphysical questions, unless they had had an opportunity of showing their fellow-students and the Professor the progress they had made. I am inclined to think they would not have pursued their studies so keenly, without the emulation and hope of distinction kindled by the prize-system.

Is a great anxiety exhibited by the scholars in the exhibition of prizes?—Yes.

Have your scholars any voice in granting prizes, or are they given exclusively on your own authority?—They have no voice in the decision of the prizes; for it is impossible at present that the merits of the different prize-writers can be brought fully and clearly before the students. On Saturdays, however, they have an opportunity of hearing me read (which I endeavour to do with the greatest impartiality) passages from the greater number of essays written during the session. I conceive myself that that is the only mode by which I can at all judge of the relative merits of the different essays which I receive. But I read with so much impartiality, I hope, and also so many passages from the different essays of the students, that they have thus an opportunity of judging of my impartiality, and if my ultimate decision be borne out by the passages they have heard read from the various essays. I have thought it my duty to inquire occasionally of the most advanced students, at the end of the session, as to the satisfaction or dissatisfaction which may have been felt generally throughout the class with my decisions; and I have found, that though there has been occasionally some slight difference of opinion, yet that invariably the students have done justice to my impartiality, and preferred the decision being in the hands of the Professor, to its being in their own.

Do you take any means of ascertaining if the essays are actually written by the students who give them in?—That is a subject I have frequently considered, and I have no positive and unfailing test by which that fact may be ascertained; but in giving out the subjects of essays, I generally confine myself to subjects which have been treated of in the class, and I can pretty well know, from the mode in which these subjects are treated, if the essay have been written by students attending my class or by *grinders*. As my prizes are not given for any one essay, but for a succession of essays, I should easily discover if the gentlemen were assisted in some essays, and not in others. I scarcely conceive that any one student could have all his essays written for him without my discovering it. I also make it a point to converse privately and immediately with every student who writes an essay of extraordinary merit.

Is not the system of essay-writing quite voluntary?—At present it is voluntary. It is the only way in which any students of mine can hope to have the least distinction; and my students are well aware that it is only such students as have written essays for me, and have gone through the business of the class with credit, that I ever recommend to any situation of trust—which it is occasionally in my power to do.

Is the general attendance on your class very good?—I consider it is. The system of essay-writing, in fact, enables me to know who are absent from the class. I very soon become acquainted with the names and faces of those forty or fifty who write essays, and by knowing their names or faces, I know the rest who do not write essays; so that generally in a couple of months after the commencement of the session, I have a pretty accurate knowledge of every countenance and the name of every student in my class. At the same time, I believe there

University of Edinburgh.

Professor Wilson.

10 October 1826.

are occasional students who are very remiss in their attendance, and I can believe it possible that there may be some who do not attend at all. I cannot take on me to say whether I am able to prevent that, or to know when it takes place, if it does take place.

Do you call a roll?—I do not.

Have you any system of Censors, such as there is in the Greek class?—No, I have not.

Can you state the average number of students who attend?—I know my class was never below 140, and I do not think it was ever above 160. I think the largest was 162.

Are not the names enrolled in the Album, so as to be found in the library?—The matriculation ticket of each gentleman is presented to me; I then give him his ticket; and I believe I ought to have inserted in a list the name of each individual in my class, which I have not done. No student can get his certificate from me without presenting the class ticket to me.

Do you grant a certificate to every student who applies for it and produces his class ticket?—I have occasionally refused.

Upon what grounds have you refused?—Upon the ground of an impression that I had never seen the student in the class-room. I have put the question to him, if he had attended the class regularly, and in several instances I have observed much hesitation. In short, students have been brought to acknowledge that they did not attend the class regularly, in which case I have not given them their certificates. But I am not aware of that having happened in the case of any student in Divinity. If it had, he must have attended my class again in order to have got a certificate. It has happened among those young men who probably entered the class without any intention of regularly attending it, of whom there may be a few.

Can any man take a degree without producing a certificate of having attended your class?—None.

Is it the practice of those students to ask for certificates who are not Divinity students and have no thought of taking the degree of Arts?—It is more generally the custom than I could have thought. Many ask for a certificate, though it can be of no use to them, as they seem to have no intention of ever taking a degree in Arts. It is considered respectable, and I presume the parents and friends of the students expect them to get a certificate.

Does the certificate merely mark the fact of attendance in your class, or does it bear on the face of it if that attendance has been creditable from the proficiency of the student?—In all cases where the student has gained a prize, I mention it in the certificate; but in those cases where the students have not written for prizes, but when I know that their attendance has been regular, and that they were good students, from the conversations which I have had privately with them, I then mention that their conduct was regular, attentive, and praiseworthy. In those cases where I am in the dark entirely as to their abilities, and in some degree as to their regularity, I merely state that they were students in the Moral Philosophy class, without saying more.

In addition to what you have stated, what means have you of enforcing discipline in the class, and attendance on it?—I do not know of any means, nor do I ever try any but such as must arise from a regard to their own character, and respect or affection to their Professor. When I have seen any improper, idle, or vulgar behaviour unbecoming a scholar, I do not know that I have ever had occasion *twice* to put a stop to it in the same individual. I am entitled to say, that my class conduct themselves with the greatest respect towards me individually, and, generally speaking, with very marked decorum—occasional allowances being made for idleness among the younger students, or those who are not always able to follow the argument of my lecture. But as to anything like noise or disturbance, it never did exist in my class.

Have you ever had recourse to fines for want of attendance or want of discipline?—No; the notion of fines never occurred to me.

Have you ever had recourse to impositions?—No, never; I have several times threatened to make a public exposure of the fault in the presence of their fellow-students. I have now and then done so, in so far as looks or words, without naming, could have that effect. I think there never have been six students in any one year in my class, who would not have looked with horror at the notion of being publicly reprehended by name in the class.

Would it be necessary for you to apply to the Senatus Academicus for authority to forbid students from attending your class?—That is a question I cannot answer upon my own knowledge. I have heard it slightly talked of among the Professors, and some of us seemed to think that a Professor might expel a student from his class; others think it would be necessary to apply to the Senatus Academicus—and some seemed rather to incline to the belief, that perhaps the power of the Senatus might be doubted, and the power of expulsion claimed exclusively by the Patrons.

Do you think it so far necessary for the discipline of such a body as this University, that such a power should be vested somewhere of expulsion from a particular class?—Certainly; I hope it is a case that scarcely could occur in my own class, where the students are far advanced in their education. It is scarcely conceivable that any young man of eighteen or twenty would commit any such flagrant misdemeanour in the class as to require expulsion.

Have you ever found an occasion take place in your own class, when you wished to exercise that power?—Never.

You intend to lecture this session on Political Economy?—Political Economy forms one great division of a course of lectures upon Moral Philosophy. Hitherto I have delivered but few lectures on that subject, for I found it impossible to do more without entirely altering the plan of what I consider ought to be the plan of the first course of Moral Philosophy; that course of lectures forming part of the curriculum. Therefore it is my intention, as I mentioned in answer to the printed queries, to have a Second Moral Philosophy class, or a

159

University of Edinburgh.

Professor Wilson.

10 October 1826.

Political Economy class, which I am going to attempt to teach this session. I propose teaching it on the ground that it has been always considered by all great moral writers, and the most illustrious Professors of Moral Philosophy, as forming a part of the very wide science of Moral Philosophy. It is on that ground I claim a right to lecture on it, and it is on that ground that I hold myself to be under an obligation to lecture on it.

Will you state the names of those persons to whom you have referred?—If I were to go at full length into the subject, I would occupy too much of your time, but I can in a few words make some decisive statements. I will not do more than allude to any of the great moral inquirers of ancient times, although it could be easily shown that in the ethic systems of Aristotle and Plato, Ethics and Politics constitute one science. Dr. Hutcheson, the celebrated Professor of Moral Philosophy at Glasgow, lectured at considerable length on many of those subjects which may be supposed by many to belong exclusively to the science of Political Economy, as it has been arbitrarily restricted within a narrow definition by some modern writers. He lectured upon money, interest, wages, and other subjects of that kind; though it is well known that, before the time of Dr. Adam Smith, Political Economy, as a science to be lectured upon in a University, could scarcely be said to have existence. Dr. Hutcheson did, however, lecture upon it in his course of Moral Philosophy, as will be seen by looking to the heads of his chapters in his work on Moral Philosophy, which gives a very imperfect picture of his lectures. But the precedent which is decisive on the subject is the practice of Dr. Adam Smith. There is a general account given of Dr. Adam Smith's lectures from the chair of Moral Philosophy at Glasgow, by the late Professor John Millar, in the life of Smith by Dugald Stewart; and from that account it appears that Dr. Smith's course of Moral Philosophy was divided into four parts. The first, Natural Theology—the second, Ethics—the third, Jurisprudence—and the fourth an Inquiry into those Political Institutions whose tendency is to promote the prosperity or the wealth of Nations, such as those relating to Commerce, Finance, Ecclesiastical and Military Institutions, &c. These were the four great divisions of the course of lectures on Moral Philosophy by Dr. Adam Smith, as mentioned by Mr. Millar, and recorded by Dugald Stewart. Mr. Stewart makes many observations on that scheme, and bestows on it his highest approbation as a scheme of Lectures on Moral Philosophy. Dr. Smith, in his preface to the Theory of Moral Sentiments, states that his great ambition was to bring forward, in the form of separate works, the substance of the lectures he delivered from the Moral Chair at Glasgow. The part, containing Ethics, he gave to the world in his Theory of Moral Sentiments; —that part of his course which regarded Political Institutions, in the "Wealth of Nations;" and he was ambitious to perform the other achievement by composing a system of jurisprudence—something probably on the same plan as Montesquieu's "Spirit of Laws"—but he died without being able to accomplish it. According to his views of the subject, and I suppose there is no other authority so high, Political Economy is to be considered as belonging to the province of a Professor of Moral Philosophy. The present Professor of Moral Philosophy at Glasgow, Mr. Mylne, has lectured on Political Economy upwards of twenty years. In Professor Fergusson's Outlines or Prospectus, I observe perhaps twenty or thirty pages in which the names of various articles in Political Economy are mentioned. But he sometimes observes, in one part of his writing, that these were not the parts of his subject on which he felt himself particularly strong; and the greater portion of his course consisted of ethical disquisitions and inquiries into the character of the various social states of man. Mr. Dugald Stewart divided his course into four parts:—1st, An inquiry into the intellectual part of our constitution; 2d, An inquiry into the moral part of our constitution; 3d, An inquiry into our duties; and 4th, An inquiry into the condition of man, considered as a member of a community. He followed that plan for many years; and I observe it mentioned in his Outlines, that it was his ambition to make the fourth division a separate course. Afterwards he did so; and his reasons for considering Political Economy to belong to his province are stated in his Outlines. Dr. Brown had precisely the same views respecting Political Economy. He divides his course into—Mental Physiology, considering the mind as an immaterial substance, with certain susceptibilities and capabilities of being acted upon by external circumstances; 2dly, Ethics, or an inquiry into conscience, the passions, affections, and moral obligation, &c.; and 3dly, A knowledge of our duty, and of all the different causes which influence the happiness of individuals and the prosperity of states. Under this division he included Political Economy. The design of delivering a separate course he never carried into effect; but in his Life, lately published by Mr. Welsh, it appears that it was a great object of his ambition—that he never relinquished the design—and that he had widely speculated on that subject, in connection with those ingenious discussions of his now published on the subject of morals. Dr. Chalmers, Professor of Moral Philosophy at St. Andrews, is now lecturing upon Political Economy, and did so last session. Dr. Paley, in his work entitled "Moral and Political Philosophy," containing the substance of his Lectures on Morality, discusses many of the questions of Political Economy, such as population, taxes, &c., all of which were considered by him as part and parcel of the subjects falling under the wide science of Moral Philosophy.

Do you know what was the practice of Sir John Pringle and Mr. Cleghorn?—As to Sir John Pringle, I know nothing of him except what I have observed in Bower's History of the University, and from what I heard in casual conversation. I believe there was something rather strange in his course.

Did you ever see an advertisement of his to this effect?—I saw an advertisement a few years after the date of the above in the Scots Magazine, and which perhaps is the same.

Do you conceive Political Economy is included in the Doctrina Civilis of Bacon?—I have some difficulty in answering the question in so general a form; but I observe Mr. Stewart has a quotation from Lord Bacon, in which is pointed out the necessary connection between all

University of Edinburgh.

Professor Wilson.

10 October 1826.

inquiries into the principles of human nature, and the circumstances in society which operate upon those principles. And Mr. Stewart remarks, that it is that connection alone which can dignify the calculations of the political economist, and make them worthy the attention of the moral philosopher—Mr. Stewart always entertaining very high notions of the dignity of his favourite science.

Have you seen any analysis of the lectures of Mr. Cleghorn?—I have not. I have been anxious to see them.

Would it be necessary, for the purpose of giving these lectures, to adopt a separate hour?—Yes; I mentioned to the Senatus Academicus (whether it was necessary for me to mention it or no, I know not) my intention of delivering a course of lectures, and that the hour open to me, without interfering with the hours of any other Professor, was from one to two. It is an objectionable hour to me on various accounts; one of which is, that it immediately follows my other lecturing hour. It was the best hour, however, that I could take without interfering with the interests of other Professors.

When does the course of lectures on Political Economy begin?—On the second of January.

How long would you propose to continue that class?—This being the first year, I think it will not be advisable, on many grounds, to deliver a course of lectures on that subject, as extensive or as long as my other courses of lectures—now consisting of about 110. I shall deliver forty or fifty or sixty lectures this session; and beginning in January, instead of lecturing twice or three times a-week, shall lecture on four consecutive days of the week for two or three months, or more, according as I judge it expedient. If I find the class likely to succeed, I shall probably lecture in future every day throughout the whole session.

Is it your wish to give a complete and extended view of the whole subject of Political Economy in your lectures if you find due encouragement?—Yes; but I should not begin it at all, unless I was in hopes that I was able to lecture upon that subject as fully as it would admit of.

Did not Mr. Dugald Stewart give a separate course of lectures?—He did for some years give a separate course; how often he did so I have scarcely been able to ascertain. It was not very often; I believe only for two years.

How many lectures did he deliver?—He delivered about fifty lectures. I have observed it publicly mentioned that he delivered "two short courses." I inquired therefore, and found that his course consisted of fifty lectures; certainly not less than fifty—perhaps more.

Can you state anything in regard to the practice of Foreign Universities on that subject?—The science of Political Economy has not arrived at much perfection in Germany among those who have written on it. I have looked over some of the programmes in the Foreign Universities, but the terms are so different from those in use with us, that it would be necessary to know precisely what is their signification. Many of their lectures appear to border nearly upon Political Economy, if they do not include it as delivered by Professors of Philosophy.

Can Professor Wilson give the Commissioners any information of what is passing or likely to pass at Oxford, with reference to the Professorship of Political Economy lately founded by Mr. Henry Drummond?—I cannot at present, but I could soon get the best and most accurate information about it. When the Professorship of Political Philosophy was instituted at Oxford, I observed what was said of it in the public prints; and I inquired of some Oxford men what they knew of it. My impression is, that the Professor was required to deliver at least six lectures in the year, and that he was annually to publish something upon the science. These, I think, were the only two conditions I saw mentioned; but I may be speaking now from imperfect recollection.

Do you know if any lectures have actually been given?—No, I do not.

Will the Professor inform the Commissioners whether he believes that it is completely within his own power, independent of any communication with the Senatus Academicus, to deliver this new course of lectures upon Political Economy?—I am inclined to think that it would be in my power to do so without any communication. The reason I think so is this: that that was the opinion of several professors who were anxious that a separate chair on Political Economy should be established; and they were of opinion I was at liberty to lecture on this, on the ground of precedent and other grounds, without having made a communication to the Senatus.

Was your communication, then, a matter of courtesy, and for the sake of conveniently arranging your two hours?—It was a matter of courtesy, and for the sake of conveniently arranging my two hours.

Does Professor Wilson conceive that he would have had a right to take a separate hour to lecture in the College without the permission of the Senatus Academicus?—Without their permission I think that I could; for this reason, that Professor Stewart did lecture at a separate hour from three to four; and in doing the same, I should have been following the precedent of the most illustrious Professor of Moral Philosophy the University could ever boast.

Did Professor Stewart do so of his own authority, or after communication had with the Senatus Academicus, and leave granted?—Upon asking the question of those most likely to know, I was told, though they did not speak with perfect certainty, that it was entirely of his own accord, without asking any permission of the Senatus Academicus.

Is this class which you propose to institute, to be a separate class from the Moral Philosophy; or are the students of Moral Philosophy to attend as a matter of course?—No, they are not to attend it as a matter of course.

As Political Economy, as you state, is a branch of Moral Philosophy, in consequence of the institution of your new class, will those who attend Moral Philosophy be deprived of that general view of Political Economy which you are in the practice of giving in your present course?—No. I should be anxious, considering the greatness of my subject, to introduce in my first a good many discussions on the easier and more elementary parts of Political Economy.

161

University of Edinburgh.

Professor Wilson.

10 October 1826.

I may say that I consider the subject of Moral Philosophy to be so extensive that I cannot do justice to it in one course of lectures; one course, however, forms part of the general curriculum, and therefore I am bound to exclude nothing from that course that my judgment tells me should be included in it, or treated in a more cursory or elementary manner. I think, from the composition of my Moral Philosophy class, it will be more to the advantage of that class to dwell longer on the moral feelings, conscience, the passions, the theories of virtue, &c. than on Politico-Economical subjects.

Then you have no intention of excluding any part?—No, I have no intention of excluding any part.

You do not mean to exclude any part of that subject which you now deliver?—No. On the contrary, I should be anxious, if possible, to make my concluding lectures upon that subject, in my first course, complete in themselves, but introductory to my second, to qualify them for entering into the views of the subject.

Is it the practice of the students, generally, to get certificates from you at the end of the session?—I think a considerable number do not ask certificates. I find a number of tickets remain in my janitor's hands that are not called for.

Have you reason to suspect that you have given certificates of attendance and qualification to those who have not attended?—I have no reason to know it in any particular case; but I think it not improbable it may have happened, for I do not see how it is possible for me to know positively on that subject. Were any person of credit to tell me that they had ascertained it had happened, I should be disposed to believe it. But such a case must have been of very rare occurrence.

What is the general form of certificate which you give to the students?—To all those who have distinguished themselves, and to all those who I am sure have been regular, I give a certificate either of abilities or regularity, or both. When I have some reason to think, that though their attendance on the whole has been fair, yet not quite constant, I say merely they were students in the class. I never unnecessarily give any character to any student, unless I think he deserves it for his talent or regularity.

When were you appointed?—In 1820.

Did the composition of your course of lectures, on so important and difficult a subject as Moral Philosophy, require a great deal of time?—It required a great deal of time. I was elected to that chair only two months before the commencement of the session; therefore, though I had devoted my studies all my life long to subjects of that nature, I did feel, I may say, almost an awful responsibility in following such distinguished men as those who immediately preceded me. I therefore was determined not to aim at too much, but to do my duty with industry and perseverance; and ever since I delivered that first course of lectures, I have continued altering them, though I have preserved in a great measure the general outline of the plan.

Was it possible, doing justice to that first course of lectures which it is imperative on a considerable portion of students to attend, to commence a course of lectures on Political Economy sooner than the present year, without a degree of exertion of which no man was easily capable?—It might have been *possible;* I do not doubt that I might have been able to have done it myself; but I thought it more prudent and more respectful to the character of the University and of my predecessors, to show no haste in imagining that I could, by any sudden exertions, do more than some of them had ever attempted to do. I was anxious to make that course a useful one before I attempted another; but ever since my election I have been studying with that view. At the same time I was aware there might be some difficulties in carrying this plan into effect, principally on account of hours. There was a very great difficulty in getting an hour. These and other causes weighed on my mind to delay it a year or two, though I feel myself entitled to say I have not delayed it beyond a rational time, considering all the difficulties of the subject.

Did Dr. Brown ever get so far as a course of Political Economy?—He never lectured upon that subject, but he always intended to do so, and announced that intention every year.

With the views you have mentioned, would it be your wish, if possible, to obtain, during a part of the week, separate hours, in addition to the one on Saturday, for the examination of the essays of your students?—During this session, of course, as I shall lecture to the two classes from 12 to 2 o'clock, I am not anxious for it particularly; as far as the labour goes, I am perfectly willing to undertake it.

Is the hour on Saturday entirely voluntary on your part?—Entirely voluntary. I shall keep up that system. Very often on Saturday I am there two or three or four hours, equal in all to thirty or forty separate hours during the session, supposing there were fourteen Saturdays and three hours each day; but that is too much perhaps, two hours is sufficient.

When did you introduce that practice of criticising the essays on Saturday?—About four sessions ago.

Are you satisfied that it has been attended with beneficial effect?—I cannot say that the attendance is very numerous. All those who write essays are anxious to be present; and when I find it is not in their power to be present always, I inform them on what Saturdays and at what hour their essays will be criticised.

Do you think it would be of importance if any of the subjects given out for essays in your class were open to competition to the whole students of the University?—I think, under certain regulations as to the length of time which the different competitors have been in the University, it would be a very excellent thing.

If prizes were to be given, open to students of the whole University, would the subjects of your course be well adapted for that subject?—I think admirably well.

Do you think that any such alteration ought to supersede the prizes in your own class?—No, by no means.

University of Edinburgh.

Professor Wilson.

10 October 1826.

Would it be, in your opinion, expedient to introduce any plan by which prizes—either distributed to the students of your own class, or prizes on subjects open to the competition of the whole University—should be awarded in a general meeting of the University?—I think, if such a plan could be carried into effect, it would give life and spirit to the whole prize-system. I take it for granted, that that system is in itself good.

Have you any suggestions to offer to the Commission on that part of academical education?—I cannot say that I have considered it much. Any suggestions must regard, first, the subject of the prizes; secondly, the regulations as to the competitors; and thirdly, the mode of bestowing the prizes.

Does the granting of prizes at Oxford, in your opinion, produce a beneficial influence in that University?—There are very few public prizes given at the University of Oxford. There are more, I think, at the University of Cambridge. The few which are given at Oxford occasion great spirit of rivalry and competition. So they do at Cambridge.

Do you think that the introduction of some similar scheme in this University would be attended with advantages?—I think it would be attended with great advantages; but it is difficult to make the scheme altogether similar; the system of education being so different at Oxford. There there are prizes for under-graduates, and for bachelors, and I believe also for masters.

Is it your opinion that public examinations for degrees in Arts might be an useful practice at Edinburgh?—I think the present way, in which degrees in Arts are conferred, is very far from being a good one; and I do not see any possibility of improving it essentially, without making the previous examination public.

Do you think, if it were made public, the fame to be gained by those who excelled in public examination would make the degree an object of ambition?—I am strongly inclined to think it would. I think the young men who at present take degrees in Arts are on the whole very respectable—among the best of our students; so much so, that as far as my own experience goes, I have never thought of examining them. Some of them have been in my own class, and among the best students in all the different classes. At the same time, the degree is now given on the ground of general repectability, and not on the ground of any specific examination. I think the distinction or honour of being a Master of Arts in this University cannot be felt by any person to be great, but it is sometimes found to be useful. And since those who, according to the present system, apply for that degree, are generally men of respectable attainments, I think none such would scruple, or hesitate, or dislike, to undergo a public examination.

Do you think that the result of this change would be, that the degree would be more sought after than at present?—I think decidedly it would.

Would it of course be more valuable?—More valuable, because more honourable, and therefore more sought after. I have known some of my students ask me my opinion whether they ought to apply for a degree of Arts or not; that is to say, whether I considered it as any honour to a student, or in any way worth his while. On a right system, the question would not have been asked.

If the graduation with a system of public examination was to be established at this University, would Professor Wilson think it a good thing to have a sort of distinction between the Ordinary Degree and the Degree with Honours?—I think there would be some difficulty in introducing those distinctions at the very commencement of the new system. It might be sufficient honour at first for a man to pass his examination with credit at all.

From the spirit of emulation, and desire both to improve themselves and likewise to obtain such distinction as can be obtained in your class among the students, have you any doubt whatever, that if there were more general opportunities by which young men coming forward to the learned professions might acquire distinction at the University, these would be anxiously and sedulously sought after?—I think they would, both from what I have observed in this University, and from every thing I have observed in other Universities, where education is conducted on such principles.

As at present there is no privilege attached to degrees, would you be of opinion, that if any privilege was to be attached to the degree, that would be an additional stimulus, at present there being none?—I believe the degree of Master of Arts entitles the person who has it to enter Divinity Hall.

Do you think it of advantage to make it a necessary qualification to certain professions that the young men should take the degree of Master of Arts?—There can be no doubt that every person who looks forward to a learned profession, and receives a University education, ought to have a degree in Arts. My opinion is very strong in favour of a degree of Arts being essential—useful, no one could doubt, to every man studying for a learned profession—it being understood that that degree is not to be granted till after a pretty strict examination. But it must be added, that there might be extreme difficulty in carrying such a measure into effect.

Are most of the young men who attend your class about entering their studies, or going through their studies for the professions for which they are intended, such as the Bar, for instance?—Yes.

As you must know something of the prospects of young men attending your class, do you believe that the opportunity of acquiring public distinction or character from such means, either of public examination for degrees, or competition for prizes, would be of use to those young men who are entering upon their profession?—I think it would.

Would it be sought after by them as a means of introducing themselves advantageously to their profession?—If the system was to flourish, in a few years I think it probable that the acquisition of the degree in Arts, in the University of Edinburgh, would be a mark of distinction to any young man; but I think it would require some time before that effect was produced.

1/63

University of Edinburgh.

Professor Wilson.

10 October 1826.

Do you think, if the method of awarding prizes was introduced already alluded to, viz., that after public competition they should be awarded by the whole University and in the presence of the public, it would be beneficial?—I have no doubt upon that subject whatever. It would be most beneficial.

At present, may a young man go through the College of Edinburgh, and be known to the professors to possess the highest attainments, and yet have no other means of distinguishing himself but by these class-prizes awarded by the professors individually?—Yes.

Then, in your opinion, would those opportunities of distinction, which have been pointed at, supply a very great defect in the system of academical education in the University of Edinburgh?—In my opinion they would.

Would it be of essential use to young men, who now enter entirely unknown upon their professions?—I think it might be of essential use to them.

Do you see any difficulties whatever in carrying into effect the plan of making the examination for a degree one that shall be a source of credit and distinction to the individual taking the degree?—At present there are very few degrees taken in the course of a year; I suppose six or eight, or ten at the most. We must therefore suppose that many more degrees must be taken each year before the public examination could be said to be working at all as a part of the system. Now, it is possible, certainly, that that number might not increase. I gave my opinion formerly that I thought it would; but I must add, that I think it would take a considerable time before you could suppose a great number of young men coming voluntarily forward, to go through a public ordeal for a degree. Until there are a great many, the distinction cannot be very great, for the comparative merits of the different candidates cannot till then be made very apparent.

But would not the absolute amount of knowledge and attainments requisite for obtaining the degree, if the examination were made strict, be ascertained at once?—Perhaps it might, but not necessarily. Some time would elapse before the examiners themselves thoroughly understood their tasks.

Has the Principal been in the habit of attending your class at the reading of essays or examinations?—No, he has not.

Would it be attended with advantage if the Principal, and even some of the Professors, were occasionally to attend on such occasions by way of giving more publicity?—I cannot see at present much effect that could be supposed to arise from that practice. It was, I believe, the practice of former times. Principal Robertson, I believe, did so occasionally.

Have you had occasion to observe what proportion of those who have received the highest prizes in your class have received prizes in other classes?—I have observed that a good many of my best students have got prizes, and high prizes, in the Natural Philosophy class. I think that a very great proportion of those who got prizes in my class had got prizes in the previous classes—in the Language classes, and in the Logic; though I have sometimes observed rather striking apparent inconsistencies in that respect—some students standing very high in my class by their own exertions, who, from causes unknown to me, did not stand high in the previous classes.

Is it your general impression that the student who distinguishes himself in one class is most likely to distinguish himself in the others?—It is so; and, with respect to my own students, I think it is consistent with my experience.

Professor Wilson having stated Dr. Brown's objection to examinations in the class on Moral Philosophy, will he inform the Commissioners, if, in his opinion, the very abstractedness of the subjects, upon which the objection is chiefly founded, renders it desirable, particularly for the sake of young minds, to simplify the discussions that occur in the lectures, and to render illustrations more familiar, by means of examination?—Certainly.

Might not questions also be put as to the course of reading pursued by the students—for instance, upon the books recommended to them, and the opinions of speculative men in former times, in an examination in the Moral Philosophy class?—In the examination of students of Moral Philosophy, every question should be put that could ascertain their clear and distinct apprehensions of the doctrines delivered as his own doctrines by the professor, and a clear and distinct apprehension of the merits and demerits, beauties, or defects of all the different systems which he brings under review.

Have you published any text-books?—I have not published any text-books.

As you have no text-book, must not examination be of importance for the sake of enabling you to ascertain that no false impression of your peculiar views has been carried away; and might you not sometimes amplify what might appear to be not perfectly comprehended?—I have no doubt whatever, if sufficient time were given for examinations at a separate hour, that much light might occasionally be thrown on subjects in themselves necessarily obscure and dark, without much difficulty to the professor, and to the great advantage of the student.

It having been stated, that a certificate from you of mere attendance is sufficient to entitle students to enter Divinity-hall, will you inform the Commissioners whether it would not be considered a great improvement that it should be rendered indispensable that the certificate should bear upon it not only that the student had attended, but had made progress in the study; and would not that tend not only to the improvement of students in Divinity, but to render attention to the science of Moral Philosophy more imperative on young men in general?—To every question of that kind I should, without a moment's hesitation, return an answer in the affirmative,—that every thing which could be contrived to secure attention and attainment in the students for Arts, or in Divinity, ought to be done; nor can I conceive that any student would imagine it a hardship to be refused a certificate by a professor, when that professor had it not in his power to say that he had made any advance in a knowledge of the subject of the science he had been studying, or had regularly attended and properly conducted himself in the class.

University of Edinburgh.

Professor Wilson.

10 October 1826.

In the account that is before the Commissioners, given in by you, of the course of lectures in your class, you state "that, in treating of the duties man owes to his Maker, there is danger of trespassing on the Theologian:" and in reference to that you add, in a line or two afterwards, that in that case the lecturer confines himself to an elucidation of the argument *à priori* and *à posteriori* in proof of the being and attributes of the Deity, to a refutation of the reasonings of the sceptics, the existence of evil, and the question of liberty and necessity; do you enter at all into the evidences of a Revealed Religion, or do you avoid that as not belonging to your course?—I do not enter at all into the evidences of Revealed Religion, nor do I think that such a subject belongs to me as Professor of Moral Philosophy; but I am extremely anxious that my lectures on the subject of what is called Natural Religion should leave a belief on the minds of all who have heard them, that Natural Religion is nothing without Revealed Religion. Farther than that, I should not think myself entitled, as Professor of Moral Philosophy, to go. With respect to the expression "the risk of trespassing on the province of the Theologian," I meant no more than this,—that were I to dissert on the attributes of the Deity, his goodness, his justice, his mercy, or his power, those are subjects on which sermons have been written by many celebrated divines; and that, therefore, I have avoided these, and have confined myself to *the metaphysical questions* connected with the proof of the existence of a Deity, and to the *logical deduction* of his attributes.

Were your predecessors in the habit of considering the matter as you have stated?—They were. Perhaps I might mention, to prevent any possibility of mistake, that in lecturing on Natural Theology I express a belief, that, without Revealed Religion, the human mind could never have arrived at that knowledge of the existence and attributes of the Deity which is now prevalent over the world—that many of these conclusions, to which philosophers may have imagined they have come by the force of their own reason, have in fact been truths handed down by old traditions. There is another point connected with this—though referring to a different part of my course—where I give an account of the different moral theories respecting the principle of moral approbation, the moral sense or the conscience, &c. I do not represent the conscience as in itself an unerring guide, but I endeavour to prove that the will of God is the foundation of every moral obligation; and that moral obligation is felt to be stronger in that mind which has arrived at a knowledge of the will of God through revelation, than through the exercise of any natural power; but that, in the absence of revelation, conscience may be considered as the vicegerent of God. I mention this, because these subjects are connected with each other; and, when my mode of treating the two is taken into consideration, it shows, that, though I do not presumptuously enter on the subject of revealed religion, I wish my lectures to be in all respects not only consonant with, but in many respects corroborative of, its truth.

Edinburgh, Wednesday, 11 *October* 1826.

The EARL of ROSEBERY in the Chair.

John Leslie, Esq., Professor of Natural Philosophy, called in and examined.

Professor Leslie.

11 October 1826.

Are you Professor of Natural Philosophy in this University?—Yes.

Have you had an opportunity of seeing the answers to the several queries sent to the Senatus Academicus by the Royal Commission?—I have, and perused them.

Do you concur in all of them?—My attention was directed to certain points chiefly, to which I returned answers.

As to those points, do you give your complete acquiescence?—I acquiesce entirely in the report that I made on those points; the points were matters of fact for the most part.

Will you inform the Commissioners whether, in the general answers that you have had an opportunity of perusing, you see any reason for differing from any of them, or any part of them?—I have not seen the Returns; I have only seen the original questions: I have been mostly in the country; I have seen some small parts in manuscript, but not the whole.

Are there any observations you would wish to make with respect to your own particular class?—This would require a very considerable degree of deliberation; I should be at a loss how to begin. If any particular parts were pointed out to me I should most readily enter into a full explication of them.—(*The witness withdrew*).

The Witness called in, and further examined.

Were you present at the meeting of the Senatus Academicus when they agreed upon the answers that have been sent to the Royal Commission?—I think there were several meetings, at one or two of which I was present, but not at the last; the business was divided among different committees.

Were you present at that meeting when the General Report from the committees was agreed upon?—No.

Were there regular meetings of the Senatus Academicus for the purpose of considering these Returns?—Yes, and I believe they often sat till a very late hour. I was not present at the general meetings, but they were broken into committees and sub-committees.

With respect to your own particular class for the teaching of Natural Philosophy, have you any suggestions to make to the Commissioners by way of improvement or alteration?—Perhaps I may be allowed to state what I have endeavoured to do myself towards that object. I have endeavoured, as much as possible, to introduce greater method than had prevailed before. I believe, from the middle of the last century until about the year 1805, there were no examinations, no exercises given up, and no catalogues called. My immediate predecessor was the first, I think, that introduced the practice of giving exercises weekly, or once a fortnight, I will not venture to say which. Upon my accession I adopted the same plan, and increased the number of those exercises. I was also very anxious to promote a regularity of attendance;

University of Edinburgh.

Professor Leslie.

11 October 1826.

and for that reason I have enjoined all the students at the commencement of the session, who should have occasion to demand certificates of attendance, to give me their names; conceiving that I had no right over any of the others who chose to come merely for their own improvement, and were not amenable to the discipline of the University. Those names are arranged in an alphabetic catalogue, and are called occasionally, at the interval, perhaps, of one or two days, often at ten days, but not every succeeding day, as it would take up too much time; and from this catalogue I draw my certificates. I refuse it altogether if the student has been absent a certain number of times. If he has not been absent once I say "most regular" in their certificates. If rarely absent I say merely "regular"; and if somewhat less assiduous I omit that epithet altogether. My endeavour is to draw a line of demarcation, and so as to refuse a certificate altogether in case of great negligence. The examinations, of course, I have been solicitous to introduce, but with very great difficulty indeed. I had to contend with a strong prejudice; for the young men in my class being generally more advanced than in my other classes, were extremely averse to submit to public examination. The way in which I have been able to effect this to a certain extent is, partly by allowing no person to be a competitor for the prizes unless he submits to be examined on the Saturdays. And, in the next place, I allow a certain number who give me their names to be present as auditors, inviting them, as soon as possible after they have got over the shame of a public appearance, to pass over to the number of those who are examined; all strangers, and even fellow-students, being excluded; for the principal objection is that of being exhibited before the whole class, from which a feeling of delicacy resiles. I should also mention that there are certain exercises of a simpler nature prescribed for those who are to obtain certificates at the end of a session. Of them I require not only regular attendance, but their performing one or two of those general exercises before I grant them a certificate. That is nearly all I can say as to discipline, which can be carried to but a very limited extent in our higher classes. With regard to the ordinary prizes, they were first instituted here only about 19 years ago. They were bestowed on the application of certain professors in whose classes public examinations had been conducted. These were only four; they were those of the professors of Humanity, Greek, Logic, and Mathematics, such being the only classes in which public examinations were then conducted. The sum of £10 was allowed to each by the Town-council. A few years after the Rhetoric class had the same allowance, although there were no public examinations in it; and more recently the Hebrew, and then the Moral and Natural Philosophy. This extension took place only five years since. The annual sum was reduced from £10 to £7. 10*s.*, but upon my application to the Lord Provost last year it was raised to £10, which, it is presumed, will be henceforth continued. At first very few prizes were given, it being conceived a greater mark of distinction to confine the number. To this rule I have rather more closely adhered. Most of my learned colleagues divide them very numerously; but how far that may be proper is a matter of opinion. The mode which I adopted in the Mathematical class (and I continue the same in the Natural Philosophy class) is, that those who are to appear as candidates give me their names a few days before the competition takes place, that I may see if they have conducted themselves well in the previous part of the session, and should be judged worthy of being allowed to compete. I fix a certain day, Saturday generally, for the purpose of competition, which is carried on with closed doors. A certain number of exercises, generally three to four, are prescribed and explained generally to the candidates. They are allowed to bring what papers and books they think may assist them, and they are directed to disperse themselves in different parts of the class, so as not to have any communication with each other. They are reminded, that if one give any help to another the competition will be void, and a new one appointed. I occasionally visit them while the competition is going on, and make such general observations in the hearing of them all, such as may direct them into the right path, having glanced over their several solutions; and at the conclusion of the competition, which is generally late in the evening, the performances are all sealed up and delivered to a servant who is in waiting during the whole time. After I have carefully examined and compared those productions, and weighed their respective merits, I call together the authors, and generally allow two prizes, or sometimes three, according to circumstances. These prizes are also sometimes subdivided if there is an appearance of nearly equality. To these prizes I add also what I call a *Prize of Merit*, for the unsuccessful candidates who have, according to the judgment of their fellow-competitors, been most sedulous in their application during the session. This is by the votes of the candidates themselves, but classed in a particular way: thus, each of the unsuccessful candidates has a single vote; those that obtain the third prize, two votes; the second, three votes; and the first, four votes. This is a sort of scale which some may conceive to be more intricate perhaps than is necessary. Should the aggregates of the votes come nearly equal I divide the prize, as it is not my wish, in such cases, to proceed with extreme rigour.

That is as to the Prizes for Merit, but, as to prizes for Exercises, do you not determine those yourself?—Yes, and the prizes for merit are left to the decision of the competitors according to the mode I have named, for I conceive they are the best qualified to judge; and it serves as a farther inducement to the students to come forward to the examinations and the competition.

Is the competition annual?—Yes; generally about the beginning of April; and, if there is great difficulty of decision, some of the students are sent back again for a second competition. I have had three competitions, but generally I wish to avoid that; it is giving a great deal of pain to them.

What may be the general ages of your pupils?—They are extremely various in my class; I have young "men" who I dare say are not more than fourteen, and men above sixty; the majority, I should suppose, would be about eighteen or twenty; there is a considerable number

University of Edinburgh.

Professor Leslie.

11 October 1826.

of those more advanced who have been in professions, and choose to get a little information and amusement.

Have you many as young as fourteen?—I believe I have not very many, and the youngest students are generally the best scholars.

Is it the practice, then, with any considerable number of students at this University to attend your class the first year of their curriculum?—Strangers do so frequently, and I am sorry to say they are often not very well prepared; this is one of the evils which we have no means of remedying at present.

Do they generally attend your class in the third year?—The fourth year is what is understood in our curriculum. If I may be allowed I would go farther back and state how this arose. In all the Scotch Colleges, I believe, in imitation of the Continental ones, the curriculum of Arts, or of Philosophy (which is considered the same), was managed under four regents; the first year the subject taught was Grammar; the second, the same regent (though he was not properly styled a professor) taught Logic; and the third Ethics, and the fourth Physics. This order is still as our curriculum.

But, in point of fact, is the third year a very common year for attending your class?—Yes, it is.

Do you consider the first year one in which it is usual for students to attend your class?—It is not usual, except for strangers.

Have you any means of enforcing discipline or attendance in your class?—I have no other except the power of withholding a certificate; I refuse a certificate to those who have not complied with the regulations, or who have been too often absent; but there is not above a third part of the class that ever ask for certificates.

Have you then a set of regulations for your class known to your scholars?—They are generally understood, being given out near the commencement of the session. After some preliminary lectures I state what is to be done by the students, and explain what regulations I mean to enforce. I presume these are now pretty generally understood over the College. None of these regulations, however, apply to such gentlemen as attend for their own pleasure and instruction, without any professional views.

Is there any improvement you would suggest by which benefit would be derived to your class?—I labour under very great restraint at present, from the vast extension the subject has undergone, being progressively enlarging, insomuch that I conceive Natural Philosophy cannot now be taught with proper effect unless there are two courses, and this has been the practice of the Continental Universities for a considerable time back. Even in Mathematics we have at present three classes; and Natural Philosophy, which is still more comprehensive, has unfortunately in our system been confined to one. There would be very great difficulty in bringing this about, for the curriculum includes only four years as far as it is acknowledged by the Church, which authority is the only sort of hold we have.

Might not the same object be accomplished if you were allowed to lecture two hours each day?—This might answer in a place where there were very few professors, and other avocations; but the students here are occupied so many hours in the day, both within College and without, that it is with the utmost difficulty they can be got to attend even a lecture on Saturday.

Is the difficulty the want of an hour?—Yes; if one employs an extra hour it is ill attended, and the students are apt to complain that it interferes with their other studies. In places such as St. Andrews, Glasgow, or Aberdeen, where there are but few professors, the mode of double hours may be carried on easily, the second hour being devoted to rehearsal. In this University, except in the junior classes, it would be judged too burthensome to the students to be accomplished effectually. Two or three years ago I proposed a plan which appeared to me likely, without making any alteration in the present system, to effectuate a great improvement. I was to continue to give the same general course as at present forms a part of the curriculum; but I proposed, besides, to divide the subject into two distinct branches, and to take them in alternate years, and at a separate hour. I was to divide it, I think, in this way: one of the subdivisions to be Mechanics, Hydrostatics, Pneumatics, and the Theory of Heat and Climate; the other was to be Astronomy, Optics, and Physical Geography. I meant to have allotted five or six months to each of these, taking them in alternate years, at a separate hour; and thus afford the students an opportunity, while at College, of gratifying their inclination to cultivate more thoroughly particular branches of Physical Science.

By such an arrangement would only one branch be taught?—There would only be one general class as at present; but then an opportunity would be given of following out and studying more fully those branches that might be particularly desired. It is not one of the best plans, but it appears least to innovate on our general course of study.

By that plan would only one of the branches be heard every year?—The general lectures would go on every year as usual; but students would have it besides in their power to cultivate their favourite branch more fully.

According to your plan, is the second class to be divided into two years?—Yes, such was my design; I should, no doubt, have preferred an independent second class.

But do you think that is attended with difficulties?—Unless the students were obliged to attend five years instead of four, which would be a great improvement. Those who are intended for the Church hurry on to the Divinity-hall, and have then no opportunity of pursuing their philosophical studies. This is felt as a general evil, and many of the students themselves have often expressed to me their regret that a better arrangement were not adopted. If they could abridge their attendance at the Divinity-hall, and add one year more to the course of philosophy, it would be a very great improvement in our system, and I know that many eminent clergymen are of the same opinion. This proposition, of having a second alternating class, I made to the Senatus Academicus; but I am sorry to say that my learned

167

University of Edinburgh.

Professor Leslie.

11 October 1826.

colleagues did not accede to it, not on account of any alleged demerit in the plan itself, but from an apprehension that it might interfere with the established hours of teaching. This is one of the great difficulties we have to encounter, that it has been impossible to fix upon an hour that has not been pre-occupied by other professors.

Did you refer that to the Senatus Academicus?—I did; but I conceive that they have no further power in the matter than to refuse admitting the class into the programme. I do not believe that they could prevent me from announcing it as an individual, taking my own risk. It was merely a voluntary class, and did not come within the curriculum.

Does Professor Leslie think that any professor in this University has technically a right to set up a new class, and take an hour without permission of the Senatus Academicus?—It is generally believed we have; our constitution is extremely lax; this has been repeatedly done before; where a class is merely voluntary, and trenches upon none of the established classes, it has been left entirely to the professor's discretion.

Do you then conceive that it would be an improvement in the curriculum to make it five years instead of four?—Yes. I must mention another circumstance, which is one of the greatest evils we have to complain of, perhaps—the want of an early application to Science. It is deferred too long; if persons would begin a little earlier it would be gone over sooner.

Do you mean in point of age?—Yes. I was fifteen years Professor of Mathematics here, and I found boys only twelve or thirteen years old remarkably apt; infinitely better than lads who came from the country at twenty-five or thirty years of age; they had a susceptibility and an ardour of application which carried them successfully through.

Would that remark apply equally to the higher and more extensive branch of Natural Philosophy?—I believe it would. My opinion decidedly is, that Ethics should be taken in the latter part of the course. The Science of Physics should be taken rather early; the mind is sooner open to physical objects than to contemplations of mind, which require a great deal of reflection.

If young men came so early would it not interfere with School Education, and be converting a University more into a school than keeping it as a College?—Decidedly; but that is one of the evils. I would have all junior subjects taught at schools, and not at College; and I would suppress the first classes in the College.

Do you think the junior classes in the College had better not be there?—I certainly think so: students would come with some knowledge of the elements of Science; they would not find it a new subject, and would be enabled to go to the higher classes much easier.

But how would that suit young men from the country?—That is the only objection; but they might go to some higher school a year before they came to College. The country schools have been gradually degenerating, that is, in respect to Latin, which is not taught as it was formerly; and many of the students here are obliged to drudge through the mere elements of Literature and Science, which is quite degrading to a University, I think.

Does Professor Leslie think that, if the elements of Science were taught at schools in the way he proposes, there would be any necessity for increasing the curriculum to five years?—I believe not; I think the business then could be managed without an additional one year, but it would be necessary that the schools should be subjected to some kind of preparatory order,—that they be adapted to the University like the Gymnasiums of Germany, where those schools are considered as appendages to the Colleges.

Is it part of the general plan of alteration, which Professor Leslie has recommended, that the whole schools throughout the country should be subjected to some public inspection and control?—I conceive it would be a great advantage if such a thing could be done; but I merely throw out the hint. I may be allowed to say farther, that on the Continent, where attention is much paid to education, particularly in Protestant Germany, and in Bavaria, which, from being the rudest country, has now become the most enlightened in Europe, that the young men there are examined at schools before they are allowed to go to College. This could not be effected here, because if people choose to pay for their education no teacher can refuse to receive them. On the Continent education is gratuitous, and of course the Government may have a right to direct who shall be entitled to enjoy the benefit.

May there not be other difficulties arising out of the habits and feelings of this country which do not occur there?—I believe it would require some deliberation; it might, however, apply to all those who hold Bursaries, or who are in part educated by the public.

Did you say it was your opinion that the system of education in parochial schools was degenerating?—In this sense only, that there is less Latin taught in them than before. I dare say they have improved for the general purposes of education, or the useful training of boys in the country, but they are not so well adapted to prepare young men for the College. More arithmetic, land-surveying, and various practical subjects of that description, are taught now, but the parochial schools are generally insufficient as preparatory for Collegiate education.

Is the introduction of that plan of inspection necessary, in Professor Leslie's opinion, for the alteration and the change of University education which he has proposed?—I do not say it is absolutely necessary, but I conceive that to a certain extent it would be most desirable.

Does he conceive the change in the system of University education, by which the elementary parts of science are not to be taught in Universities, could be beneficially accomplished without some such plans of inspection as he has alluded to?—No; I think it would require time, however, to bring about such an improvement.

Do you think that gratuitous education is preferable to education at a cheap rate?—I believe not. I am much inclined to think that the true mode lies in the medium between these; and when education is entirely gratuitous there is nothing but the desire of reputation to incite the professor to do his duty; and, on the other hand, if he is entirely dependent upon his students, he is tempted to cater for his own advantage, by descending to a superficial popularity. In short, there is a temptation held out to desert his duty for his interest.

University of Edinburgh.

Professor Leslie.

11 October 1826.

Does Professor Leslie think that the system of superintendence and control could be exercised effectually unless the education was made gratuitous?—It would require to be brought about in a very gentle manner, like all other beneficial changes; probably it might be commenced in some of the greater towns, or advantages might be offered to such students as followed the proposed plan.

Do you think, if it were decided that the colleges were no longer to teach the elementary parts, those elementary parts would necessarily be taught at a certain number of schools preparatory for the college?—I should conceive so, at least in all the public schools. There might be schools established in every provincial town, under a sort of superintendence, and with a power of recommending those, perhaps, who showed greater talents than the rest, to receive certain immunities and distinctions.

Are you aware that a certain approximation to that system is now making at the New Edinburgh Academy?—Yes; I am aware they have been multiplying a number of classes, but I do not know if they are doing so very judiciously now. Indeed, I entertain a different opinion now with regard to the conduct of that seminary.

Do you approve of the arrangements that are making for keeping boys a year longer at school?—I certainly disapprove of the manner in which this is attempted.

Has Professor Leslie happened to look at the arrangement of studies proposed in the first Book of Discipline, which was published just after the Reformation?—Yes, I have, some time since, and must say that it contains judicious and excellent remarks, better indeed than many that have been produced in more modern times.

Does that approximate to your idea on the subject?—It does upon the whole.

Have you any apparatus for experiments in your class?—I have now a very considerable apparatus.

Do you consider it to be sufficient?—No, not yet, though I believe it is more complete than any in the island now.

Is it furnished by the town?—It ought to be so, but I have found the utmost difficulty in drawing money for it. I have offered to lend for some time apparatus of my own to the value of £200.

Do you consider the greater part of that apparatus your property, and that it will not descend to your successor?—If I were removed to another situation to-morrow my successor could not go on profitably with the class until he had supplied the deficiency. I conceive that a choice apparatus in the present state of the science would be most important. The exhibition of experiments is perhaps the only way to fix the ideas in the mind of the pupil; it gives him clear conceptions, and rivets the leading facts and conclusions in his memory. He associates the experiments with the principles intended to be illustrated by them.

Do you exhibit many experiments in your class?—I exhibit a great many now; and one of the greatest difficulties I had to overcome was to do this without interrupting the lecture; and I made considerable exertions to bring it about. I dare say I exhibit near a thousand experiments every session.

How do you accomplish that?—Chiefly by means of an operator, whom I trained to the business, and whom I direct by a sign when each experiment is to be performed, while the explanation is going on. In this way I can enlarge or abridge my observations, according as circumstances seem to require.

You were complaining of the extent of your subject; do you in fact every year go over the outlines of the whole subject or not?—I find it quite impossible to go over the whole subject completely; and therefore my two immediate predecessors were accustomed, in different years, to leave out certain branches entirely—Optics, for instance, or Electricity, or Magnetism. I omit no part entirely, though I am thus obliged to pass over some branches more cursorily than I should wish. I would mention particularly Astronomy; and my reason for passing more lightly over it is, that in order to teach it scientifically would require a greater share of the knowledge of Mathematics than my auditors generally possess, which makes me anxious that the study of Mathematics should be carried on more in unison with Natural Philosophy. In general I treat of each subject in the course, but dwell chiefly on such as are fundamental, and what the bulk of the students can comprehend the most readily.

Do you think it desirable that no person should enter your class until he has attended the second class of Mathematics?—It would certainly be so; but, on the other hand, the expense that would be incurred would be too much.

Would it be desirable for their own proficiency?—Certainly; but I am sorry to make a complaint on this subject. I had first brought about the attendance on the Mathematics, at least on one class, as necessary for the students of Divinity; but at that time the First class, which they commonly attended, besides teaching the elements of Geometry, gave the elements of Algebra to a certain extent; and they were tolerably prepared for the study of Natural Philosophy. At present the Algebra is detached altogether from Geometry, so that the first year does not qualify them well for entering the class of Natural Philosophy. But the chief objection which I have to state is, that many of the students, from mis-information, and a wish to postpone the study of Mathematics, take the First Mathematical class the very same year as the Natural Philosophy class. This renders the former regulation nugatory; it is an evil which I cannot remedy. The professor of Divinity could, perhaps, check that absurd evasion.

Have you any idea of the proportion of students that do that?—Not many; I dare say not half a dozen, but I will not venture to state it exactly. I communicated my information to the professor of Divinity, and requested that after due notice he should refuse admission to the Divinity-hall to those whose certificates of attendance upon Natural Philosophy, and upon the First Class of a Mathematical course, were dated in the same session.

Did he do so?—I understand there was some doubt as to the power that he possesses. I have not attempted anything further in it; I have only stated that it is a grievous evil, and

should be remedied as soon as possible; and I exhort the young men upon the subject, that they should not fall into that abuse, as it is but throwing away their time; yet, if they are diligent students with me, I cannot refuse them a certificate of attendance.

Would you think that it would add to the reputation of this country, particularly in the line of Physical Science, if you were restrained from admitting them until they had acquired a sufficient knowledge of the Mathematics?—I conceive I have no right to shut my door against any person who presents himself; his is the whole risk and responsibility.

Do you think such a system could be adopted and made imperatively binding on all the students?—That must proceed from the profession to which they belong; if those several professions would take up the matter it might be easily effected.

Do you think it would be conducive to the advancement of Physical Science in this country if such a measure were adopted?—Yes, it would be most advantageous.

Will you inform the Commissioners whether, in your opinion, it would be conducive to the advancement of Physical Science in this country that such a thing should be introduced?—It would, no doubt, redound greatly to the honour and illumination of the country; but it could not apply to those students over whom there is a power of control.

But would it be beneficial, supposing you had authority to enjoin that course of study?—In the profession of the Law they were formerly all laureated, or had the degree of A.M.; and for this reason, advocates, like the clergy, had the title of *Master* prefixed to their names. If this practice were revived, and it were insisted that they should take that degree before they were called to the Bar, it would accomplish an important reform. The same obligation might be imposed on the students of Divinity. In Physic it would be impossible, in the present state of things, to go quite so far.

Do you consider the acquisition of a certain portion of Mathematical knowledge to be necessary before a student enters your class with advantage?—Certainly, I consider it necessary, but not a very great share. The subjects taught in my class are very various in their nature; some of them, such as Electricity. It would require a very profound knowledge of Mathematics to advance to the difficult parts of Astronomy; but a very small portion is sufficient for understanding Hydrostatics and Mechanics, and the more ordinary branches of Natural Philosophy. I conceive that a course of three months' study of Mathematics, on an improved plan, for which a syllabus could be digested, to be quite sufficient for entering upon what is called a Popular Course.

Do you think that portion of Mathematical knowledge is likely to be sufficient to enable them to follow the course you deliver?—Not quite; but the mode in which I endeavour to obviate this is to refer my students generally to demonstrations contained in an ample text-book which I have published. I am obliged, for the sake of the bulk of my hearers, to take rather a low flight; but I exhort those who wish to study it more thoroughly to peruse carefully the demonstrations at home. In the class, I now give no demonstrations except of the simpler kind. I question if I should do so if I had the entire control of the matter; but I am obliged, under the circumstances under which I am placed, to consult the feelings of the public.

Then, to a considerable extent, do you render your class a less scientific one than it otherwise would be, in consequence of a considerable proportion of the students not having acquired a knowledge of Mathematics?—Exactly so.

Can you inform the Commissioners if it was the practice in the Mathematical class to teach Algebra in the First class before your time?—I believe that it was not so in Edinburgh, but it has always been the case at St. Andrews, and I believe in Glasgow and Aberdeen. When I was appointed Professor of Mathematics, I introduced it, and I conceive with very great advantage. I went as far as Quadratic Equations, and this without in any way cutting off part from Geometry, which hence derived further illustration, and was taught to the same extent at least as before.

Do you think that any attainments beyond the pure elements of Mathematics are necessary to enable a student to attend your class with advantage?—No. They might understand the greater part, at least three-fourths of the course, with a knowledge of the mere rudiments of pure Mathematics. I likewise believe, that elements simpler than those of Euclid, and much better adapted to the actual state of science, could be adopted with the happiest effect. I hold it to be slavish prejudice to think otherwise. The introduction of the Elements of Euclid, indeed, was comparatively a recent thing in our Universities. I believe it was not introduced before the time of M'Laurin. A mere Compend had been used formerly.

About what time might Euclid have been introduced here?—I suppose about the year 1740; but generally the professor of Mathematics had a small Digest of Arithmetic and another of Geometry, which he taught, drawn up by himself; and at an earlier period had they also continental books. The Arithmetic of Ramus was used here, and the Geometry of Metius.

Did not the professor of Mathematics at that time teach Geography and Dialling?—The professor of Mathematics in M'Laurin's time taught a great many things which are certainly not understood as properly belonging to Mathematics. It is necessary to state, that the professor of Natural Philosophy was then a very old man, who had been, I believe, one of those who taught every branch of knowledge in succession. He was one of the four regents, and therefore included under the title Natural Philosophy a number of subjects, which he went over in a very superficial way. He taught the Physiology of animals and plants, a little of Anatomy, the history of Minerals and Meteorology; and he followed the Cartesian system and Cosmology, blended, if possible, with the Aristotelian: it was a strange chaos. On that occasion the professor of Mathematics thought himself entitled to teach some parts of Experimental Philosophy, when it was neglected in the proper chair; and M'Laurin being at the

University of Edinburgh.

Professor Leslie.

11 October 1826.

same time a man of high genius and talent, was encouraged to give lectures on several branches, which were indeed foreign to his profession.

Had not the Gregories done the same before him?—No. There was David Gregory, who gave some lectures on Astronomy at one time, explaining the Newtonian Philosophy, then first promulgated. But education here was exceedingly low at that time; for it appears that, upon the occasion of the Royal Commission in 1690, one of the queries was, Whether it might be worth while to instruct the students in the New Philosophy by experiments? This was a few years after the publication of the Principia. Of course, David Gregory did merely supply a defect in our system. His lectures on Astronomy were a sort of commentary on Newton, which he afterwards compressed into his book on Astronomy.

Do you understand the Newtonian Philosophy to have been introduced in the English Universities at that time?—No, a long time after; and in a very curious book, the Life of Whiston, by himself, that most conscientious man says, "He had already caused several of his scholars to keep acts, as we call them, on several branches of the Newtonian Philosophy; while we at Cambridge, poor wretches, were ignominiously studying the fictitious hypothesis of the Cartesian."

When you were professor of Mathematics, did you subscribe yourself at the same time Professor of Astronomy?—When I came to that chair, I found my predecessor had written his name *Matheseos et Astronomiæ Professor;* I thought I should do the same, without knowing how far the title was available, but reserving my claim *quantum valeat.* I am now assured no such right belongs to the Mathematical chair. Upon the occasion of the erection of the Professor of Practical Astronomy, some apprehension, I believe, was entertained that it might prove an encroachment, and a sort of claim was therefore put forth. The addition of Professor of Astronomy has never been affixed to any publication, nor has it been admitted into any of the commissions granted by the Town-council. It ought, as null and void, to have been omitted long since in the signing of diplomas.

Was Astronomy ever taught before that time in the Mathematical class?—I think a branch of it, or the more Mathematical part, was once or twice taught by Professor M'Laurin, when the Professor of Natural Philosophy was far advanced in life, and adhered to the ancient system.

Do you happen to know whether Professor Dugald Stewart and Professor Playfair gave lectures on Astronomy when they were professors of Mathematics?—I am not prepared to answer that question absolutely. I believe Mr. Stewart did not. Mr. Playfair never did.

Do you know the practice of Mr. Matthew Stewart?—He taught nothing at all except the elements of Geometry, nothing certainly of Astronomy.

Did you propose teaching Astronomy at any time when you were Professor of Mathematics?—I never gave lectures on Astronomy.

Did you propose to do so?—No; I did sometimes think of it, but never did make a regular proposition to that effect. I conceive I should not have done so without consulting Professor Playfair. I did not consider it a valid right, though I was not then aware that it had been so lately assumed. I learned from Mr. Dugald Stewart that it was not used by him until about the time he quitted the Mathematical chair.

Does Professor Leslie know at what time the class of Natural Philosophy was introduced in the University of Edinburgh?—The class of Natural Philosophy was one of the curriculum that is, the regent taught Physics in the fourth year.

But can you give the date of the institution of Natural Philosophy as a separate class?—In the year 1708; and, on that occasion, all the regents had their several different branches assigned to each.

Were they enjoined to take separate departments by the Parliamentary Commission?—I am not quire sure of that; at Aberdeen some of the old practices long remained.

From 1708 has Natural Philosophy been taught in this College as a distinct class?—Yes, as a distinct class.

Did you state that the same Professor who had been the Professor of Natural Philosophy in 1708 was teaching in 1740?—I am not prepared to say absolutely; my impression is, that I know Sir Robert Stewart was a very old man at that period, and I know that he was in the College in the year 1713.

How long did he continue?—He continued until he was a man very far advanced in life. I cannot now state the thing, but it is easily ascertained.

Have you had an opportunity of seeing a syllabus of the lectures delivered by Professor Playfair in his Third Mathematical class?—I think I once saw a paper of that sort.

Do you know if that syllabus included Practical Astronomy?—I believe it contained a great many things which are not considered as belonging to the subject. I do not think it was ever carried into effect; it was a programme for one session only, for not above five or six months. It was a sort of an experiment made at the time when Professor Robinson was in bad health.

Was Astronomy included in that programme?—If my recollection serves me I think it was, and I believe also Mineralogy and Physical Geology.

While you were Professor of Mathematics, did you think of introducing the branch of Astronomy into your course?—I thought of a separate course, but I never did carry it into effect; it was only a certain vague contemplation.

Did you contemplate that it was to be introduced into your Third Mathematical class?—No; the only thing I ever introduced into my third class was the illustration of Integration of Quantities, as applied to certain Astronomical Problems, taking these merely as a subject of illustration.

Had you contemplated a Fourth class in addition to the Third class?—No, certainly not.

You have stated you have made frequent representations to the Town, with a view to obtain a more complete apparatus?—I have.

Do you conceive the Town is bound to afford to your class a complete apparatus?—I certainly conceive so; and indeed, upon my appointment, it was promised that in due time I should receive the necessary sum.

By whom was it so promised?—By the Provost of the day, but at the same time he complained of the great want of money in the Town's coffers.

Did the Provost who made that promise recognise to you that the Town was bound to afford that apparatus?—No, it was merely an understanding to that effect.

Did he deny the right of your request?—No.

In what sense does Professor Leslie understand the Town as bound?—As Patrons of the College, and, besides, holding in property the College buildings and class-rooms. If the College funds should be not sufficient, it is presumed that the Magistrates would judge it expedient to supply the deficiency from their own funds.

Are you aware of any specific regulations by which they are so bound?—No; I know it has been the practice. Professor Robison received £600 with considerable difficulty, and I believe after repeated applications.

Do you believe you are the first person who has not obtained from the Town a sum of money for apparatus?—No; I believe several of my predecessors obtained such aid; the Magistrates have been exceedingly averse to make those payments.

Did you receive the apparatus so purchased by Professor Robison with that £600?—A catalogue was furnished me, and, on examination, it was found that a great dilapidation had taken place, in consequence, I suppose, of the frequent removals of the apparatus during the progress of the College buildings. I must say that apparatus was in exceeding bad order, and many of the articles very incomplete and ill-constructed; insomuch that I have retained part of it rather for the sake of showing the progress of the science than for any real use I can derive from it.

Is almost the whole of the present apparatus your own property?—Professor Playfair had some addition made to it. I have added about two-thirds to the whole value, partly from my own funds, and partly from what I obtained from the Town. I have received some money, and have been promised more.

What year did you commence as Professor of Mathematics?—In the year 1805.

You have mentioned you always taught the Third class, and it appears in the Returns that from the year 1805 down to the year 1819, inclusive, there are not above two or three marks of any students having attended the Third class; will you explain that?—I do not know how that blank has happened. I taught a Third class every second or third year, but not every year in succession. My object was to give the students an opportunity, while at college, of attending it. [*The Return to the Commissioners is handed to the Witness.*] I do not know how this has arisen. The last class I taught I had 22 students; the class was constantly improving, and I must have opened it about six or seven times.

Did you furnish the materials for making up that Return?—I believe so; I cannot charge my memory with regard to it. How the omission happened I do not know, unless I had conceived the Third class, as a sort of private one, to be one for which Returns were not expected.

From what materials did you compose the return with regard to the numbers of your own class?—Whenever a student enters my class, I desire him to write his name in a book, together with the place from which he comes, and also his place of residence; this book I preserve, and from it make my returns. Whether I considered the Third class as entirely a voluntary one, and did not make the returns, I will not say; it was an increasing class, the last having 22 students.

While you were in the Mathematical chair did you annually make returns of the numbers attending your class?—I made regular returns.

Was the Return for the purpose of this Commission made by yourself or the Secretary of the Senatus, from those returns which you had previously sent in?—They are made up by the under-librarian, I do not know in what way, from my returns.

Do you mean those returns that you had previously transmitted?—Yes.

Did you transmit any returns to that officer with reference to the returns which were to be made to this Commission?—No. As to the Mathematics, I did not conceive myself required to do so; as to the Natural Philosophy, I should explain it. The students of Natural Philosophy are more irregular in the time of joining the class than those of Mathematics. I found it difficult to make returns at Christmas, as several students enter even after that period; but the principal reason which prevented me from doing it was this, that I found it to be a practice with some students to go to the Secretary and obtain certificates from the College Album. By this collusion they were enabled to enter the Divinity Hall whether they had attended regularly or not. I resolved, therefore, not to give an opportunity of evading the regulations in that manner. The Medical classes have lately tried to prevent such evasions, by obliging the students to write down their names every month in a book kept for that purpose in the library. Before this regulation was made, it had been not unusual for students in certain classes to take out their tickets, and go into the country and remain there until the end of the session, and even surprise the Professor into a certificate of attendance.

Do you know if the Professor of Divinity was in the habit of taking a certificate from the Secretary, in lieu of the certificate of attendance from the Professor?—I should suppose not; but there are several other students that must attend the Natural Philosophy class, besides those who enter the Divinity Hall. Some belong to the secession, and some are apprentices of Writers to the Signet. With regard to those the certificates signed by the Secretary are

University of Edinburgh.

[Professor Leslie.

11 October 1826.

considered as sufficient. On this ground I declined sending my returns until some mode was adopted to remedy the evil.

In what manner would you (refusing to transmit the returns enjoined by the Senatus Academicus) prevent these persons from taking the certificate of the Secretary instead of your own certificate?—Because the Secretary has no certain means of knowing whether a student attends a particular class, unless the Professor furnishes him with the information.

You stated that it was the certificate of the Secretary from the Album in which the students matriculate?—No, but from the returns made by each Professor.

Although you have not made those returns to the Senatus Academicus since you were Professor of Natural Philosophy, will you be able to make them now to the Commissioners?—I would have done it with a great deal of pleasure, but my operator has gone into the country, and has, by some oversight, taken with him the key of the drawer in which my class-books are kept. I stated from memory as nearly as I could, which I supposed might be sufficient. I stated as the number 150 or 160, a few more or less.

Will you furnish the lists with the numbers?—I will endeavour to do so.*

Is there any public examination by the Principal, or by the Dean of the Faculty of Arts, or any of the other Professors, in your class?—No, none.

Would it be of advantage if there were?—No, I do not think it would.

Do you conceive it would be of any advantage if there were any public examination before the whole College and the Senatus Academicus?—I question it very much; with such an advanced class as mine, I find it very difficult to bring the students to submit to examination.

You have stated you have Prizes in your class, and that you find beneficial effects resulting from giving them?—I should mention that I have a larger prize to give afterwards, instituted by Dr. Fellowes, but the terms are not yet completely adjusted; it is an experiment which will be varied according to circumstances. I may be allowed to state, that in consequence of my suggestion, there is a sum of £50 allotted for the encouragement of the more advanced students, that is, students who shall attend Natural Philosophy the second year, or attend a higher course.

Who was that allotted by?—By Dr. Fellowes, to whom the late Baron Maseres left his fortune.

Is it an annual sum?—Yes, and the first belongs to this year; but it has not been given, because there was not sufficient time for its right operation. This first sum is to be laid out in the purchase of an instrument for the use of the class. It is intended there shall be two prizes, one of £30 and another of £20; but with the power of subdividing as circumstances may occur. There are besides a gold and silver medal.

Are those prizes to be awarded by you?—By my decision; but the conditions are to be published, and, if any improvement be suggested, I shall be glad to adopt it. The prize, at all events, is always at least to be determined on a close competition.

You have not finally arranged it?—No; we have not yet arranged the whole of the circumstances. I did not conceive there was a sufficient number of candidates last year, and I recommended the prizes to be postponed till next year.

Do you think it would be of advantage to have a classification at the end of the session according to merit and proficiency among your students?—I believe this would be very desirable if it could be done; and I have endeavoured to bring it about to a certain extent by my certificates. I make them all different; some contain expressions of a very high, and others of a very moderate, degree. I have always endeavoured to follow gradations as far as I could judge, and these certificates possess a certain value. I do not know any other classification; perhaps it might be done, but it would probably be difficult, perhaps invidious.

Do you consider the system of conferring prizes or classification is the best?—I should suppose the present is the preferable mode, but I am not prepared to say positively. There is another prize by Dr. Fellowes, of a higher description still; it is a prize of £75, to be divided into two parts, one of £50 and the other of £25. It is to be assigned to any student, who has finished his Philosophical studies at Edinburgh within the last 12 years, for an Essay on a certain subject to be prescribed. There is to be a competition next year and the year following, and, if the result be such as is expected, the prize may be made perpetual; but we do not conceive ourselves bound to continue it, unless we see reason to think that it will answer the ends proposed.

Does it relate to a competition to your particular class?—No, by the whole College.

Who is to be the judge of the prizes?—The matter is not completely arranged; I presume Dr. Fellowes and myself are the two judges; but the whole matter is to be reconsidered, and will be submitted to the Senatus. It is for the present limited, at my suggestion, to those who have finished their course within these 12 years; but probably it may afterwards be reduced to a shorter period. I was solicitous to have a literary and scientific production that would reflect credit on the University.

Are there any public Examinations of any sort in this University?—None.

Are there any for degrees or otherwise?—No.

Does Professor Leslie think that it would be attended with advantage if there were such

---

* *The Professor has subsequently transmitted the following list:—*

Winter Session.				Summer Course.	
1819-20	No. 180	1823-24	No. 143	1820	No. 51
1820-21	No. 160	1824-25	No. 140	1822	No. 46

University of Edinburgh.

Professor Leslie.

11 October 1826.

public examinations connected with a well digested system of graduation in Arts?—I have considerable doubts upon that head, for the degree of Arts confers no civil privilege in this country, and I am afraid the students would not submit to that ceremony unless they had a prospect of advantages which they do not possess at present.

Do you think the reputation of taking a good degree would not be a stimulus?—I conceive to a considerable extent it would. I am anxious that the degree should be conferred publicly, whether the examinations were public or not. Indeed I am convinced that the whole of our regulations as to degrees require to be reconsidered.

Has Professor Leslie any suggestion to offer to the Commissioners upon that head?—If I were allowed, at the next meeting I should be prepared to offer my suggestions. I would mention another circumstance. The original curriculum was four years; the students, in the first year, were taught only Grammar; there was no Humanity class in any of the colleges, for all the lectures were given in Latin, which presupposed a knowledge of that language competent; the third year the students were styled Bachelors. I am anxious that the degree of Bachelor should be revived, to be conferred upon the students in the third year; and, if they prosecuted their studies vigorously, they should get the degree of Master the fourth year, so that we should have greater hold over the application of the students than we have at present. Some professors think this alteration would hardly be worth while. I wish it to be a matter of no expense.

Are there any other suggestions you would wish to offer to the Commission?—I would say we have made alterations lately in the mode of conferring degrees which I do not approve of. Originally the attendance was upon four classes only, the four that I have stated; that is to say, Greek, Logic, Ethics, and Physics; Mathematics was added afterwards. Humanity, though assigned to a separate professorship, was never considered as a class properly belonging to the curriculum; it has only been added lately to the course, and I believe in some of the colleges it is not yet required for a degree. What I would complain of is, that very recently the attendance on the Rhetoric class has been enjoined here as a requisite to the obtaining of a degree. I hold that, as Rhetoric is always included under Logic, we had no right to compel students to attend more classes than constitute the curriculum in every other University, or to render the difficulty of taking a degree greater here than at other places. That they may have access to more classes is all very well, but that we should require their attendance is a totally distinct thing. This has had an unfortunate effect already; for a considerable number of young men are sent down from England from the Dissenters with exhibitions which require them to get a degree in Arts. At Glasgow the professors do not require attendance on Rhetoric, which is taught in the Logic class. They likewise confer the degree upon a candidate who has studied only three instead of four years. But many of those young men would prefer Edinburgh. We have injured our classes, I believe, by this regulation; and I do think that we had no title whatever to demand greater qualifications for a degree in this than in other colleges, though we give lectures on a greater diversity of subjects. We might with equal reason exact attendance on Natural History and Universal History, or even Agriculture. These are all desirable branches of knowledge, but still they are not to be considered as essential. The requisites for a degree in Arts should be the minimum of Philosophical acquirements.

Under what circumstances is the degree granted after three years' attendance; is it in the case of those students who have not been bred in Scotland?—The provision was at first intended for the encouragement of strangers; it was conceived that those who came from England possessed a better knowledge of the learned languages than the youth bred in this country; and it was considered likewise, that, being of a riper age, the application of three years from them might be deemed equivalent to four in those of our native growth.

Is Professor Leslie aware that it was under the authority of the Parliamentary Visitation in 1700 that this practice was introduced and acted upon?—I am quite aware of that; and I stated to the Faculty of Arts the impropriety of rendering the attainment of degrees more difficult here than in other places; but, from the absence and inattention of one or two of the professors who thought as I did, I was left in the minority.

Do you know what particular class those persons you have alluded to were entitled to pass over?—The Greek class, which was very low here at that time, insomuch that in the year 1733 the Town-council passed an act to prohibit any person in Edinburgh from teaching Greek, as it might injure *their* professor.

Was not the regulation in 1700 meant to apply to all the Universities in Scotland?—Yes; but it was conceived the study of Greek was generally low in Scotland, and that students brought a sufficient stock of it from England to qualify them for going to the higher classes.

From your knowledge of the students who come from England and Ireland, and other countries, does it appear to you that distinction ought still to be observed?—With regard to England I think it should; as to Ireland, I have no such favourable opinion of the students who come thence, they being, for the most part, extremely ill prepared on any subject of education.

Do you think the distinction ought to be observed as to those who come from France, Holland, or other foreign countries?—I do not know; perhaps it would be prudent in us to ascertain what advancement they had previously made.

Would it add to the reputation of this or any other University in Scotland, if degrees were granted in an easier form in Scotland than they could be in the countries of which those persons were natives?—Certainly not; but in those countries three or four years are judged sufficient: it is only in England that the term of seven years is kept up, following out the principle of apprentice laws, which were borrowed from the scholastic system of education.

Do you know if the number of graduates in the degree of Arts has decreased since the

University of Edinburgh.

Professor Leslie.

11 October 1826.

addition of the class of Rhetoric?—Not on the whole; but the degree had been rising before in reputation, and coming more into request. Young men going to England, or wishing to hold public situations, are solicitous to obtain it.

If the number of those who take the degree of Master of Arts has increased since the addition of the Rhetoric class, on what does Professor Leslie found his opinion that the addition of that class has diminished the number who would have taken the degree?—I have stated that the number would have been greater if no such obstruction had been opposed. I have known several students, that, to save time and expense, were under the necessity of going to Glasgow. But I must say, that the whole business of conferring degrees of Arts is conducted here with more attention than formerly. When I came first there were not perhaps above two granted in a year; since the time when the regulations were revived, about ten years back, they have regularly been increasing, perhaps to a dozen or a score annually.

Have you happened to observe what proportion of those who take the degree of Master of Arts have of late been Dissenters?—A very considerable number of them are Dissenters from the Church of England, and I presume take the degree chiefly to qualify them for enjoying their exhibitions.

But are there not many (not connected with the Church of Scotland) who are Dissenters from each of the Established Churches in the United Kingdom?—Yes, I believe so, from what I have been able to learn.

Is any religious test required from those who take a degree?—None.

Is it required of a Roman Catholic?—No; a Roman Catholic may receive a degree, though I believe there is an old act which required the candidates to sign a declaration of their being Protestants; but in practice it has been abandoned long since, perhaps a hundred years since.

Is there any *Sponsio* signed?—There has been.

Is it discontinued altogether?—I suspect it is signed now by students without their knowing it. It was sometimes written upon the first leaf of the Album, and all the students who wrote their names were presumed to give their assent to it. At present it is copied annually, and placed at the head of the list of the names of the students as a matter of mere form. It is exceedingly moderate, however, and might be signed without the smallest hesitation by those of any religion.

So that a Roman Catholic may subscribe it without being aware what he is doing?—Perhaps the under-librarian might take the trouble to explain the matter to him; but in general it is passed over without a moment's thought. I have known several gentlemen from Oxford who refused to enroll names down, for fear they should be entangled in some Presbyterian oath.

Are there any Societies of students in this College, particularly for the prosecution of Physical study?—No, there are none of that description. I have often wished something could be done, but, from the necessity of having apparatus, the institution of them would be attended with immense difficulties.

Do you approve of the system of societies?—I think they are by far too numerous. I have often wished that they could be put under some sort of regulation. I conceive that the professors, though they had no power in general over them, might at least exercise it over such as are held within their own buildings. I made a proposition formerly to the Senatus, that an annual list should be required of the members of those societies which meet within the walls of the College.

Do you know how the persons composing such societies obtain the places for meeting?—They get it from the janitor, to whom they pay certain fees; and the Senatus never exercises any sort of interference. My reason for objecting to these societies is, that very young men are often tempted to join them long before having acquired sufficient knowledge, and waste their time in debates, instead of pursuing their regular studies. I should wish that none but those of riper years were permitted to take a share in such discussions. There is another cause that has contributed to multiply those societies, namely, the little vanity of being made presidents, and vice-presidents, and secretaries. To obtain these titles more easily, the societies are often split down into very small bodies.

Could they be easily put under proper regulation?—The names of the members might be given in to the Senatus, but it would be a pity to interfere too much; there is hardly a professor that would choose to exercise that authority; a little degree of odium would be incurred without producing much advantage to the University. I think that this inspection would be more properly the province of the Principal.

Is it not understood that honorary distinctions are obtained in these societies?—Yes.

And are not many exercises performed there?—I believe so. The higher societies are very useful; but the system of debates is certainly carried too far in this College. Too many young boys enlist in the minor societies.

Are they under the regulation of the College?—No, except one, the Speculative Society; but the Senatus does not seek to exercise its authority.

You have referred to some proposals that you made to the Senatus Academicus, or Faculty of Arts, as to an improvement in the mode of graduations in degrees; are those proposals in writing?—No; I believe they are not now in existence.

Will they appear on the minutes of the Senatus Academicus?—No; and I must say further of the Faculty of Arts, that very often only two or three members are present at its meetings, which excite little interest. Several things appear in its books which I should not approve of.

Were the proposals made to the Senatus Academicus, or confined to the Faculty of Arts?—They were made to the Faculty of Arts, but rejected. I do not think they ever came before the Senatus Academicus.

Could the Commissioners obtain that paper by an order on the Senatus Academicus, requesting them to furnish it?—I am afraid the paper does not exist now.

Can you state what improvements you proposed, and furnish the statement in writing to the Commissioners?—I will bring forward my views of it.

Will you state the nature of that proposal, and communicate any other suggestion you have to make?—I shall have the paper ready forthwith.

In one of the papers transmitted by the Senatus Academicus there is a return from the Professor of Natural Philosophy, in regard to certain small fees which are paid by the students; and the Professor states, that, in regard to every matter of that sort, he understands that each Professor is left to his own discretion and responsibility; can you give the Commissioners any information upon that point?—That has been the general understanding hitherto.

Does that small fee go to defray part of the expense of the instruments or experiments?—It was intended to go towards the expense incurred by breakage and the consumption of articles in various processes and experiments. Dr. Black, I remember, took four shillings for the charge of experiments; and at Aberdeen the late Dr. Copland made a small demand on his students for waste, or the tear and wear of instruments. I thought myself entitled to follow this example; the more so, as I directed that in future no vail should, as customary, be given to the door-keeper at Christmas.

What has been the extent of allowance that you have received from the Town for instruments or philosophical apparatus?—I received £100 about a twelvemonth after I succeeded to the office, and obtained another £100 about a year ago as the pledge of a much larger sum. I am now promised only £200 more, but have not yet received it.

Have you received £200 since your appointment in 1820?—Yes; and there are at present in the class-room instruments and apparatus purchased by myself to the amount of £900.

Is the attendance of your students towards the close of the session pretty regular?—It is upon the whole pretty regular; a number of the students, however, have schools in the country; they with difficulty obtain leave of absence, and are often obliged to go home about the beginning of April. If they attempt to go away sooner, I refuse them altogether a certificate. When they take their leave before the end of the course, I always state in the body of the certificate that their attendance was regular up to the day in which it is dated.

Is that the only class of students who leave you before the expiration of the course?—Yes; and, to encourage the frequent attendance, I generally reserve some peculiarly interesting subject, such as Electricity, for the end of the course.

Does the Professor think the difficulties he has experienced, from the subject being too extensive to be embraced in his present course, might be overcome by an extension of the period of the course?—No; I find that there is a very considerable strain in the continued application for even five months; a degree of lassitude is experienced among the best students, and to support their attention I endeavour to throw the more entertaining parts, and those which require the least of mental exertion, towards the conclusion of the course.

Is that the only objection you have to the extension of the period of the course?—That is the principal objection; we find that they return again to their studies with much greater vigour when the term is not too long protracted.

Are you aware whether in other Universities there are any examinations in the classes of Natural Philosophy conducted in the presence of the whole class?—No, I do not know the practice of other Universities except that of St. Andrews, where the class being a very small one, the examinations were no doubt carried on in the presence of the whole.

What is the method at Glasgow?—I believe they have two hours, one for the lecture, and another for examinations and exercises.

Would there be any difficulty in introducing that system?—It would be impossible to do it here, for there are so many classes in the College, besides private classes in the town, that the bulk of the students could not find time for those extra hours.

Would there be a difficulty in fixing an hour for that portion of students who chose to avail themselves of the benefit of it?—I have frequently proposed an extra hour, but it was very ill attended, so that I found myself obliged to give it up. I know the same thing happened with the late Dr. Robison.

Have you had occasion to consider Professor Jardine's Outline of a Course of Philosophical Education?—I am acquainted with the general character of his plan, but I think it is not applicable to our system, particularly in what regards Natural Philosophy. It may be very fit for training school-boys, but not proper for guiding the education of persons of more advanced age. In general, I am no admirer of those mechanical modes of instruction, which are intended to supersede mental exertion. I disapprove of the system of monitors, and am convinced that there is much deception in the machinery which has been lately put in motion.

What number generally attend that hour on the Saturdays for examinations?—I am sorry to say, not above twenty; there may, perhaps, be thirty hearers, making both together about one-third part of the whole class. I have adopted a regulation which I find to be most effectual in securing attendance on the examinations: it is this—that no student is allowed to compete for the annual prizes unless he has submitted to the regular examinations. But I must say, that several of them drop off during the progress of the session. Indeed I must say, that in this respect the exertions of the students are by no means proportioned to the anxiety and efforts of the Professor. He feels the necessity of yielding sometimes to circumstances.

Are there any suggestions you have to offer with a view to the improvement of the course of study in your class?—I should require some time to consider that, it has so many bearings; but I believe one of the most improvements is one which I before stated, that there should either be a second class, or a subdivision of the general class, somewhat in the manner already mentioned.

Have you any general suggestions to offer to the Commissioners relative to the course of

University of Edinburgh.

Professor Leslie.

11 October 1826.

academical study?—If I were permitted, I should certainly suggest several alterations; but I believe it would be better done in writing. At present I shall only say, that on the whole I should rather prefer the plan proposed at Aberdeen fifty years ago, drawn up by Dr. Gerard, from the suggestions I understand of Dr. Reid, and adopted in the Marischal College, by introducing physical sciences earlier, and throwing Logic and Ethics to a later period of the course; upon this ground, that the mind sooner grasps external objects than it is prepared for contemplating, reflecting, and analyzing its own operations.

Would you have the goodness to consider the subject instead of setting it down in writing, and, when a farther opportunity of examination is given you, state such suggestions as you may have to offer?—Yes; I shall be glad to state anything that may occur to me.

Edinburgh, Thursday, 12 *October* 1826.

VISCOUNT MELVILLE in the Chair.

The Reverend Dr. *David Ritchie,* D.D., Professor of Logic in the University of Edinburgh, called in and examined.

Professor D. Ritchie.

12 October 1826.

Are you Professor of Logic in the University of Edinburgh?—Yes.

Have you seen the Returns that have been made to the several queries which have been sent to the Senatus Academicus by the Royal Commission?—Yes, I have perused them all as a member of the Committee, and I give my concurrence to them all.

Are there any general observations you wish to make, in addition to those answers?—There is nothing which has occurred to me on that subject.

Would you have the goodness to mention the average age of the students who attend the Logic class?—From thirteen to seventeen years of age. I think some of them are as young as thirteen, but very few. They are generally about fifteen years of age; many of them are older; sometimes men of considerable age attend.

Is it a small proportion of much older students who attend?—A small proportion.

In general, have the students attended any other class in the College before they come into yours?—Almost all have attended the Greek and Latin.

Have you any method of removing to any of the junior classes those students who are not competent, in your opinion, to attend your class?—No; I do not think that it is at all practicable. I do not think it would be equitable, if it were practicable, excepting in regard to those who aspire to academical honours.

Have any considerable portion of your students attended any of the classes of Mathematics, before they attend the Logic class?—I believe very few.

Do you consider it desirable for the study of Logic that they should attend Mathematics previously?—Perhaps it is not very essential for the study of Logic; but in other points of view, I should think it advisable. According to the present plan, they are supposed to take the First Mathematical class and the Logic class in the same year. I think this inexpedient, because many of them are very poor, and cannot afford to pay four classes in one year, which they must do in that case. Then, as Greek and Latin would require a great deal of labour in that year, and as Logic is a new subject, I think they cannot do justice to Mathematics along with the Logic and Greek and Latin.

When you refer to the present plan, do you refer to the course of study prescribed for Divinity students?—Yes, generally speaking, for students who are going on regularly. They cannot attend the First Mathematical class and the Moral Philosophy class the same year, because they meet at the same hour. The consequence of this arrangement is, that as many of them are not able to pay four classes in one year, and also do not think they are able to carry on four different branches of study in the same year, they omit taking Mathematics in the second year; and, when they come to the third, they find they cannot take it, the hour of meeting being the same with that of the Moral Philosophy class, and consequently they must take Mathematics and Natural Philosophy in the same year, in which case they are unqualified for Natural Philosophy.

It appears from the returns made by the Senatus Academicus that there is no general course of study prescribed for the general body of students attending the University?—No, only for those who are intended for the Church, and those who intend to take academical degrees.

Is it necessary, for obtaining the degree of Master of Arts, that the Literary and Philosophical classes in the College should be attended in any particular order, or must they only attend a certain number?—The order is pointed out by our Regulations. It is allowed in particular cases to be departed from. The order is Greek, Logic, Moral and Natural Philosophy.

Do you suppose that that order in practice is much observed by those who take the degrees?—It is followed almost invariably, or with very few exceptions.

Does any alteration occur to you that would be beneficial in regard to the course of study which students attending the University are to follow, speaking with reference to the order of attending classes?—The only general alteration that occurs to me is, that students should have it in their power to take the first Mathematical class any one year before the fourth. I do not think it would be of consequence to alter the arrangement of classes so as to take Natural Philosophy before Logic or Ethics; I think the present arrangement is, in that view, as good as any other. But I would say, arrange the hours so that the student may take the Mathematics any one year before the fourth. He must have attended it before the fourth, otherwise he is unqualified for Natural Philosophy.

Do you consider it as not of much importance whether the student studies the Science of Physics or Metaphysics first?—No, I think it is of no importance whatever.

177

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

What is the average number of students generally who attend your class?—Probably from 170 to 175, or 180.

And is the greater proportion of those about fifteen years of age?—That is, speaking generally, the most common age.

Will you have the goodness to state your general plan of conducting the system of instruction in your class, not with reference to the subjects of your course, but the mode of conveying instruction which you pursue?—My mode of instruction is almost entirely by lectures. I also examine; but that is merely once a-week, and for a short period, with a view of going over the heads of the subjects discussed in the week before, so as to bring them to remembrance. I intend my examination merely for giving a general view of the subject of some preceding lectures. When I first got the class, there was a separate hour twice a-week for examination; but, as there could be no compulsion upon their attendance, the consequence was, that, out of 140 students, there were only about 20 that had given in their names to attend that second hour. I thought the smallness of this number rendered this separate hour a matter of no consequence, as those 20 probably least needed it. I thought it better to try what I could do, by examining them occasionally in a class. I had it in view also, by these examinations, to know that the students attended; for, if one did not answer when his name was called, I inquired why he was not present. I soon found, however, that this did not answer my purpose of ascertaining whether they attended, and I resolved to call a catalogue, which had not been done in the class from time immemorial. I tried to prevail on my colleague, Dr. Brown, to do the same thing, but he did not like to do it. I have continued ever since to call the catalogue, so as to call each student once a-week; and those who have been marked absent I call twice a-week. I am thus able to ascertain pretty well their attendance.

Have you any means of enforcing attendance?—I have no means but by refusing to give certificates, which I do sometimes at the close of the course.

How many cases in the course of a year are there in which you suppose the attendance is so bad as that, in the event of applications, it would lead to the necessity of a refusal?—There are not above two or three cases in a year in which I refuse applications which are made. I warn my students at the beginning, that, unless they are regular, I will give them no certificate; or, if they are frequently marked absent, I will only give them one of occasional attendance; and there are some cases in which I refuse to give any certificate.

Do many cases occur in your class in which, if application was made to you for a certificate of attendance, you would be under the necessity of refusing?—There may be eight or ten probably.

What do you suppose is the cause of non-attendance in those you mentioned?—Generally idleness and love of amusement.

In what description of students would you say that you generally observe that irregularity of attendance?—Not in those who must attend the Divinity Hall, for they know that, unless they get a certificate at the end of the session, they cannot be allowed to enter as students of Divinity, but in those who are studying for no profession. At the same time, examples have occurred of young men wishing to attend the Hall who have been so irregular that they could not get a certificate, and they were obliged to attend again.

Does it occur to you to be desirable that the Professor should have any means of enforcing attendance beyond those which you possess at present?—I do not think it practicable. I dare say it would be desirable, on account of the young men, if the thing could be done.

If any system of instruction by examination, at a separate hour, were combined with the plan of teaching by lectures, and if attendance on that hour was made imperative, in order to obtain the certificate, would not that lead to much greater regularity of attendance at the hour of lecture?—Very probably it would; but it would be exceedingly difficult, if practicable, to devise such a scheme; for a great many of the young men attend various classes, and no one examination hour would suit them all. Many of them also teach schools, and many are engaged in private teaching, and it would be impracticable to find an examination hour which they could attend, without giving up the means by which they live.

What are the classes that, in your opinion, ought to be combined with the study of Logic, and which the students should be made to attend the same year?—Greek and Latin appear to me to be as much as can be advantageously attended along with Logic.

Does it occur to you as the preferable course that they should come to the Logic class before they go to the Moral Philosophy or Natural Philosophy classes?—It is a matter of little consequence which of those three comes first or last; the students are as well qualified for the one as the other, provided they have Mathematics.

Does it occur to you as desirable that they should not attend more than one of the last-mentioned three classes in the same year?—Yes, for the first time.

Looking at the number of classes which you conceive it desirable that young men at the Logic class should attend, is there any difficulty in arranging the hours so as to give a separate hour for examination and exercises at the Logic class?—It might be done so as to accommodate a great proportion of the students, but certainly not all of them. Neither could such an arrangement be enforced, excepting in regard to those who are studying for a particular profession. Those who have no professional object in view must be allowed to choose what classes and what hours they will attend.

Would it not be practicable also as regards those who are studying to take a degree?—Yes.

Are you aware that at Aberdeen, in order to secure that object, the three classes you have mentioned, Natural Philosophy, Moral Philosophy, and Logic, are taught all at the same hour, to prevent attendance at more than one in the same year?—I am not aware of that fact; and I do not think it advisable. Many of the students here come to revive what they have learned in younger years, and they attend sometimes two, and sometimes more of these

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

classes, in one session. Many of the students also, who have attended one of these classes one year, wish to attend a second,—an advantage which this plan altogether excludes.

But, looking at a system of academical education as calculated to promote the instruction of youth, is it desirable to obtain the object you now mention by the sacrifice of a greater, viz., the instruction of younger minds?—I am not sure that the instruction would be much greater; the examination, no doubt, would be of importance, but that advantage could perhaps be secured to all those for whom a real knowledge of the subject is indispensable to their profession, without sacrificing the other objects which I have mentioned.

Do you think the attending on classes could be made imperative upon those who had such an object in view?—Yes, I think it could be insisted on.

Have you had occasion to consider the account of the course of study in the University of Glasgow given by Professor Jardine, in his Outline of Philosophical Education?—I have looked through it, but I have not examined it very thoroughly.

Do you consider the introduction of that system, by adding additional hours to the classes of Logic, Natural and Moral Philosophy, for the purposes of examination and exercise, would be an improvement in this University?—Yes, I do, to the extent I have now stated, and as regards all those who are studying for a particular profession, or for obtaining degrees; but I do not think it an improvement for others.

But does not that objection to the system, or that qualification, seem rather to apply to the extent to which you would make attendance imperative?—It does not apply to the system generally, but to the making it imperative on all students.

Do you think, with reference to the age of students attending your classes, that it would be desirable to combine with lectures, and examinations on the subjects of lecture, the reading of any portion of Greek or Latin authors who treat of the systems of ancient philosophy, at that separate hour?—Yes, it might be introduced with advantage; but perhaps the time it would consume might be better employed.

Might not that be one great means by which the Professor might judge of the attendance of his students, from the conversations that might thence arise as to a comparison of the ancient and modern systems with the subject of the lecture?—Undoubtedly it would.

Do you recommend to your students such books as it is proper they should read?—Yes.

Does it consist with your knowledge that that is the general practice in all other classes of Arts?—I believe it is; in all the classes I attended at this College, it was the practice.

Have you only one class?—Only one.

Is there any system of Prizes in your class?—Yes; £10 are given by the City of Edinburgh.

Is that sum under your own distribution, or that of the Senatus Academicus?—My own alone.

Is that divided into many prizes, or a few small prizes?—I generally divide it among about ten.

Is it given in books, or what?—I allow each successful competitor to take what book he chooses, and I put my usual inscription on it. It is a valuable book or not, as they like.

May the book be of greater value than the portion of the above-mentioned sum which properly belongs to the prize?—The small sum that is allowed will hardly get a valuable book; but I allow them to purchase a valuable book if they choose.

Will you state, for the information of the Commissioners, the system you follow in regard to those prizes, whether they are given for a single exertion, or for continued exertions during the course?—I make it a rule to intimate to the class, at the beginning of the session, that no man can obtain a prize unless he has given me one essay at least before the prize-essay is given in, that I may have some sort of notion whether the essay he gives in for the prize be of his own composition. That is the only limitation. I examine the essays to the number generally of from 40 to 60, and it is not an easy matter often to form an opinion of the best. Sometimes, perhaps, I gave more than ten, sometimes fewer, according to the good essays that are given, though generally about ten. I began by applying to one of my colleagues to assist me in deciding the prizes; but the labour was so enormous that I could not ask him to continue it. The essays are generally such as would take half an hour or more to read each of them.

Are you in the habit of prescribing themes in the course of the session?—Yes; I prescribe the subjects of essays.

Is that entirely a voluntary exertion on the part of the students?—Entirely voluntary.

How many such themes may you prescribe in the course of the session?—Three or four, besides the prize one.

Is that done at different periods of the session?—Yes; at the very beginning I give them one subject; and perhaps a month after, when I think they have time to have finished that one, I give them another, &c.

Supposing there were a separate hour for examination, and exercises introduced, would you approve of the system, which, it seems, has been followed at Glasgow, making the students in the classes, in the presence of the Professor, write out at the second hour occasionally the substance of the lecture of the preceding hour with a view to exercise their minds?—I think it would be very difficult to do much good in that way. I do not know, however, as I never tried the plan; but it would not be very easy to examine 160 or 180 or 200 such exercises.

But if each student were writing that exercise without knowing that his might not be the one that would be called up and criticised at the moment it was composed, would it not be a great incentive to labour and exertion?—It would be the same sort of incentive as the examinations; but, as it would come to any individual's turn very seldom, it might not be a very great incentive. If it were practicable, the true incentive would be to examine all of them; but this could not be done.

179

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

Looking to the instruction of youth, is it your opinion that the examination upon such subjects as those which form the topics of the course of lectures upon Logic and Moral Philosophy, is or is not as important a part of the course of instruction as that of lecture?—I should hardly think it so important.

Without the aid of examination, and exercises being made imperative on the students, is there risk, from the nature of the subjects (the attention of the students being entirely voluntary), that they may not be very assiduous as it respects those subjects?—No doubt that will sometimes be the case; but it would be the case whatever means were taken. We know that in all public schools there are idle fellows, and we cannot help it.

Is there any improvement you would wish to suggest in regard to the examination for degrees in Arts in the first instance?—The Faculty of Arts suggested to the Senatus Academicus lately an addition to our regulations, requiring certain examinations, and we still have that subject under consideration. Probably somewhat more strict examination than is at present practised may be advisable. But very seldom indeed, hardly ever, do we give degrees to those whose qualifications we do not know, from their having been our students in our own classes.

That paper having been transmitted to the Commissioners, did you concur in the opinion of the Faculty of Arts?—Yes, I did.

Is it your opinion, that, if there could be any system of public examination by which young men might acquire distinction and honour in taking their degrees, that would be a great source of exertion and industry?—I very much doubt it. I am not at all of opinion that those show-examinations are of much value. The true way of ascertaining the qualifications of students is by the private examination of each individual, as takes place in regard to degrees in Medicine here.

Would not that view of the subject render the examination of students in the classes, and the enforcing attendance at such examinations, a matter of greater importance?—This would be its tendency, and it might enable the Logic and Ethical Professors to know somewhat better than we do at present the qualifications of our separate students in Mathematics, Greek, and Latin. The professors would thus know the qualifications of all the students.

Do you consider that the introduction of any prizes open to competition to the whole students of the University would be an improvement and lead to great exertions?—It would be an improvement certainly.

Are there any means at present in the University of Edinburgh by which young men of talent can attain any other mark of distinction than that of class-prizes?—None.

You state that those prizes are awarded by individual professors; are they awarded in the class?—Different professors follow different rules; my rule is to make the students give in their essays with a motto or number annexed to them, and along with the essay a sealed paper, having the motto or number on the outside, and the name of the author within. I open, before the class, the papers belonging to the successful essays; but I open none of the other papers; so that I know the names of none of the candidates but the successful ones.

Is there no other attendance upon such occasions but the ordinary attendance on your class?—A great number of young men generally come in to hear the successful essays read.

Are they read after the names are announced?—Yes; Saturday is set apart for this purpose, a day on which I have no other class, and there is plenty of time to read them.

If the prizes for exertions in individual classes, or essays open to competition to those students of the University, were awarded in a more public manner, would not that be a great incentive to exertion?—It would unquestionably be an incitement to those young men who feel themselves of good talents.

Do you find that the system of giving prizes, as it is at present, with that occasional attendance, is a considerable stimulus to exertion?—The desire of gaining prizes is a very great one, and I have often been surprised at the essays I have received from young men, which were very well written indeed.

Might not some opportunities of gaining distinction by examination, on taking degrees, operate in like manner as a stimulus to previous study?—To a certain extent it would; but so few take degrees of Arts with us, that it is hardly a distinction at all.

But if the taking a degree implied greater attainments and greater honour, and could be obtained with greater distinction, would not that lead to others taking a degree in Arts as in Medicine?—It might certainly.

Are you aware, that, by a regulation of the Senatus Academicus about the middle of last century, it was rendered imperative on students enrolling themselves at Divinit-hall to take the degree of Master of Arts?—Yes.

Do you know how that regulation came to fall into disuse?—I believe by its not being rendered necessary by the Church. The Church has the sole right of directing the previous studies of those who aspire to become members of the Church; and they make the having taken the degree of Arts one of the conditions of their entering the Hall; but it is only one of them.

Are the Commissioners to understand from that, that you mean that the Church lays down regulations under which the Presbyteries are to grant licences?—Yes.

Supposing any academical authority was to require students enrolling themselves in the Theological class to take the degree of Arts, as was done by the regulation of the Senatus Academicus, do you think that would be an expedient change?—It would be perfectly nugatory. The Senatus Academicus have no authority to make such a regulation. The Church would say we require no such qualification. If the Church chooses to make such a regulation, it would be imperative; but not otherwise.

As the Church requires attendance on the Theological class, and could not dispense with it,

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

would it not be desirable to say that attendance on the Theological class should only be permitted on condition of having taken the degree?—That could only be authorized by the Church, and not by the Senatus Academicus.

Upon what ground do you conceive that the proper academical authority, whether it is the act of the Visitors or the Senatus Academicus, could not prescribe any previous course of study to those who enter the Theological class?—Because I conceive the Church has the right of directing that matter, and no power but the Church can direct it with any authority.

Do you think no power but the Church can direct it with authority and effect?—With no authority that could have effect. If a young man were to go to the Presbytery, and say, I am returned back, because I have not had my degree, the Presbytery would tell the Professor of Divinity that he was not acting according to the law of the Church, and the Professor would be obliged to receive the student.

Can you refer the Commissioners to any decision bearing upon that question?—No, I cannot; but my own conviction is that this is the law and the practice.

May not this regulation of the General Assembly have arisen very much from the Presbyteries having power to license?—The Church, like other corporations, must have the power of making its own bye-laws, not inconsistent with the law of the country.

Do you consider the laws of the General Assembly as imperative on the Senatus Academicus and professors of Theology?—On Theological professors, assuredly, they are. Theological professors are members of the Church, and amenable in every respect to the Church.

Are they not equally members of the Senatus Academicus?—Yes.

And equally subject to academical authority, whatever that be?—Yes. But, if there were any clashing of academical authority in regard to students of Divinity, the Church must prevail as to her own professors at least.

Supposing a regulation were introduced by the Church, or by the proper authority having power over colleges, do you think it would be expedient to require that the degree of Master of Arts should be taken on an improved system, as a preliminary to attendance on the Theological class, or to obtaining a licence in the Church?—If such a degree could be obtained gratis, it would be a great improvement, provided it were authorized by the Church; but I would not like it to be imperative, if it were to cost three guineas, or even a much less sum.

If the degree could be obtained without expense, do you conceive it would be an improvement?—Yes, if the Church sanctioned it.

As it is rendered imperative on students attending the Divinity-hall that they should attend Mathematics, might not the same authority order them to take the degree of Master of Arts?—It is rendered imperative by the law of the Church only indirectly. But they must attend Natural Philosophy, which it is impossible to study with advantage unless they know Mathematics. In the law of the Church, Mathematics is not mentioned; it is only what is called a full course of Philosophy, including Greek, Logic, Moral and Natural Philosophy.

Do you consider that, by the authority of the Church alone, they are obliged to attend Natural Philosophy?—Yes.

Supposing any regulation might be enacted by the King, or other competent authority, for a course of academical discipline, and that therein it should be directed that in the regular course of attendance students in the Theological class should not be entered who had not gone through a certain previous course of University education, would you consider that that was not imperative on the University?—I should conceive it was not imperative, unless it was enjoined by the authority of the Church. I have stated already that I conceive the Church to be solely entitled to regulate the previous education of all those who are candidates for being members of it. I may be wrong, but that is my view of the matter.

Does your opinion go to this extent, that the authority having the power to regulate every other branch of academical discipline is not entitled, within the College, to say what shall be the course of study for students attending Theological classes?—Certainly that is my opinion.

Do you mean merely that such regulation would be inoperative, if the Church were to say they would license without any attendance on the Theological classes?—The Church certainly possesses such a power, but it is not likely they will ever exercise it.

Would it not be imperative on the University?—I do not see how there could be such a clashing of authority as that. If the Church has the power, I do not see how there is any other power entitled to interfere. If the Church has not the power, it should be declared by Act of Parliament, or in some efficient way, for I am sure the Senatus Academicus could not take away any power or right belonging to the Church.

Was there any representation or remonstrance from the Church, or General Assembly, against those laws of the Senatus Academicus in 1738?—No, as far as I know.

Does the law of the Church admit that the degree of Master of Arts is a succedaneum after the attendance on certain classes?—No; it is always understood that the degree of Master of Arts is not attained without attending all the classes prescribed by the Church, previous to entering Divinity-hall.

Is that a University regulation, or a law of the Church?—It is a law of the Church. The degree of A.M. is one of the alternatives for entering Divinity-hall.

The act of the General Assembly provides that a student, before being admitted to be enrolled in Divinity-hall, shall either complete a course of Philosophical study during four winter sessions, or shall have attained the degree of Master of Arts; but the Act does not say how many classes are required to make up a course of Philosophical study: is it your conception that it is not in the power of the University to say what the course of Philosophical study shall be?—I should have great doubt whether it would be in the power of the University to change what

181

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

has been the course of Philosophical study from the commencement of the College. The four Regents taught just those sort of subjects which have been taught all along, and have been supposed to constitute the course of Philosophy, and that is what the Church has in view. It is a regulation of the University that the students should attend the subjects in a certain order.

Is it in Dr. Ritchie's recollection if at any period the Church prescribed the course of study to be pursued in any other way than under the professors of Divinity in the Universities, or under the superintendence of the Presbyteries?—I do not recollect any case to which the question alludes.

Do you find that the attendance on your class is tolerably regular during the close of the session?—A little before the close, more than half the students have left the class, say a week before, or about that time.

Can you state the reason of that?—In a great number of cases the slender finances of the students are the cause.

From that cause are they obliged to leave Edinburgh?—They are obliged to leave Edinburgh.

Do you consider that to be any serious obstacle to the extension of the period of the session?—I think it would be a very serious obstacle to a great many.

Do you consider that that difficulty can operate to a greater extent now than in former times, when the length of the session was eight or nine or ten months?—I do not know, though probably the students at that period belonged to a more wealthy class than many of our present students. I know well that many of them expend their last shilling before they leave college, and consequently are obliged to leave town.

Does that operate upon a considerable number of students?—It does upon a great number.

You mentioned that you had no way of enforcing attendance except by refusing certificates; do you conceive yourself to have any such power, when the conduct of the student is improper; how would you act in that case?—I would refuse him admission into the class, or bring him before the Senatus Academicus.

Do you conceive that you have power to refuse a student admission to the class without applying to them?—I doubt if such a power might be acquiesced in. I am not sure if it be quite legal.

With respect to the Essays you prescribe to young men, do you ever examine them upon these essays?—No; I never examined them upon the essays.

Suppose you have reason to think the essays are not of their own composition, do you take any mode to ascertain it?—I have found this out in one or two cases, and deprived them of their prizes afterwards.

What proportion of the students do you think write essays in your class?—More than the half; many of them write two, some three or four.

Which description of students does that chiefly apply to?—To all descriptions.

Is it or not confined to Divinity students?—No, by no means.

Do you mean to say that half of them write for each of the prizes?—No; half write at least one essay in the course of the session, and many write more.

With regard to prize essays, do you not ascertain who are the unsuccessful candidates?—No, never; I leave the unsuccessful essays in my apartment, and desire the young gentlemen to go for them or send for them.

What is the nature of the certificates you give to students at the end of the session, as they relate to attendance?—If their attendance has not been very regular, I say merely that they attended; or I say that I had reason to be satisfied, or very well satisfied with their talents and proficiency, or something to that purpose.

Do you examine all the students of your class in the course of a session?—No, only a few; I take them up at random.

According to that form of the certificate which you grant, has no one student any opportunity of knowing if his certificate is better or worse than another's?—No, unless they show their certificates to one another.

Would it not be an improvement if there were a printed regular form of certificate, containing the highest possible qualifications, and the Professor were to score out those that did not apply to a particular student?—I do not know; I should not like that mode.

Although it belongs to the Church to say what shall be the course of education for students of Theology, yet would it not be imperative on the Senatus Academicus if a particular course of study were to be prescribed by the proper authority for all those who wish to receive degrees?—Undoubtedly.

Do you recollect who was the first Professor in this University who introduced the mode of teaching Logic chiefly by lecture?—No, I do not.

Are you acquainted with the mode that was pursued by Dr. Stevenson?—Yes.

Was Mr. Bruce his successor?—Yes; but I do not know the mode in which he taught.

Do you recollect when Rhetoric was detached from the class of Logic, or do you understand that Logic and Rhetoric were formerly considered as forming one branch of academical study?—They formed one; the separation took place in 1762.

Do you not understand that before that time Logic was taught at least two hours in the day?—No, I do not know that.

Has there ever been a collision between the two chairs of Rhetoric and Logic?—So far as I know, there has been none.

Is there not a considerable coincidence in the three classes in Rhetoric, Logic, and Moral Philosophy?—There is a little. I believe each of them teaches, more or less, intellectual Philosophy, as it is called.

Is there any concert among the professors of those branches to prevent the possibility of

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

occupying the time of students unnecessarily with a repetition of the same subject?—No, there is not.

Would it not be desirable that there might be such a concert?—I think it might. But, generally speaking, there is no great harm in two at least discussing the same subject, for they never take the same views exactly.

Is it your opinion that Rhetoric should precede, accompany, or follow, Logic?—I think it is a matter very immaterial which order is taken.

Would you think it of any consequence to give instructions upon the refinements of taste and the rules of criticism to young men who have not previously acquired the habit of thinking justly and expressing themselves with precision?—I believe that at the time both Rhetoric and Logic are taught the mind is capable of understanding pretty fully the discussion of both subjects; and both nearly equally well—at least so far as I have been able to judge.

Do you require any account of the previous studies of those who apply for tickets in your class?—No, I merely ask them what class they have attended.

Can any benefit arise from irregular attendance on such a class as Logic?—Not a great deal; unless they attend the whole particular subjects. But, if they attend to-day, and miss two or three days, and then come another day, they will derive little benefit. If they attend regularly any one subject from beginning to end they will derive benefit from such attendance.

Which of the subjects you treat of do you think most essential?—The one that most particularly belongs to me is the subject of Evidence and Reasoning.

Do you dwell at considerable length on the prejudices and sophisms to which the mind is subject?—Yes, I do.

Do you think that the knowledge of the Latin language is necessary to enable students to derive benefit from your lectures on Logic?—No; I think a man may understand everything that can be spoken on the subject in his native language, though he does not understand any other whatever. One important use of learning languages is to improve the intellect by the habit of learning them.

Are you completely satisfied with the course of instruction that is generally pursued in the schools throughout Scotland, as preparatory to the academical study, not in reference to your own class, but the study in general?—In many schools the education is very imperfect. I have had many examples of this.

Is it your impression that a great number of young men come to the College without being duly prepared for receiving benefit?—Many come without having a sufficient knowledge of Greek and Latin.

Do you not think that a great many go away without having received much benefit?—Yes, I believe so.

Is it your opinion that a certificate of mere attendance really affords any test whatever of the proficiency of young men?—No.

With you it is not intended, is it?—No.

Do you encourage the taking of notes in your class?—Yes.

Do you recommend copious notes or short notes to be taken?—Short notes.

Have you no syllabus or text-book?—No.

Are any allowed to compete for prizes who may not have submitted to examination?—Yes.

Are persons who have been four or five years at college allowed to compete for prizes on the same footing with students of the first and second year?—No, not in my class; I do not admit persons who have been four or five years at college to compete at all. I warn them at the beginning that they are only those who attend the first and second year that I allow to compete for prizes.

Suppose a student to come to your class during the fourth year of his course, without having previously attended you, would you refuse him?—I would not, because it would be the first year of his attendance on the Logic class.

Do some attend your class the first year of their academical study without having been at Greek and Latin?—Yes, there are several who never attend either Latin or Greek.

Is it consistent with your knowledge that any meetings of young men are held within the walls of the College for the purpose of cultivating literary and philosophical studies?—A considerable number.

Are any of them in your own particular department?—They are not under my authority. There is a society that chiefly belongs to the Logic class; but I believe generally these societies include young men of all classes.

In the return of fees, your fees appear to be smaller than those of the other professors; how is that, can you explain that?—The regular fee, before I came to the class, was two guineas, and of course I never exacted more from any one. When the fees were raised, the regulation was, that those whose fee had been two guineas should be three, and those whose fee had been three guineas should be four; of course my fee became three guineas. I do not know how it happens that mine were previously smaller than some others.

Do you know how it happens that the fees in some of the other classes were made higher than the fees in Logic?—I do not know.

Do you know that 50 or 60 years ago no fees were taken at all in the Moral Philosophy class?—Yes.

Do you know that fees were first introduced in the time of Dr. Ferguson?—Yes, about 60 years ago nearly.

Was that under the particular recommendation of the Principal at that time, Principal Robertson?—Yes.

Do you understand that all at once higher fees were introduced in the Moral Philosophy

class?—I understand the fee in the Moral Philosophy class was three guineas, upon condition that those who attended for the Divinity-hall should have it at a lower rate.

University of Edinburgh.

Professor D. Ritchie.

12 October 1826.

Is that course now followed?—I believe it is.

Is it your opinion that there is more exertion in those classes where prizes are given, than in those where no prizes are given?—I should think there is, though it is difficult to decide the point. I remember being incited by that circumstance when I was a student myself.

Did you ever know any instance of prizes being given for exercises which were not performed by the students themselves?—I have discovered one or two instances, and, having given the prize, I took it away again.

Is it your opinion that debating societies are advantageous upon the whole to young men attending College?—I think they are considerably advantageous in sharpening the intellect, but they are apt to have some bad effects also; I think, however, that the good predominates.

Is there in the University any control over these societies?—None.

Do they meet in the University?—Yes, they do.

How do they obtain admission?—They ask of a particular Professor if he will lend them his class-room for such a time; or they ask John Wilson if they can be accommodated with a separate spare room.

Has the Senatus Academicus any means of ascertaining what principles are inculcated in those societies?—No, none whatever.

Do you not think that they may interfere a good deal with private study?—I should hardly think that they often do so.

Do they meet oftener than once a-week?—Never oftener.

Does Dr. Ritchie happen to know if the rules of the Church relating to Theological study are read in the Divinity-hall, as required by the act of Assembly?—I do not know that they are.

What is the length of a Divinity session?—Rather more than five months, if not quite six; there are a great many discourses to be revised.

Have you any idea how many discourses are delivered in the course of a session?—No; but one can easily guess from the number of students. There are 180 on an average, and each gives one, and some two.

Does that not interfere with the hours of lecturing?—Yes: the Professor lectures much less than he would do if it were not for all those discourses.

Does he meet every day for five days in the week?—Yes.

Does he hear discourses every day?—Not upon the lecture days. There are certain days for the lectures, and others for hearing the discourses.

Looking to the number of discourses that must be delivered, and the time occupied in hearing them, which interferes with the time of lecturing in every College, in Divinity classes, do you consider it would be an improvement if part of that duty of hearing discourses devolved on the Principal of the College?—It would enable the Professor of Divinity to discuss the subjects more effectually than he can at present.

Would it render the course more effectual for the instruction of the students?—Yes, no doubt.

Robert Jameson, Esq., Regius Professor of Natural History, called in and examined.

Professor Jameson.

Are you Regius Professor of Natural History in the University of Edinburgh?—Yes.

Have you seen the Returns given in by the Senatus Academicus to the questions sent to them by the Royal Commission?—Yes, I have seen the greater number of those Returns.

Do you concur in them?—As far as I have seen them, I concur fully in all the Returns that have been made.

Have you anything to suggest generally in addition to what is represented by the Senatus Academicus therein?—There are a good many different points. I would use the liberty of stating what occurs to me in regard to the Medical Curriculum, as I am now in some degree attached to that department.

[*It was intimated to the witness that the Commission intended to consider that subject separately at a subsequent period.*]

As you have favoured the Commissioners with so full an account of the subjects of your course, will you have the goodness to state the plan of instruction which you follow in your course?—The mode of teaching in the Natural History class is by lectures and demonstrations of objects of Natural History; and, with the view of impressing the details on the minds of the pupils, I make it a practice to converse with them an hour before the lecture, and very frequently after the lecture. Another feature of my mode of teaching is, that in the Museum (where I meet the students three times a-week, and occasionally six days a-week) I attempt, by conversations with the young gentlemen attending the lectures, to inquire as to the progress they have made in the particular subjects of my course, and occasionally, when I feel convinced of the progress they have made, I propose exercises. Those exercises consist in writing descriptions of objects of Natural History with which they were previously unacquainted; I require them to describe fully those objects, and afterwards examine the descriptions and correct them; by these exercises they speedily acquire correct modes of describing objects of Natural History, which is a principal object in this study. There is another plan of instruction which I consider a very useful one, namely, explaining to my students in the field the mode of carrying on investigations in Natural History; I make excursions into the neighbouring country, and sometimes go to the Western Islands with my class. During these excursions I explain to them the mode of examining appearances in the mineral kingdom. When an interesting animal occurs, I point it out to their attention, and I am careful to direct their attention to the various

University of Edinburgh.

Professor Jameson.

12 October 1826.

atmospheric phenomena that occur during our walks. I also explain to them the nature of such springs, lakes, &c. as occur during our walks.

Do you find those excursions attended with beneficial effects?—Very useful effects. Sometimes it happens, that in the lecture-room they have formed an incorrect idea of the arrangements that occur in Nature; after seeing them in the field, they come to understand more clearly, not only those particular appearances, but other descriptions that may have occurred during the lectures. These excursions also prepare for travelling, and for the active and accurate pursuit of Natural History.

Are there any Prizes given in your class?—No, none.

Would you conceive the introduction of prizes into your class a desirable object?—I think it might prove useful.

Are there any suggestions you have to offer to the Commissioners, either in regard to the discipline or mode of instruction in your own class, or in respect to the general branches of academical education in the University?—There is nothing that occurs to me that has not been more fully stated by others who have made it an object of peculiar attention. I should think, speaking generally, that the system of examination might be more extensively introduced into many of the departments of the University.

Do you mean examinations in the class, or public examinations?—Examinations in the classes.

Do you mean examinations combined with lectures?—Yes, combined with lectures.

Do you find that system to answer in your own class?—Quite well.

Are your students, many of them, of a more advanced age, and attending from a desire to gain information?—Many from the desire of acquiring a knowledge of a particular branch of the science, without further views connected with it.

Are your students of a more advanced age?—Very frequently they are; occasionally there are very young students who present themselves. I have them from twelve to sixty years of age. I have had, sitting on the same form, boys of twelve and gentlemen of sixty years of age. They all seemed to be interested.

When students so young as the age of twelve attended your class, was it from any unusual turn they had for the subject, or what was the reason of so early an attendance?—Sometimes their parents sent them there to amuse them, and it has happened that afterwards they have taken a decided turn for Natural History, and several persons now distinguishing themselves in the world are of that description.

Do any persons attend your class as students connected with the departments of the Arts or Mechanics?—Yes, they do. In short, every description of students occasionally attend these lectures.

In what particular departments of the mechanical arts are those students?—Those who are intended as surveyors, and a great many of that description; also civil engineers, and those who are connected with the engineering department of the army, who happen to be here, uniformly attend the Natural History lectures.

Are there many from the army?—Those who are intended for the engineering department, or who have been in Edinburgh, and officially placed here, or who look forward to employment in that department, attend the lectures.

Are you able to state, if a considerable proportion of the engineers in the army, who have received education in Edinburgh, have attended your classes?—A large proportion of them; they consider that the Geological department of the course is intimately connected with part of their operations as engineers.

Do you find that any silversmiths or jewellers attend?—Yes; a good many of these.

Are there any in any other branches of trade who attend?—Those pursuing agriculture do; a good many of them.

Are they factors or farmers?—Generally farmers, who are looking forward to the appointment of factors.

Do you apply the system of conversations and examinations to all indiscriminately?—In the Museum I converse with every one, and in a short time we become perfectly acquainted. A friendly intercourse is established; and in time there is no hesitation in them to put any question to me; and by that system of conversation probably more is elicited than by more formal examination.

Are you in the habit of putting questions to them?—I generally allow the question to come from them.

Do you find no reluctance in the persons of any age to resort to that mode of instruction?—They rather seem to enjoy it than otherwise.

You have favoured the Commissioners, in your Return, with an account of the history of the Museum and the funds of it; is it the case that a considerable proportion of the recent additions to the Museum have been the contributions of former students?—Yes, it is the case.

Have arrangements been made for enabling Government to get them forwarded to you free of duty?—Application being made, Government issued an order, commanding that all packages addressed to the Keeper of the King's Museum here should come duty-free; they are sent down under seals of office to Leith, and from Leith they are sent to the Custom-house; and they are not opened till they come within the walls of the University; then they are opened in presence of the Custom-house officers, and passed.

Has the Museum been greatly enriched by means of that arrangement?—It has. I may say every fortnight cases of objects of Natural History arrive in the University from distant countries, and a great number in that particular channel.

Were you appointed Professor in 1804?—Yes.

Has there been a considerable proportion of the Museum formed since your appointment?—

University of Edinburgh.

Professor Jameson.

12 October 1826.

The whole, I may say. When I succeeded to the late Dr. Walker, there was a considerable collection in the room; that collection was almost entirely removed by Dr. Walker's Trustees. I had no power to interfere; it was carried away as his private property, and I believe it was his property.

Do you consider every thing that is sent to the University in the forementioned channel to belong to the public, or to the University?—To the *King*.

Is there any private collection belonging to the Professor which is within the walls of the College?—There is at present.

Does that belong to yourself?—Yes, it does.

Are there any suggestions you have to offer with reference to the Museum, beyond those contained in the written information?—I am very anxious, of course, to apply to Government for a fund to keep the Museum up to the present state of science. Without some provision of that kind, I suspect it must come, and that very soon, to be stationary. I have been at great personal expense in bringing it to its present condition. That cannot always be the case. There is a fund collected at the doors of 2*s*. 6*d*., but that is gradually diminishing, and will soon become inconsiderable. If Government considers it as a Royal Museum, for such should it be, I hope some allowance will be made to it.

Has that fund to which you have alluded diminished very much, from the interest after opening the new Museum having ceased?—The usual consequence has followed.

Is it now visited only by strangers?—Principally by strangers.

With reference to the general subject to which you have alluded, are there any other suggestions, besides the introduction of more frequent examinations with lectures, that you would propose?—I propose, as a very useful measure, that after a certain period each professor should be bound to produce a syllabus or text-book of his lectures to the Chancellor or Principal of the University. At present, pupils are entirely at a loss in regard to the extent and nature of the classes they are to attend, and it is impossible for them to know without some such document. I should consider it a great improvement, if every professor was bound to produce a regular printed syllabus of his lectures, or a text-book, within five years after the date of his appointment to his professorship.

Do you consider that would operate beneficially upon the exertions of the professors as well as the students?—It would act beneficially both ways.

Do you consider the examination of young men attending the College as important a mode of conveying instruction as by lecture?—The difficulty is to draw the line between the two; if conjoint, the general effect is more beneficial than when only one of these modes is adopted.

Do you consider it as a necessary and essential mode of instruction in addition to lectures, such as are delivered in the Scotch Universities?—It will increase the utility.

Could you suggest any improvement in the mode of conferring degrees in Arts, in this University, in the way of having public examination, or in any other way?—I think the present mode is not the best; it would be well if the students were privately examined by the Professor of the department; and, afterwards, there ought to be a public examination of the gentlemen claiming that academic honour.

Do you consider, if the degree of Arts could be acquired only by greater exertion and attainments, it would be a stimulus to exertion?—Yes.

Do you mean that that private examination is to be one by the professor alone, or by each professor, but in the presence of the Faculty of Arts?—There ought to be a regular system of examination in the classes of the Faculty of Arts. When it is intimated to a professor by a student, that he intends standing for that degree, he should be previously examined by the professor, afterwards by the Faculty as a body; and lastly, all those gentlemen claiming that academical honour ought to be publicly examined.

Would you have that open to the public?—Open to the public.

Is it your opinion, that, if the degree of Master of Arts could be taken with greater credit and honour, it would be sought after in Scotland as a distinction?—I should think so.

Do you think that would tend to the advancement of the interests of literature and science?—It would raise the literary and scientific character certainly.

Would you propose, in that case, that individuals might be allowed to take their degree chiefly in mathematics or classical literature, according to their particular pursuits?—That depends on the manner in which the Faculty may be organized.

Do you mean that it should be in such a way that a degree of Arts would imply a knowledge of all the branches taught?—Yes, of those different branches.

Would you consider any competition for prizes for essays, open to the whole University, a very useful improvement?—Yes, I think it would operate very beneficially; it would bring the candidates before the whole community of the University and the public in a striking manner, and would excite more than the common exertion and display of talent.

Do you see any particular difficulties whatever to such an improvement as that which you are now pointing out in the mode of taking degrees?—Nothing occurs to me.

Have you any other suggestions to offer relative to the course of academical education or discipline in this College?—There is nothing that occurs to me farther with regard to that department.

Have you any suggestions to make upon any other subject connected with the interests of the University, or its constitution?—I should think that the University might be much benefited by a different constitution than that which it now has. I think it would be eminently benefited by the appointment of a Chancellor; and if the Chancellor were to have under him a Council or Board, and all differences arising in the University, and all changes or plans for improvement, were submttted to that Chancellor and his Board or Assessors, a system of that kind would, in my opinion, be most agreeable to the Professors of every University; and it would be very beneficial to the body itself.

University of Edinburgh.

Professor Jameson.

12 October 1826.

At present, is it understood in the University that the plan of teaching is left to the discretion of each professor?—I believe so.

Do you consider it to be a beneficial system that they should not be amenable to some authority?—It is probably carried too far with us. A certain degree of authority might be exercised with advantage.

Do you consider that it is any evil to the University that the Senatus Academicus should have, as it is supposed to have, the power of determining upon such questions as you have now alluded to, in regard to the attendance on classes, the hours of professors, and other subjects of that description?—I think it would be much better if all that was in the hands of the Chancellor, with his advisers. It would be for the advantage of the College.

Are you satisfied at present with the construction of the rooms of the Museum, or have you anything to suggest as to ventilation or heat?—The heating apparatus is not so well adapted for its purpose as it might be, in consequence of its imperfect structure, a circumstance which occasions a great annual expense, an expense which the Museum cannot afford. It might be improved and made more economical. From the rapidly increasing number of donations, and the contributions being so extensive from all the public offices, particularly the Admiralty, I have found it necessary to apply for new apartments. I have lately nearly filled, with valuable objects of Natural History, five additional rooms; these will be quite filled in a month. I shall be placed, then, exactly as I was at the outset; and therefore I am anxious that new accommodation should be speedily provided for the Royal Museum, which is not to be considered as a private department of the University, but as a public department connected in some degree with the country of Scotland; it is the National Museum of this country.

Do you find any practical difficulty to yourself arises from a delicacy in refusing donations from distant parts, though they may not perhaps be of much value, or worthy of a situation in the collection?—I make it a rule never to refuse anything. By refusing indifferent specimens my wishes for the increase of the Museum might be misinterpreted, and thus I might deter others from sending what was valuable; I therefore take everything; I do not put them up; I keep them in boxes; I refuse nothing.

You do not feel yourself bound to exhibit everything that is sent?—No, that is optional.

Are there any other suggestions relative to the constitution of the University and its system of discipline, which you would wish to offer, connected with Universities in any respect?—There is nothing farther than that which relates to the Medical Faculty, which I understand is not considered to be before the Commissioners at this moment.

Is there any farther information as to your own class that you would wish to offer?—There is nothing farther; but, with regard to the Museum, I now take the opportunity of saying that it is understood in the public offices, that, of those articles of Natural History brought home by expeditions fitted out at the public expense, part is to be sent to the Royal Museum in the University. We owe that very important and beneficial arrangement to my Lord Melville. One part of each collection is deposited in the British Museum, another part is sent down to the King's Museum in the University. We have hitherto got a fair proportion of the articles collected by our travellers and voyagers; so that now we possess a most interesting series of objects of Natural History, illustrative of many of the discoveries and observations made during the different expeditions set on foot under the sanction and protection of Government.

Have you found that since the Museum has been brought more into the notice of the public, and rendered valuable, that the attendance of the student has been increased?—Yes, I think it has.

Has it increased in as great a proportion as you yourself expected?—Yes.

Do you know the return of the numbers attending your class?—I am irregular in my list. I think the number who attended the first course of lectures in the College was 35; now the annual number is about 200.

Do you recollect if your Return was given in to the Committee who were appointed for the preparation of the Returns?—Yes.

Was it in the history you gave of the Museum?—I gave a note. I do not know how it was engrossed; probably it is in some of the tables; the number is about 200.

Has it been steadily increasing?—Not being regularly connected with any of the academic departments, and it not being necessary for any academic honours, it fluctuates; some years it is very numerous, some years it sinks again, owing to the circumstance just stated.

Are the students of Divinity admitted to Natural History by your indulgence?—Yes.

Do the students of Divinity avail themselves of that?—Yes, a good many.

What proportion do you think?—Sometimes I may have 30 or 40 Divinity students, sometimes not more than six or seven; it depends a good deal on the Professor of Divinity. I put it in his hands.

Does he recommend them?—He recommends them.

Have you got any contributions from students of that description when settled afterwards in the country?—Not so many as I expected; I expected a greater return from gentlemen of the Divinity-hall than I have got.

Is there any mode for giving an additional accommodation to the Museum without the erection of new buildings?—None. I may now mention that lately a collection of pictures and statutes has been left to the University, but the College buildings affording no accommodation for it, it is proposed to erect, to the westward of the College, a building which will accommodate the collection just mentioned, and also afford additional accommodation for the Museum of Natural History.

At what period of life do you think the class of Natural History would be attended with the greatest advantage?—It may begin very early. There are two kinds of courses which I occasionally give; an Elementary Course, which may be attended with great advantage by

187

University of Edinburgh.

Professor Jameson.

12 October 1826.

boys of twelve or thirteen years of age, and another course for those who are more advanced, who are fifteen or sixteen years of age, or upwards.

Do you consider classical acquirements of value as preparatory to the study, such as a knowledge of Greek?—Yes, as connected with the derivation of terms.

Do you consider your department as interfering with literary study?—I should think, on the contrary, it is a stimulus.

Would you prefer having students who had previously studied Greek?—Yes; they would enter more into the spirit of the study.

Do you consider a previous acquaintance with Logic, and induction, and the rules of philosophizing, as serving to advance the study of Natural History?—To a certain extent it is very useful. Natural History itself is a species of Natural Logic; it serves to exercise the mind in as correct a way as Logic properly so called. Those boys who attend the class acquire a distinct conception of numerous natural objects, and reason with great accuracy, owing to their being instructed in methods of arrangement, and to their being obliged to use precise and accurate language in every thing they do.

Do you consider the one study as being auxiliary to the other, or as being mutually auxiliary?—Yes.

Do you consider the study of Natural History should precede that of Chemistry, or that the student should have a previous knowledge of Chemistry?—It would be well that they should go together; probably Chemistry should be a previous study; upon the whole it would be advantageous to make it a previous study.

Does your class interfere in any degree with that of the professor of Chemistry?—I do not consider that it interferes with the professor of Chemistry. It may be said that it does; if so, I consider the interference as an advantageous one for the student. In illustration of this opinion I may state, that the professor of Chemistry gives a sketch of Meteorology, chiefly, however, with the view of illustrating certain chemical doctrines. The professor of Natural Philosophy also treats in his lectures on Meteorology, with the view of illustrating doctrines in Natural Philosophy, whereas I, as professor of Natural History, in the extensive view I give of Meteorology, *describe* the different meteoric phenomena, as objects of Natural History, and according to the methods and principles of Natural History, and in explaining these phenomena adopt as it may fit the views of the chemist and natural philosopher. By these interferences, if such they can be called, the same subject is brought before the student in different forms, and thus his knowledge of it is extended and improved.

Do you give any view of the various Theories of the Earth, termed the Wernerian and Huttonian Theories?—Yes.

And do you express a preference for the one or the other?—We generally have a leaning on the one side or the other.

Does the professor of Chemistry do the same?—Yes. It would be a misfortune if we all had the same way of thinking; Dr. Hope is decidedly opposed to me, and I am opposed to Dr. Hope, and between us we make the subject interesting.

Do you by any means disapprove of the different departments of philosophy being treated of under different classes?—No, it is very beneficial.

Is the Library well stored with books in your department?—Not well.

Have the students access to them under proper regulations?—The expensive books are not allowed to be taken away, such as books with plates.

Is a fee paid for admission to the Museum by strangers?—A regular fee is paid.

Do you consider that to be beneficial to the general interests of the science?—I doubt it; but it cannot be avoided as things stand at present.

Do you think it would have promoted the study to have rendered the Museum accessible to the public, on certain conditions?—Yes; it has been advantageous to a certain extent, but probably it would have been more beneficial had the public been allowed to enter the Museum without paying a fee of admission, somewhat according to the practice of the British Museum. It might be opened to the public one or two days in the week, that is, to those individuals or parties who had previously procured cards of admission from the professor of Natural History, as is the practice in the Botanic Garden. This arrangement would afford every facility the public could desire, and at the same time would prevent the halls and galleries of the Museum becoming a lounging place for idlers from the streets.

You would not exact a fee at all?—Yes; from all those who would not take advantage of the open days.

Are you acquainted with the plan of admission to the Hunterian Museum at Glasgow?—Yes; it is upon the same plan; they pay a fee of 2*s*. for admission.

Do you think it would be an essential improvement, as a preparatory study, if young men destined for the Church were required to attend a course of Natural History, and give proof of it?—It would be one of the most beneficial improvements that could be proposed. On numberless occasions they might have recourse, as illustrations, to such objects as are explained and discussed in the Natural History class, and their finer and more splendid views in Natural History are connected with many discussions that take place during those lectures.

Are there any societies in the College for the cultivation of the study of Natural History?—There are two; one is the Wernerian Society, which is known all over Europe, not so much by the meetings of the society as by the excellent volumes they publish; the other is the Plinian Society, where young men discuss subjects which they have heard in the class of Natural History, or in the other classes where such subjects are considered.

Have those societies been formed under your countenance, and with your approbation?—They have both.

Do they continue to be conducted in such a manner as to be satisfactory to you?—Yes.

University of Edinburgh

Professor Jameson.

12 October 1826.

Have you any control over them in case they do not conduct themselves properly?—I have no particular control over those societies.

Do they distinctly confine themselves to the proper subjects of investigation?—Yes.

How are they supplied with apartments?—The apartment where the Wernerian Society meets is my private retiring room; I think it ought to have a meeting room, on account of its utility and celebrity. The other being one in which young men meet, they might be furnished with an apartment in the College.

Are any of the members of those societies persons who have not previously engaged in any branch of academical study?—There are foreign members and non-resident members, some of whom have studied here. Other members have studied here or at other Universities.

Have most of the resident members attended your class?—Yes, a good many.

Do they continue to be members of that society after they have ceased to be subjects, in any sense, of academical discipline?—Yes.

The Wernerian Society is not limited to students?—Students are not admitted till after they have finished their education and got the degree of Doctor of Medicine, or are established in the Church.

Is it on the plan of the Royal Society?—Yes; but taking limited subjects.

You mention that the progress of the pupils is ascertained by conversations in the Museum; are those conversations at a different hour from the lecture?—Yes.

Do many attend?—Yes; the arrangement is this: the class hour is from two to three o'clock; I am in the Museum every day at eleven, and the students may come any time from eleven till five, and they are certain to find me.

Do the students find no difficulty in attending at these conversations?—No; if they are disposed they can always make it convenient.

What proportion of students write the exercises?—Sometimes the whole class write exercises; at other times, from its not being a compulsory class, not many.

Do you find yourself able to go over all the synopsis and course of lectures, which you have given in your Return, in one session?—Some seasons I have gone over the whole in a particular way; in other seasons I have taken a more extended view, and I have been obliged to divide it one half in the winter, and the remaining portion in the summer.

What proportion of students attend the summer class?—Sometimes the same number as in the winter, sometimes not.

Do the Geological exercises occupy a considerable share of the time devoted to the junior students?—When the class appears to be composed principally of younger men I make it very practical; when again I find that it is composed of more advanced students I make it less so, indulging more in general discussions.

Then it does not take place at different hours?—No; at one hour.

Is it the same individual course, which you vary according to the complexion of the class around you?—Yes; I seldom begin the regular course for some little time. I endeavour to make myself acquainted with the wishes and wants of those who attend the class, and frequently I calculate on what may be the general feeling, and lecture accordingly.

Have you published a synopsis hitherto?—I have published on several subjects, but no regular syllabus.

Where are the funds deposited that are received for viewing the Museum?—I have been in great difficulty as to the funds thus collected. The Town-council have required of me an account of my disposal of them, but this I have hitherto waved. The Senatus Academicus have done the same thing, but this also I have declined, having been informed that I am bound to furnish my statement only to the Exchequer, on the understanding that the Museum is Royal, and the building in which it is contained the property, not of the Town, but of the Government. In the meantime I have been careful to keep regular accounts, and these are now ready to be delivered to any competent authority. I therefore now request the advice and direction of the Commissioners on the subject.

Will you have the goodness to transmit to the Commissioners the state of that account, distinguishing the sums received in each year, and stating how they were disposed of?—Yes.

The purchase of the Collections referred to in your account of the Museum as recently added, was suggested by yourself, was it not?—Yes.

Had the Collection from Paris been offered to the University of Edinburgh in the first instance?—We heard of it, and the proprietor was very anxious it should come here; he gave us a preference, and for that purpose he was willing to dispose of it at a lower rate. The Emperor of Austria offered a great deal more than we paid for it, and likewise the Emperor of Russia.

Who was the proprietor?—Dufresne.

Had he been educated at this University, do you know?—No.

Can you state, from foreign books, if your Museum has acquired a name on the Continent?—I think it has; from the journals and books of travellers I have met with, it stands very high, and by those who have attended to these things it is considered now as probably the fourth or fifth collection in Europe.

Have you had occasion to be well acquainted with the state of science and literature on the Continent?—I know a little of what is doing.

Have you any general knowledge of the state of foreign Universities, or pretty intimate knowledge with some of them?—I knew some of the arrangements of the Universities at Berlin and Vienna and Paris.

Do you consider the attainments of the professors there as being high?—I think the selection in general which has been made is judicious.

Do you consider Physical Science has been much more successfully cultivated on the Con-

tinent than in Scotland?—I should not say so; I think, as far as our means go, that we have done our duty fully.

Does it appear to you that a greater proportion of books are translated from English into the Continental languages than from those languages into English?—There are more English books translated into the French and German languages than of French and German into English.

Is the English language in very high estimation throughout the Continent?—It is rising every day. In many parts of the world, where formerly it was little attended to, as in Poland and Russia, where the French language was the general one, the English is making rapid advances; in the North of Europe, as Norway, Sweden, and Germany, the English language is spreading rapidly, and every well-educated man is understood to read Shakspeare, while many speak the language in preference to French.

Are the historians of Great Britain high in esteem on the Continent?—Yes.

Is it conceived upon the Continent that our attainments in *classical* literature are particularly mean, or are they thought respectable?—The general impression, as far as I understand it, is this, that our literary men occupy themselves more with the words than with the general views and meaning of the author; and, at present, many Continental authors maintain that our literary men have more the character of commentators than of profound or original thinkers.

Do they consider that the course of education pursued in the Scotch Universities is useful for practical purposes, or otherwise?—They consider it useful for practical purposes; that is my impression.

Do they consider it as an education particularly calculated to enable a man to make a figure in public life?—They do.

Would you say that they look down upon our attainments in Literature and Science?—I think not.

In contrasting the characters of Professors upon the Continent with those in this country, would you say that those on the Continent have greatly the advantage?—It is difficult to answer that question.

Looking to them in the double character of men of science and teachers of youth, would you say that the comparison is favourable to the Professors of this country, or the reverse?—I think upon the whole it is favourable.

Was that the impression when you studied in Germany?—That was the impression when I was abroad.

Is that your present impression?—They think probably we have not risen so much as we ought to have done.

Does it appear that a greater proportion of students come from any single country in Europe of the same population as Scotland, than go from Scotland to any foreign University with which you are acquainted?—I should think, for instance, taking Saxony as an example, that full as many of the inhabitants there get an University education as in Scotland, rather than go to distant Universities for the purpose.

Supposing Saxony and Scotland were nearly of the same population, do you know if as many Saxons come to Scotland, as Scots go to Saxony for education?—I believe there is very little intercourse between them.

Do you suppose that a greater proportion of our countrymen go to Holland for education than Dutchmen come here?—Very few go there, and none come here.

Was it not the practice, 60 or 70 or 100 years ago, for a great proportion of our countrymen to go to Holland to be educated, both in the general departments of Literature, and in Law, Medicine, and Theology?—Yes, certainly that is a fact.

Does it seem now to be the practice in any of these departments for any considerable number to go there to acquire a learned education?—No; for in all the different countries in Europe they have regular organized systems of education for themselves, and each system answers for its own country.

Do you not think, if these countries were considered as still holding the same eminence in Literature and Science, there would be a tendency in the people of Scotland to send their sons to be educated there as they did formerly?—I should think not. Formerly they had one general language which was the means of intercourse, namely the Latin, which is now rarely used, and there is nothing else substituted in its place. This difficulty would prevent that intercourse which formerly existed, allowing that the talents of the teachers were high.

In what language do they lecture in the Dutch Universities?—The language of teaching and conversation was Latin, but at present Latin is gradually disappearing, and in a year or two the lectures in Holland, as in most other Continental countries, will be given in the language of the district, there being a prevalent feeling in every country to cultivate their own language.

Is it consistent with your knowledge that the text-books in our Universities are translated in foreign countries?—I think the text-books of Dugald Stewart were translated into French and German. Mr. Tytler's text-book is translated into the German language.

Did you ever see a translation of Dr. Ferguson's works, his Institutes, for instance?—I have no recollection of that.

Did you ever see a translation of the text-book of Professor Playfair?—No.

Do you not know that the works of Professor Ferguson have been translated into Russian, German, and Italian, and several other languages, and that they have been used as text-books?—No, I am not aware of that.

Have you found many foreigners attending the University of Edinburgh?—I find the numbers decreasing, for in every country they are anxious to support their own public University.

Do you attribute that decrease to the cause you have alluded to, or to the disrepute of our Universities?—No, but to that patriotic feeling which induces them to remain at home and study in their own Colleges, and there to finish their studies after obtaining their academic honours; many think of travelling abroad to enlarge their views.

University of Edinburgh.

Professor Jameson.

12 October 1826.

Have you had from circumstances great means of intercourse with philosophical men abroad, in the way of communications?—Yes, I have.

Have you, generally speaking, found a desire in such persons to publish in our Journals and Philosophical books?—There is a great desire for that; but upon the same principle that also is decreasing; they wish that everything should appear in their own language, and in their own publications.

Are our journals considered an important means of circulating to the philosophical world important discoveries?—I think they are; and those philosophers on the Continent who do send contributions to this country consider it complimentary that their writings are inserted in our respectable journals.

Has it been consistent with your experience, that, while they are publishing in their own journals accounts of philosophical improvements, they have likewise sent translations of papers to this country, or placed them in the hands of scientific gentlemen here?—Yes.

Does it appear that, while they were desirous of improving Literature and Science, they also wished to avail themselves of further publication in this country?—Yes.

Do you consider that in Physical Science, in Medicine, or in Philosophy, for the last fifty or sixty years, the University of Leyden has stood particularly high?—After the death of those great men whose fame attracted pupils from all countries, its character and consequence gradually sunk, and its establishments were nearly in a state of ruin. Of late years, however, owing to energy on the part of the Government, and the appearance of distinguished individuals, those establishments are rising into great distinction.

Do you know how the professors are appointed there?—In the kingdom of the Netherlands, as it now stands, they are pensioned by the Government.

Who appoints them?—The Government, the King.

Is that appointment directly, or through the intervention of any Board?—I think there is a Board.

Is the Board nominated by the King?—The Board recommends to the King, and the King appoints.

Does the King appoint the Board?—I should think so.

Have you anything to suggest to the Commissioners upon the subject of the appointment of Professors?—I think it would be much to the advantage of the establishment if all the Professors were nominated by the Crown.

Would you recommend that nomination should be without the aid of any Council?—I think a Board of Education would be the means of directing more correctly the views of the Crown in the appointment.

Then you do not mean that the University should have the election of its own Professors?—No.

When you recommend a Board of Education, do you consider that one of the most useful means by which the mind of the Crown can be informed on the subject?—Yes.

You do not intend that the Board should be an independent body to interfere with the exercise of the Crown's prerogative?—No; merely to recommend those whom they consider as the most efficient persons.

In short, you would recommend it as a mode of exercising that which you consider it to be desirable should be part of the Crown's prerogative?—Yes.

Do you think the mode of judging of the qualifications of the Professors, by certificates which they may circulate, to be altogether satisfactory?—I think it is a dubious mode; the only mode of judging is by the reputation of the person: he ought to have reputation before he is advanced to such a dignity.

Would you think it preferable in most cases that a young man, or one who had been a long time known to the literary world, should be appointed a Professor?—I think that a man in the vigour of life, of thirty years of age, who has distinguished himself, may be considered as a very fit person to occupy a chair in the University.

Are Professors on the Continent generally appointed at an early period of life?—I would not say generally; they have them at all ages. I would say they are not appointed earlier than thirty; in general they might average thirty.

Then you would not think it desirable that Professors in this country should be appointed at a much earlier period of life; for instance, immediately after taking the degree of Arts?—No; I think the mind ought to be allowed to work for some time after the degrees have been obtained, and ten or twelve years would show if the individual had talents to entitle him to aim at the Professor's Chair.

Independent of the character and celebrity of the University, would you consider that a gentleman who was moderately skilled in a particular science, and who had a good method of teaching and communicating knowledge, would be preferable to a highly cultivated man who was above his students, and did not communicate his knowledge well?—I prefer the first, most certainly.

[*The Rev. Dr. William Ritchie, Professor of Divinity in the University, being unable from indisposition to attend the Commission, a Committee was appointed to examine him.*]

Edinburgh, Saturday, 14th October 1826.

The said *Dr. William Ritchie,*—Examined.

Professor W. Ritchie.

14 October 1826.

Have you seen the General Returns from the Senatus Academicus, in answer to the queries sent them by the Royal Commission?—No, I have not seen them.

Will you have the goodness to inform the Commissioners whether you have any suggestions to offer respecting the University, or respecting your own class?—No; I have none.

How many days in the week do you lecture?—Twice a-week, upon Tuesdays and Thursdays.

How are the other days occupied?—In hearing discourses or in examination.

Were you in the habit of having any examinations upon any of those days?—Yes.

Do you examine upon the lectures which you have delivered?—Yes.

Were the students in the practice of attending regularly?—Yes, they attended very regularly.

How many discourses do you generally hear, in the course of a session?—It is impossible to say; I never counted them, but I hear three each day three times a-week; and at the end of the session, every day in the week, I hear four or five discourses before I can get through them.

Do you criticize those discourses after hearing them?—I do; I tell them what they have said wrong.

Are any criticisms offered by the students themselves, in your class?—There are none.

Do you divide your course of lectures in different sessions, or, do you go over your course in any one session?—No. It takes three or four sessions; sometimes three and sometimes four sessions.

Are there a large proportion of what you call regular students, who deliver discourses?—Yes, each student is bound by the Church to deliver five discourses during his course of Theology.

In what manner do they intimate to you that they have a discourse to deliver, or, how do you regulate the time in which they deliver them?—I take them down in a book. I write down the student's name for a certain day on which he is to deliver his discourse.

What proportion do the irregular students bear to those who attend regularly?—I fancy about a third.

Do you prescribe the subjects of discourse the session before they are delivered?—I must do so; they do not deliver them sometimes until two years after the subject is prescribed.

Do they regularly deliver them?—They must deliver them.

Do you desire that they should be as regular as possible?—Yes.

Have you ever been in the practice of prescribing a course of reading to the students?—Yes, in certain books.

Have you reason to think the students pay attention to your recommendation?—I think they do.

Have you reason to be satisfied with the general conduct of the students of Divinity attending your class?—They behave very well in general.

Have you in general been satisfied with their manner of answering you upon their examinations?—In general I have.

Would you not think it would be advantageous that the irregular students should attend more frequently than they do?—O yes, they attend very ill; some of them come to town about ten o'clock, deliver a discourse, and are gone by one P. M.

Do the young men ask certificates every session, or not until the conclusion of the course?—When they go away to other Universities they require a certificate, without which they cannot be received. There are many such.

Do you require certificates of their conduct, during the time they are away from the College, from the Minister of the Parish?—I have a certificate from every student of his conduct during the Summer season; I require it every year.

Do you think it would be practicable to abolish the irregular attendance of students altogether?—I think it would be quite imprudent.

Upon what ground do you rest that opinion?—I think those who do not attend may read the books recommended to them, and in general they are the best students; they are in the families of noblemen, or gentlemen. I think we would cut off some of the best writers and geniuses that we have at the Hall, and I do disapprove entirely of the plan of cutting off the partial students.

By an act of the General Assembly, it is required, that one session should be attended by all the students in Divinity; do you think the time of attendance should be enlarged?—No, I think not; it would be too much for a partial student, it would cut him off from a family where he might get a good salary; he would be obliged to break off the connexion to attend the Hall.

Do you not think it would be rather more advisable, if there were to be a year of regular attendance, that it should be the first year before the young men are settled in life?—I think it would be the best plan.

Is it your opinion, that generally there is diligence used on the part of the students who do not attend regularly?—I do think it.

Do you think, in general, that such young men turn out good Theologians, and respectable members of the Church?—Yes, some of them are out with different families; they are very well liked, and they acquire a fashion more of the world than other students do.

Are you in the practice, in the certificates which you grant, of expressing your opinion as to the attainments and character of the students?—No, I never do; I give the certificate of attendance and nothing more.

Do you mention in them your opinion of the discourses they have delivered?—No, I do not.

Do you mention the number they have delivered with approbation?—Yes.

If you do not approve of the discourses of the students, would you mention in your certificate that you do not approve of them?—Yes, I would, but I never reject a student finally; I reject the discourse, but I give him time; I wait, until some months, to give him an opportunity to deliver it over again.

University of Edinburgh.

Professor W. Ritchie.

14 October 1826.

In the event of a discourse not meeting with your approbation, do you give the student another opportunity of writing again?—Yes, I do.

Have instances occurred where young men, not having delivered discourses which met your approbation, have done so afterwards, by which means you have been enabled to see the improvement they have made in that way?—Yes, there have been many instances of it.

Do you think it would be advantageous, if the labour of the Professor of Divinity could be diminished by the Principal hearing any part of the discourses?—I don't know; it would be giving up the judgment of the Professor. I would not like to have any one interfere with hearing my discourses.

Do you think it advantageous that the general views of the Professor should be known to all the students upon points of criticism?—Yes, I do.

You think it would not be advantageous that they should have a diversity of sentiments delivered to them?—No.

Were the certificates to which you referred in answer to a former question, those that were granted for the purpose of enabling young men to be taken upon trials by the Presbyteries?—Sometimes they are. When a student has been one or two years here, he gets into a family at St. Andrew's or Aberdeen, or near Glasgow; he finds it more convenient to go to Glasgow or Aberdeen than come to Edinburgh, and I write a single line to the Professor, stating, that the young man has been a student for two or three years.

Are these certificates given either for the purpose of transferring the students to another Divinity Hall, or for the purpose of enabling them to be taken on trials by the Presbyteries?—Yes.

Upon the occasion of a young man of whom you have formed a favourable opinion, would you decline giving a higher certificate to enable him to obtain a situation in life for which he might think himself adapted?—When I grant a certificate of that kind, I make it different from a certificate for the Presbytery.

Have you had occasion to reside a part of your life-time on the Continent?—I spent eleven years there.

Had you access to be well acquainted with the state of literature and science in any of the foreign Universities?—All the time I spent was in University towns, at Gottingen, at Jena, and at Mentz, Lausanne, Geneva, Utrecht.

Were there any others?—No, I don't remember just now.

Had you acquaintance with any eminent professors on the Continent?—I spent a year and a-half in Griesbach's house.

Did you know any other professors?—I knew Eichhorn, Professor of Church History at Jena, and many others.

In what estimation did the literature of Scotland appear to be held by those professors?—It stood very high: Doctor Loder was a Professor of Anatomy at Jena; he and I were very intimate from his having resided so long in Edinburgh, and he had the highest opinion of the Medical professors at that time in Edinburgh.

Do you think they have now, on the Continent, any man superior to Black, Cullen, or Gregory?—No, they never profess to have such men.

Do you suppose that there are any more eminent lecturers in Natural History in Germany than Mr. Jameson, or in Chemistry, than Dr. Hope?—I should think not. Blumenbach in Gottingen has a high name for Physiology. I knew Goethe, the author of the Sorrows of Werter.

He was not a professional man, was he?—No.

What is the opinion of learned men upon the Continent respecting the works of such men as Doctor Robertson?—High when I was there. I was at Mr. Gibbon's one day, when a French Duke was with him. The Duke made a pause, and said,—Gibbon, I recollect no excellent historian who has not been a sceptic. Gibbon pulled out his snuff-box and rapped it, for he did not like the speech. He said, I recollect to have heard nothing of the scepticism of Doctor Robertson; and the first man he suggested as a great historian was Doctor Robertson.

Were the works of Doctor Blair in esteem when you were on the Continent?—O yes, I bought a French copy of Blair's Sermons: the governor of a convent, an abbot, was in my room, and he saw the book, and he asked the reading of it. I gave him one volume, the first, and he took it, and afterwards he came back to me with the book, and put the question to me whether that book was published by the authority of the Church of Scotland. I said every body published what they pleased there: he gave me the book, and said he would not read it after that.

Do you know if the works of Ferguson were translated into any of the foreign languages?—They were translated into German; they were sent in sheets from the printing-office here, and came to a bookseller whom I knew well. He sent a copy to me; I read it in English: it was translated next week.

Which of his works was that?—The History of the Roman Republic.

Do you know if the Institutes of Dr. Ferguson were translated into any of the foreign languages?—I don't know.

Do you know if the works of Gregory or Cullen, or any of the literary men in the Universities in Scotland, are translated into the foreign languages?—I should think so; the Germans translate every thing.

Do you know if Professor Jameson's works are translated?—Yes; the Germans translate every thing.

From your knowledge of the state of foreign Universities, is there any circumstance from which they have the advantage, and which you would recommend to be adopted into ours?—

193

University of Edinburgh.

Professor W. Ritchie.

14 October 1826.

No, there is nothing that I could recommend. They are willing to take hints from us. At Mentz there was a Coadjutor to the Elector; he was a literary man, and consulted me if Sallust were read in any of our Universities: I said it was one of the best books; he said he had prohibited the reading of it: I said Sallust was one of the best books in the Humanity class here; and thought it was strange. It was afterwards ordered by him that the book should be read in the class in the college.

Then they thought the example of a Scottish University worthy of being followed?—Yes.

In what estimation were the works of our Theologians held on the Continent?—Not so high perhaps; at that time we had none.

Were Dr. Campbell's works unknown?—They were very much run upon.

Were they in great request?—Yes, particularly his work on the subject of Miracles.

Are you satisfied with the mode in which Professors are nominated in Scotland, either by the Crown, or in any other way, or which mode of nomination do you think best?—The nomination by the Crown undoubtedly.

Do you think in any of the foreign Universities, when you were abroad, they had any more distinguished men than Dr. Blair in that particular department?—No, I never thought any equal to him; there never was a Professor of Rhetoric in Germany before my time. The first man who wrote in any thing like common elegance of style, or in a style that was reckoned better than ordinary, was he who wrote the death of Abel, Gesner. There was not a Professor of Rhetoric in my time in the whole Universities of Germany.

Do you think that they had any Professors of Logic superior to most of those in this country?—I think not.

Do you think that in Moral Philosophy they have had more eminent men than those who were to be found in this country?—No, they have had none.

In the Physical sciences, Natural Philosophy, and so on, are the Professors in Scotland fully on a level with them? I should think we were.

And in Medicine?—We certainly are. I had the opportunity of attending a Chemical lecture: the Professor read the lecture in Latin: he had first to invent a language, and then collect facts. But he used Latin in explaining a number of his experiments in Chemistry.

Do you think Biblical Criticism is sufficiently cultivated in this country?—Every boy who can read Greek begins to think he is a biblical critic: it is disgusting to hear them sometimes; every boy attempts it in every discourse he offers. I have an opportunity of hearing it every day; I think it is too much cultivated by boys.

Do you think the importance of that branch is over-rated?—I think so.

As there is a library devoted to the use of students in the Divinity Hall, do they appear to you to be great readers in general?—Yes, some of them read every system, and some of them read more for amusement than any thing else; they read a great many books.

Is the collection of books sufficient for their purposes?—It is very well; we buy a hundred pounds' worth of books every year.

Are these paid for by the contributions of the students?—Each student pays ten shillings for the use of the library.

Do you have the selection of the books?—I have the selection of all the books.

Has that been the practice of your predecessors?—Yes, it has.

Have you any suggestions to offer in regard to your own class, or other departments in the College?—No, I have nothing to say further.

Do you think it would be desirable to have a separate hour for hearing discourses, so that a greater portion of the time might be given to lectures?—I have that in my power; I can fix what hours I please; and a Professor of Divinity told me he tried to hear five or six discourses in a day, and that sometimes when he heard six discourses there was nobody left in the Hall but himself and the lad who was delivering.

Edinburgh, Monday, 16th October 1826.

The EARL of ROSEBERY in the Chair.

John Leslie, Esq., Professor of Natural Philosophy, called in and re-examined.

Professor Leslie.

16 October 1826.

You were requested, upon your former examination, to put down upon paper any ideas which might have occurred to you, as to any improvements in the University which you would think desirable; will you inform the Commissioners if you are now prepared to furnish them with that information?—I promised more than I have been able to accomplish within the time; I have been unexpectedly interrupted by a number of visiters from the country. I have endeavoured to put down as much as I could, which I have brought; I have likewise prepared notes of the remaining observations which are drawn out, and, with permission, I will send them to-morrow, or the next day, as is most convenient.

Are those observations upon the questions as they are stated, and which were sent to the Senatus Academicus?—They are rather answers to those questions.—[*Some papers were delivered in by the witness.*]

Would Professor Leslie wish to state verbally to the Commissioners any thing in addition to these answers?—I would like to state the substance of what I mean to add to this paper.

Is there any thing you wish to communicate in addition verbally to the Commissioners to-day?—Nothing more than what I mean to write. I may be allowed, however, to say, that I have done so with freedom, and should be exceedingly sorry to give offence to any individual. If any alterations I have proposed should be found in the least degree to affect the interests of any professor, I presume he would be entitled to a suitable indemnification.

University of Edinburgh.

Professor Leslie.

16 October 1826.

Supplementary of Mr. Leslie's Evidence.

Some Remarks on the Returns of the Senatus Academicus, humbly offered to the Royal Commission for visiting Colleges, by the Professor of Natural Philosophy.

Edinburgh, October 16*th* 1826.

Question 5.—In all Colleges the Rector is elective, and seems to have been annually chosen by the Graduates, divided into four sections, which, imitating the constitution of the University of Paris, were termed the Four Nations. Students of the third and fourth years' standing are accustomed at St. Andrews to vote near the end of the session, when they have made that progress which would qualify them to obtain the degrees of Bachelor and Master of Arts. The practice at Glasgow, for all students indiscriminately to vote in the election of a Rector, was a modern innovation, to gain some particular end. It is a practice which deserves no commendation, and is only calculated to disturb the peace of the College, and breed contention among the students. The Rectorial Court has long ceased to have any operation. The students at Edinburgh, where it has not met for 180 years, have been on the whole more orderly than in other colleges which make a boast of their discipline.

It would be advantageous, however, for the interests of learning, if the office of Chancellor were revived, and that the Principal and Professors, as in other Universities, had the power of conferring this dignity upon a nobleman of rank, respectability, and literary taste, who might serve as the organ of communication with the Crown, represent them on all public occasions, and reflect lustre on their body.

I hold that the Town-council has no right to appoint the University printer. It had granted rooms for setting up the press, and hence came to usurp the nomination. By the Act of Parliament, no book is entitled to the privilege of a drawback, unless it has the licence of the Principal, who acts by the direction of the Senatus. Were the Principal, therefore, firmly to refuse his sanction to any book printed by the person appointed by the Town-council, it would render his nomination void, and put an end to the claim. It is not necessary that the press should be erected within the College walls; the Senatus might appoint any printer to execute any particular work.

Owing to some supposed abuse of privilege, it has of late years been rendered of very little avail in Scotland, but it certainly ought to be revived and placed under better regulations. It would render classical books of education cheaper, more correct, and more within the reach of the bulk of the students.

But there is another object connected with the University press which I have long contemplated. Government grants £500 annually to each of the two English Universities, to encourage the publication of original works and books of education. I am inclined to think, that if the subject were fully brought before Ministers, they would, in the same spirit of liberality, bestow a similar grant at least upon one of our Universities, and Edinburgh would unquestionably have the preferable claim. The sum of £500 allotted annually to the printers of books for the use of students, and under the sanction of the Senatus, would tend greatly to the improvement and diffusion of such useful works.

Question 6.—A chair of Law was endowed, in 1593, by the Courts and the Town-council; but two successive professors, in the view of preparing the pupils to read with profit the Institutes and Pandects, thought it advisable to refresh their knowledge of the Latin language, and unfortunately never advanced farther; so that, after a trial of four years, the study of Law stopped at the threshold of Literæ Humaniores. The writer's apprentices are accordingly obliged to attend the Humanity class, for the purpose of being enabled to peruse charters, though I suspect that the most accomplished scholar would be utterly at a loss to comprehend such barbarous latinity. But it would be useful, and might be deemed a suitable return for the donation lately made by the Society of Writers, if the present ingenious Professor were to give a few lectures on the corruption of the Roman tongue during the middle ages, and the rise and formation of the modern Law Latin.

Question 8.—A *Sponsio Academica*, or solemn promise of obedience and good behaviour, is annually prefixed to the list of students who matriculate or enrol themselves each year in the *Album*. I suspect that they are not always informed of this circumstance; but the *sponsio* is so very moderate, that I am sure no student could have any hesitation in signing it.

Formerly the *sponsio* was taken with imposing solemnity in the Great Hall of the College, accompanied by a dignified and impressive exhortation from the Principal. This ceremony was calculated to produce an excellent effect on the minds of the younger students, and should, I think, be revived. Other Universities may have too many forms, but ours has undoubtedly too few.

The *sponsio* now signed, is, with the omission of two or three immaterial phrases, the very same as the one framed in 1627. A longer one, though much to the same purpose, was produced in 1639. The first form was resumed in 1652, and somewhat extended in 1656. But in 1662 the shorter *sponsio* was preferred, and continued till 1708. After that time it does not appear prefixed to the annual lists of students till 1762, when it was revived in its amended form by Dr. Robertson, and has been transcribed every year, without alteration, ever since. It is important to remark, that the *sponsio*, from its commencement, involved no religious test. The subscription of the Covenant, however, was sometimes required at the laureation or conferring the degree of Master of Arts.

I presume there is a mistake in stating the salary of the Professor of Practical Astronomy at only £100; it should be £150. It was intended to be the largest in the College, and I well know that the Professor expressed no small degree of disappointment, on being told that the salary attached to the chair of Law of Nature and Nations was much greater.

I have no hesitation in saying, that the patronage in filling up the vacant chairs has gene-

rally been exercised by the Town-council with more discrimination than by the Crown, and is greatly superior to the mode of election in other colleges by the body of professors themselves. The fact is, that the members of the Town-council rarely have any relations or connexions to offer as candidates, and upon questions confessedly beyond their sphere of information, they naturally follow the sentiments expressed by the more intelligent part of the community in the social intercourse of a large city, and seek to reap a share of the reputation which a judicious and impartial choice always confers. The Magistracy, indeed, can seldom err, so long as, in such elections, the competition is kept open and exposed to the scrutiny of public opinion.

Question 10.—On this matter I am not yet enabled to make any specific remarks. The balance sheet for the last 50 years, with which we have been furnished, only shows the very strange way in which the accounts are kept. Though the annual expenditure and receipts must have continued nearly the same, the balances in consecutive years seem most irregular: for instance, in one year, on the creditor side, stands £50; and in the very next year £1,300 appears on the debtor side. Sometimes the rents of two or three years are crowded into the account of one year.

Of what is called the Mort-Cloth Dues, dated in 1609, for augmenting the Professors' salaries, a very small part evidently is paid to the College, since it has not been progressive. The average payment for 50 years back is under £90, though, in the year 1753, the sum of £28 was allowed to the collector, who, I presume, could not charge more for his trouble than 1*s.* in the pound. Since that time the population of Edinburgh has been tripled, and, with the depreciation of money, fees of all kinds have been raised. But the accounts which have been rendered are, besides, the most anomalous imaginable. In one year the receipt of the mort-cloth dues is stated at only £50, and in the very next at £255. No such wide difference could possibly have occurred, even had there been a plague, which has not visited Edinburgh since the year 1645.

In short, it is quite impossible to form any correct estimate of the College Revenues till detailed accounts are received from the beginning, or as far back as they can be made out.

Question 12.—The Town-council are not the administrators, but only the bankers, holding in trust the funds mortified for Bursars. It would be desirable to know what was the rate of interest for which they convenanted—certainly more than 5 per cent. The greater part of the bursaries were founded between the years 1619 and 1678. Now the rate of interest was fixed, by Act of Parliament, in 1587, at 10 per cent., and not reduced to 8 till 1633, or to 6 before 1661. In 1714 the rate of 5 per cent. was enacted by Parliament for Great Britain, though bonds at 6 per cent. were still in force in Scotland until 1763. I presume that in 1741, when the Town-council granted their bond to the College, they reduced the interest on all the funds to 5 per cent.

There is reason to believe that much abuse prevails in the Town's bursaries. For a long time back the Professors have been kept ignorant of the persons who enjoy those bursaries. It is suspected that the same person holds sometimes more than one bursary, and continues to receive it after he has left College; and it is well known that the first quarter's payment is commonly retained, under the pretence of charge of management. These evils would be removed if the act of council passed in 1658 were again strictly put in force.

I would propose that the patron notify to the Secretary of the University every time he appoints a bursar, who shall not be allowed to draw any part of the annuity till he receive from his respective professors an attestation of regularity, application, and proficiency (to pass through the hands of the Secretary), and which he is then to present to the city chamberlain. And it should be the duty of the Secretary to acquaint the Patron without delay, as often as a vacancy occurs.

Questions 14 *and* 17.—In the subdivision of knowledge, and the allotment of the years devoted to education, the notions derived by a long descent from Pythagoras and Plato were commonly adopted for the constitution of Schools and Universities. The *Triad* was added to the *Tetrad,* to form the mystic number *seven,* which included all the liberal arts, as expressed in a well known monkish verse. The study of the Triad was generally confined to the higher schools; but the *Quaternion,* corresponding to the Tetrad, was the course pursued in the Universities abroad and in Scotland.

Grammar occupied the first year, but after the Reformation the Greek language was substituted in all the Protestant colleges, to qualify for reading the New Testament. The commencing students were called *Bejani,* contemptuously, from the French phrase *bec-jaune,* yellow-neb, or nestling. The second year was allotted to Logic, and the name for the students softened into *Semi-Bejani.* Ethics employed the third year, when the students received the inferior degree of *Bachelor,* and named *Bacalaurei,* from the circumstance of having their heads encircled with a chaplet of laurel-berries. The fourth or last year was assigned to Physics, and the students, now called *Magistrands,* were at the conclusion of the course *laureated,* or crowned with laurel leaves; and after the imposition of the *pileus,* or velvet cap, manumitted with the title of Master of Arts.

The Quaternion (including Philosophy, in which A. M. corresponds abroad to Doctor), likewise the learned professions. No person advanced to the study of Physic, Law, or Theology, before he had gone through a full course of Philosophy, and obtained the title of A. M. It would greatly promote learning, and raise the character of our Universities, if this commendable practice were partly revived. Every student, for instance, might be required, as formerly, to produce a diploma of A. M. before he be permitted to enter the Divinity Hall. Even at present he is obliged to go through such a course of philosophy as would qualify him to receive that degree; and if he has not made sufficient proficiency, it is but fair and reasonable that he should be remitted to his studies. Nor should the small fee demanded for the

University of Edinburgh.

Professor Leslie.

16 October 1826.

diploma be deemed a hardship, especially as it seems inexpedient to give any particular encouragement to this description of students now, when the candidates for the church are so greatly overstocked.

But it would be a most wise and salutary regulation if none were in future to be called to the Bar, who had not only studied law, but had pursued the Philosophical Curriculum, and obtained the degree of A. M. Such candidates generally belong to a wealthy class, who can well afford the means of education; and, considering the various and weighty matters which will afterwards come under their sole deliberation and decision, the well-being of the state imperiously demands the preliminary studies of lawyers to be most solid and extensive. They certainly ought to have a fund of general information before engaging in their professional labours, which will leave them but little leisure or inclination for other serious pursuits.

Till beyond the beginning of the last century our young men, after they had finished their course of Philosophy at home, generally went to France or Holland for the study of Law or Medicine. The title of A. M. was an indispensable requisite to the obtaining the degree of Doctor in Physic; and at Glasgow and some other Universities, it is the practice, even at present, to bestow that title *pro formâ*, before the Medical Degree is conferred. I am persuaded, however, that it would be inexpedient and impracticable now to exact from the candidate in Physic an attendance upon all the regular classes in Literature and Philosophy. It will be more judicious, at least for some time hence, to rest satisfied with a moderate share of classical knowledge, and an acquaintance with the elements of general science, or the more practical and popular branches of Natural Philosophy. To require higher attainments would only repel strangers from our gates. They would either abandon the hope of obtaining a degree, and remit their exertions, or they would seek that boon in other quarters. As the value of the Degrees conferred in the Scotch Universities must depend wholly on public opinion, it is obvious that the projected London University, though not invested with such privileges, might, by prudent and judicious management, contrive to bestow some marks of distinction, which, in the eyes of the world, might come to be more generally respected.

The division of the Professors into four sections, or Faculties, was intended merely to facilitate the conducting of business. The right of allotting the Professors to their several Faculties certainly belongs to the Senatus at large, though the Medical Faculty has effected a sort of independence, and betrayed a strong disposition to monopolize power and emolument. There are six professors who are not yet assigned to any Faculty, though it would be easy to point out their proper destination. The professorships of Universal History, Natural History, and Agriculture, should be joined to the Faculty of Arts; and the professorships of Clinical Surgery, Military Surgery, and Medical Jurisprudence, should be annexed to the Faculty of Medicine. On the other hand, the professorship of Botany, which is only a small branch of Natural History, and at first merely dependent on Materia Medica, and that of Chemistry, which has no immediate connexion with Physic, except by the slight appendage of Pharmacy, which is now fully taught in the class of Materia Medica,—should both be removed from the Medical Faculty, and attached to the Faculty of Arts. The science of Chemistry is sufficiently extensive to occupy a full session, without wandering to a subject of such little general interest as Pharmacy. It were better that the professor should give occasionally a short course of the Application of Chemistry to the Arts.

One most important advantage would result from this proposed alteration—that, in the case of vacancy, a wider field would be opened for competition, and a greater variety of talents invited. Chemistry is now supposed to be confined to those who have cultivated medicine; but the most distinguished Chemical Philosophers, both at home and abroad, were not bred to the Medical Profession.

The minor chairs, or those which cannot attract more than 30 students, should be suppressed or merged in other efficient Chairs. I am quite convinced that such professorships are not only useless in the college, but even pernicious. They tend in some measure to distract the attention of the students from more important pursuits; and they are sought for either as marks of distinction by persons who have richer sources of emolument, or embraced by young men in the hopes of afterwards obtaining some lucrative situation in the University. Such chairs are indeed a sort of outworks through which the citadel is more easily stormed. The young aspirant remaining on the same spot gradually strengthens and extends his connexions, till he becomes enabled, in the conflict of patronage, to baffle perhaps the paramount claims of the most eminent stranger. But in every case such professorships will necessarily degenerate into sinecures.

To what useful purpose should the Chair of Military Surgery (at best only General Surgery in a disguised form) be kept up with a class of only 35, many of whom are gratuitous auditors? But it appears almost ridiculous to continue the class of the Medical Jurisprudence, with only four or five students. Yet both these Professorships are, by the last *Statuta Solennia* of the Medical Faculty, a sort of privileged Chairs. They should certainly be melted into some of the standard Medical Professorships; and, if lectures on those branches of science be called for, they may be given as often as shall be judged expedient.

For the same reason, the Rhetoric class, with its 20 or 30 students, should be re-annexed to that of Logic, from which it ought never to have been disjoined. The late attempt to bolster it up by requiring the attendance on it as a requisite for obtaining the degree of A. M., has had only a partial effect.

Following out the same principle it would certainly be most expedient to merge the Chair of Practical Astronomy in that of Natural Philosophy, to which the subject strictly belongs. If a distinct Professorship be still maintained, we shall infallibly be loaded with a sinecurist who will fasten upon our body like an incubus.

The arrangement which I now propose would nearly restore the equilibrium between the

197

University of Edinburgh.

Professor Leslie.

16 October 1826.

professorships of Mathematics and Natural Philosophy. At present the small salary of the latter is hardly sufficient to pay the operator, while the salary of the former, with the allowance for a house, amounts to £148 clear. The professor of Mathematics has besides the material advantage of being placed near the beginning of the curriculum, where he can intercept a greater number of pupils who gradually drop off in their progress to the more advanced classes. It will be admitted also, that to fill adequately the chair of Natural Philosophy, requires a higher range of talents, and more varied and extensive acquirements. The reward held for it should therefore be proportionally greater. I have no doubt a personal interest in the improvement now proposed, but it is not of such moment as at all to bias my judgment. I look forward to a great benefit to redound to the University.

The Medical Curriculum lately enacted, though it certainly embraces some improvements, will, I fear, as a whole, satisfy neither the students nor the public. Yet nothing better, perhaps, could have been expected. It is too severe a trial on human nature to have one's duty set in direct opposition to his interests. No real reform in the Curriculum can ever be effected but by the application of extrinsic and paramount authority.

The great blemish of the Curriculum is the loading it with medical classes to the exclusion of those of general science, without which, as a firm basis, the former are really nugatory. But if the profession is not imbued with some tolerable share of sound and elegant learning, it must insensibly lose its former high reputation.

It would not be difficult to trace the latent principle which runs through this Curriculum. Yet the claims of certain professors were the results of mere chance and management. Some of the regulations appear whimsical. For what purpose, for instance, are the candidates enjoined, as fancy may direct them, to attend one of the three classes of Medical Jurisprudence, Military Surgery, or Natural History, unless it be to procure a dole of the fees to each of the favoured professors?

A capital defect in the Curriculum is the want of a distinct chair of Surgery, which is certainly most important, and ought never to have been conjoined with that of Anatomy. Either of these branches of medical education appears quite sufficient to give full occupation to the most active and laborious professor.

I will now venture, with all due submission, to sketch out a course of study which would assuredly be calculated to sustain and exalt the character of Medical Education.

I. Preparatory Philosophical Classes—(which, however, may be taken along with certain Medical classes):—

Natural Philosophy.
Chemistry.
Natural History.

II. Classes strictly Medical:—

Anatomy.	Materia Medica.	Practice of Medicine.
Surgery.	Theory of Medicine.	Clinical Medicine.

Four years, as now contemplated, might be sufficient for this course of study. The candidates should be examined near the close of every session, in order to ascertain their progress, and stimulate their application. The professor of Humanity might inquire into their attainments in classical learning; but the Medical examinations, to be really useful and searching, ought certainly to be conducted wholly in English. The practice of examining in medical Latin is a most senseless and intolerable remnant of scholastic pedantry, introduced from Holland 20 years after the reading of lectures in Latin had been abandoned. But such a preposterous mode of examination can only serve to screen ignorance or shallow pretensions. For the same reason it should be left to the choice of the candidate himself, whether he writes a thesis at all, or in what language he composes it. With that option he would exert himself to bring out something original, on which to establish his future reputation; and in every case the time would be employed in useful studies which is now spent in making futile or temporary acquisitions.

In the first year of the course the candidates should take no other Medical class than Anatomy; with it they might join Natural Philosophy and Chemistry; but the cultivation of these sciences should undoubtedly not be postponed beyond the second year. If they are not studied together, I should prefer placing Natural Philosophy before Chemistry, because the former is better calculated to discipline the mind, and train it to habits of accurate thinking. Indeed I have long considered it as one of the greatest errors committed in this College to send boys early to the Chemical class, where, being delighted by its fascinations and brilliant displays, they are too much disposed to regard all the severe studies as unprofitable and repulsive. Natural History, however, has not the same debauching effect, but, requiring no strain of application, it may be taken in any of the years that are judged the most laborious.

I am fully persuaded that a judicious and well-digested Mathematical course of three months might qualify a student of average parts and application to comprehend distinctly as much of Physical Science as should be fairly required in a Medical candidate. It would be necessary to ground this tuition on the rudiments of Arithmetic and Algebra, and the rudiments of Geometry and Geometrical Analysis. For the benefit of professional men, whose earlier education has been neglected, I have often thought of drawing up such Compends, which, rejecting every thing superfluous, yet without departing from Mathematical rigour, give a neat, clear, and concise exposition of the principles of science.

In proposing these reforms in our Medical Curriculum, I have been solicitous to recommend only what is practicable and imperiously called for. When sound education has taken a deeper root, more improvements may be successively introduced. My great object is to raise

University of Edinburgh.

Professor Leslie.

16 October 1826.

the character of the Medical profession, which, at a former period, was the most distinguished by its various and extensive learning. Physicians were the earliest promoters of experimental science—the leaders of inductive philosophy. At the foundation of the Royal Society they were esteemed its most active and its ablest members. And it is evident that the possession of large information, and the habit of logical precision, would restrain the profession from the rashness of adopting those hasty and ephemeral hypotheses which tend to bring the art of Medicine into discredit.

Library.

A collection of learned books, gifted to the Town by Commissary Little a few years before the Reformation, forms the basis of the University Library, which has been since very much augmented by donations from individuals, fees of graduation, the dues paid by students at entering and leaving college, and more lately by the publications sent down from Stationers' Hall. The privilege of access to it seems to have been much restricted at first, and indeed for more than a century afterwards. No students were allowed the use of it, no books were lent out, and no persons were admitted to read in the Library but some of the upper graduates, on being introduced by the Principal and one of the professors to subscribe a solemn oath. In 1636 the Laws of the Library were enacted: it was to be opened every day of the week except Sunday, from 10 to 12, and from 2 to 4 in winter, and, besides, from 7 to 9 in the morning during summer. Those permitted to frequent the Library were to swear, that "according to their credit, place, and power, to be special friends to the College of Edinburgh, and neither willingly to blot, violate, cancel, wrong, nor *steal* (such was the rudeness of the times) any book." This oath was taken before certain of the Bailies on the 12th December 1636, by 12 persons, among whom are the Dean of Edinburgh, one or two of the ministers, and several of the professors. In the subsequent years not above two or three were annually admitted to the privilege of reading in the Library till 1753; before which period, I presume, the very useful and laudable practice of lending out books for the accommodation of students in general had taken place. Since 1627, and probably some time before, at the laureation of each class, every Master of Arts presented some valuable book, or paid at least £4 Scots, and often much more, which money was laid out by the Regent in the purchase of books for the library.

The privilege of demanding from Stationers' Hall a copy of every new publication has not been very productive; it has loaded our shelves with a great deal of trash, and occasioned much unnecessary expense in binding. This exaction, however, is a tax which, bearing heavy upon authors, will probably be repealed or abridged by the Legislature; and in that event I am sure it would be advantageous for the College to accept from the public (as once proposed by the late Mr. G. Rose, of the Treasury) an annual compensation of £300.

The general management of our Library has been much improved of late years, though in many respects it still requires great amendment. The division of the curators into general and medical occasions much obstruction and delay in the purchase of books. The very important and responsible office of Librarian has become little better than a sinecure, being commonly bestowed by the Town-council upon some Professor, without any regard whatever to his habits of business, or his taste and knowledge in books. The Under-Librarians, however deserving by their diligence and assiduity, are too poorly paid to ensure an adequate stock of learning. They are, besides, too few for the laborious duties which they have to perform. Accordingly the books are not properly collated, the binding is slovenly executed, and the plates often injured by careless beating; nor are the books sufficiently inspected and examined on being returned. It would require one or two more assistants for all these purposes.

It should be remarked, that though the students derived no benefit from the Library during their course of literature and philosophy, yet they contributed to its support at their matriculation before 1695, and annually after 1708. Each of them gave half-a-crown, several of them a crown, and some few half-a-guinea or a guinea; so that, making allowance for the alteration in the value of money, they paid on the whole more liberally than at present.

But the interests both of students are now invaded by an evil which oppresses our Library, arising from a most improvident and unfortunate transaction between the Senatus and the College of Surgeons. In 1764 the Surgeons united their Library and Museum to those of the University, on condition that they acquired equal privileges. This strange agreement was about the same time sanctioned by the Town-council. Three hundred volumes, of different sizes, treating of Surgery and Pharmacy, but so antiquated that none of them have been opened since, formed their whole collection, which, if exposed to sale to-morrow, would not, I am sure, bring £50. But to trim the balance nicely, the Surgeons moreover promised to pay yearly £5, which they have generously raised lately to the goodly sum of £20. It thus appears that, by transferring to the Library the fiftieth part of its stock, and scarcely the fiftieth part of its annual revenue, they claim the whole of the privileges. Thirty was the number of surgeons when this wretched contract was made; but they now amount to 90, of whom above 60 are in the daily habit of frequenting the Library; they roam about the different rooms, distracting the attention of the under-librarians, and demanding their services; and they borrow more than 600 volumes of all kinds for themselves and their apprentices.

The few articles which the Royal College of Surgeons sent to our Museum are supposed to be lost, and their claims of admittance to that rich collection have been hitherto resisted.

It is painful to see such respectable names connected with such a scandalous transaction; it was clearly unwarrantable and illegal from the beginning. Neither the Senatus nor the Town-council had any power to barter away the rights of the University, or to communicate the privileges of the Library (which was formed mainly out of the funds contributed by the students) to any other body. But no length of time can ever ratify such a breach of trust.

The University, considered in the light of a minor, can always reclaim its privileges and immunities. If it were otherwise, all sorts of abuses might become permanent and irretrievable. I should propose, therefore, that their collection of books should be sent back to the Royal College of Surgeons, and our connexion with that body be henceforth dissolved.

A similar transaction was afterwards contemplated with the Royal College of Physicians, whose books were more valuable; but after the trial of one year, the proposition was annulled.

Observatory.

Professor Maclaurin made great exertions to have an Observatory erected within the College. He procured £100 from Lord Morton, which was augmented by individual subscriptions, and by the produce of a Course of Popular Lectures, to about £300. The Town granted a heap of old stones, to the value of about £20, and the building was to have commenced in 1746, when that illustrious Professor died. The money was transferred to his successor, Dr. M. Stewart, who, though a man of genius, had no turn for business, and no taste for experimental pursuits. His pecuniary affairs fell into disorder, and the funds destined for the Observatory came into the hands of his creditors. Through the vigilance, however, of Principal Robertson, the sum of £500 was recovered in 1775; the original deposit, notwithstanding some loss, having, by accumulated interest, grown to that amount. The fund was now intrusted to Professor Robison, and increased by £100 given by the Duke of Hamilton on the occasion of his winning the King's Plate at the Leith races. About this time Thomas Short, nephew of the famous optician of that name, came down from London, and brought with him a very large reflecting telescope, worth about £800. He proposed to give the use of that magnificent instrument on certain terms to the students of the University and the public at large, provided the Town would grant him a piece of waste ground on the west top of the Calton Hill, on which to erect an Observatory, the College furnishing the money. Short had a lease for 99 years, and the rights of the College to the intended building were secured. An octagon Observatory was in 1776 begun under the direction of Professor Robison; but (as happens frequently in Edinburgh) the whole of the £600 was expended in rearing the bare walls. The building remained in this unfinished and ruinous condition till 1791. Short having died bankrupt, his privileges were resumed by the Town-council, without any regard to the claims of the University. It appears that about £400 was spent by them in roofing and repairing the Observatory. What became of the fine telescope I cannot tell; but it is reported that the plumber seized, as a pledge for the payment of his account, upon the large Speculum, which, having become tarnished from lying in a damp cellar, was carefully *scoured* (and consequently rendered useless) by a common lamp cleaner.

In 1812, when the Astronomical Institution was forming, the Town-council agreed to convey a new grant, without alluding to the original and indefeasible destination of the ground; and in consideration of this favour, they reserved to themselves certain privileges. On that occasion, having consulted the late Lord Meadowbank, I tried in vain to rouse the Senatus to look after its rights. But as the Institution seemed now likely to succeed, though I did not approve of its constitution, on joining it, I subscribed for two shares, which made some others follow my example. The Institution was obliged, at its own charge, to remove a powder-house that had been erected (unwarrantably, I think) within the walls of the Observatory, for the accommodation of certain dealers in gunpowder. As there was no possibility of getting the large instruments constructed for several years by Troughton (an artist of the highest talent), I pressed strongly the propriety of suspending further operations, and of allowing our funds to accumulate. But my advice was overruled; and the whole of the contributions have been expended in raising the building. Government has vaguely promised £3,000 to provide instruments; but no money being yet advanced, artists have refused to undertake the work without being assured of their payment.

In this dilemma and utter stagnation, the best thing, probably, that could be done would be to purchase the Observatory from the subscribers, and re-annex it to the University. I presume that the Royal Institution is now heartily tired of the concern, and would willingly sacrifice half the amount of their subscriptions. The money required might either be furnished by Government, or borrowed by anticipation on the faith of General Reid's bequest. But, at all events, I should hope that Government, to promote an object of such importance to science and to the national prosperity, would consent to defray the expense of stocking the Observatory with the best instruments, and of appointing a resident Observer, with a salary from £100 to £200, on the recommendation of the Principal and a Committee of the Senatus, consisting of the Professors of Astronomy, Natural Philosophy, Mathematics, and perhaps Natural History. This Observer should not only record the celestial phenomena, but also keep a complete Meteorological Register, in which he should note the successive changes in our atmosphere. Great advantages would result from the proper execution of such a plan, which would extend very widely its influence.

For the purpose, however, of instructing students in the use of astronomical and meteorological instruments, and the method of taking celestial observations, I prevailed with the Commissioners of the College Buildings to cause rail a platform, to which the professors of Natural Philosophy and Mathematics shall have access, on the roof immediately above my class-room. It is to have an iron tripod or stand fixed near the centre, on which an equatorial or other general instrument may be occasionally placed.

Faculty of Arts.

I have stated that it would have a beneficial effect to abolish all the Junior or First classes in the college. They are but inefficient schools, intended to supply the defects in our country schools. But the reading of Latin and Greek authors, both in our schools and at college, is not sufficiently varied. We seem to think of forming only poets, orators, and historians, and

quite overlook the rest of ancient literature. We disregard the epistolary writings of the Romans, their natural history, agriculture, architecture, &c. It would be a great benefit, therefore, to general education to have choice excerpts from various authors, short and skilfully arranged; for instance, from Lucretius, Lucan, Manilius, Claudian, and Silius Italicus, from the Epistles of Cicero and the Younger Pliny, from the Natural History of Pliny, the Natural Questions of Seneca, the Agriculture of Columella, the Architecture of Vitruvius, &c. A more intimate and extensive acquaintance of the language would thus be communicated, and along with the knowledge of words, the mind would be stored with interesting information. The same method would be extended to the Greek authors, and concise excerpts (not like the bulky modern collections) could be drawn from Aristotle, Theophrastus, Polybius, and Strabo. This masculine and extended system of Philological education has been carried on with the happiest results in Germany.

So long as the First Mathematical class shall be retained in the College, it should certainly, like the Latin and Greek classes, occupy two hours every day, the first to be devoted to the lecture, and second appropriated wholly to the examinations. By far too little is done in that class at present to adapt it to our system of education. It should undoubtedly include the rudiments of Algebra, Plane Trigonometry, and the practice of Surveying. When professor of Mathematics, I found no great difficulty in comprising all this in a single hour, while the emulation of the students was incited and kept alive. I began with the progress of Numeration, palpable and figurate, traced the various arithmetical operations, and marked their historical epochs. The transition was easy to Algebra, in which I proceeded as far as Quadratics. I began Geometry about Christmas, and constantly illustrated its conclusions, particularly respecting the sections of lines and the properties of the circle, by the application of Algebra. In concluding the course, I showed the triangulation and mensuration of the heights of the remarkable places seen from the Calton Hill and other eminences round Edinburgh.

In the second class I treated of Geometrical Analysis, and applied to the Geometry of Curve Lines of the second order, or Conic Sections; I discussed the theory of planes and their intersections, the principles of perspective, and of the projection of the sphere; and under Spherics I explained the art of dialling and the construction of geographical maps, with the theory of Navigation. Resuming Algebra, I proceeded to Cubic Equations, passed to the general theory of functions, applied them to angular quantities and logarithms: explained the theory of annuities, lives, and chances, and gave some general views of political arithmetic. I was enabled to support the interest of those subjects by collateral illustration and historical remarks. It may easily be conceived that the third class took a still higher range of disquisition.

To excel in the art of Composition it is necessary to begin early, but only by free translation. The youth should be furnished with ideas, and only required to clothe them in proper language. If he attempts an original essay before he has acquired a tolerable stock of information, he will contract a feeble and diffuse style, labouring with amplification, which he will afterwards find difficult to correct. Or if a student be desired to write on the subjects of the prelections, he will be apt to return back nearly the words of the Professor, and thus sink into a flat and dull tone of composition. This appears to be a great error in Professor Jardine's plan of scholastic education.

I have mentioned my conviction that the Mathematical and Physical studies should always precede those of Logic and Ethics. I will not fatigue the Royal Commissioners with detailing my reasons, but refer them to a small Tract given out by the Marischal College of Aberdeen in 1755. I would also take the liberty of recommending to their attention the First Book of Discipline (drawn up chiefly by the famous G. Buchanan in 1560), and a short Memoir on Education, presented to the Scots Parliament in 1704. These Tracts contain some sounder views than are to be met with in later and better known publications.

Physical Cabinet.

I have laid out about £700 in purchasing and collecting, as judiciously as I could, a great variety of instruments and illustrative apparatus; of which sum I have only received £200 from the Town-council, and now the promise of as much more. I have besides lent to our Cabinet apparatus which I formerly possessed, to the value of at least £150; and this besides the gift of £250 from Dr. Fellowes, which is to be expended on some large and splendid instruments. I reckon that about £100 more will be wanted to put the whole in a satisfactory condition, though I have procured some articles, such as a water-barometer and a fountain, as fixtures in the room, from the Commissioners of the College Buildings.

In addition to all these hardships under which I labour, it required at least £50 annually to keep the apparatus clean, and free from the effects of damp. But I have still a more immediate claim. Every professor, though he may not have a right to a dwelling-house within the College, is understood to be entitled to an apartment. I consented to yield up this, on condition that I should have a large Physical Cabinet. But it was always admitted that another roomy apartment should be assigned to me for holding models and the larger and older instruments. Accordingly, in the attic story, immediately above the Physical Cabinet, there is such a room, lofty and unoccupied, and quite unfit for a class. This, I was led to think, had been promised to me several years since, and the architect was even directed to fit it up for my accommodation. But I have been amused with excuses and repeated delays; and the room is now partly filled with old books, which are collected there to be transported to the new library. But the possession of that room is quite indispensable; the table and floor of the Physical Cabinet are now covered with instruments, exposed to every hazard and injury. Yet the collections in Natural History, which are surely of less importance for the

purposes of education, are spreading rapidly over the whole buildings, and deposited in apartments fitted up at great expense. I have submitted long to much inconvenience, and trust that the Commissioners of the College Buildings will see the urgency of granting me relief.

University of Edinburgh.

Professor Leslie.

16 October 1826.

General Observations.

The rank of a Professor in Edinburgh has not kept pace with that of other learned professions. His income may have doubled within these fifty years, but the value of money has decreased in a greater ratio. During that period, the stipends of the Clergy here, and the salaries of the Judges, have been augmented five or six fold. It has even become a maxim, borrowed from a mistaken application of political economy, that the poorer they are kept the better. Let the same principle be applied to the Judges. But, in the case of buyers and sellers, both parties are equally qualified to estimate the value of the articles exchanged; it is quite otherwise with master and pupil. And in this country wealth is the great incentive to which every other thing is subordinate.

I shall put forth only a moderate claim. Let each Professor have a salary of £300, and let the fees be lowered one guinea, and perhaps the small dues abolished altogether. Such a salary would bribe no man to indolence, while it would remove the temptation to descend from the dignity of academical instruction to cater after popularity.

It would most essentially improve the condition of the professors, and increase the fame of the University, if an adequate provision were secured to them for retiring from their chairs before their bodily powers are exhausted, and their mental faculties perhaps impaired. The Judges and others paid by the Crown are thus provided for. But the present situation of a superannuated professor is extremely hard. He is generally forced to enter into some sort of private bargain with a young associate, who consents to give a share of the income of the class to himself or his widow. But no man of established reputation would submit to such onerous terms. If a professor, after his long services, could retire with little diminution of revenue, there would be no temptation for smuggling in a successor. The competition would be thrown quite open; and persons of the highest talents and the most established reputation in the country would be attracted. The best destination, perhaps, of part of General Reid's bequest would be to form such a retiring fund. In the meantime, Government might grant some aid.

It would excite emulation among the professors, and promote the great interests of the University, if they could hope to obtain by their merits and exertions some marks of distinction, and some moderate additions to their income. This is the case everywhere on the Continent, and has produced the happiest effects. In England, as most of the members of the Universities are clergymen, they have always the prospect of the rich endowments of the Church. Nothing is more disheartening to a Scotch professor, than to find himself resting at the same level, while he sees the companions of his youth, with not better talents, rising in other professions to the highest situations.

I conceive it would be of great national advantage to institute a Board of Education, where all improvements should emanate. This Board I think should be composed of the most eminent professors, conjoined with some gentlemen of rank, and of taste and skill in literature and science. They might direct a better and more uniform system of excerpts for the higher schools, and recommend the general adoption of text-books in the Universities. If such a Board were to send regular deputations to inspect and examine the great schools, and occasionally the Universities, the most important benefits would result. They might foster the germs of genius, and select the boys of the most promising talents, whose education should either wholly or in part be defrayed by the public. Our Bursaries, as they are at present managed, perhaps do more harm than good. The very high eminence which the Polytechnic School of Paris has acquired is owing chiefly to a mode of selection similar to what I would venture to propose.

I have recommended the suppression of the Minor Professorships in the University, yet there are two new Chairs which I conceive it would be of importance to found. They are those of the Fine Arts and of Political Economy, though the latter imperfect science, I regret to say, has been running lately into very idle and unprofitable paradoxes. But I will not tire the Royal Commission with stating my reasons for proposing those two professorships.

I am averse to all violent and sudden changes; but the progress of the age most decidedly requires a firm and temperate revision of the whole of our system of education. It would afford me the highest pleasure if I can contribute my mite to forward an object of such paramount importance; and with every feeling of deference and respect, I subscribe myself

(Signed) JOHN LESLIE.

The Rev. Dr. *Brunton*, Professor of Oriental Languages and Hebrew, called in and examined.

Professor Brunton.

Are you Professor of Oriental Languages in this University?—Yes, I am.

Have you had an opportunity of reading over the several queries which were submitted to the Senatus Academicus, and also the answers which have been returned to those queries?—I did read the queries and the greater number of the answers. I did not see them in their last state when they were given in to the Commission, but towards the close of the previous week I saw a rough draft of them. We found ourselves pressed for time, and we were obliged to require a committee to prepare them in their finished state.

Have you not seen the answers in their printed form?—Certainly not in their printed form.

In consequence of the queries which you have already seen, is there anything you would suggest by way of improvement to the University of Edinburgh in general?—It is a very broad question, and I have not been turning my mind to it perhaps so much as I ought to have done. I have rather been confining my attention to my own department.

University of Edinburgh.

Professor Brunton.

16 October 1826.

Is there any improvement in the way of discipline or education, that Dr. Brunton would think of advantage to be adopted in this University, beyond its present rules and forms, taking each department separately, or in the University generally in the first instance?—I should fain hope that the branches of study in the Faculty of Arts are sufficiently complete. With regard to the Faculty of Medicine I am very little a judge; still less as to the Faculty of Law.

Have you any suggestions to make with regard to the Faculty of Theology?—Perhaps it would take a little time to explain what I think an imperfection in the mode of teaching Theology according to the constitution which at present exists, and which it is understood depends more upon the Church than upon any other authority. Without hesitation, I think there is too little lecturing upon the subject of Theology in the college; but that is by no means the fault of the professor; it arises from the multitude of discourses which, by the acts of the General Assembly, he is obliged to hear from the students. Each of the numerous students that attend him is obliged to read in public no less than five discourses; of course the time of the class is very much occupied in that exercise, and comparatively little is left for lecturing.

Does Dr. Brunton think it would be an improvement, if the lectures were delivered by the Principal, and the superintendence of the discourses submitted to the Professor of Divinity, or *vice versâ*?—The difficulty appears to me to lie in getting young men to give attendance at separate hours. If it were made imperative upon them to attend at separate hours, I think the Professor of Divinity might conduct both branches of the course perfectly well.

Do you think that the defect to which you have alluded could be easily remedied?—Why, it would depend upon the authority of the General Assembly, and my brethren are a little slow in adopting any proposed changes in the course of Theological study.

Could not the Professor of Divinity say he would lecture at such an hour, and at such another hour he would revise the discourses?—I am not exactly sure how far the power of the Professor might extend in that way here. Young men put a great value on their time; they employ it profitably to themselves out of the college, and they would complain of an exaction being made of them, which was not made of their predecessors, without the authority of the Church. I think it highly probable they would carry a complaint upon that subject to the Church. Whether it would be entertained, that is another matter.

Without entering into the question as to the authority of the Commissioners or the authority of the Church over the University, will Dr. Brunton have the goodness to state any defects which appear to him at present to exist in the study of Theology in the University?—The defect appeared to be, that there is too little lecturing on the subject of Theology at present in the Chair of Divinity. The defect is in some degree compensated by Theology being taught chronologically by another Professor, and he has not the same difficulty to struggle with as the proper Professor of Divinity in regard to discourses by the students.

But do you think, notwithstanding this teaching chronologically, there are too few lectures in Divinity for Divinity students?—Yes, in systematic Theology; arising from the cause I have already explained, not from the want of willingness or competency in the Professor.

If that could be altered by any authority, would it be a very considerable improvement in the Theological Faculty?—Unquestionably it would; the number of discourses required of the students is perhaps too great; but that the Professor cannot alter.

Would Dr. Brunton wish to make any observations to the Commissioners, or propose any alteration or amendment as to his own particular class?—I am not aware that there is any improvement or any statement with which it is necessary for me to trouble the Commissioners at present. It is very much my wish that the students should be bound to attend my branch for two years; there is nothing interested in that wish, as no second fee is ever taken by me; but it could not be made imperative on them without the authority of the Church. It is not strictly imperative on them at present to attend even one year.

Are they bound to attend at present any particular period, however short?—There is a *recommendation* of the General Assembly to Presbyteries to require of those students who avail themselves of the privilege given to regular attendants to attend the Hebrew class for one year at least.

But is it only a recommendation?—It is only a recommendation.

Is it or not made essential?—It is not an *act* of the Church, it is only a *recommendation* to the presbyteries, on which they proceed or not according to their own discretion very much. Generally speaking, in the Synod of Lothian and Tweeddale this recommendation is practically made imperative.

Is it consistent with your knowledge that a presbytery has ever received a young man upon trials without a certificate from the Hebrew Professor?—Young men may come before presbyteries in different situations; either having enrolled their names in the Divinity Hall for six years, in which case no regular attendance is required at all; or, having attended for three complete sessions, and being enrolled in the fourth; or having attended two complete sessions, and being enrolled in three more. In both of the last cases, I presume that, in consequence of the recommendation of the General Assembly, the presbytery would call for a certificate of attendance upon the Hebrew class. In so far as the presbytery of Edinburgh is concerned, no students are received without such certificate. I know of no such case in other presbyteries; I am not quite sure, however, that it does not exist.

Do you think that there are any cases in other presbyteries where regular students of Divinity are received upon trials without a certificate from the Hebrew Professor?—I cannot say of my own knowledge that there are; but I cannot say the contrary. My own supposition is, that such cases do occur; but I believe they are not frequent.

Do the Commissioners distinctly understand that you would recommend that there should be an imperative order that the students in Divinity should attend your class for two years?—

I think it would be very much for their advantage. I may, perhaps, be unduly partial to my own branch, and it might be too much to have it made imperative. My reason for wishing it is, that by the attendance of a second year the elements of the language are fully fixed in their memory, and they get a facility in reading which is not likely to forsake them. I have seen the practical advantage of it in the pretty numerous instances of those young men who do attend a second year, and who leave college better prepared to carry on their study in after life than those who attend only one year. I have hitherto found it impossible to teach either Chaldee or Syriac to the students of the first year.

Upon that account, among others, do you recommend that the two years should be made imperative, in order to allow you to teach them Chaldee and Syriac?—I think it very desirable.

In the course of one year, can that be brought about?—I have found it impossible to overtake that in one year, nor was it ever done in this University, I believe.

Do you conceive that the teaching of Chaldee and Syriac is of great importance to Divinity students?—Undoubtedly I do. Part of the Scriptures, though not a large part, is written in the Chaldee; and Syriac throws much light upon the *cognate dialects* of Hebrew and Chaldee.

Do the students of Divinity generally attend your class during the first session of their course?—In general they do. I encourage it very much, in the hope that they will return to me a second year. In some cases students have come to me in the finishing year of their philosophical course, which I think a very great improvement. My class differs from other Theological classes in this, that it is not necessary for the student to have finished his Philosophical class before he enters mine. Any person may enter without so doing.

Do you find that the students frequently have acquired any attainments in the Hebrew literature before they attend your class?—Scarcely ever; except when they have attended a Hebrew class in another University.

How many years do the students generally attend your class?—I fear I can hardly say; *in general* they attend two years. I think it is only a minority that come back to me a second year; a considerable number, however, do come.

In what way do you occupy those students who come back the second year? Do you teach them in the class with those who are commencing the study of the language?—I only command *one* hour, and I give the advanced students a portion of that hour. I do not think there is any disadvantage in listening to the examinations of the junior side; they have the principles of the language more fully stated than I could have had time to illustrate them from the task of the advanced students only.

Are you in the practice of prescribing essays for the students?—The only essay that is prescribed is a *prize* exercise. An exercise of Hebrew penmanship is prescribed for the junior side, to make their eye familiar with the alphabet. I find this a better mode for familiarizing them with the character than any other that I have employed. To the advanced side of the class, there is a prize for an essay prescribed every year. This is the only exercise of the kind which is prescribed. I encourage them as much as I can to give me voluntary exercises. Sometimes these are the poetical translations of a passage which has been read in the class.

Do they frequently give these voluntary exercises?—I get not above half-a-dozen I think in a season.

You stated that you were in the practice of giving prizes in your class; in what manner are those prizes decided?—I do not know whether my answer upon that subject was reported in the Answers to the printed Queries. It was after I became Professor that I prevailed on the Patrons to extend the same privilege to my class which was before enjoyed by some others. They gave an annual sum of £10 to be expended in prizes; the prizes are books stamped with the City Arms, according to their direction. One prize is given, as I have stated already, for Hebrew penmanship; and the competition is confined to the junior part of the class. One is given for the best essay on a subject prescribed by the Professor; and the competition is confined to the advanced side of the class. In both of these cases the Professor alone decides the prize. In regard to penmanship, the gentlemen either append their names to the writing or not, as they choose. The names of the writers of the essays are given in, along with the essays, in sealed billets, with a motto inscribed; the billet belonging to the successful essay is opened in the presence of the class. When the prize has been decided, the other billets are returned to the writers of the essays unopened, or at their option; if they wish themselves known, the Professor states to them in private the remarks which have occurred to him. Indeed he always accompanies the decision of the prize with a general statement of the merits of those essays that have been unsuccessful. The third and fourth prizes are for general good conduct and proficiency during the session. One is given to the junior and one to the advanced side. Both of these are decided by the written votes of the students on the advanced side.

You have stated, in your Return, that you were in the practice of receiving fees for teaching Hebrew; do you exact fees from those who enter the second time, in the same way as from those who enter at the first?—In no case. I take care to remove any difficulty on that subject from a second year's attendance, by making it publicly known every session that no fee is taken the second year.

In teaching Hebrew, what mode do you adopt; do you use the points or not?—I do not.

Do you take an opportunity, in the course of the session, to explain the nature of the system of punctuation to young men?—I do not. I think it would not be possible to make it intelligible to them without a detail, for which I have not time. It is not an innovation on my part to throw out the points; they had lost their footing in this University for 20 years before I was Professor.

Do you conceive it is an advantage not to use the points, in order to obtain progress in Hebrew literature?—Decidedly advantageous. I am quite sure I could do nothing in the time allowed me, were I to attempt to teach with the points.

University of Edinburgh.

Professor Brunton.

16 October 1826.

Do you think, from your experience, that Hebrew literature is at present in a state of advancement with the students of Theology in Scotland?—Certainly within my own time, that is, since I was myself a student in Hebrew.

Is it only to students that enter for the second time you teach Chaldee and Syriac?—It is only to those who attend a second time, never to the first class. The junior class, however, have the advantage of hearing the senior side examined, and may, of course, if they choose, prepare the tasks of the senior.

Do you teach Syriac and Chaldee at a separate hour?—No, I do not. With the junior part of the class I read Hebrew only; with the advanced I read, in the early part of the course, such portions of Hebrew as have not been read in the former year, and then I take, successively, Chaldee, Syriac, and the elements of Persian. My reason for introducing Persian into my class was to bribe the students to attend me a second time for what was more particularly in their province. But there is a connexion between Persian and their theological pursuits; Arabic is most important for a theologian. Arabic, however, is an extremely difficult language. But by taking Persian first the student both acquires some of the peculiarities of the Arabic grammar, and he has conquered, at least, the difficulty of making himself acquainted with a new alphabet; as the characters in Persian and Arabic are nearly the same.

If such arrangement could be made, would you not conceive it highly advantageous that the number of hours for teaching should be increased in your class?—I think there is abundant employment for two hours' teaching;—a first and second class at separate hours.

If two such hours were established, one for the second class and one for the other, would you not be able to overtake the Syriac and Chaldee, in addition to Hebrew, in the second class; and would you be able to give a thorough knowledge in the course of the second year, doing all a Professor could do; or would it be necessary to have a separate hour for Syriac and Chaldee alone?—I do not think that it would.

Do you think there are any obstacles to a prolongation of the session in Divinity?—There is no obstacle, except the particular one that we cannot keep our young men together. There are many difficulties to struggle with. Some are tutors in families, some are schoolmasters, who have endeavoured to get their places supplied in the best way they could for the winter; and after the middle of March, when the catalogue ceases to be called in Divinity Hall, it is impossible to keep them together; that is, as things stand at present.

Does the want of finances operate severely too, as an obstacle to prolonging the session?—Yes, it does.

Do any of the other students in the University attend the Hebrew or the Eastern languages which you teach, who are not students of Divinity?—The exceptions are so very few, that I need hardly say they do.

Are you in the practice of giving certificates to students at the end of the session?—When they are required.

Are they generally required?—I think in general young men do not call for them until they are going for trial before the Presbyteries.

In these certificates do you not express your opinion of the proficiency of the young men, as well as your approbation of their general conduct?—In general terms, certainly I do. I keep a regular record of each class, by which at any time I can refer to what my estimate was of each individual's merit at the time he attended me.

Is there not a Divinity Library connected with the College?—Yes.

Have you, as Professor of Hebrew, control over it?—As a member of the Theological Faculty I have, by printed regulations which I believe have been laid before the Commission.

Have your students access to that Library?—If a student were coming to me who was not a student of Divinity, I should doubt if he had access to that Library. I should rather consider him as having access to the University Library. He may have admission to that, for my ticket is a passport to what is called the Upper Library; but the case occurs so seldom, as my students are almost all students of Divinity.

Does the collection of books in that library meet with your approbation?—There are a great many valuable books in the library, though there are a great number of the volumes which are never touched. There are a great many of the Dutch divines.

You have stated, that, as matters stand at present, you are not enabled to keep together your students beyond the month of March; at what time in March do they leave you?—About the end of March, or after the middle of March. The middle of March is the time when the Professor of Divinity ceases to call the catalogue.

Do you think it would be desirable, by any method that could be devised, to keep them longer together than the time they now attend your class?—The answer to that question depends a little upon the success of the proposal hinted at in a former question. If they were all to attend the two years, I think the present session long enough.

Do they actually attend you to the close of the present session?—For the last fortnight, our number falls off very much, certainly.

If it were rendered imperative that they should attend two years, do you not think it of any great importance to make an alteration by which their attendance should be forced positively to the end of the session?—No; in that case, I should think the present session long enough.

Do you think that, as it is at present, the students give attendance for too short a period upon the whole?—I have stated already, I think, that the time of attending the Hebrew class might be increased with advantage to themselves. Whether it might be better done by lengthening one session, or by making them attend two years, I do not know.

Are there any public examinations in your class?—Daily, in both sides of the class.

Do you mean, upon the junior and the advanced side?—Upon the junior and the advanced side. The business of the class is conducted entirely by public examinations, except a few days when I lecture, which are a very few.

In consequence of such examinations, is there any taking of places, or any other mode by which proficiency is made apparent to the scholars at large?—There is no taking of places; but the proficiency becomes sufficiently apparent to the students at large; and I see that it does so, by the result of the notes which they give at the end of the session, when they determine prizes for proficiency and good conduct.

In what way is that proficiency made so observable to the students of the class?—Merely by the superior success of one student over another in his public examination.

Is there any general public examination at the close of the session?—None.

Would you recommend that any public examination of that kind should take place, and that a classification, according to merit or proficiency, should at that period take place?—The subject is rather new to me, the proceeding is so utterly unknown in this University. But, so far as it is necessary to ascertain proficiency, I think that object is ascertained by the system as it now stands.

Might not the opportunity of display operate as a stimulus to the students to attain proficiency?—Undoubtedly it might. Certainly I should think so; I have found the prizes of use in that way.

Upon the whole, are you of opinion that the conferring of prizes is sufficient for that purpose, with the daily examinations which take place as at present?—I am not quite prepared to go that length. But I think the object is attained to a great degree by the system as it exists, including the system of prizes. Whether it might be improved in the way alluded to or not, I am not prepared to say.

Although you do not give it a negative, are you not prepared to say positively that this might be enacted with improvement?—The thing is so entirely unknown here, that I have not attended to the probable effects enough to enable me to answer the question.

Will you have the goodness to state the hours of attendance at the Divinity Hall in this University?—The hour of attendance at Divinity Hall is, as I understand, from 11 to 12 o'clock on Monday, Tuesday, Wednesday, and Thursday, and from 11 to 1 upon Friday; such at least was the understanding when I myself was a student. I rather believe that the present Professor thinks himself entitled to the attendance of the young men from 11 to 1 o'clock every day.

Will you have the goodness to state what other classes, besides the Divinity class, the students of Divinity are attending after they enter the Divinity Hall, in the course of their Theological studies?—The professional classes are the Divinity Hall itself, the Church History class, and the Hebrew class.

What is the regular period of a fair course of Theological study during which a young man must attend?—The alternatives are three regular years and a fourth enrolment; two regular years and three enrolments; or six enrolments without any attendance at all. These are the different alternatives. I had forgotten to mention, that last General Assembly made it imperative, in every case, that there should be regular attendance for one year. This law has not come into operation yet; it will come into operation upon the students who enter for the first time this year.

In your opinion, for the prosecution of systematic Divinity, Ecclesiastical History, and Hebrew, in the course of University education, do you consider one session to be sufficient for those three branches?—Undoubtedly not; but all three may be going on together, though they cannot be completed in one session.

Is there any regulation for this University operating upon the students in Divinity, by which they are compelled, or will hereafter be compelled, to attend for those three branches of study more than one session?—There is no such regulation at present; and, as the regulation depends upon the Church, this is not a subject upon which we in the University feel ourselves competent to give directions different from those which emanate from the Church.

Is the only period for the proper course of University education for students of Divinity, as you understand the regulation at present to be in operation, an attendance for one session only for these branches of study as an imperative regulation?—It occurs to me this moment, for the first time, that this regulation for one year's regular attendance applies to Divinity Hall only, and may not be considered as including the classes of Church History and Hebrew; I rather think that is the meaning of the Act, but I am not sure.

You stated that you thought the system of instruction in Theology defective, inasmuch as the Professor had few opportunities of lecturing; how often do you understand that in point of fact he is able to lecture?—I speak only from report upon that subject; but in the early part of the session I understand that he lectures at least two days a-week, sometimes three days a-week; for the latter half of the session not more than once, and indeed, towards the close of the session, not at all.

From your knowledge of what ought to be accomplished in a course of lectures upon Theology, can any considerable proportion of the course be overtaken in one session, with that limited portion of time?—No, very small indeed.

Do you think that such of those students of Divinity as are only required to attend in the Divinity class for one year, will ever receive from any Professor any systematic or complete course of instruction in Divinity in that time?—I should suppose it to be quite hopeless.

Will you have the goodness to state what obstacles you conceive to exist to the attendance at the Divinity Hall for a greater number of hours during the day, to enable the Professor to lecture for one hour, to examine for a second hour, and hear discourses for a third hour, as is done in the University of Glasgow?—If the students were attending at the same time upon the Church History class and the Hebrew class, that would infer that five hours of their time were spent in strict professional study; and, if so much of their time were thus employed, they would probably think it a hardship.

University of Edinburgh.

Professor Brunton.

16 October 1826.

Do those obstacles to which you allude appear to arise from the attendance of only one year being required of students in Theology?—I should think so.

If a Professor was enabled to lecture for a whole hour during every day in the session, would he be able to overtake a great proportion of a course of Theology in the six months of the session, according to the system of instruction usually pursued in the classes of Divinity?—I rather think he would; I presume so. But I am not speaking in my own department. I understand a Professor of Divinity at present would endeavour to go through the whole of the system within the three years of attendance which he considers the regular students are bound to give him; probably it may prolong itself a little farther, though three years is the utmost regular attendance given, according to law. Within three or four years, however, as I understand, a Professor of Theology endeavours to go through the whole of the system. If, then, with the very limited number of hours which he has at present for lecturing, he can attain this, it is quite clear a great deal might be done in a single session if it were possible for him to lecture every day.

Is it not a great disadvantage to a student entering upon the study of Divinity to come in upon the broad side of it at the third year of the lectures, instead of commencing at the beginning?—A great deal depends upon the way in which the lectures have been arranged. It is possible the subject may break itself down into several branches, so that this evil would be little felt; and I presume that the Professors of Divinity endeavour to accommodate themselves to that apparent difficulty as much as they can.

For the purpose of conveying instruction to students, and of obtaining a proficiency in those attending the classes, is it the opinion of Dr. Brunton that the examination of the students is as important a part of the method of conveying instruction as that of lecturing upon such subjects as those of Divinity?—I think, considering the length the young men are advanced before they come into the hands of the Professor of Divinity, that so strict and minute an examination as might be very useful in their early Philosophical course would not be necessary. But certainly I think the practice of examination exceedingly useful.

Does Dr. Brunton foresee any difficulties, other than those he has mentioned, to the attendance of the students of Divinity being required for at least two sessions, in the different Universities in Scotland?—None other than what I have already mentioned.

Is it your opinion that the present system of regulation under which a young man is only bound to attend one session, can possibly ensure any adequate attainment in the different branches of information which he ought to possess for entering the Church?—Were it not for the security which arises from the examinations he has to undergo before the Presbyteries, most certainly the academical provision would be altogether insufficient.

Would Dr. Brunton have the goodness to state the general nature of those regulations in the Presbytery which he thinks in part remedy the defect in the system of academic education?—In answering that question, I allude chiefly to the Presbytery of which I am at present a member. The young men are examined in private, according to the directions of the Church, by a committee of that Presbytery, who in general do their duty, I believe, very correctly and very conscientiously. The examination of each young gentleman lasts, I suppose, for an hour or an hour and a half, and during that time he is examined upon Latin, Greek, Moral Philosophy, Divinity, and Church History, and I have no doubt at all, from what I have seen in the course of such examinations, that the examinators gain a pretty accurate knowledge of his proficiency.

Are they not examined in Hebrew?—Not at that stage of their trials; it is at the close of their public trials that they are examined in Hebrew.

Do you conceive there would be any obstacle to the duty of hearing discourses in the Divinity Hall being divided among the Theological Professors?—The principal difficulty that I foresee with regard to such an arrangement is, that, if different individuals heard the discourses of the same student, it would be impossible for them to form such an accurate idea of his merits as the single Professor who heard the whole series. That, however, might be obviated; for it might be arranged that the student who began to read his discourses before a particular Professor should read them all before the same Professor.

Supposing the students at the Divinity Hall were divided into three or four portions, so that the Principal and the other Theological Professors might hear the discourses required of the several portions of students respectively, is there any difficulty in that case to such an arrangement?—There is no difficulty except what arises from the legislative power of the Church. The Church requires the certificate from the Professor of Divinity personally. The certificate of the Professor of Divinity bears that the young man has read all these discourses with approbation. It would be difficult for him to grant such a certificate, unless he had personally heard them all. I am not a Professor of Divinity, though the Professor of Church History be so. He is called in his commission Professor of Theology and Church History; I am merely added to the Theological Faculty by the Senatus Academicus.

Do you conceive there would be any difficulty from the nature of the alteration itself, or from the nature of the subject?—None whatever.

In your opinion, is it an important object for the benefit of students in Divinity, that during each session, so far as may be practicable, a regular systematic course of lectures on Divinity should be delivered by the Professor of Divinity?—I should not think it necessary that a system should be completed in one session; but certainly it would be desirable that a large part of it should be gone over.

Would you prefer that the students should be obliged to attend in two divisions upon the Professor of Divinity, so that he might have two classes, the one for those who were attending the first year, and the second for those who were attending the second year?—I am hardly prepared to say whether such an arrangement would or not be preferable to the present. It strikes me, at the first impression, it would.

What is your opinion of the system of irregular attendance which at present obtains among the Divinity students?—I have never missed an opportunity of saying that I think it discreditable to the profession.

Would you wish to see it entirely abolished?—Whatever my wish for such an enactment may be, I fear it will be impossible to attain it; but I certainly would wish to see a greater remedy to the evil than at present exists.

Do you understand that by the regulation of this year a student will be obliged to attend one session, and enrol himself for four or five other sessions, during which the attendance of one day to read a discourse may be sufficient?—Yes; that is my understanding of the law; and it strikes me, since I have come into this room, that there would be a doubt if even he were obliged, during that year, to attend Church History and Hebrew.

Do you consider that that is anything else than merely prolonging the time through which those discourses may be delivered, or do you think that that system of occasional attendance is of the slightest use in securing farther instruction to the students?—We flatter ourselves that, while a young man enrols himself as a student of Divinity, he will so far consider himself a student of Divinity, that he will prosecute the study in private. We have no other security until he comes before the Presbytery.

Is it known to you that the general method by which that is arranged is by students fixing with the Professor of Divinity on what day his discourse can be delivered, and that perhaps he is only in Edinburgh for a few hours to deliver it?—I believe that to be the case. I would not say that he is in Edinburgh only for a few hours, but, upon an average, I should not suppose that he was in Edinburgh for more than a week, and in a majority of cases he remains a week for his own private convenience, rather than because he feels it necessary to attend the class.

Can you state, from your knowledge of what takes place at this University, what proportion of students ever attend more than one session at the Divinity Hall?—I am really not prepared to state that.

Is it your impression that any considerable proportion whatever attend more than one session?—O yes, certainly. The Returns from the Divinity Hall will put the Commissioners in possession of the exact fact. Certainly more than one-half are regular students.

In the numbers returned from the Divinity class, it appears they vary from about 230 to 280; will you state your impression as to the number of those who are enrolled for occasional attendance, or the proportion of that total number?—My impression is, that about 150 to 120, or something like that, is the proportion of the majority of our students who attend regularly for that particular session, and who have it in prospect to attend regularly for three sessions or two. About 150 to 120 is the proportion of regular to the irregular students. I may mention further, that the Commissioners will be able, by the Returns from Divinity Hall, either those which have been made, or which may be required, to find that most accurately. Suppose that Dr. Ritchie enrolled 250 students last year, there was a catalogue called daily of those who were bound to give regular attendance. Upon comparing the number in the catalogue with the total of matriculations which Dr. Ritchie has given to the Commissioners, the number of regular or irregular students will be found most exactly.

Can the Commissioners obtain a list of regular and irregular students of each year?—Yes.

Will you have the goodness to mention, whether you consider it would tend to raise the standard of Theological attainments in the Church of Scotland if the attendance on the Theological class was required for more sessions than is at present the case?—I think so certainly, but it is a subject on which there is a diversity of opinion.

Is it your opinion, that not only greater proficiency in Theology, but a greater proficiency in the study of Hebrew, would be secured by some regulation enforcing regular academical attendance at the University for a longer period than one year?—Certainly.

Is it your impression, looking to the situation of most of the young men who are enrolled for occasional attendance, that they have many advantages for prosecuting the study of Hebrew without the assistance of a Professor?—I should fear not.

Do you consider the benefit of lectures from an intelligent Professor to be of great importance in pursuing the study of Theology?—Most certainly; not merely from the information the lecturers give, but from the sources of information which they naturally point out.

Do you consider a young man, resident in a remote part of the country, has any sufficient opportunities for acquiring competent and satisfactory knowledge of Theology?—He certainly must have great difficulties to struggle with. The systems of Theology which have been published will, however, essentially assist him, if he is willing to avail himself of their aid.

Do you understand that most of those who attend the Divinity Hall are very dependent upon the use of the Library for the reading which they ought to pursue?—I believe them to be so.

Do you consider that it would be of importance, if, by having a separate hour for examinations, the Professor of Divinity was able to prescribe to his students books which they ought to read, and upon which he might afterwards examine them, so as to secure greater application to the study of Theology, as is done by Principal Haldane at St. Andrew's?—I can have no doubt that the practice might be very useful: I do not think that *daily* examinations are necessary for purposes of that sort.

Do you not think that the system of prescribing books for them to read, and having a separate hour by which their application to their studies might be ascertained, would be an improvement?—I think it might be turned to excellent account, certainly.

You stated that the catalogue was not called after the middle of March; may not that circumstance partly lead to the students leaving the University sooner than they would otherwise do?—Whether it has been cause or effect, it is really very hard for me to say. Undoubtedly

University of Edinburgh.

Professor Brunton.

16 October 1826.

the young man would remain till he has stayed out what is reckoned a regular session. As I understand it, a regular session is at present completed in four months.

Do you conceive there is any difference in the circumstances of a Divinity student attending at the University of Glasgow and the University of Edinburgh?—I have no access to know the circumstances of the students at Glasgow; but, unless in regard to that part of them who come from the Highlands, I should not suppose there is much difference.

If the session was longer at Glasgow, and you found the Divinity students to attend to the end of the session when such attendance is required, is it your opinion that the same regulation could be carried into effect in the University of Edinburgh, so as to prolong the session?—I have mentioned before, my impression that the student might consider an additional imposition a hardship; and, if it be a hardship at all, the hardship would be a little greater in Edinburgh than in Glasgow, for here the students can turn their hours of leisure to better account than at Glasgow by means of private teaching.

If they have the source from which they can maintain themselves here, does it not appear that it would rather enable them to continue longer at the College during the session than at Glasgow?—If they were surer of private teaching, it would; but private teaching is greatly diminished at the close of the session of the Language classes.

Is not the Divinity course shorter than that of the Language classes?—The Divinity Hall, properly so called, continues lingering on, employed in hearing discourses merely, till the end of April; but, after they cease to call the catalogue, there is nothing day after day but reading of these exercises.

Do you consider it essential for the benefit of the students, that there should be a great proportion of the Divinity students present when these discourses are heard?—The students may profit very much by the criticisms of the Professor upon the discourses; otherwise I would say the time is almost wholly thrown away.

Supposing a regulation were introduced, by which, at the close of the session, or in such parts of the vacation as may be found suitable, the Theological Faculty were to hear these discourses, or as many of them as they could overtake, might not that regulation be as beneficial to the students who deliver the discourses, and at the same time greatly enable the Professor of Divinity to do more efficient duty during the session?—If the discourses are to be read at a separate hour from the hour of lectures, it seems unimportant whether they be heard by the Theological Faculty or by the Professor;—unless they were to be heard at a separate hour, it is quite clear it would give no relief at all to the Professor, who is himself a member of the Theological Faculty.

Might it not be an improvement if the discourses were heard at the close of the session by the Theological Faculty, or during such parts of the vacation as may be found to answer for that purpose?—According to the present system, the close of the session would be made of a most tremendous length. The labour would be excessive if the exercises were thrown upon one part of the session, for their number is very great indeed. We have 260 students, and each of them must read, during the period of his attendance, five discourses in public. Now, as the majority of them complete their attendance in three regular years, it will easily be seen that a great number of discourses must be read every session—an overwhelming number.

If the number of discourses is greater, does it not interfere much more with the teaching of Divinity by the Professor of Divinity?—Certainly: if there were any way of conquering that evil, it seems to me much more might be done for the effectual teaching of Divinity. I consider the number of discourses as uselessly great at present; and their length is uselessly great also.

Are you aware that at Glasgow attendance for two or three separate hours at the Divinity Hall is required every day?—I am not minutely acquainted with the manner in which Divinity is taught in Glasgow.

Do you happen to know if the students are obliged to enter themselves so as to mark whether they mean to attend for one session, or whether they mean to attend regularly for more sessions than one?—My own impression is, that at the beginning of the session the student must signify if he means to attend regularly during that session, but that he is pledged no further.

Can you state, generally speaking, if, according to the system of University education in Scotland for the students of Divinity, any method is taken, at the commencement of the sessions after the first year's attendance, to ascertain what studies have been prosecuted or pursued by the student during the preceding vacation?—What questions may be put by the Professor in private I do not at all know; but I am not aware of any regulation that binds him to put such questions.

Are you aware of any part of the present system of public instruction by which that information can be obtained by the Professor?—He can judge in some degree by the discourses which the young man reads. He can see the growing improvement and the increase of information from time to time.

Does the Professor of Divinity, at the close of each session, recommend any books to be read during the course of the vacation?—I do not speak from my own knowledge, but I presume he does. It is the practice, as far as I understand, of every Professor to do so, not only at the close of the session, but from time to time.

Are there certain essays prescribed in your class?—There is one prize-essay in the course of the session.

Are the essays of such a nature, or are the subjects so selected, as to render it necessary for the student to prosecute his studies in private, to enable him to compete for that prize?—I endeavour to choose the subjects with a view to that, and I find myself successful. I have obtained a great many essays of very great merit from the students in that way. I ought to

have mentioned upon that subject, in talking of the distribution of prizes for essays, that, though the Professor is the sole judge for deciding the prize, I always make the prize-essay be read publicly in the class, that the competitors may have an opportunity of hearing it.

What security have you that those essays are the composition of the students who deliver them?—I can have no absolute certainty; I can in general detect them if they are taking their information from printed books to an unwarrantable degree. They must take their general information from books, of course. What assistance they receive from their friends in private it is impossible to say, except that I generally have a pretty good idea of the talents of the young men. It is in the second year only that he gives me the essay, so that I have had the previous year's proof of his diligence and application.

Is it your opinion that it would tend to increase the prosecution of Theological studies, and be of use to the young men entering the Church, if there were any means of having prizes in your class, or any Theological class, for essays, to be awarded at a meeting of the University, publicly before all persons who choose to attend?—Yes. That is, supposing we had the facilities which I hope we shall soon have for such meetings. At present the thing is impossible. I think, were there a proper hall for such meetings, it must be gratifying and flattering to the gentlemen who were successful. I think it would be an additional spur to competition, if such publicity were given. As the subject is entirely new, I cannot speak with certainty; but I anticipate favourably of it.

Are not the number of discourses to which you have alluded before, and which you think too numerous, prescribed by the General Assembly?—They are, strictly.

If those discourses are too numerous, upon what principle would you recommend additional exercises to be prescribed?—I consider the discourses too numerous principally with regard to the proportion they at present bear to the hours of teaching. It must be very desirable that the Professor should have, either through those discourses, or other exercises, an opportunity of judging of the talents and diligence of the young men who attend him; but the number of discourses I consider as relatively too great for the number of hours afforded for teaching.

Does not the Church put it in the power of the Professors to prescribe a still greater number of discourses than the five which are absolutely required?—Yes, it does.

In point of fact, is it not the practice of this University, when students attend two Professors of Divinity, to require discourses in each of the classes—Divinity strictly so called, and Church History?—In the Divinity Hall, of course, the discourses are *required*. In the other class, subjects are prescribed, and discourses recommended; but a certificate in the Church History class may be received without the reading of such discourses. It is a voluntary task on the part of the student.

At what age do students generally enter your class?—I have stated already that they sometimes come to me before the Philosophical course is closed.

But, as to the students of Divinity, what is generally their age?—I really have no very exact mode of ascertaining it, except from their appearance.

What is your general impression of the average age of those who begin a course of Theological study?—From 18 to 19 years of age; about 18.

Do you generally find them pretty well prepared; particularly, do you find them tolerably proficient in classical literature?—I have very little opportunity of judging of that: we conduct our examinations in English.

You have already stated, that, in your opinion, the practice of allowing students of Divinity to complete a course in the way of occasional attendance, is not favourable to the progress of Theological literature, or to the reputation of the National Church; is that your decided opinion?—That is my opinion, as far as I can judge from our circumstances here. I know there is a diversity of opinion, as I have mentioned, upon the subject.

Do you think that those who are enrolled for partial attendance generally attend at all further than upon the day they give a discourse?—My impression is, that they attend scarcely at all. But I do not speak from my own knowledge; for these occasional students never come to me.

Do you think the occasional students, or those who are non-resident, are, at the end of the Theological course, generally equal or superior in their attainments to the regular students?—I have no access to know it. *Ex facie*, I should suppose the thing impossible.

Do you consider students at the age of eighteen are generally sufficiently prepared to act as tutors, particularly in the country, where they may have the sole charge of a number of boys?—A great deal must depend upon the disposition of the individual, of course, and his attainments; but, as a general question, I should say, certainly not.

Do you think that to require students of Divinity, who in general commence their Theological course about eighteen years of age, to attend regularly during the first and second years, could at all interfere with the duties they may have to exercise elsewhere as tutors?—So far as I can judge of the state of things in this neighbourhood, I do not think it could. An opposite opinion, I believe, is held in another part of the Church. I think it would not interfere.

Do you not think that students residing in the country labour under great disadvantages, particularly in being deprived of the facilities of consulting books to which they have access in University towns?—I have not the least doubt of it.

Do you consider that the subject of Biblical Criticism is sufficiently attended to in the course of Theological instruction followed in Scotland, but particularly in this University?—I fear not; I have already stated I do not think the attendance on my own department is sufficient for the purpose.

Do you think that students who are engaged in tuition to a great extent—for instance, in gen-

University of Edinburgh.

Professor Brunton.

16 October 1826.

tlemen's families in the country—are likely to devote themselves as assiduously to their own studies as those who can command much greater means?—It is quite impossible, of course, for a great sacrifice of their time is required in such situations; and, after the discharge of their daily duty, they must be so jaded and fatigued as not to be expected to do a great deal in private study.

Do you understand that the act of the General Assembly, concerning Theological study, and the licensing probationers, is read in this University?—I believe regularly.

Did you study at the University of Edinburgh?—I did.

Have you studied in any other?—None.

Do you think that there is a greater or less ardour upon the part of the students of Divinity in their professional pursuits now than when you studied here?—I think, as far as I can judge in my own department, the ardour is greater; and I have remarked, since I became a Professor, a very decided improvement in the general tone both of the intelligence and information of the students in Divinity.

Compared with the time you yourself were a student, do you think that a greater or smaller proportion of students now give regular attendance?—I really am not prepared to say; I do not believe there is much difference. This will be answered more exactly by those who are more strictly Theological Professors than I am.

Do you think more or less attention is paid among the students of Divinity to classical literature now than formerly?—I think there is more, so far as I can judge.

Do you think, if all the students of Theology were to give only such attendance as is thought sufficient by many of the occasional students, that there would be any use for Professors of Divinity at all?—As the law stands at present, there must be a Professor of Divinity, if it were only for hearing discourses.

Might not the Presbyteries just do that as well?—The Presbyteries do hear that identical number of discourses, when the young men come before them; this is the reason why I have said that I think the number of discourses needlessly great. The same class of exercises is gone through again before the Presbytery. The student reads a lecture before the Professor of Divinity—he reads a lecture before the Presbytery,—a homily in the same way,—a popular sermon, &c. I do not say it is the same homily, or the same popular sermon, but it is in the same kind of exercise.

Is there a rule prohibiting the same discourse to be delivered before the Presbytery as had been read in the Hall?—There is no rule, except that the Presbytery generally prescribes its own subjects.

Do you think that Professors of Divinity could judge of the progress of students in Theological knowledge, by requiring any less proof of their attention than a single discourse every year?—I should suppose so.

In what way could they judge of their proficiency by a less frequent opportunity of hearing discourses?—Examination, I think, certainly would be one way.

Would you propose to substitute a greater proportion of examinations for the present number of discourses?—I think so. I have had occasion to hear these discourses often for Dr. Ritchie, and, as far as my own experience goes, I cannot say I should be able to form a very accurate estimate of the talents of the gentlemen who read, from hearing their discourses.

What benefit could mere occasional students, who never attend even one regular course, derive from a Professor of Divinity?—If we are to speak hypothetically of what might be, not of what is, the Professor of Theology might have it in his power to examine those students at each successive enrolment, and, if he found they had not been making progress in Theological study, he might refuse to enrol them for that session.

Still, in the case of an occasional student, is there not a probability that there would only be one annual examination?—If I am to speak of prospective regulations, that might be as should be appointed. Even irregular students might be required to appear before the Professor of Divinity more than once in the session; at the beginning of it, for instance, and at the end.

Have you found it difficult to keep students together to the end of the session of five months?—I always found it so; not in my own experience as Professor merely, but from my recollections as student.

How do you account for the circumstance, that in former times, when the wealth of the country was not greater than it is now, students in general, even from the poorer classes of society, contrived to attend regularly during a session of nine or ten months?—One reason, I suppose, was, that they were not able to turn their leisure to so good an account in a pecuniary point of view. A great many of them wish to get away to the country, to return to school as masters or assistants, or to go with gentlemen's families who are leaving Edinburgh. A great number of them go in that manner; formerly they were not so much employed in that way.

Are you of opinion that it would be advantageous to recur to the ancient mode of conferring academical honours, such as the degree of Master of Arts, with public solemnity, after rigorous examination?—That is a little out of my own department; and perhaps I have not attended so much to the subject as I ought to have done. There would be great difficulty about it in so *popular* an University as this is, where many students come to us, picking out individual classes which they choose to attend, and not going through the regular course. But it might be made imperative on young men studying for a particular profession to take the degree of Master of Arts, after going through the curriculum and a regular examination. We should know better what we were doing, than when young men come to a Professor of Divinity with certificates in their hands, saying merely that they have attended particular classes. In some of these classes the Professor can say no more than that the young men have attended the lectures; and he says a great deal often, if he can say even that.

University of Edinburgh.

Professor Brunton.

16 October 1826.

Do you not think that the practice hinted at just now might directly tend to the advancement of Theological learning?—If I look to the practice as bearing upon young men who intend to be students of Divinity, I think so undoubtedly. We should be more sure of having a good material to work upon.

Do you happen to know what proportion of your students have taken the degree of Master of Arts before commencing the study of Divinity?—I suppose they take that degree generally about the time they become preachers, and have a little more standing than at first enrolling their names in the Divinity Hall books. The degree of Master of Arts is taken by very few altogether.

Do you happen to know much of the form or practice with regard to taking the degree of Master of Arts, whether it was very regularly attended to till 40 or 50 years ago?—I am not prepared to speak with precision on that point. In the early days of the University, when the custom of laureation was pursued, all the students went through that ceremony in regular course. In my own recollection the degree of Master of Arts, at the time I was attending the Philosophy classes, had fallen into almost total disuse in the University; I think it is now more frequently taken. When I was a student at the University, the young men thought of no such thing.

Do students from the different seceders in this country attend your class?—I have had them occasionally, but not very often. Whether their Professors of Theology now teach Hebrew, I am not prepared to say; but I should infer it, from the seceding students being less numerous in the Hebrew class than they formerly were.

Does Dr. Brunton think it would be attended with advantage, in the way of raising the standard of learning among the students of Divinity, if another year's attendance upon the Philosophy and Language classes was exacted from them, before they were allowed to enter at Divinity Hall?—Generally speaking, it would not appear to be necessary. Much depends upon the attainments of the young man before he comes to the University at all, and upon the opportunities he has of self-cultivation during the recess; but, in general, I think four years of previous University education would be enough.

Does Dr. Brunton think the attendance on the Language classes, as prescribed in the University of Edinburgh, is sufficient to insure the attainment of any considerable degree of learning in those branches?—It really is difficult to answer that question. It very much depends upon the individual Professor, and upon the individual student, particularly upon the zeal with which the student pursues the line of present study.

Suppose the best Professor has an average description of students, with the means he at present possesses, does Dr. Brunton think that much classical learning or knowledge of the learned languages is attainable during the time of attendance which is prescribed?—I should think, if their previous training has been good, that their stock of Latin must be very fair: in Greek they could not carry the matter so far; but still I think they might make respectable progress in Greek, if they have had such previous training as is received in the High School or Edinburgh Academy.

Is it common for students in Divinity to come with so good a previous training to the Language classes?—I lament to say it is not.

Have they, in point of fact, very often very little previous training?—In Greek they very often come to learn the alphabet, which is to be deplored.

How long are they obliged to attend the Greek class?—I am not exactly sure if the Professor of Divinity is entitled to call for a certificate for more than one year's attendance.

If he were even allowed to call for a certificate of attendance for two years, in the case of a young man who begins his attendance at college with learning the alphabet, is it possible he can have acquired any correct knowledge of the Greek language in two years?—He does not produce his certificate to the Professor of Divinity the moment he ceases to attend the Greek class. There are two intermediate years, and they may be very important. The young man may make them very productive to himself in the attainment of Greek literature.

Is there any security provided by the University, that he shall pay any attention to the studies entered into at any particular class after he has left that class?—None, unless he mean to take the degree of Master of Arts.

Does Dr. Brunton think it a matter of importance that gentlemen who are to go into the Church, should be as learned as it is possible to make them?—Unquestionably: a Language Professor, in particular, can bear no other testimony.

Supposing the occasional year's attendance on the Divinity class were dispensed with, and two sessions of regular attendance exacted in the place of them, and another year's attendance upon the classes of the Faculty of Arts, particularly on the Language class, required, does Dr. Brunton think that would be an improvement in the existing system?—Why, I doubt it. I have stated already, that it is very difficult for me to say (so much depends upon the previous training of the young men), whether an additional year's attendance on the Philosophy class would be of essential benefit for a student of Divinity. But I doubt if the benefit, granting that it were a great one that might accrue from making them attend five years upon Philosophical classes, would not be more than compensated by abridging their professional course to two years only.

Suppose, in proposing to abridge the students' professional course to two years, it were understood they were to be two years of regular and rigid attendance; how would you answer the question in that view of the case?—Still I think the time is too little for strict professional study; two years are too short a period for a young man's University attendance on that part of his education which is strictly professional. I state this, however, only as my own personal opinion.

Does the Professor of Divinity prescribe the subjects of discourses which are delivered before

University of Edinburgh.

Professor Brunton.

16 October 1826.

him, or does he leave them to the choice of the student?—He prescribes the subject in every case. If it were asked, if the Professor prescribed the subjects to the occasional, as well as to the regular students, I ought to have added, in justice to the Professor and to the occasional student, that I believe the prescription of the subjects is accompanied with suggestions as to books that ought to be consulted.

Would it be deemed a hardship by the students of Divinity to be obliged to give three years' attendance upon the professional classes?—I wish I could say that it would not. I have said already, I fear it would, if three years' attendance were required, and every case of occasional attendance done away. There is grumbling about the one year's attendance now required; I do not say there ought to be.

Considering the importance of the study, does Dr. Brunton think that there would be any ground for discontent if that regulation were established?—If it were possible for us to bring the students to it, my impression is, that there ought to be three years' regular attendance, and no alternative. This is the point to which I would wish to bring matters, but I despair of ever effecting it.

Has the number of Divinity students been increasing these last thirty years?—Very greatly.

Do you understand that there is at present a far greater proportion of preachers who cannot obtain churches than there was 30 years ago throughout Scotland?—Thirty years ago the preachers used to consider themselves as a formidable band in proportion to the number of livings provided; but the number is comparatively greater now.

If any system of academical education were introduced for the students of Divinity, although it might keep a few from entering the Church who now enter with the facilities afforded to them of occasional attendance, would there be any evil to the Church itself from such a regulation in regard to the number of those who enter, or would the Church be adequately supplied with preachers?—My own impression has always been, that there would be an adequate supply at least; but I know that a different impression prevails in a different part of the country, and from particular circumstances. At Aberdeen, I understand, the Professors think that it would be a great evil if occasional attendance were done away with entirely, and that the supply of ministers would not be adequate to the demand. Whether they are right in that opinion, I have no means of judging.

Speaking with reference to what falls under your own observation in this University, have you such apprehension?—I have no such apprehension whatever. I believe, that if the system of occasional attendance were done away with, we should lose many excellent young men; but I have no doubt excellent young men enough would remain to supply the wants of the Church.

Have you any suggestions to offer with regard to the Philosophical and Language classes, in the way of improvement in the course of instruction that takes place in those classes?—I think I mentioned before, that, not expecting to have any question put to me on this subject, I really had not turned my mind to it, so as to venture to give an opinion upon another man's department. I am not aware that I am qualified to suggest any alteration.

Which would you consider to be the most important alteration for the interests of the Church—the addition of another year's attendance at the Universities before the students enter the Divinity Hall, or the addition of two further years to the attendance at Divinity Hall?—My difficulty in answering that question is exactly what I have stated before, that so much depends upon the previous training of the young men. In some cases, I think additional attendance in the Philosophical classes would be of no advantage at all; and in others, it would be of great advantage. I know no way of bringing it to a level, unless some provision were made for ascertaining the qualifications of young men before attending the Divinity class at all. I think there are means enough within the student's power, in four years of previous study, if he is qualified to profit by them.

Would there then be no reason against a student who had not made proficiency in the previous classes, entering the Divinity Hall?—No reason. I can understand a young man very low in attainment, coming from the country, going through the regular *curriculum* in Edinburgh, and coming to the Divinity Hall, who in truth was unqualified even for entering upon Philosophical studies; yet the Professor of Divinity has no means of ascertaining it.

Do you think it would be desirable that the Theological Professor should be entitled to examine those who wished to enrol themselves as students of Divinity, so as to remit them to their former studies, if they were not qualified to prosecute their course at Divinity Hall?—I think it would be very desirable that there should be such authority somewhere; but it would be a very severe responsibility to impose upon any individual.

Are you aware, that by one of the regulations of the Senatus of this University, about the middle of last century, every student enrolling himself at Divinity Hall was required to take the degree of Master of Arts?—No, I am not aware of that regulation.

If the degree of Master of Arts were taken after a strict and public examination, so as to secure very considerable proficiency on the part of those taking it, do you consider that would be a great check on the evil which exists?—I do; I think it preferable to examination by the individual Professor of Divinity.

Do you see any practical difficulty to the enforcement of such a regulation as that now alluded to?—The members of the Faculty of Arts are better qualified to answer that question; but none occurs to me from my knowledge of the circumstances of the students of Divinity. It would impose upon them no greater exertion, in the way of literary attainment, than they ought to make, and the little additional expense is hardly worth the naming.

Do you think the expense might be dispensed with?—There might be means found to dispense with the expense.

Do you not consider the necessity of exertion during the four years of attendance upo

University of Edinburgh.

Professor Brunton.

16 October 1826.

Literary and Philosophical classes, for the purpose of taking the degree with credit, might be of essential use in securing application and literary habits in after life to the students of Divinity?—I cannot have the smallest doubt of it.

Would not the credit acquired, by taking the degrees with honour, be of great use to the individual students themselves, in securing them notice and distinction and situations in the Church?—I have no doubt it would: the only drawback that occurs to me in counterbalancing what is referred to, is, that the value of the degree might be rendered somewhat less by the number of persons who held it, and that it might be forgotten, in the case of the individual, that he had attained it with distinguished honours.

Are there any means at present, by which a young gentleman intended for the Church, passing through the Literary and Philosophical classes, and the Divinity Hall, can really acquire any distinction beyond what is known to the individual Professors whom he is attending?—The attainment of any prize in the University is annually advertised, but beyond that I know of no other.

You have stated it would be, in your opinion, a very great responsibility to impose on any individual, as Professor of Divinity, to remit back students to their studies, if, upon presenting themselves to him, he thought them inadequate to enter Divinity Hall; do you mean by that, that you would propose the responsibility should be shared by him with any other persons in the University for that object?—I have stated already, that in my opinion, requiring the young men who are afterwards to become students of Divinity, to take the degree of Master of Arts, and removing the responsibility from the Professor of Divinity to the whole Faculty of Arts, would be preferable.

Do you think that it would accomplish the end in view equally and in a better way?—In a safer way. Examination by one individual is really a very precarious test of the attainments of a young man. He may feel nervous and embarrassed in the presence of a stranger; he would do himself much more justice in an examination by Professors with whom he was already familiar.

Looking to your knowledge of the licensing of Preachers, would you say, upon the whole, they were more deficient in Literary or Theological attainments, compared with what you yourself would desire to see in persons filling situations in the National Church?—I really have the pleasure to say, that though the duty of examining young men in the strict and close manner already described does not come round to us very frequently, yet in all those examinations which I have had a share in conducting in the Presbytery of Edinburgh, I scarcely recollect any instance in which the young men have not acquitted themselves most creditably in both departments.

Is it not very probable that they are students of rather higher attainments who present themselves to the Presbytery of Edinburgh for examination, as compared with those who present themselves to meet other Presbyteries?—The chance undoubtedly is, that the young men who propose themselves to the Presbytery of Edinburgh, have had all the advantages of Edinburgh training before they entered the University at all; and in this respect they have the advantage over their fellow-students.

Do you recollect many instances of students, who gave only an occasional attendance, being taken upon trials before the Presbytery of Edinburgh?—No: I think the number of such cases in Edinburgh, from the nature of the case, must be small. From my recollection it is small; indeed I do not at this moment remember any.

The Reverend Dr. *Meiklejohn*, Professor of Ecclesiastical History in the University of Edinburgh, called in, and examined.

Professor Meiklejohn.

Are you Professor of Ecclesiastical History and Divinity in the University of Edinburgh?—I am Professor of Divinity and Church History.

Have you read over the several Queries that have been sent to the Senatus Academicus of this University by the Royal Commissioners?—I have read them all, and I returned answers to them in writing, at least to as many as it was supposed I had any connexion with.

Have you read the Answers to them?—I have not read all the answers. I have read part of them.

Have you not read through the Answers generally?—Not the whole of them.

Have you any suggestion to make with a view to any improvement in the University at large, or in the system of education which prevails in it?—The subject is very wide: I should be better able to speak to any particular question that was put.

Would you suggest any alteration or improvement in the Faculty of Arts by which education might be improved in the University?—I have long had a general impression that it would be a good thing in that Faculty if there could be hours for examination and hearing of discourses in three of the classes belonging to it where there are none in this University.

What are those three classes?—Logic, Moral Philosophy, and Natural Philosophy. I know there are difficulties connected with it.

Are those difficulties to which you allude of a nature that would prevent the change from being properly introduced?—The difficulty to which I refer at present is the almost impossibility of getting hours without interfering with other professors. The hours are filled up from morning to night, and no attempt of that kind would be made without many complaints being urged against it.

In your opinion, do you think that an alteration with respect to hours could be so made as to introduce the improvement which you are desirous of accomplishing in the University?—I have no doubt another hour might be taken; but it must be an hour which is occupied by another class; and the evil must depend upon the relation which the business of one class

University of Edinburgh.

Professor Meiklejohn.

16 October 1826.

bears to another. I mean by that, an hour may be taken when the other classes did not induce many of the students in those classes to attend.

Do you think that probably might be done by an arrangement between the different professors?—I presume it could only be well done in that way; for it would be necessary to consider maturely what interference there might be with regard to young men's attendance upon the different classes.

If such an arrangement could be effected, are you of opinion that the alteration which you propose would be a very beneficial one for the education of young men in the classes of the Faculty of Arts?—I am disposed to think so from my own experience. I find in those departments as much benefit in the hour for hearing the discourses and examinations as in the hour for lecturing for the good of the students.

With regard to your own particular class, which is in the Faculty of Theology, are there any suggestions or alterations you would wish to propose to the Commissioners?—I am not aware of any. I have sometimes thought of trying to select an hour for such a purpose as I have now mentioned, for the hearing of discourses interferes considerably with the hours of lecturing; but I have found the thing quite impossible, for these young men not only are attending other classes, but the great body of them are employed in private tuition, and they could hardly live in Edinburgh unless they were allowed to devote a considerable portion of their time in that way.

What is about the average ages of the young men who attend your class?—I suppose from eighteen to twenty-four. I have no occasion to know their ages exactly; I speak from appearances.

Do you suspect there are many above the age of twenty-one?—There are several, but what their number may be I cannot say precisely.

Did you not state that a difficulty of attendance arose from several of the young men who attended your class being tutors in families?—Yes; and they are likewise employed in private tuition.

Do you apprehend that there are many so employed between the ages of eighteen and twenty?—There are many of them take employment, if they can obtain it, as early as eighteen; some are successful and others disappointed; but there are many of them very willing to go out and teach at that age.

Do you know if there are several so employed?—Yes, several; and there are instances of their being employed before coming to our classes.

Have you any Examination in your class?—No public examination. I prescribe discourses to all young gentlemen who come to the class. They have a long time to prepare them, often from one year to another: when they are ready they return them to me that I may examine them before they are given in, and when they come back to receive their discourses for the purpose of delivering them, I have conversations with them on the subjects, and I come to know pretty well what they are doing, and what the degree of information is which they possess.

Have you any means of ascertaining if the discourses which they bring you are *bonâ fide* their own, or whether it be possible that they may be made by other persons for them?—I can form a pretty just conclusion from what I know of the young men from conversing with them, if they have written their discourse. It is possible they may have submitted it to some of their more intelligent friends, and afterwards transcribed it, but I do not know that; I have never known an instance within these twenty years in which I have discovered that a discourse had been written by another. Once I had occasion to make that discovery, and it was with regard to a young man who was inferior, and who indeed was not altogether sane.

Have you any Prizes that you confer in your class upon the students, either upon the ground of proficiency in their discourses, or for their general good conduct during their attendance in your class?—None. I one year gave a prize of books to the value of £6 or £8; but I found it not quite consistent with my convenience to pay for prizes myself, and I had no other means of getting them.

Is there no public fund for the purchase of prizes?—There is no public fund whatever.

Have you any general examination at the end of a session, so as to ascertain the proficiency of your scholars?—There is no such examination.

Do you grant certificates of attendance?—We must do that, for they cannot be admitted to trial by Presbyteries unless they have received them.

Are they generally demanded by those who attend your class?—Very generally. They do not require it in some districts. Indeed they do not require attendance on my class in the greater part of Scotland; but in some districts, as in the Synod of Lothian and Tweeddale, they do; in several other parts of the Church they do, but it is not universal.

Is it, or not, in consequence of any general law of the Church that the certificate of attendance on your class is required?—It was a matter of discussion before the Church Courts, and it came to the Assembly. The Assembly had recommended attendance, but it does not become the law of the Church unless it is approved of by the majority of the Presbyteries. The proposal never was transmitted to the Presbyteries, and approved of; and, though a resolution of the Assembly is a good law of the Church for one year, yet it is not permanent law unless the Presbyteries have returned an approval of it; and that was never required.

Do you think it would be an improvement, by producing emulation, to institute prizes, or to have public examinations annually of the classes, either in the one or the other, or both?—I am quite certain that prizes wisely conducted would have a happy effect; for the students are so far advanced in their studies that they are able to produce something that is valuable, and there would be many candidates for them. The public examination might be useful too; but a private one suits the purpose as well in our situation, for many of those young men go away

before the end of the session, and there is no particular time of the session when you could have the whole present.

Do they leave your class considerably before the expiration of the session?—There are several of them that remain to the termination of the session; but after the beginning of March, and more particularly after the Court of Session rises, there are a great many of these young men who go away with families as tutors or private instructors to the children; we find that there is a considerable diminution of the numbers from the time the Court of Session rises.

With respect to prizes, would you recommend that they should be instituted if funds could be found for them?—I am quite aware they would do much good.

Have you any means of enforcing discipline in your class, or checking insubordination, or of insuring attendance?—We have no means of checking insubordination except by informing them that they must behave gentlemanly, or they cannot come there. I have not found difficulty in that respect.

Are they under any obligation to attend?—Those who attend are under an obligation to do so, or I should not grant them certificates. Every day, when they meet, a catalogue is called, so that I know the exact number of hours every individual is present, and the number of hours he has been absent.

Do you refuse certificates to those who do not attend for a certain number of times?—They are refused to those who do not attend a fair number of weeks and days.

What is your opinion in regard to the occasional attendance?—It is allowed for students of Divinity.

Do you consider it beneficial to the interests of the Church?—I have generally thought unfavourably of occasional attendance; but there are strong arguments pleaded as to the hardship it would be to some individuals if they were to be compelled to attend always. I may be permitted to add that there is a tendency to increase that attendance now. No individual can come upon trial for licence since the last Assembly unless he attends one year regularly; and it is known that the prospect is pretty favourable, and that two years will soon be required of regular attendance; at least, I expect so.

Is your own opinion against the system of occasional attendance?—I do not think favourably of it, and for this good reason: I have found, in a great majority of cases, that the discourses of the students who attend regularly were better than those produced by the students attending occasionally. There may be some exceptions to that; there are superior young men, but in general it is true, as far as my experience goes.

Do you consider that the best students in the Church are those who attend occasionally, or the reverse?—I think those who attend regularly are the first class of students; there may be exceptions, but I think they are not numerous, as far as my experience goes.

You stated that when you were at College there was a separate hour for examination; at what College was that?—It was not at this University.

At what University did you attend?—I was twelve years at the University of Glasgow, and I know pretty well about the practice there, from my long residence.

Are you enabled to state decidedly that the system of having examinations in classes in the way alluded to, and at separate hours, is a most important method of conveying instruction to youth?—So far as I am enabled to judge individually I think it of the greatest importance, and productive of the happiest effects.

Were you a Professor of the College at Glasgow?—I was not a Professor then, but I taught the Mathematical class some time; but one session, from almost the commencement to the conclusion.

Do you consider the system of education pursued in that University for the Philosophy and Language classes to be superior to that followed in the College of Edinburgh?—I presume I must be excused from answering that question: I feel a warm attachment to Glasgow, and I feel a personal interest in Edinburgh, and I would not choose to give a preference.

Are you acquainted with the Outline of Philosophical Education published by Professor Jardine?—Yes, I am quite acquainted with it, and I knew it in practice formerly.

Do you consider the introduction of that system into the different Universities in Scotland would be an improvement?—I am not quite aware that it would; but the only point in which I give a preference to Glasgow is for the hours of examination, the constant account that is taken of the young men, so that it is impossible for an individual to be idle and unobserved; but as to the mode of teaching the class I am not disposed to give a preference to what goes on there. As far as the Professor is concerned I am far from giving it a preference. The circumstance I put any value upon is the constant superintendence and the regular examination of the students, so that it is impossible for a young man to be idle without being immediately detected.

With reference to the plan pursued to convey information and instruction, and not with reference to the merits of the professor, do you attach great value to the system of having separate hours for daily and constant examination?—I am certainly disposed to do so.

Are you of opinion that it would be beneficial for the interests of the Church, if it were incumbent on students of Divinity to take the degree of Master of Arts before entering the Divinity-hall, upon some system of strict examination which might secure considerable attainments in the different departments of literature before they so enrol themselves?—I am not aware that the degree would have any material effect if detached from examinations. Were examination to take place of the kind I have been describing, the certificates from the different professors, which they produce, would ascertain their qualifications; every student who came to be enrolled as a Divine, bringing from the professors not only certificates of having taken tickets to their classes, but likewise stating in what way they have attended, and what has been their progress, so far as is known to them.

University of Edinburgh.

Professor Meiklejohn.

16 October 1826.

Do you consider, according to the method of instruction pursued in this University in this class, there is sufficient certainty of the Professor knowing the attainments of the students?—In the Language class they have sufficient opportunities of knowing; and so far as they give exercises to them to perform in the other classes, they always state how that has been done. I do not think the knowledge is so complete as if it were obtained by a daily examination. In all the Philosophy classes they give certain exercises to be performed. I fear here it is voluntary; in Glasgow it is not; they are there obliged to perform them; the Senatus has power to enforce it.

Will you have the goodness to state to the Commissioners generally the system of instruction to which you allude as pursued in Glasgow; say, for instance, in the Logic class?—At Glasgow the Professor lectures in the morning hour; he meets his students in the forenoon hour for the purpose of hearing discourses of one kind or another, and examinations. He has two classes of discourses, as he used to prescribe exercises in my time; the exercises consisted of an account of some particular topic on which he had been lecturing; these were read *de die in diem*. He used at the same time to prescribe essays of a larger character, and the student was allowed two or three weeks to prepare these, when I attended. At eleven o'clock there was examination on all the topics in the lectures, particularly on the lecture of that morning, as well as reading short exercises on some of the topics discussed in the lectures the preceding days.

Had he frequently more than two hours?—He had not more than two hours for this business. There is no Professor of Rhetoric there, and I recollect, at one time (I do not know if it was continued long), he had a separate hour for giving lectures on Rhetoric; it was a third hour, which used to be in the evening.

Was attendance on those separate hours for examination imperative on the students?—The attendance upon the examination hour was as imperative as at the hour in the morning for those who were regular students. Perhaps I might state a circumstance: in Glasgow the students are all enrolled in a special class, which they are supposed to belong to; they all stand in that particular class. In Classe Latina, in Classe Græca, in Classe Logica, in Classe Ethica, or in Classe Physica, they are called in public meetings as belonging to that particular class; but there are also individuals who may come and hear the lectures who are not enrolled at all. There are always some who do so, but the regular students are all enrolled in that class, and upon them it is imperative to attend at the hour of examination.

Is it imperative on all the students likewise to perform all the exercises which are prescribed?—It was so in my time.

Was any difficulty found in enforcing that regulation?—There was, for it was necessary to exact small fines; but generally it was without much difficulty.

So that the object in view can be attained by having such separate hours?—Yes; the greater part are performed, and without difficulty. Those who failed when they were fined, and persevered in refusing to comply with the orders of the Professor, were dismissed from the class and not allowed to receive certificates.

Is there any reason why such examinations should not take place in the University of Edinburgh?—The only reason I know of is, that the hours are so completely filled up that it is extremely difficult to fix any one which could be employed in that way.

Would it not be of more benefit to the student that he should attend a certain number of classes with a good effect than that he should attend more than he can probably receive benefit by?—Unquestionably it must be so; if he attends more than he can profit by he is losing his time and his labour.

Do you think that a change in that respect would be beneficial to the students?—I must think so, as it is always disadvantageous for a student to be in more classes than he can bestow proper attention upon.

Looking to the present system adopted in the University of Edinburgh, where examinations do not take place, would not the regulation of a person being admitted Master of Arts, after undergoing strict examination, be a useful regulation, so far as the Church is concerned?—I am not aware that it would have a very good effect; it might if the examination were very strict for these degrees; but if it were not very strict there would be little effect produced.

Supposing the examination were strict, would such a regulation be beneficial?—It would certainly have some effect in that way. At present a degree is received in place of the certificates from Professors. If they produce a degree they are enrolled; but we had an instance of a student going to Aberdeen, and getting a degree without giving the attendance. Upon complaining, they said it should not take place again; so that we were sustaining a loss by a degree being given to a person who should not have been admissible. By the attendance given, he had interest with the people of course at Aberdeen to get a degree. I mention it to show that degrees will not at all times answer the purpose.

Supposing that no degree were to be given without an efficient examination, and some degrees were to be given, where the examination had been extraordinarily good, under circumstances indicating superior honour to the persons receiving them, would not such a regulation be beneficial?—I should think so, if it were understood that all those who were not very well qualified were to be rejected; but people would have some feeling about the hardship of the measure. In the earlier periods of this University degrees were taken by everybody, and nobody was rejected. If the result were to be the same, we should gain little by it.

Is there any reason why the results should be the same?—I do not know; I only say that there will be a feeling that it is harsh to cut off a young man's prospects, and say he shall not go on because he is not able to answer very strict examinations.

Have you ascertained that no one was rejected in former times?—I do not know exactly

University of Edinburgh.

Professor Meiklejohn.

16 October 1826.

whether they were rejected or not; but we are sometimes told that the class amounted to a certain number, and that that number was "laureated," which was the phrase at that time. At that period they attended 11 months out of the 12.

You stated you were Professor of Ecclesiastical History and Divinity; do you not conceive Church History is your particular province as a lecturer?—I rather think not.

Are you in the practice of lecturing on Divinity as well as Church History?—They are combined; and I will inform the Commissioners why I do not. In the establishment of my class, it is said there shall be another professor of Divinity. In the charter of the class from King William and Queen Mary, the words History, Ecclesiastical or Civil, does not occur: at some subsequent period it is said in the commission, "with special respect to Church History," which is all the authority for my being Professor of Church History.

Would you favour the Commissioners with a short plan of your mode of lecturing?—Considering the nature of the establishment as it appears from these documents, I thought it my duty to begin first with the earliest spiritual dispensations of God to man, and to prosecute them in chronological order down to the Christian era, giving the best account I can of these dispensations, and stating the effects they produced, which become the History.

In what way do you proceed after the commencement of the Christian era?—I begin giving an account of what took place in the Ministry of our Lord, and in the apostolic age; and then I present the different events and disputes that have arisen with regard to different subjects in the order of time.

Do you find that you are able to finish your course in one or two sessions, or what number of sessions are required?—I have never finished it. I go on for three or four years, sometimes longer. I have never come down so far as I intended, which was to the termination of last century; and I doubt if I shall. I select those periods which I think most useful; such as the period of the Gospel dispensation during the first century, and the centuries which followed: and I bestow a good deal of time upon the ancient economy, and upon the sacred Books under both dispensations.

How far have you actually brought down your account of the History of the Church?—To the Mahommedan Impostor; I have hardly exhausted what precedes, and I find it takes more than three years to get through it.

Is it the practice of students in Divinity to attend your class during the whole time?—Part of them,—the regular students, and many of the others who have been once in the class,—enter as occasional students for the purpose of giving in discourses that I may have prescribed, and hear the criticisms I make upon them.

Would you not consider it as a great advantage, as the subject is so ample, and you find a difficulty in bringing it down if you had an additional hour given for lecturing?—I should think it a great advantage to have an hour entirely devoted to lecturing, if I could find another for the purpose of receiving these discourses and for examination, but I have thought on the subject very often, and I find no hour that I could well fix upon. I have consulted the more intelligent students who are in the class at different periods in the course of nearly 30 years; I find it impossible to get them to attend two hours.

How often do you lecture?—Five days in the week, except the days I hear discourses; that depends on the time they are given in. I lecture on all the previous days of the week except Saturdays; I lectured only four days in the week the first time I went over my course; then I increased it to five, which has now gone on 24 years.

When you prescribe discourses to your students do you hear them delivered in your class?—I formerly stated how they were managed. They give them into me when they have got them ready, and they lie in my possession until I have an opportunity of reading them over and writing criticisms upon them, making all the remarks I think necessary; then I request the student to call upon me and receive his discourse, and converse with him upon the subject of it, and every thing connected with it; after that he delivers the discourse in the class, and I criticise upon it afterwards. I always read the criticism upon it: I never do it *extempore*.

Are the subjects of the essays connected with Ecclesiastical History?—Many of them. I give three kinds of discourses; I give them dissertations upon different parts of Ecclesiastical History, or upon Characters, or sometimes upon Books; I give them portions of Scripture for lectures, and texts for sermons.

Are you in the practice of recommending books to the students, which should be read by them, connected with the subject of Ecclesiastical History?—I always do so at the commencement of the session; and, when I am passing from one department to another, I state a number of books that I think will be read with advantage, and I inform them that I shall always be glad to receive them and give them information as to the books which they should read upon the subjects claiming their attention, and they very often take advantage of it and come to me.

Have you been in the practice of examining them in those books which you have prescribed to them for reading?—Not directly, but incidentally. I ask them if they have found the information which I led them to expect from the perusal of the books; then they give me some account of it, and in that way I obtain a knowledge of their progress.

Considering the peculiar nature of Ecclesiastical History, does it occur to you whether it would or not be an advantageous mode of giving the students a general view of it?—I think it might be useful. I make the writings of a particular author the subject of a dissertation, and I receive such dissertations accordingly.

Do you examine your students upon the subjects of your lectures?—No, I do not; I have no hour for that. I examine them more particularly on the subjects of their own discourses.

Do you not think it would be desirable that there should be such examination?—I have no doubt it would be profitable if it were possible to accomplish it.

What makes it impossible?—It is not upon my own account that there is any difficulty, but there are two reasons which I have already stated: the first is the difficulty of finding an hour for that purpose; secondly, the almost impossibility of a great number of these young men attending without sacrificing that portion of time which is necessary to secure the means of support.

Does it not appear, considering the vast importance of Theological Science, that it is a great disadvantage that much more attention is not paid to it than at present?—I am perfectly satisfied that there is too little attention bestowed; one of the great reasons is what I have mentioned, that these young men, and the most intelligent of them, are probably obliged to devote five or six hours a-day to private tuition.

Do you suppose, if a strict mode of tuition were introduced, and in consequence of that these young men were cut off from being students of Divinity, a sufficient number would be left for supplying the Church of Scotland?—It is not easy to say; it would require a knowledge of the numbers in all the Universities, and some acquaintance with the circumstances of the young men; but I have no doubt here it would cut off one half of our students if you were to make demands upon their time with which they could not comply.

Are you aware what is done in the Divinity class at Glasgow with regard to that?—I am not fully aware of that at present, for there have been several things introduced by Dr. M'Gill, with which I have no reason to be acquainted. When I was at Glasgow the Divinity Hall was conducted precisely in the same way that it is here, and for a very long period there was no difference in any respect. The other professor, commonly called Professor of Church History, only lectured two days in the week during all the time I continued there; and the class was very ill attended.

In the certificates which you grant to the students of Divinity, are you in the practice of expressing your opinion of their proficiency and talents, as well as regular conduct?—Invariably. I state what my opinion is of them, and likewise the number of discourses they have given me.

What is the nature of the Divinity Library, as it is called?—It has existed for a very long time, and it is chiefly supported by contributions from the students of Divinity. At a former period they paid a small sum to it; latterly they have paid 10*s.* each year: they now pay that sum, and the number of books is greatly increased: it is a very good collection for the use of students in Divinity.

Have you, as Professor of Divinity, any control over that library?—That was a subject of great discussion in this University during the time both of the present and the two preceding professors of Divinity. The young men assumed to themselves a power of managing it; they claimed it; it produced a great deal of dissension, confusion, and discord in the Hall. That went on, as I have stated, from one Professor to another; and, eight or ten years ago, I cannot tell the particular year, it became necessary to have a termination put to the matter, and a number of the more respectable students chose to state to me their claim. I was well acquainted with all that my colleague, Dr. Ritchie, thought of it. We made up a plan for the management of the library, which has been acted upon. According to those regulations the Theological Professors have the choice of books; the accounts are kept, and they are adjusted at the end of each year. I should mention that these regulations were approved of by the Senatus Academicus. The accounts are produced to the Senatus at their first meeting after the commencement of a new year, and docqueted by them. These accounts are then accessible to the students. It appeared lately that for a year or two they had not got them; but, on making an application at the end of last year, they were furnished with a copy of them. Our rules require that the books should be annually bought: but, while I state that the choice of books is to lie with us, I may mention that the librarians are always told, that if any books are asked for, or any books occur to the young men as suitable for that library, they have nothing to do more than to mention them; we take care that they are introduced. I believe the regulations have been produced to the Commissioners.

Having mentioned that there is a good collection of books, will you inform the Commissioners if you think students have found free access to them?—The regulations show what the access is. Those regulations are adjusted for the purpose of giving every individual as much command as is possible of the library, consistent with his fellow-students having the advantage of it.

In the Return made to the 18th Query, and in the column where the separate hours for examination are stated, the following words are opposite to your class—"the usual meeting prolonged;" will you have the goodness to explain what that means?—I generally receive two discourses at each meeting; and, though a minor part of them may be heard, I have read them more minutely. It generally occupies a whole hour, and sometimes more. I have afterwards to read critical remarks which I have made upon the discourses, and sometimes we are after the hour a quarter or half an hour. It is prolonged to serve the purpose for which that hour is destined. I may at the same time observe, as an evidence of the difficulty of getting the young men to attend at different hours, that there are great numbers of them who make application, and assign reasons why they must get away exactly at the hour. I have only a small number who remain.

Does it mean then that the usual meeting is prolonged only when you receive discourses?—Only when I receive discourses.

In point of fact, what other classes ought the student of Divinity to be attending while he is at your class?—Why, there are many of them who go to attend the Natural History Class;

University of Edinburgh.

Professor Meiklejohn.

16 October 1826.

a very considerable number go to it, and some of them attend other classes, where they have pupils, to see what is going on.

What other classes *ought* the students of Divinity to be attending while they are attending the class of Ecclesiastical History?—It is very often necessary for them to attend a second time some of the classes which they have attended before; for they may have attended them only one year. There is an inconvenience in our University. It is the practice, though not in all the Universities in Scotland, to attend the last year of the course on Natural Philosophy. That hour happens to be the same hour in which the Professor of Divinity lectures; and those young men have an opportunity of attending that class only one year.

Without referring to what is the state of fact in the University, will you inform the Commissioners—supposing the literary and philosophical education of the students of Divinity to be properly secured by previous regulations—what classes *ought* they to be attending while they are prosecuting their Theological studies at the University of Edinburgh in your class?—We are very anxious they should be as accomplished scholars and as well-informed men as may be, and we advise them to attend Chemistry, Natural History, Rhetoric, &c.

Supposing that sufficient regulations shall be adopted for the purpose of securing the Literary and Philosophical education of the students of Divinity before they enter Divinity Hall, the question you are asked is, after they enter Divinity Hall, what are the proper classes for students of Divinity to be attending at the same time they are in the prosecution of Theological studies?—They must attend, first, the Professor of Divinity; they attend me secondly, and the Hebrew one or two years; they should attend all of them: these are the only Theological classes.

Supposing such attendance at the University for the students of Divinity to be enforced as shall be judged sufficient for the prosecution of their Theological studies, could there be the slightest difficulty in the Professor of Ecclesiastical History acquiring another hour for the instruction of his students, without interfering with the attendance on the other Theological classes?—There would be none on his part if the students could be got to attend. I think an hour might be got without much inconvenience, except what results from the engagements of those young men who are employed in tuition.

Does the inconvenience experienced in getting another hour result from a desire to enable them to attend such classes as those of Natural History, Chemistry, or any of the Medical classes?—It does from that in part; but I think the great difficulty in getting another hour's attendance from them is the use they have for that time in private tuition.

Is not the object in giving instruction to students of Divinity in an efficient manner partly sacrificed to the desire of enabling them to give instruction to others?—I am not just disposed to state it in these terms; but I do think more might be done if our students were in circumstances that did not make them depend almost entirely on their own labours.

If it should be found, in point of fact, that by recent alterations in the University of Glasgow, the students of Divinity are bound to attend, and do attend two or three hours at the Divinity class, and two hours at the class of Ecclesiastical History, would Dr. Meiklejohn be satisfied from that, that similar regulations might easily be introduced into the University of Edinburgh?—I have no doubt of it; but in Glasgow, instead of attending two hours daily upon the Professor of Church History, they attend only two, at most three, days in a week.

Do you know that they attend the Professor of Divinity two hours a-day?—That must be entirely new; it is not consistent with my knowledge; there was no such thing when I was there.

Supposing it to be the fact, that in the College of Glasgow the students of Divinity do attend the Professor of Divinity two or three hours a-day, and the Professor of Ecclesiastical History two hours during a part of the week, would Dr. Meiklejohn from that be satisfied that the same regulation might be carried into effect in regard to the students of Divinity in the University of Edinburgh?—I have no doubt that what is done in one University may be done in another; but I know the attendance upon Church History in Glasgow is very limited, and always has been.

Does it appear to you that there are any circumstances, in regard to the students of Divinity attending the College of Edinburgh, which could prevent such a regulation more than at Glasgow?—I do not think there are; there are none known to me.

Are students in Divinity at Glasgow as much in the habit of teaching pupils as those at Edinburgh?—They are a good deal in the habit of teaching, but not so much as at Edinburgh.

What is the nature of the proceeding called the Blackstone Examination at Glasgow?—I remember sitting on that stone four times myself. The examination on the Blackstone takes place at the beginning of the session; it takes place every successive session. The obvious view they have is to inquire so as to ascertain whether the student has made sufficient progress in his studies the former year to admit of his going forward.

Are all the Professors present at this examination?—There is only the Professor in whose class he is, at the time he is examined, and the Professor in whose class he was the preceding year; and they are often attended by the Principal during the time, if he is in good health, but when the Principal is old or infirm it is not done; but generally the Principal and the two Professors are there.

Do you know if, upon those occasions, the Professor of Divinity attended?—No, never.

Was the examination very minute and strict?—Not remarkably. In the two Language classes the student specifies himself what books he can read, and he brings them there; if he is in the Greek class, the Professor of Latin examines in Latin; and there is an officer in the College who stands at the back of the chair, and at the end of every five minutes he calls out *ad alium, Domine.*

University of Edinburgh.

Professor Meiklejohn.

16 October 1826.

Are there many instances of students being remitted to the studies of the former year, and being obliged to alter their course?—I never knew an instance of that sort; if there was any, it had escaped my observation.

Did it appear to you that it was anything more than mere formality?—It was something more than a mere formality, for the students were obliged to prepare themselves a little for it. They are obliged to read those books they professed, and to prepare themselves on the subjects of examination; it did a great deal of good. So far as it was intended to arrest the progress of those who were not very well qualified, it did little or none.

Do you think that the possibility of being sent back might operate on the minds of young men to induce them to study diligently?—I do not entertain a feeling of that kind, nor would I say that it is entertained by others. The student has paid his fee, and has been enrolled some weeks before he is examined.

But might not some arrangement of that kind be adopted that would be beneficial?—If the student were to be examined before entering a class by a person who has no interest in his admission or rejection, some good might probably be done.

Have you the means of knowing the attainments of young men when they enter your class in point of Grecian literature?—No farther than from the certificate of the Professor of Greek, who mentions how long they have attended, and what has been their progress.

Can you refuse to enrol them, though he certifies nothing more than mere attendance?—We cannot refuse to enrol them; that is fixed by the law of the Church.

Do you think the subject of Biblical Criticism is sufficiently attended to in this University, or do you think that there is a sufficient provision for the teaching of it?—I should presume that there is a great deal of attention paid to it. The Professor of Hebrew has one department of it, so far as the language is concerned, that is, the language of the Old Testament; then there is a department which falls to me. I have to give an account of the different books; and when lectures and sermons are delivered, I have to remark upon the import of the subjects in the original, and every thing about them; but the young men do not read the book to me in the original.

Do you think the number of discourses prescribed in Divinity Hall, under the authority of the Church, is too great or too small?—I cannot conceive it to be too great, for I am well aware that what a young man does for himself is more productive of benefit than what he can possibly hear from others; and if it were possible to increase the number it would be advantageous; the only difficulty is, that there would not be time to hear them.

Do you think, if the specimens of a student's exertion were less numerous, that the Professor of Divinity could have any means of judging of his progress, unless examinations were much more numerous and minute than they can be at present?—I do not think the number of specimens should be diminished.

Are many of your students tutors in families?—A great many of them.

Do occasional students enrol with you, as well as other Professors of Divinity?—The greater part of them do not; but those who have attended my class generally come back again to enrol, chiefly for the purpose of delivering a discourse or two.

Have you occasional opportunities of comparing the attainments of those students who give a regular, and those who give a partial, attendance?—I have the discourses produced by the one and the other class of students.

Have you any opportunities of knowing it at the termination of their course, when they are examined before the presbytery of which you are a member?—We have every opportunity of knowing what their attainments are when they are examined before the presbytery.

Which of the two classes do you give a decided preference to?—I have not been able to judge from the presbytery's examination, for I did not carry in my mind what the attendance of the students had been at the moment when they were examined; but, in a great majority of cases, 19 in 20 of the discourses of the students who attend regularly are preferable to those which are given by those who attend only occasionally.

Edinburgh, Wednesday, 18th October 1826.

The EARL of ROSEBERY in the Chair.

Alexander Irving, Esq., Professor of Civil Law in the University of Edinburgh, called in and examined.

Professor Irving.

18 October 1826.

Are you Professor of Civil Law in this University?—Yes, I am.

Have you read over the several Queries sent to the Senatus Academicus by the Commissioners, and the Answers which have been returned to them?—Yes, I have.

Have you any observations to make, or any new matter to suggest, in consequence of the perusal of those answers, with respect to the University at large?—No; I am not aware that I have anything to suggest.

Do you concur in all that has been stated in those answers as delivered by the Senatus Academicus?—As to part of the matter I am no proper judge; with regard to Medical matters, for instance. But in so far as relates to the Faculty of Law I concur there. I assisted as one of the Committee in drawing up the Answers.

Do you object to any of the Answers that have been given in relative to the subjects connected with the other Faculties in the University?—No, I do not.

Are the Commissioners to understand that the whole answers have obtained your concurrence?—So far as I was informed of the subject; many of them relate to matters of fact, as to which I did not make research, but which I presume are correct.

Would you recommend any alteration or improvement in your own particular class?—The

only change that I have sometimes thought it might be desirable to make was to reduce the two classes into one. From the attention which is now paid to Civil Law, it appears rather a hardship on the Professor to be obliged to deliver two courses of lectures, to a very few students sometimes.

Has it always been the practice to have two sets of lectures?—Yes; ever since the institution of the class it has been the practice to have one upon the Institutes, and another upon the Pandects.

Would you consider it an improvement to conjoin these together, and form only one class?—It would be an improvement so far as the Professor is concerned. I do not know that it would be any great improvement to the students, if they chose to attend both classes, which many of them do not. It is of advantage to have the two courses.

In what respect do you think it might be an improvement to the Professor; do you mean that it would be merely a saving of labour?—Merely a saving of labour. The number of students that attend the Pandects is very small.

As far as the students are concerned, do you think an alteration to that effect would be rather injurious than beneficial?—If the students are disposed to attend both classes, which those who are best educated do, it is an advantage they should have an opportunity to attend both courses.

Have you any mode of enforcing attendance at either course?—No, I have none. The Writers to the Signet have made a regulation, by which it is imperative on all persons entering their society to attend one class of the Civil Law; that is the only regulation by which it is imperative upon anybody to attend.

In either course?—Either course will serve; they must have a certificate from me. These regulations have not taken effect yet.

Would you refuse to grant a certificate to a person who had not attended at all, or whose attendance had been very ill?—I would refuse.

Is there any regulation of the Faculty of Advocates to that effect?—No, there is no regulation at present. It is not imperative on a person passing trials before the Faculty of Advocates to have attended any class in the University whatever.

What may be the age of those students who generally attend?—About eighteen, or from eighteen to twenty years.

Do you mean in both classes?—They are older in the Pandect classes, as they generally attend the Institute class first.

Have you no separate hour for examination in either of your classes?—No, I have not. Examinations take place the same hour that the lectures do.

Have you any kind of examinations?—Yes, I have in both classes.

Would you have the goodness to state the nature of the examination which the students undergo in both classes?—The lectures are delivered in English, and I have made it a practice to have the examinations in Latin. The examination is not a very severe one, it cannot be expected it should be; one object of it is to accustom the students to answer questions in Latin, as they have to undergo examination in Latin for their trials for admission to the Faculty of Advocates.

Is it an examination *vivâ voce*?—Yes, *vivâ voce* in Latin.

You have no prizes in your class?—None.

Have you any classification at the end of the session for good conduct or proficiency?—No; I have not been accustomed to make a classification of that kind.

Would you think it beneficial for the object of learning to which your class refers, to have any general examination at the end the session, or prizes instituted to be conferred for merit, or attainment in the branch of learning to which your class refers?—I think it might be useful. It might secure more attention on the part of the students.

Having that object in view, which would you recommend, or would you recommend both, prizes or general examination?—I should imagine that prizes might be most effectual.

Are there any funds for prizes in your class?—None.

Were you the first Professor that began to lecture in English?—No; Mr. Dick lectured in English, and Mr. Wylde lectured in English. Mr. Dick made the change.

About what year was that?—It must have been before 1786; I think I began to attend his class at that time. I suppose the thing was first adopted by Professor Millar of Glasgow. It was afterwards followed in this University.

Generally upon the state of the College, have you paid attention to the extent of the powers of the Senatus Academicus?—No farther than that my attention has been called lately to it in consequence of certain law proceedings at the instance of the town.

But unconnected with any question with the Patrons, as to the powers of the Senatus Academicus, do you think that they are sufficient, or that they require to be extended or abridged?—I should think the powers which we have been understood to possess with regard to the discipline of the students are sufficient for any purpose; at least nothing has ever occurred in the University, since I had connexion with it, to show that those powers are not sufficient.

Would it be desirable if there were a regular Rector or Chancellor of this College?—It might be desirable.

In what respect?—In establishing a more respectable head to the University, and affording a mode of communication more efficiently with the Crown.

As to your own class, do you consider the study of the Civil Law an important branch of education to every individual intended for the law?—Yes, I certainly do.

Do you not consider two years' study of that law by young men about the age of eighteen a very useful preliminary to their future progress?—I conceive it to be very useful for the students to attend so long. What I formerly mentioned as to the Professor giving only one course, was grounded on this, that as students are not compelled to attend in order to their admission into the Faculty of Advocates, and those entering with the Society of Writers to the

University of Edinburgh.

Professor Irving.

18 October 1826.

Signet will, by the late regulation, be only required to attend one year, the number of students who may be expected to attend two years is very small. In fact, very few do at present attend both courses.

Is it consistent with your knowledge, whether any advocates have lately been admitted into the Faculty who have not attended any Civil Law class, either here or in any other University?—I cannot positively say as to the attendance at other Universities. Many of them have been admitted into the Faculty without attending my classes; and I have known instances of young men taking out a ticket to attend the Institute class, which is, of course, the first they ought to attend, and applying to the Court of Session to be taken on trials by the Faculty of Advocates long before the course was finished.

Are the first year's lectures upon the Institutes of Justinian?—Yes.

What is the nature of those lectures, as distinguished from the second course?—There is some return which I made upon that subject; I believe it is in the Appendix to the Answers.

Does that contain all you have to mention upon the subject?—Yes, nearly.

Have the goodness to state again the substance of it?—The two courses necessarily embrace the same subject, because the Institutes profess to give an account of the whole of the Civil Law, and the Pandects give a much more detailed account of it; but in my lectures upon the Pandects I have been accustomed to go very slightly over those parts of the subject which are sufficiently treated of in the Institutes, and to confine my attention to the more important parts, on account of their connexion with the law of Scotland.

You stated that your examination of the young men was slight; do you apply that to the first year's study of the Civil Law?—It is necessarily but a slight examination in both years.

Why should the examination be slight?—It is such as merely to show that they have been attentive to the lectures, and that they are acquainted with what is to be found in the text-books. The examination is entirely taken from the text-book.

Is that text-book Heineccius?—Yes.

Do you put questions to the students as to what the text-book contains?—Yes, I do.

Do you put any marks of censure upon any individual who is not able to answer questions?—I find many of the students do not answer the questions, and I am obliged to discontinue the examination as to them when I find them not prepared.

Is that discontinued for the day, and do you resume it next day?—If I find a student is always unprepared I give up calling on him altogether. I have no means of making the students pay attention; if I find them constantly negligent, I am under the necessity of not calling them at all.

Do you give certificates to those who are to pass as Writers to the Signet?—It has not begun yet to be the practice, as their regulation has not yet begun to operate.

Should you withhold a certificate from any individual who was in the practice of not answering?—I should think it my duty to do so, of course.

Will you have the goodness to describe the nature of the lectures you give on the Pandects?—I have stated that I confined my attention principally to those parts of the law that are most important from their connexion with the law of Scotland; for example, the Law of Contracts, and the subject of Tutory.

Do you use the same text-book upon that subject as upon the other?—I use a different text-book, but one by the same author.

Do you follow the order of Heineccius in lecturing upon the Pandects?—No, I do not. Professor Millar first began to take the titles of the Pandects in the order of the Institutes, which is a much better order than that of the Pandects, which indeed can scarcely be said to have any principle of arrangement at all. I adopted his order at first, but I altered a little the order of the titles afterwards. I have in my pocket a copy of the order in which they are treated.—(*The witness produces a paper.*)

Is there an examination upon the Pandects also?—Yes, there are examinations in both classes. I examine more upon the Pandects. The class consists of a fewer number of students, so that the examination is more strict, and comes more frequently over to each student than in the Institute class.

Are any exercises of any kind prescribed in this class?—I have not been accustomed to prescribe them.

Looking at the numbers who attend your class, they seem to be very few indeed, when compared with those who attend the Scotch Law Class?—Every student of law, and all writers' clerks and apprentices, invariably attend the Scotch Law class; very few of these think of attending the Civil Law class, it is confined chiefly to gentlemen coming to the bar.

Is it, in your opinion, a well-founded notion that a competent knowledge of the Civil Law is very necessary to enable a student to become a good Scotch lawyer?—I conceive it to be so.

You have stated, that, according as they are understood, you conceive the powers of the Senatus Academicus to be sufficient for their purpose; do you also conceive that they are sufficiently clearly defined, so that it can be accurately known what those powers are?—I think it would be very desirable if they were better defined than they are.

Are they so defined that it can be strictly known what they amount to?—I am afraid they are not so well defined.

You have stated that you thought it would be an improvement to conjoin the two classes, and have but one lecture; supposing that that were done, do you think it would be advantageous that there should be one hour for lectures and another for examination?—It would be desirable, certainly, to have a separate hour for examination; the examination could be conducted to a much better purpose.

Do you happen to know if it was ever a rule or understanding in the Faculty to require attendance upon Civil Law?—I do not know that it ever was. I may mention what I know as to the Faculty. A few years ago a set of regulations was drawn up by a Committee of the

Faculty, and approved of by them, requiring not only attendance on two courses of Civil Law and one of Scotch Law, but requiring a certain University education preparatory to the study of law, namely, attendance for three years at the Language and Literary classes. These regulations, after being approved of by the Faculty, were laid before the Court for their approval, and they were returned to the Faculty with the approbation of the Court, but with a suggestion that it might be better to add a fourth year to the preparatory studies. When this came to be laid before the Faculty again, I do not know from what cause it happened, but by a vote of the Faculty it was determined that all previous education should be laid aside as not necessary, and they retained only the attendance upon the Law classes. After this took place the late dean considered the Faculty to be placed in so strange a situation by retracting what they had themselves proposed, that he never would present the regulations again to the Court for approbation, so that nothing farther was done.

Does it not stand as a resolution of the Faculty that there should be attendance on the Law classes?—Yes; but it has not been approved of by the Court, and has therefore no effect.

Is it not the understanding that there should be a certificate of attendance on the Civil Law?—Sometimes it has been customary, I believe, to present a certificate of attendance. I do not know that there ever was a regulation of the Faculty requiring it.

Looking back at the number of attendants, according to the Return in the answer to the 31st question, it appears they vary sometimes very considerably; there are twice as many in one year as in another; as to the years 1811-12, do you happen to know how that stands blank in the numbers?—I really cannot explain it. I believe the list was made up from the returns.

How long have you been Professor?—Since the year 1800. That list, I believe, was made up from the returns which the Professors make every year to the library, of the number of students who have attended the classes, in order to compare them with the matriculation list, to see if the numbers agree. I sent them a list every year. They must have lost the list, but I can easily supply it from my own book.

You have said you used Heineccius as a text-book; do you use any other book particularly in your lectures?—I refer to others.

Have you made considerable use of Huber?—Not particularly; I recommend various works to them, those of Huber and of Vinnius, and Voet, and of Pothier.

Do you conceive that it is an improvement to lecture in English and not in Latin, as was formerly done?—I conceive it to be much more useful to students to lecture in English than in Latin; they follow me to much more advantage.

You have stated that your course of instruction is divided into two classes, the one year being for lectures upon the Institutes, and the other upon the Pandects; is there any principle upon which that separation is founded?—I suppose it had been founded originally upon the attention of students being first turned to Justinian's work on the Institutes, composed expressly for the use of those beginning the study, and which of itself was used as a text-book. The second year they attended to the other works in the *Corpus juris*, and particularly the Pandects, as the most comprehensive.

Is there a regulation by the Senatus Academicus, or of any other authority, prescribing that in the first year you shall lecture upon the Institutes, and the second year upon the Pandects?—I do not think there is. I suppose that was the understanding at the time the class was first instituted, but I have not looked into the minutes of the Faculty of Advocates at the date of the institution of the class.

Supposing there are to be two separate classes in different years, would it not be a very great improvement if the classes were very differently modified, so that the same course of instruction should be carried on for the second year, but embracing those parts of the general subject of Civil Law which you could not overtake in the first, in order to make it, not only a two years' course, but a continuous course upon one plan of instruction?—If the students were always to attend both classes I suppose it might be of advantage, but it would be considered a great hardship by the writers if they were obliged to attend more than one year; and such a regulation would necessarily protract the course for two sessions.

Is not the present plan of lecturing, one year upon the Institutes and another upon the Pandects, both a very arbitrary, and, apparently, a very useless division of the subject?—It certainly is not the best division of the subject; and if every person was to attend the whole lectures on the Civil Law it might be much improved; but it seems the custom of gentlemen, except those who are entering with the Faculty of Advocates, to attend only the Institute class, in order to gain a general knowledge of the principles of the Civil Law without taking anything more.

How many attend the course of the Pandects?—The number varies very much. I have had nineteen and twenty; in other years I have had only five and six; and it was when so few attended that I considered it a hardship to be obliged to give two courses of lectures.

Is the second supposed to be the higher and more useful class?—Yes.

Is it not apparent that, without some change in the constitution of the class, or some regulation requiring attendance upon that second class, it is comparatively of little use as a part of a system of instruction in the College?—It is only of use to the gentlemen who come to the Bar, for no other person attends the second year.

Do you not think that it might promote greatly the study of Civil Law if the classes were differently cast, so that either the same course of instruction should be carried on for two years, or that a more extended set of lectures should be delivered for a longer session?—Certainly, the lectures might be made more useful if they were extended so as to embrace a longer session, and were confined to one course only.

Must it not frequently happen, however you may try to avoid it, that frequently the same

University of Edinburgh.

Professor Irving.

18 October 1826.

subject is discussed in the second course which you had treated of more or less in the first?—Necessarily it must.

Considering the education which most young men have who attend the Institutes, is there anything in the nature of the subject to prevent you from giving them as full a view as you might wish of the subject of Civil Law the first year they attend?—There are many very important subjects which are scarcely noticed in the class of Institutes at all.

Suppose your class not to be limited to lectures on the Institutes, is there anything in the nature of the subject of Civil Law to disqualify young men who in general attend your class from following a more extended and fuller course of lectures than those which are delivered the first year they attend?—I do not think there is.

Is any part of your time, in the First or Second class, taken up in the History of Roman Antiquities, or Customs, explanatory of particular laws?—To a certain degree there is. The History of the Roman Law is necessarily given, as I think it necessary to notice what the Law was originally, and what change it gradually underwent.

Are there any parts of your course devoted to the explanation of particular customs and laws among the Romans, as explanatory of the Institutes and Pandects?—So far as the Law is affected by peculiar Customs I naturally explain them.

Do you at present find inconvenience from the want of any separate set of lectures by another Professor, on the subject of Roman History and Roman Law?—No; I should not conceive such a thing to be necessary. I am accustomed to recommend Heineccius's work on Antiquities to be read along with the Institutes, as explanatory of the Law.

Suppose you felt yourself at liberty to depart from the previous practice of lecturing one year on the Institutes and another year on the Pandects, and were to form a general set of lectures upon the Civil Law, for a more extended course, might not that be much more useful than the present system of instruction?—Yes, I rather think it might be more useful. If I were to adopt such a plan as that, I would take the Pandects for the basis of the course, arranged according to the order of the titles which I am accustomed to follow.

Could you complete such a course of lectures in one year?—No, not in one season. In Mr. Dick's time, and also in Mr. Wylde's, the Pandects took two years; I endeavoured to compress them into one year.

Do you think it would be an improvement if, after such a course were proposed, you were to deliver annually your lectures for the first course, and annually your lectures for the second course, so as to carry on the students of the respective years upon a much better and more efficient system than that which practice has prescribed to you; making it one course instead of two separate courses on the Institutes and Pandects?—I think it would be an improvement.

Does it occur to you that there is any principle whatever which can be assigned for that system which has obtained in Scotch Universities, of lectures being delivered one year upon the Institutes, and another upon the Pandects?—It seems to have been a general understanding in all the Universities in Europe; perhaps it originated from Justinian's views himself. The Institutes were originally reckoned as a work which the students of Law were to have as the first object of study; their first year was employed in that, and they afterwards went to the Pandects.

In point of fact, in your course upon the Pandects, are you under the necessity of frequently referring to parts of the Institutes?—Yes.

Is the course upon the Pandects an expansion of the course upon the Institutes?—It is an expansion of the course upon the Institutes; but there are many subjects, and very important ones, which are scarcely noticed at all in the Institutes.

Do you consider that the subject of Scotch Law can be adequately treated of in one session and in one class?—I should think it could not be fully treated of in one session and in one class.

Would you be inclined to recommend two sets of lectures on Scotch Law in two classes?—Yes, I think it very necessary.

Supposing such alteration were to be accomplished in the system of instruction with regard to Scotch Law, would you still recommend attendance for two years on Civil Law, or would you prefer a more extended set of lectures for one year with a separate hour for examination?—I should conceive the separate hour for examination a very useful part of it; it might not require an hour every day; a shorter period might suffice for it, and two hours a-week for examination might be sufficient.

Supposing it were difficult to command the attendance of the students for two years upon Scotch Law, and likewise two winters upon Civil Law, might not an adequate supplementary course be delivered during the summer session on the Civil Law?—I should think that if a course were delivered in the summer and winter the whole might be got through in the course of one season.

So that, if it were judged expedient, might the attendance of three years complete the University Education for a law student?—Yes, it might.

Looking to the state of the Scotch Law and relative importance of the Civil Law, does it occur to you as of greater importance that the course of lectures on Scotch Law should be extended to two years, than that two years' attendance should be required on Civil Law, as at present taught?—The Scotch Law is the more important subject of the two.

In point of fact, in treating of the subject of Scotch Law, is it not necessary, on the part of any Professor or systematic writer, to consider most of the principles of the Civil Law in so far as they are applicable to the system of Scotch Law?—It is certainly so.

Would you be inclined to recommend the attendance for two years, both in the Civil and Scotch Law, as a suitable preparation for passing at the Bar?—I should think it would be of

advantage: at the same time, it has always been the practice of young men coming to the Bar to attend Scotch Law after they have passed the Advocates; sometimes two years after.

Would it necessarily require four years' attendance if such a rule were established?—At present students very frequently attend the Pandects course in Civil Law and Scotch Law at the same time.

But is it your opinion, upon the whole, that you could accomplish your own object of instruction, and do more good by a more extended course of lectures in one year than by your present arrangement?—I think undoubtedly it would be so, but it would render it necessary for all the students to attend the whole course; at present many of them content themselves with the Institutes alone.

Do any of the gentlemen attend your class after they have passed the Bar?—They very frequently pass at the Bar while they are attending during the course of the session.

Are you or not aware of the number who attend your class in consequence of this regulation of the Writers to the Signet?—No.

Do you suppose that any inference can be drawn from the numbers attending the Conveyancing class last year?—I certainly found no advantage last year from the change; they did not come forward in the anticipation of the regulation taking place afterwards. My number of students was not larger last year than it had been for several years before; but I suppose it will render the attendance of the Institute class considerably larger when it comes to take effect.

When does that regulation take effect?—I rather think not till 1828, but I am not quite certain. I had a copy of the regulation sent me at the time, but I have mislaid it. I suppose the Professor of Conveyancing will be able to tell you.

Do you concur in the propriety of that regulation proposed by the Faculty of Advocates, requiring attendance upon a course of Civil Law lectures?—I should think it very proper that there should be such a regulation; and, no doubt, many young men pass very ill instructed upon the subject of Civil Law.

Considering the nature of the subject, and the probable indisposition of some young men at first to bestow so much attention upon so dry a subject, do you consider that strict and rigid examinations might be of essential service, if you had a separate hour for the purpose daily, or as often as you found necessary?—I think examinations, if they could be enforced, would be of very essential service, to those gentlemen particularly who, on the present system, seemed determined to pay no attention to the subject at all, of which there are always some who enter as students. The attendance is very bad, as well as the answers to the examination.

Supposing attendance were required, and that the attendance for one hour, for the purpose of examination, were likewise made imperative, do you not conceive there would be a great benefit resulting from such examination, and that habits of application and industry would be acquired by young men before they come to the Bar?—I think there is a great defect in having no means to ensure attendance or attention to the subject of the examinations, for very frequently, before the end of the course, one-half of the students have ceased to attend altogether.

How could you secure attendance at the hour of examination?—A roll might be called, and the name might be marked; and if certificates were made necessary, so that the student is under the necessity of having them, the Professor might refuse to grant them unless there had been proper attendance.

Judging from your own experience, is the knowledge of the Civil Law one which a person is likely at all, in many instances, to acquire, after he comes to the Bar, if it has not been secured by his previous education?—I do not think it is at all likely that it can ever be acquired afterwards; and I am satisfied, that except students attend Civil Law at first, and do not mix it with Scotch Law, they will never pay proper attention to it. The moment they enter the Scotch Law class, it appears so much more important to them, that the other is neglected.

Would you consider it of advantage, therefore, that, besides requiring attendance upon the Civil Law, the regulation should prescribe attendance on your first course of the class before entering the class of Scotch Law?—I think it would be very proper.

Do you consider that it is the character of the Scotch Bar at the present time that they are as well grounded in Civil Law as in former times?—I should rather suppose not.

Is it not notorious that the study of the Civil Law has been much neglected for a considerable time past by young men coming to the Bar?—I am afraid it is.

Has the extension of many branches of Scotch Law rendered the study of the Civil Law at all less necessary for the education of a lawyer than it was formerly?—Perhaps it may have done so. Those branches of the Civil Law which have been admitted as of authority with us, after they have entered into the works of our Institutional writers, and are confirmed by judgments and decisions of the courts, become part of the Scotch Law, and are studied in the class of Scotch Law, so that the student has less occasion to resort to the Civil Law than originally.

Do not, in point of fact, the leading principles of many branches of the modern Mercantile Law rest upon part of the Civil Law?—Yes, that part of the Civil Law which regards contracts and obligations is still retained in almost all the laws of modern Europe.

Is it the generally received opinion that the Mercantile Law of England was supposed to be very much matured by the aid which Lord Mansfield brought to it from his superior knowledge of the Civil Law?—I understand it to have been so; and that the law of England with regard to contracts has been much matured by borrowing from the Civil Law. Sir William Jones, in his Treatise on Bailments, explains the confusion that prevailed in the Law of England as to the nature and classification of Contracts until the principles of the Civil Law were adopted.

Is that a change of great antiquity?—It was only about the time of Queen Anne; there was a particular decision at that time, Coggs *versus* Bernard, in which the Lord Chief Justice

University of Edinburgh.

Professor Irving.

18 October 1826.

Holt introduced the doctrines of Civil Law relative to Contracts, and responsibility for neglect, as much superior to any rules on these subjects then existing in the English Law.

Have you had occasion to consider the evidence that was taken before a Committee of the House of Commons in regard to the recent change effected in the law of Factors and Agents in England?—Not particularly.

Are you aware if the doctrines of English Law, before the late statute, were different from the Law of Europe as to the power of factors to pledge?—I understand so.

Was not the Scotch Law, and the doctrines of the Civil Law, appealed to in the course of that discussion, as authority?—I have not attended particularly to it.

Upon all these branches of the Law of Scotland, are its principles mainly those of the Civil Law?—Yes. The whole law of contracts and obligations with us is derived from the Civil Law, with certain modifications which practice has since introduced; and the greater part of the Law of Tutory, of Testamentary Succession, and Legacies, has been adopted.

Do you consider a proper course of instruction in Civil Law to be essential for the explanation of the Elements and Principles of the Scotch Law?—I do so.

Do you go the full length of the opinion given by the Faculty, which was presented to the Court of Session for their approbation, that gentlemen intending to be called to the Bar should attend for three years upon the classes for the Faculty of Arts and Philosophy?—Yes; I think the regulation was a very proper one.

Do you go so far, in your opinion, as to recommend an additional year?—I think an additional year little enough.

Do you think it would be attended with any hardship, or ought to be attended with any difficulty, to comply with such a regulation?—No, I do not.

Would you think it necessary, at the same time, to make provision that attendance for a certain number of years, or the production of a certificate of having taken a degree at one of the English Universities, should be allowed to stand for attendance at the classes of the Faculty of Arts and Philosophy here?—Yes.

Was that a part of the intended regulation?—I suppose it was.

Suppose a young gentleman to have been educated at Eton or Westminster, and to come down here an excellent Greek and Latin scholar, so as to be unnecessary for him to attend the Language classes at all, would you consider four years' course of study at this University necessary before he went to Law?—No.

Would the circumstance that the opportunities of private study might be very much excluded if a course of four years' attendance at an University before the young man could commence his study in Law, constitute an objection to such a regulation of previous University education?—According to the system of education which has generally prevailed in this country, by which all gentlemen who come to the Bar are supposed to have received a University education, I do not think the period of four years would be attended with any inconvenience.

At what time did you say your class terminated?—The Institute class generally terminates at the same time as the Court of Session rises. There are eight or ten lectures more upon the Pandects.

What month in the year?—The month of March.

Do you find it difficult to secure the attendance of your students down to the close of your lectures?—I find it difficult to secure the attendance of the whole; generally not one-half attend at the end of the course compared with the number who attend at the beginning.

How would you accomplish the extension of the course of lectures for one year?—By lecturing during the summer session. It might be inconvenient to lecture during the vacation, but the lectures might be conducted during the summer session.

Mr. Irving has stated that he conceived the powers of the Senatus Academicus, as they have generally been understood, to be sufficient; would he state what he conceives these powers to be, with reference, for instance, to their authority over the Professors?—I had in view only a reference to their authority over the students.

Have they any authority over the Professors?—It is questionable.

Have they any authority which would enable them to ascertain if a person appointed either by the Town-council or the Crown, or any private Patron, is duly qualified to exercise the duties or functions to which he is called?—I do not know that they have any power which they can exercise with effect.

Do you think it would be useful that such a power, to be exercised with discretion, should be vested in a body constituted like the Senatus Academicus?—I think it very questionable if there would be any advantage; it would be better if the various qualifications for the classes were insured in some other way.

Do you think it would be better that those qualifications were insured by some body extrinsic of the University authorities?—Yes, as at present constituted.

In the case of any misconduct on the part of any Professor, or proved inefficiency, have the Senatus Academicus any power whatever over him?—The extent of their powers is certainly very questionable. The Senatus suppose they possess a power, in the case of misconduct on the part of any Professor, to inquire into it, and perhaps suspend him from him the exercise of his office, and prevent him from lecturing, if there were anything very improper in his conduct. I suppose they have no power to go farther. They reported to the Patrons in my own case. When my predecessor became so much indisposed that it was quite evident he could not go on to lecture, an application was made by the Senatus Academicus to the Town-council or Patrons, and the Town-council communicated it to the Faculty of Advocates.

With respect to the authority of the Senatus Academicus over the students, what power does Mr. Irving conceive them to possess in order to maintain the discipline and respect due to the different Professors in the University?—I suppose their authority goes the length of expulsion.

I should conceive this sufficient for every purpose of discipline. They have been accustomed to expel students for gross instances of improper conduct, but the necessity of it has very seldom occurred.

Does the means of maintaining discipline in the University practically rest with the Professors, each in his own class?—If anything improper takes place in a class the Professor reports it to the Senatus Academicus, and they make inquiry into it. I remember a case in my time, where, in consequence of a quarrel in the Anatomy class, a student produced a pistol and presented it at another, which he admitted to have been loaded. He was expelled the University.

Was he expelled by the authority of the Senatus Academicus?—I am incorrect in saying that he was expelled; he was desired by the Senatus to leave the University, and he went to another.

What are the means possessed by the Senatus Academicus of maintaining the ordinary discipline of the College, short of expulsion?—I suppose nothing but reproof; they have no means of inflicting any other kind of punishment.

If it came to the knowledge of the Senatus Academicus, otherwise than by the report of a Professor, that a class was in a state of great insubordination, would the Senatus Academicus have any power to interfere with that Professor to preserve discipline in his class?—I think they would, if they have any power over Professors at all; they might make inquiry into the state of the class.

Do you conceive the Principal to have any powers personally in himself in this University?—I do not know that he has any power as Principal farther than being head of the Senatus Academicus.

Is there any instance of expulsion or suspension of a Professor by the Senatus Academicus?—I do not know that there is any instance.

Is there one of any date that you are aware of?—I do not know.

Is there any instance in the history of the University, within your knowledge, in which the Senatus Academicus have exercised that sort of power over a Professor?—Not within my knowledge; but I am very imperfectly qualified to say.

There has been established, within this year or two, a Professorship in this University, called the Professorship of Conveyancing; is it your opinion that that is an addition beneficial to the education of gentlemen in your profession in the University?—I should think it is a class that must be attended with use.

By the return it appears that class is taught only by lecture; do you conceive that that mode of conveying that species of legal instruction is a good one, or that it is attended with any great practical benefit to the students in that branch of the legal profession?—I think the lectures may be a very proper mode of conveying the necessary information; at the same time, perhaps, the students would be benefited by examination, to enable the Professor to see if they understood the instructions that were given them.

Do you conceive that, practically speaking, any benefit accrues to the profession by the institution of that particular class, which has only been recently established in the University?—Certainly; I may say it is a very useful class for the conveyancers and the Society of Writers to the Signet; it is more particularly of use to them. At the same time a knowledge of deeds is useful to all branches of the profession of the law.

Do you think it is a class decidedly useful to those young men who are destined for Writers to the Signet?—I think so.

Do you think that so far, at least, it is an improvement in the University?—I do.

Might not that class be equally useful if it were confined to a lectureship within their own walls, without being made a part of academical education?—The class might have answered very well in the situation it was.

What was its previous situation?—It was a lectureship under the authority of the Writers to the Signet, and it was not connected with the University.

Do you think the subject of Conveyancing so large as to require a separate course of lectures, and that it could not be taught by the Professor of Scotch Law?—Perhaps all the information necessary for an advocate might be taught for the Professor of Scotch Law; but I think it useful as a separate class to all the members of that particular branch of the profession who are practically employed in conveyancing.

How was that class supported when it was taught under the authority of the Writers to the Signet?—A salary was given, which they pay still.

Do the Writers pay the whole?—I understand they pay the whole.

Do the Patrons or the Writers nominate?—It is a joint nomination, I believe; but the Writers have in fact the nomination, for they have two votes for one.

There have been some discussions lately in the Senatus Academicus respecting the addition of particular classes to the Curriculum for degrees in the different Faculties; do you consider it expedient for the interests of the University that the power of regulating that matter, either in the first instance or without appeal, should rest with a body so constituted as the Senatus Academicus; or would you wish to see such matters referred to such an officer as a Chancellor, with assessors or a council, or to any authority extrinsic of the Senatus Academicus?—There might be an authority, perhaps, better than the Senatus Academicus themselves; but in the present constitution of the University I do not see in what other body it could be vested.

What would you say, supposing some other authoritative body could be found?—If a higher authority could be found it might as well be vested in that higher authority.

Do you consider it for the interests of the University, that the discussions alluded to should take place within the Senatus?—It is for the interests of the University that as few discussions should take place there as possible.

Have you considered in what hands that power would be better placed than in the Senatus Academicus?—I have not.

University of Edinburgh.

Professor Irving.

18 October 1826.

Would you wish to entrust a power of that description which has been alluded to, to a body so constituted as the Town-council?—No, I do not think it would be well to entrust it to them.

You do not think it would be expedient for the interests of the University?—No.

Or the advancement of learning?—No, I do not.

George Joseph Bell, Esq., Professor of Scotch Law in the University, called in and examined.

Professor Bell.

Are you Professor of Scotch Law in the University of Edinburgh?—I am.

Have you read over the several Queries that have been sent to the Senatus Academicus, and all the Answers to them which have been delivered from the Senatus to the Commissioners?—I have. I have had no opportunity of reading, as a whole, the answers until now, very slightly below stairs, but I recollect them generally.

Have you any observations to make, or suggestions to throw out to the Commissioners, by way of improvement in this University generally?—That is a question of such extent that I should not wish to hazard an opinion rashly upon it. There are some things certainly to be improved, but I should not wish ever to give the slightest suggestion towards a reformation without a good deal more consideration. There is obvious danger in meddling with an old institution, though there are defects in it. I should not wish at present to say what alterations should be made, although I do not approve of some things as they stand.

Without going to any fundamental change as to the general principles upon which this University rests, are there any suggestions you would wish to offer to the Commissioners with respect to improvement in the mode of education as now established?—I fear I have nothing of value to suggest. Certainly there are improvements which I should wish made, with regard especially to my own department. At the same time, these, I am afraid, are not so much academical regulations as regulations in the profession to which ultimately the students of my class direct their views.

With respect to academical improvements, would you wish to reserve your opinion for the present?—If I were allowed I certainly should. I should deliberate with all possible attention on any points to which I might be directed, and afterwards wait upon the Commissioners if they think my opinion worth the having.

Have you any suggestions to offer to the Commissioners with respect to your own particular class in this University?—I am afraid that any improvement I should wish for there must depend upon myself.

In the Return to the Commissioners, it appears that you have no separate hours for Examination in your class?—There is no examination whatever. I think my predecessor, Mr. Baron Hume, began with examination. I recollect, in attending his first course of lectures, there was an examination. But there is a peculiarity in the situation of the young men who attend this class. They are generally pretty far advanced in life, and rather shun examinations of that kind, which are not necessary for their entry into the profession. It has always been found difficult to bring them to an examination, or to make that in any degree a test of their knowledge; and I think it seems, by general consent and approbation, to have been abandoned in this class.

Are you of opinion, that to revert to examination would not be an improvement, or would you recommend it?—I should not be inclined to recommend a public examination in a class so much advanced.

Would you recommend a private examination of your class?—That, I think, is more questionable. I rather think that a private examination upon any occasion of the kind is the true test by which you can know whether a man is really acquainted with the subject of his studies; and, if any examination were to be introduced in the Law class, I think a private examination of the students (taking them by turns) would be the best, indeed the only, system that could be ventured upon in a class of that advancement with any great hope of benefit.

Do you think that such an examination as you have now alluded to would be attended with beneficial effects?—Upon the whole, I think it might, although I should not be sanguine in expecting very beneficial results. From some students unquestionably I should expect very good results; from the generality that attend this class I do not know that I could expect results such as to make it expedient to adopt this as a general regulation.

About what age are the students who frequent your class?—I think from 16, perhaps I should rather say from 17, to 24 or 25.

What objection arises to the establishment of examinations upon account of the age of your students?—A young man at that advanced period of life does not like to fix upon himself a character of incompetency for examination, which may in some degree injure him in his profession. If he has the immediate object in view of entering into his profession, and can do so only by examination, he must submit to it and make the best of it; but I know, in all the examinations which I have ever attempted in these advanced classes, the students have uniformly got out of the way as much as they possibly could, and it would be necessary (as it might be possible certainly) to fix them down by regulations of a penal nature.

If examinations in the nature of public exercises were made universal in this University, do you think the same objection would occur on the part of those gentlemen?—Perhaps it would not; but still there is another objection which I do not think can ever be overcome, namely, that public examination is not a fair test of a man's knowledge of the subject of his studies. Some men have better memories, and greater presence of mind in public, than others perhaps more truly learned. It is quite probable that to such students examination may be an easy matter, and they may make a good figure; but to others of a more retired habit, I am afraid examination is so formidable, and would be so difficult, that a false and unjust estimate would be formed of their knowledge; and therefore, upon the whole, perhaps, weighing the good and

University of Edinburgh.

Professor Bell.

18 October 1826.

the inconvenience together, I should not say it were a regulation to be adopted in a University in classes so advanced.

Are the Commissioners clearly to understand, that upon the whole you recommend leaving matters as they are as to examination in your class?—I should certainly recommend so.

You would not have any examination?—I would have no examination.

As there are no examinations in your class, you have no Prizes probably?—None.

As you do not recommend examinations, are the Commissioners to infer that you would not recommend Prizes, or are the Commissioners to understand there is a difference in your mind as to that subject?—I think there is a difference; in so far as a man in the retirement of his own study may compose an essay unembarrassed, so that he has fair play for any knowledge or talent he may possess; certainly, therefore, there is not the same objection to prize-essays as to examinations.

Would you recommend that prizes should be established for essays in your class?—The only embarrassment that I feel in answering that question arises from the difficulty of finding a criterion of the merit of the essays. I do not at present see exactly how that matter could be decided upon satisfactorily.

Would not that observation hold with reference to every other class in any University where prizes are already established, or where, not existing, it might be deemed expedient to establish them?—I think it would.

Is it necessary that students who afterwards go before the Faculty of Advocates to be admitted there, should have a certificate from your class of attendance?—No, it is not at all necessary at present. There were certain regulations proposed, but somehow or other they never were passed into a law, and at this moment there is no regulation whatever, except the general understanding that a man must come forward with a fair exhibition of having attended such a course of education in Literature and in Jurisprudence as may become a gentleman and a lawyer; but there is no absolute requisite.

Would you approve of the regulations to which you refer being carried into effect?—I do not recollect these regulations so accurately as to say I should approve of them entirely. My general recollection is that they were good, I think they went to require an attendance for four years upon the classes of Jurisprudence, together with a previous attendance on classes of Literature and Philosophy, not exactly such as should entitle them to a degree in Arts, (which perhaps might be the better way of beginning the studies of a young man for the Bar,) but somewhat of the same description, according to my recollection of those regulations. If it is the wish of the Commissioners that I should look at those regulations again, I will endeavour to procure them. I should have made myself master of them, had I not understood, that, as being extra-academical, they were not within the range of this inquiry.

Would you approve of some species of regulation, by which it might be made imperative on your class to obtain certificates before gentlemen passed Advocates?—I should certainly approve of a set of regulations requiring literary education and attendance in the Philosophical classes and in Jurisprudence; the one such as should fit a man for the degree of Master of Arts, and the other such as may fairly show that his education in Jurisprudence has been complete.

Would you recommend that both branches of education should be comprised?—Yes, I would comprise both branches of education.

Do you approve generally of the regulations that were proposed?—According to my recollection of them, I do.

In the Returns which have been sent by the Senatus Academicus to the Commissioners, in that part of them where your class is mentioned, in the years 1811 and 1812 the number of students who attended your class is left blank; how does that happen?—I really do not know. That was during Mr. Baron Hume's time. This is only my fourth year of lecturing. Formerly these returns were made up from the matriculation-books, which were very irregularly kept. After a certain period (I believe considerably later than 1812), there was a regulation by which the matriculation-books were rendered more correct, and gave a pretty fair state of the number of students.

Have you any method of enforcing discipline and attendance in your class?—No.

Do the students attend in a voluntary manner?—Entirely voluntary; there is no restraint or means of enforcing discipline, but the authority which I have as Professor over them.

If certificates were obliged to be granted from your class previous to the students going on in their profession, do you not think that that would be a method of enforcing attendance and discipline of a very beneficial character?—Probably it might. There is a difficulty, however, with 250 young men, to know exactly how any one has been attending. I do not know a criterion by which a class of so many advanced students (many of whom have very often pretences of business to excuse their absence), it may be easy to ascertain whether they give regular attendance, or how it can fairly be said that their attendance is regularly to be enforced with advantage.

Have you any roll or catalogue which is called when they assemble?—None. The class which I teach is a very peculiar one; it consists not only of young men, properly academical students, who are intended for the learned professions here in Edinburgh, but of men who, without intending to submit to academical discipline, come up from the country (some of them even considerably advanced in practice), and who attend for the information which they may expect to obtain from the lectures. They therefore do not consider themselves under academical control in the same way as, in the initiatory classes, the young men are; but they attend for their own advantage when they can, or when they find advantage in it; or neglect to attend when they find it inconvenient, or useless.

Do you mean the country practitioners or procurators?—Yes.

University of Edinburgh.

Professor Bell.

18 October 1826,

Are young men attentive and orderly at your class?—Yes; I have not the least reason to find fault. I have always checked at once the least approach to disorder or obvious inattention.

At what time, or season of the year, does your class end?—I have hitherto lectured till about the 5th or 6th of April, I think.

Do you think that one hour a-day from the month of November is sufficient to comprise the whole subject of Scotch Law during that period?—I have thought a great deal on that subject. When I began that course, it was after Mr. Baron Hume had in 35 years accumulated such a mass of valuable information that six months were scarcely sufficient for it. I was not quite sure that so minute and detailed a discussion formed the proper object of an academical course, and I have endeavoured and wished to digest my prelections into what perhaps might properly form the subject of two classes; the one comprising the general principles of the Jurisprudence of Scotland, civil and criminal, the other more particular commentaries on those practical doctrines which present greater difficulty to the students. I find it difficult, in one course, and within the time assigned to me, or that period during which students can continue their attendance, to comprise both these subjects.

Do you not, in the Return, say that your course of lectures comprehends both the Civil and Criminal Law of Scotland?—Yes.

Are you able to give a sufficiently comprehensive view of both these systems within that time?—I cannot even find sufficient time in one course for the Civil part of our Jurisprudence, in the way in which I think it should be taught, and I have not yet entered upon the Criminal Law.

Did your Return relate to what you conceive to be the general nature of your class, and not to your practice?—To the general nature of my class. Mr. Baron Hume lectured two years, I think, upon Criminal Law, in separate courses from that on the Civil branch of the Law. The Criminal Law is a subject of lectures perhaps chiefly useful for young men at the Bar, or intended for the Bar; and, from the mass of matter which was to be disposed of in a course so extensive as mine, I found it altogether unfit (amidst the avocations of the Bar, from which I could not all at once withdraw) to enter on an imperfect explanation of so difficult and delicate a matter as Criminal Law.

Do your lectures now embrace Conveyancing as a part of the Law of Scotland?—No.

Do they embrace no part of it?—The lectures upon the Principles of Law of course do embrace also the Principles of Conveyancing. I take the application of those principles to the particular and detailed structure of deeds and conveyances to belong to a separate class. But the whole principles of Conveyancing, as part of the law, I hold to be completely within the class which I teach, and to be a part of my privilege and of my duty.

Are your lectures so comprehensive as not to make it indispensably necessary that a student should attend the lectures upon Conveyancing?—It is not necessary in one sense certainly; but it is highly useful to attend the class of Conveyancing. It is a class which, I believe, by a regulation of the Writers to the Signet, is made imperative on their apprentices. The explanation which in so extensive a course as mine it is possible to give of the principles of Conveyancing could never instruct a young man completely in the adaptation of these to the practical structure of deeds. The explanation of the structure of deeds is another way of considering the same subject. The class of Conveyancing I apprehend to be intended for adapting the general principles to the structure and framing of deeds and conveyances of property, and to the proper expression of the meaning of parties in conventions and contracts.

Is it not a class more fitted for the Writers to the Signet, and professional persons of that description, than for a general lawyer?—Certainly it is more fitted for them; but I think it is highly useful to all.

Do you read your lectures, or speak them?—I have hitherto chiefly spoken the lectures.

Do you speak them from notes?—Yes, from full notes. I am induced to do that from the great extent of the subject, and from the peculiar views which I entertain of the way in which that class ought to be taught.

Have you published any heads of your lectures?—No, I have not. The truth is, that my lectures have been in a continual state of alteration, and I hope of improvement. They were first prepared with more minuteness, and with greater attention to detail. I have since endeavoured to generalize or to reduce those details, as much as possible, to general principles, and to deliver these general principles in the first part of the course, keeping the details rather for the explanation, in a second branch of the course, of the more difficult and important doctrines. I never have been able to prepare a syllabus of my lectures.

Would you recommend the division of the class into a course of two years?—I unquestionably think that there ought to be two courses. At the same time, I must state that this is not exactly the notion that a great many others, who have thought very deeply on the subject, have entertained. They think that the whole ought to be comprehended within one course. I think that one course is a great deal too long both for the spirit and strength of the Professor, and for the attention of the pupils. And I should myself prefer having two courses, divided much in the way that I have already said they ought to be divided. Whether they ought to be in two successive years, or whether two courses should be going on at the same time, is a question of some practical difficulty which I have not fully considered.

Unless those two courses were going on the same year as in the Civil Law, would not the students be subject to a considerable hardship?—They certainly would; and that is one of the difficulties of accomplishing that division of my course, which I think would be advantageous.

From the result of your experience, are you quite satisfied with the practical benefit of that division of the subject by which you first state the general principles, without the illustration

of the details of cases, and then go over the subject again, as a more extended illustration of those general principles?—That is not exactly the idea of my course.

Will you state the general principle on which your course is conducted?—First I take a general view of the principles, certainly not giving the details, but, on the other hand, giving all the authorities I think necessary for enabling the students, in private study, to follow out, and fully to comprehend the whole of that subject; and also giving every illustration and every remarkable case which I think fit for establishing the rule or the exception. I give thus, not merely a view of the general principles as in theory, but what I should consider perhaps as a pretty full course of actual Scotch Jurisprudence. Towards the end of the course, I take up more particularly some of the doctrines which require a more full commentary; as, for example, the law of elections, mercantile law, maritime law, and other such subjects—taking them in separate departments, and commenting on them more particularly, and with more detailed illustrations, than in my general view. I am quite satisfied, so far as I have gone, from experience, that this is an infinitely better way of conducting the study, than by giving the whole details at once. The class to which I address myself is a very mixed class; there are many students who are considerably advanced in their studies—many who have never thought of or know any thing about the law at all. If I were at the first to enter into the details with that latter class of students, they would not understand my prelections; they would become wearied, or be thrown into utter despair. Whereas, by a previous exhibition of the general principles, with the illustrations necessary to verify them, they are introduced gradually to a knowledge of the subject, and are prepared for those more detailed commentaries which come afterwards upon the more difficult branches of the profession. On that account, I think it is a better course to follow.

Is the subject so comprehensive that you are not able to overtake it as satisfactorily as you would wish in the course of a session?—Certainly I cannot, to my own satisfaction, in the course of a session give the whole subject.

Would you recommend a class during the summer session, or a class for a second year, or the division of the subject into two classes, so as to lecture on a certain number of subjects one year, and a certain number the other, so as to carry on two classes each year?—I should recommend rather, that during the course of the winter there should be two classes; I think that were better. And in those two classes I should rather recommend that general division to be followed which I have pointed out; one more elementary, the other more detailed and grappling more with difficulties.

Considering the nature of the subject, would you account it any hardship upon the young gentlemen intended for the Bar that they should devote two years for the study of the Scotch Law before they pass at the Bar?—I should think any man very rash who should come to the Bar without having devoted a great deal more to the study of Scotch Law.

If any regulation should be adopted requiring attendance upon the Scotch Law from all those who intend to go to the Scotch Bar, would you disapprove of that regulation being extended to the two classes taught from your chair?—Certainly not.

Are you aware, that in the Scotch Law class in Glasgow the system of examination has been extensively acted upon?—I was not aware of that. I know it was adopted in Mr. Millar's time; I did not know that Mr. Davidson used it. The classes in Glasgow, however, are very small classes compared with this. I do not know what the numbers are. The most successful examinations which Mr. Millar made were in a class of not more than 12 or 15, or perhaps 30 pupils, but a class of 250 pupils is a very different matter; the examinations, if they were to be introduced, would require to be conducted by taking the young men by turns, either individually or a few of them at once, to private examination.

Do you think that in a large class, if it were known that a student was subject to be called up for examination, without knowing when, it would have the effect of whetting the attention, though a few only were examined?—Yes, certainly, that indirect effect would follow.

Are you not, in the course of your lectures, obliged to explain the general principles relative to the formation and interpretation of Contracts and Dispositions and similar Instruments?—Certainly: not as relative to the formation of dispositions, looking to that as the more mechanical operation; but, in explaining the nature of a particular conveyance, I hold it to be my duty to explain the effect of the deed, not stating that it contains so many clauses, and so on, but taking the essential part of the deed as a subject of comment. For example, the conveying clause of the deed, the clause of warrandice, or the obligation of infeftment, the precept or procuratory, &c., and every question of law that can arise out of the deed, or out of those clauses considered either as defective or as unexceptionable, I take it that I am not only entitled but bound to lecture upon and explain.

In most instances do you state the general terms of those clauses, in order to make what you explain intelligible?—Certainly.

In that part of the course which relates to the titles to heritable property, do you follow the same plan—for instance, with regard to a charter—in explaining the different parts of a charter, and the effect of the different clauses?—Yes, certainly. I do not state those clauses in the order in which they stand in the deed; but, in explaining the general principles of the conveyance of land, I take particular questions, arising from and consequently turning upon the expression of the deed. Where the conveyance or the contract may be materially affected by a particular expression, I consider how far it is competent to vary the expression, and what may be the effect of such variation. I consider the class of Conveyancing, in short, as an auxiliary class—as a class which goes farther into detail upon the same principles. The great principles being given in the class of Scotch Law, the Conveyancing class consists of an adaptation of those principles to the details of conveyancing.

Do you hold the explanation of principles in the way you have mentioned, with reference to

University of Edinburgh.

Professor Bell.

18 October 1826.

different deeds, an essential part of what ought to be taught in your class?—Certainly. It is difficult to describe the limits of the two classes; but the class of Scottish Law I hold to embrace the whole subject, so that the Professor cannot be controlled on the ground of any supposed invasion of the province of the conveyancer. For example, the great subject of Entails I have been accustomed to consider as particularly perhaps as if I were in a class of Conveyancing. I do not hold myself in this to be in the least degree restrained, by the institution of another class, from making the most full and ample commentary and analysis. This subject of entails is one of the branches I take for more particular commentary, after having explained the general principle in the preliminary part of the course.

If such an arrangement could be introduced as that which has been contemplated, of instituting two classes in the Scotch Law, would you be led to extend that part of your class very considerably which relates to the subjects already alluded to?—Certainly, that part of the instruction which consists of commentaries on the more profound and difficult branches of the Law I should extend considerably. The others I should extend also:—both might be extended if there were room for their expansion.

Are you pretty well acquainted with the lectures that have been given upon Conveyancing?—Only generally. I do not know how they have been conducted by the present Professor.

Had you occasion to lecture for some considerable time in that class?—I think I lectured upon Conveyancing for two years.

Do you consider that in the body of your lectures on the Scotch Law, as they now stand, you could embrace the whole material substance of the lectures on Conveyancing?—Certainly not.

You mentioned that you considered the Conveyancing class as an auxiliary class, but do you consider it to be a very useful auxiliary class?—Unquestionably useful. I should say it was almost a necessary class.

Do you consider it to have been an improvement, or otherwise, to add it to the academical studies?—There have been considerable doubts whether it is a class which is properly, in its nature, an academical one. I confess that I had myself doubts upon that subject; but, having been introduced, I think it is a most material improvement; I think it completes that system of Law education, which in this University (according to the theory of it) is in my mind a perfect one.

When the lectureship of Conveyancing was confined under the control of the Writers to the Signet alone, and before it was made a branch of academical education, could any person attend that class, though he were not apprentice to a Writer to the Signet?—Yes.

Was it equally useful before in that respect as it is now?—Yes. Whether it was equally useful in the private lecturer having the same authority with a Professor in the University, is another question.

Did it exist as an institution belonging to the Writers to the Signet for many years prior to its introduction to this University?—Yes; I do not recollect the date of the introduction, it was instituted on the proposition of my brother, who died some years ago. I think the class was instituted in 1790 or 1791.

Has it existed about forty years, do you know?—I think towards forty years.

Is there any doubt whatever in your opinion of the great utility of the class for those for whose instruction it is chiefly intended?—Not the least doubt.

Do you conceive that a person before he attends your lectures ought to have attended the class of Roman or Civil Law, to derive benefit from them?—Certainly he ought. I should at the same time say that this is to be taken with some little qualification. If his views are directed to the Bar, unquestionably he ought to have attended the class of Civil or Roman Law. If they are directed to the profession of Writer to the Signet, unquestionably also he ought to attend that class; and by the rules of that society it is absolutely imperative upon the students to attend the Civil Law. With regard to those who are destined for practising in the country, I think their time would be much thrown away in such attendance.

Do you consider a second set of lectures upon Criminal Law at all necessary?—I think it would be better combined with the general set of lectures upon the Civil Department of the Law of Scotland.

Did the former Professor embrace Criminal Law in any part of his lectures upon Civil Municipal Law?—He added it at one time as a separate course.

Edinburgh, Monday, 23rd October 1826.

The EARL of ROSEBERY in the Chair.

William Pulteney Alison, Esq., M.D., Dean of the Faculty of Medicine, and Professor of the Theory of Physic in the University of Edinburgh, called in and examined.

Professor Alison.

23 October 1826.

Are you Professor of the Theory of Physic in this University?—I am.

Have you seen the several Queries sent by the Commissioners to the Senatus Academicus, and the Answers which they have given to them?—Yes, I have seen the answers.

Do you concur generally in all these answers?—Yes; but there are some of them which relate to subjects of which I had no means of information. I merely heard what the Professors, who did understand them, had to say in regard to them.

With respect to those matters, which you understand yourself, do you completely concur in the answers which the Commissioners have received?—Quite so.

Have you any remarks or observations to make to the Commissioners with respect to the University at large, in the way either of improvement or alteration in its Education or Discipline?—There are various things which several of the Medical Professors have had in view

University of Edinburgh.

Professor Alison.

23 October 1826.

which may be done, if not at present, at least by and by. There are one or two things that have occurred to me in regard to other branches of education that I would wish to mention.

Will you have the goodness, in the first instance, to state your ideas relative to the other branches of education, leaving, for the present, out of view the medical schools?—In regard to these branches, I would say, that what has occurred to me is, that the greatest improvement which could be made in this University, would be to do something to elevate the Degree in Arts from the obscurity into which it has fallen for many years past in this country. At present, I really know no literary or scientific Degree that is given here, which is considered as any particular object by most young men in the country, and we see very commonly, that young men who wish to acquire a character for learning and science go to Oxford and Cambridge from this country, and remain for some time, and distinguish themselves, who, one should think, might be equally induced to remain here, if more pains were taken to make the Degree in Arts such as would confer higher distinction.

Would you think it a very great improvement to have the Degree in Arts so conferred and so changed as to become an object of distinction and emulation to students in the University?—I think so. I think it is much less so at present than it seems formerly to have been in the University, and might easily enough be made again.

When you say "formerly," do you allude to the period when degrees were conferred, accompanied with what was called laureation?—Yes.

Would you wish it made imperative, in many branches of literature, that students should take the Degree of Master of Arts previous to going forward to their respective professions?—I would not make it imperative in regard to medical men, for reasons which I will fully state hereafter. Whether it should be imperative with regard to students intended for other professions, I cannot say that I am qualified to judge.

Would you be desirous of having public examinations in the University at the end of a session, or at any particular periods, previously to conferring such a Degree?—I think public examinations, and pretty strict ones, for the Degree in Arts might be useful, as a young man might thereby distinguish himself, and make his progress known publicly. There are very great objections to making the rigorous examinations for Medical Degrees public. It has hitherto been private in this University, and there are good reasons why it should continue so; but I do not think the same objection applies to the Degree in Arts; probably it would be right to have one examination, and perhaps the most severe one, for the Degree in Arts private; but I think that one examination, at least, for that degree, and a pretty strict one likewise, might be public.

In that public examination, would you class the students for what are called honours in the English Universities, or subdivide them into classes according to their proficiency?—I cannot say I have attended to the details of any such arrangement. One thing has occurred to me, and it has been mentioned by one or two of the other Professors, that it would be right to have two Degrees in Arts,—the Degree of Bachelor and the Degree of Master.

From any consideration that you have given to that part of the subject, do you approve of that idea of the subdivision of the Degree in Arts, the Degree of Bachelor being conferred first, and the Degree of Master subsequently?—Yes; supposing a Bachelor were to follow a course of study, such as is required for a Master, and then a Master of Arts were to follow a higher course perhaps, at least two years more.

Would not that be making a Bachelor's course four years, and the Master's six?—Yes; or perhaps it might be thought better to confer the Degree of Master rather by a more extended and strict examination, than by a difference in the course of study. I do not pretend to have given much attention to that.

You have stated that you have reasons why you think that the examinations for a Medical Degree should not be public, and why you think the conferring of a Master's Degree should not be imperative, previously to going into the medical profession; will you have the goodness to state the reasons that operate on your mind as to that?—The reason why I think examination for Medical Degrees should not be public is, that it being once known that a man had been rejected, would injure him materially in his profession afterwards. The same does not apply to the Degree of Master of Arts, for it is merely an honorary Degree; but a Medical Degree is one by which a man is to live.

As you seem to think that it would not be desirable, with respect to students in Medicine, that it should be imperative on them to take the Master's Degree, will you state some reason that occurs to your mind for so thinking?—The subject of the previous education of medical students, before they actually enter into the medical class, is one of very considerable importance, and one upon which the Medical Faculty have had a good deal of consultation. It has been repeatedly urged in the Medical Faculty, both in the University and out of it, that there is not sufficient provision made in this University for the previous literary and scientific studies of medical men. Upon that subject I have some notes which I formerly laid before the Senatus Academicus, and which latterly have been read over before the Faculty; and, with permission, I should like to give my opinion partly from them.

Are you Dean of the Medical Faculty at this moment?—Yes, at present I am. The Dean is generally the youngest member of the Medical Faculty, having more trouble than any other.

What are his particular duties as Dean?—He has to manage all the business in regard to graduations, to receive all the students' certificates and examine them, to arrange the time for examinations, to answer all letters in regard to graduations, to keep different books, in which we record examinations, and some other business that comes before the Medical Faculty of the University exclusively.

How long is it since the situation of Dean of the Faculty was first introduced?—There has always been a Dean as long as a separate Faculty has been known.

University of Edinburgh.

Professor Alison.

23 October 1826.

Do you hold the situation until a junior one supplies your place?—Yes; in fact I should have given up the situation before this, in consequence of Dr. Hamilton being added to the Medical Faculty; but he declined doing duty in it until the unfortunate dispute between the University and the Town was settled; and I have therefore retained the situation.

Does Dr. Alison think it a good arrangement that the junior member of the Faculty should be Dean?—I think it is; the Dean has no particular authority or power, it is merely that he has more trouble than any other member of the Faculty; it is, therefore, always given to the youngest member.

Is the nature of his occupation such as to require more knowledge of the business of the University, and of the forms of proceeding, than is supposed to be possessed by other members of the Faculty?—No, I do not think it requires more knowledge. The greater part of his duty is, in the first place, receiving Theses from the young men, who are candidates for graduation; then receiving their certificates of study; then examining those, and seeing that they are all right, and arranging them and making a note of them to preserve; and then arranging the times of their examination. We have also a great many letters from different parts of the country, inquiring as to Degrees, and requesting indulgence as to our rules, which are referred to me; and I answer them, some from my own knowledge of the practice, and some by the direction of the Faculty. Then we have a minute book in which the greater part of these are recorded, so that we have a number of precedents which we apply to all such cases. That minute book is always in the hands of the Dean, so that he generally answers them himself.

Is there any emolument attached to the office of Dean of the Faculty?—None.

Is he Preses of the meetings?—Yes; but the meetings are not held in a very formal manner, generally.

Will Dr. Alison proceed to refer to the notes in his hand, and state to the Commissioners his opinion grounded upon them?—I was asked if I thought it would answer, if every medical student were obliged to take the Degree of Master of Arts; and likewise it has been urged upon us, if that is not required, at least that something more might be done in the way of requiring preliminary education, both literary and scientific, than hitherto has been thought necessary in this University. I would first state, that the Medical Degree in the University is at present held in such estimation, that there does not appear to be any occasion for a considerable change in regard to it. We have proof of this not only in the number of gentlemen applying for the Medical Degree here, which is much greater than in any other University in the British dominions, but likewise I may state, that we have the direct testimony of the most competent judges in regard to it. I presume, that I cannot offer testimony that will be considered better than that of men at the head of the Medical Department in the Army and Navy. We have had repeated declarations from Sir James M'Gregor, and have had a good deal of communication with him; I do not pretend to know what the opinion of Sir James M'Gregor may be in regard to the particular change that has now been alluded to, but he has particularly stated that he considers the University of Edinburgh to be the first Medical School in Europe, and hopes it will long continue so.

Was Sir James M'Gregor educated at this University?—He was educated partly here; but he has not his Degree from this University. He mentions, in one of his letters to a member of the Faculty, that about one-third of the medical officers in the army, and certainly the best informed part of them, have been educated here. I have a letter in my hand from Dr. Burnet, one of the Commissioners at the head of the Medical Department of the Navy, who was consulted two years ago, at the time when some alterations in regard to the Medical Degree here, were in agitation. Dr. Burnet says, "For several years past it has been my duty, in connexion with my colleague Dr. Weir, to examine candidates for admission into the Medical Department of the Navy, and, though they are all young men of superior medical education, I can with the utmost truth declare, that those young gentlemen who have obtained the Degree of M.D. at the University of Edinburgh are by far the best informed in their profession of any I have met with, and whom, without any other recommendation, we have immediately admitted into the service." Many of the medical officers of the Navy, independently of those lately admitted, have, since the return of peace, obtained Degrees from the same University; and it is but justice to add, that, when employed, (which agreeably to the regulations of the service they are considered to have a superior claim to,) they have invariably distinguished themselves by their superior acquirements and knowledge.

Do you know if Dr. Burnet was educated at this University also?—I am not aware if he was, or not.

Do you, or not, know whether he took his Degree here?—I do not. I would next beg to remark, that, since these letters were written, this University has made considerable addition to the course of medical study, and this addition has been made with the approbation, I may say, of the profession generally. I have a letter from Sir James M'Gregor, acknowledging receipt of the new regulations, in which he says, "Many, very many thanks for the new regulations. There is no one but must confess that great public benefit must accrue from them, and by their adoption the character of the University will be powerfully upheld."

When were they first adopted?—In the end of 1824; they were first published in 1825.

Have they been in operation about a twelvemonth?—This is the second year they have been in operation as to students commencing; they are not in operation yet upon our graduates. I should mention, at the same time, that Sir James M'Gregor expresses his approbation of these; he says he hopes some other improvement, to which I had alluded in my letter to him, and which I shall mention by and by, may also be carried into effect. Perhaps I may be allowed to state the opinion that has been given in regard to these new regulations of ours in some of the medical journals, which may be supposed to a certain degree to speak the sentiments of the medical profession. There are three medical journals in London of reputation; one of these, at the time when our new regulations were talked of, expressed great doubts

University of Edinburgh.

Professor Alison.

23 October 1826.

whether any alteration was required or would be useful; but, since the regulations were published, that journal has not said anything on the subject. Johnson's Review and Journal of 1825 expresses its approbation, and likewise the Medical Depository for the same year, more fully.

Are those two journals of the highest character?—I think so; perhaps the journal that has the highest character is the Edinburgh Medical Journal; it has the highest circulation, but, being conducted by one of the Professors in our University, it could not properly express an opinion. I may mention that the author of an elaborate work, published this year upon the state of the medical profession in England, though he expresses a wish for different reforms in regard to medical education generally, says, that education for the medical degree at Edinburgh seems hardly susceptible of improvement, or some words nearly to that purport. I have stated these facts merely to show, that at this moment there does not appear to be any very urgent call in the profession for change in regard to the education of medical graduates. I do not mean to say some improvement may not be made; but we have had strongly urged on us in the University, and likewise by some gentlemen out of the University, the importance of an extensive preliminary course of study in science and general literature, and particularly a previous academical course. Now the members of the Medical Faculty conceive, that those persons who urge this have not attended sufficiently to all the bearings of the question, and particularly to the essential difference that exists between education for the medical profession and other learned professions. The education for the Church or for the Bar is completely in the power of those who regulate the University studies for these professions; because those persons who have gone through the University course afterwards enjoy a monopoly of the exercise of their profession. But the education of the whole or any one class of medical men does not depend on this or any other University. There are other degrees (in using the word degree, I do not mean merely the degree in the University, but likewise the diplomas to surgeons and apothecaries), which are obtained by a less expensive education than that which is given in the University, and on which a great number of medical men practise all branches of the profession, in all parts of the country, with success and reputation. Unless it can be made quite clear that any additional qualifications, which we demand, will raise the value of the degree of our graduates in the eyes of the public, and increase, therefore, their chance of professional success, the effect of making our degree more difficult of attainment will only be to increase the proportion of medical men practising upon inferior degrees, and to lower rather than to elevate, upon the whole, the general average of the attainments of professional men. It is certainly the duty of this University to give as complete and scientific an education as possible to our graduates; but we must, at the same time, consider this obvious limitation, that all such alterations, in order to be effectual for the benefit of the public, must be consistent with the existing demand for such attainments in medical men. It were very easy to make the qualifications for the medical degree higher, and likewise to make the examination such that no man should ever become Doctor of Medicine in this University without much greater attainments in literature and science than they at present possess. But if we could not at the same time secure that these men, with this degree and this increase of learning, should be practitioners of Medicine, neither the University, nor the medical profession, nor the public at large, would benefit by the change. If the question were merely a speculative one, how the most learned physicians may be bred, it would be a much simpler one; but, where the object is to supply useful practitioners for the service of the public, the only rule we can go by is to adjust the supply to the demand among the public. It has been said by some that the medical profession ought to have a more aristocratic form than it has at present in this country, and that this might be given by the degree in the University being made to require a greater outlay of time and expense than it does just now, and by the graduates in the University acquiring in return a higher rank in society. But we conceive the idea that that could be done by University education, is attributing more to education in the University than experience entitles us to suppose it can do for medical men. In former times, regular instruction in the fundamental branches of the Medical Science was rare, and not easily obtained; and those men who had a regular instruction in Anatomy and the other fundamental branches of Medicine were few in number, and they formed a kind of aristocracy; but, from the education being now more generally and easily obtained, we conceive it is merely a visionary speculation to suppose that it is in the power of the University, by any education it can give, to confer this distinction at once upon medical men. By the education we give here, we trust that we afford to our graduates a greater facility of acquiring the character of skilful practitioners than they would otherwise have; but we conceive that we should be deceiving the public, if we were to hold out that, by enforcing any course of study, we could at once send our graduates from the University, fitted to take the lead in all cases of men already habituated to medical practice, although their original education may have been less complete. The real aristocracy among medical men must consist always of those who enjoy the confidence of the great body of practitioners, whose practice is what we chiefly call consulting practice—that can only be acquired by exertion of industry and talent long after the period of education is over. We can no more pretend to make great physicians in a University than we can pretend to make great lawyers or great divines. No school of medicine can do more than give the elementary education, upon which the character of each practitioner must be formed subsequently for himself, by his own zeal and industry in cultivating his opportunities of practical improvement. And we conceive, that if, in giving this elementary education, any school goes beyond the demands of the public in regard to the attainments of medical men, the effect will be that that school will lose the education of the great body of the practitioners, and the public will derive no benefit. For example, if it were found that our graduates, after a more expensive education than they have now, and after the acquisition of a good deal more literature and science, were continually

University of Edinburgh.

Professor Alison.

23 October 1826.

passed in practice by men whose education had been cheaper, and who did not pretend to any attainments but those which were merely professional, the consequence would be, that our degree would become unpopular; we should lose, and the public would not gain by the change. Now, in regard to what the general demands of the public are as to the qualifications of medical men, we apprehend we have much surer means of judging than by the opinions of any individual. In every great town in this country it may be seen that there are physicians, whose education has been very complete, and whose knowledge in general literature and science is known to be very extensive, who are, nevertheless, almost without employment. Upon the other hand, there are surgeons and apothecaries, who do not pretend to any considerable attainments in general literature or science, many of whom have been educated chiefly in the way of apprenticeship, who are nevertheless fully employed, and in the practice of all the branches of the profession. If it were wished, I could mention instances from my own knowledge, in London and several great towns in the country, in confirmation of what I have stated. I may mention it as a general fact of which evidence can be adduced. At the same time I am aware it may be said that is not a fair way of judging, for these are extreme cases—that those persons to whom I allude are men of uncommon learning. But, on the other hand, I would wish to be remembered what I have already stated as to a great number of surgeons and apothecaries, who have no pretensions to general literature and science, being in extensive medical as well as surgical practice. I think the fairest way of stating the result of my own observations, and also the observations of those with whom I have been able to consult upon the subject, is, that, as regards our graduates when they go into the world, a great many of them succeed very well, but they are *oftener* surpassed in practice by men who are their inferiors, than by those who are their superiors in point of general literature and science—I will say *much oftener*. There are many instances, at least in this part of the country, and indeed all over the country, I believe, where these persons, who have been practising as surgeons and apothecaries and general practitioners in the earlier parts of their lives, become consulting physicians afterwards, to the exclusion of other physicians, who had practised as physicians from the first, and whose attainments in general literature and science are known to be very high. These facts, then, we consider as indicating that the leaning of the public is decidedly favourable to practical rather than literary or scientific attainments in medical men. If so, it appears to us that much caution is necessary in introducing a higher literary and scientific education into the medical school here, and this with a view to the interests of the public, fully as much as to the interests of the University itself. Of late years a much greater number than formerly of the general practitioners, both of this country and of England, have taken the medical degree in addition to their education as surgeons and apothecaries, and very often in addition to the degree of surgeon—in some instances, in addition to the degree of apothecary. These changes we conceive to have been for the advantage of the public, because, if there is any advantage in medical men being educated fully for medical practice, there is an advantage in as many as possible of the practitioners having received that general education. At present a great proportion of our graduates, who settle in England and Ireland, and almost the whole of those who settle in Scotland, and all of our graduates who enter the Army or Navy, or the East India Company's service (who form a large proportion of our graduates in the first instance), all these act as general practitioners in the early part of their lives. We conceive they are better qualified for the general practice of medicine than those persons who have the degree of surgeon or apothecary only.

Have they the degree of Surgeon beside the Medical degree?—A great many have the degree of Surgeon; some few in England have the degree of Apothecary, from examination at Apothecaries' Hall; but the general practice is, that those who go into the public service, or into the East India Company's service, have also the degree of Surgeon; and, if the Medical degree were placed beyond the reach of those men, we conceive the general attainments of practitioners would be lowered rather than improved. I would beg to state, in illustration of what I have said, and of what are expected to be the effects of making our degree more difficult of attainment than the demands of the public require, what is known to have taken place in England, particularly in London. I have some statements in a book I would mention, called, "An Exposition of the present State of the Medical Profession in England." That author states, that the number of physicians in London and its neighbourhood, both Fellows and Licentiates of the College there, is 174; the number of surgeons practising in London is about 1,000; the number of surgeon-apothecaries about 2,000; and he compares that with the state of the profession in Paris, where the physicians are above 600; the surgeons in Paris about 128, and there are there no practising apothecaries: therefore, setting aside the surgeon-apothecaries in London, the physicians are to the surgeons as one to five, and in Paris the physicians are to the surgeons as six to one. Now this very great difference is traced by that author (and I do not know whether his explanation is the sole one, but it appears to me that it must be a great part of the cause of the difference), that in Paris the physicians and surgeons are educated alike, and the apothecaries are prevented from practising,—they are chemists and druggists; those who make up medicines are prohibited from practising. The comparative numbers of persons practising medicine and surgery in Paris may be supposed, therefore, to be regulated by the general demands of society; but in London the bye-laws of the College of Physicians, and its corporate privileges, throw obstacles in the way of persons, though graduates in Universities, settling there as physicians; consequently these limit the number of physicians in London, and the effect has been practically to transfer the functions of physicians to surgeons and apothecaries, which certainly we conceive is no advantage to the public. I may mention that the bye-laws of the College to that effect are, first, their subjecting all men, though graduates in the University, to examination before they are licensed to practise; then they require them to be 26 years of age; and further, they admit as Fellows only those who have

University of Edinburgh.

Professor Alison.

28 October 1826.

been educated at Oxford and Cambridge, with a few exceptions only; and then the Fellows of the College of Physicians have certain privileges, or, at least, certain facilities; for example, the physicians of certain hospitals in London must be Fellows of the College, and being a Fellow of the College is a great additional circumstance in favour of any man becoming a physician to an hospital. Now we conceive that the very same result that has followed in London, in consequence of these bye-laws of the College of Physicians limiting the number of physicians in a way that was not required by the demand of the public, would follow here also, if a literary and scientific education, higher than what the public require in medical men, were demanded of our graduates; and we conceive the same thing will happen in every case, whatever may be the nature of the additional qualification demanded of physicians, if it does not add to the value of the degree in the eyes of the public.

Does not the College of Surgeons in London enact certain bye-laws relating to men practising surgery in London?—I am not aware in regard to their rules for persons practising surgery in London exclusively; they have bye-laws for those who pass as surgeons before them.

Is there a regulation for those who mean to settle in London, and practise there exclusively?—I do not know; the bye-laws of the College of Physicians I allude to, apply to persons in London and seven miles out of it. There are a certain number of our graduates who settle in London before they are of the age of 26, and who do not enter the College of Physicians there, but become members of the College of Surgeons; but they do not take the title of Doctor of Medicine—they are not allowed to take that title; they practise as Surgeons and Apothecaries, in the same manner as the great majority of the College of Surgeons here do. A great majority of the College of Surgeons here, who have entered within the last 20 years, have the degree of Doctor of Medicine from this University; but they do not generally take the title.

Is any specific age necessary in this University before a man can have the degree of Doctor of Medicine?—Twenty-one.

May he proceed to practise at that age immediately?—Yes.

Do you require a certificate of the age?—We have always taken a solemn declaration from the graduate; we have not required certificates.

Have you never been aware that such a declaration has been made by persons who were not of the age they stated?—In one or two instances since I have been in the University we have been informed that persons who proposed to be candidates for graduation were not of the age they declared themselves to be; the declaration is engrossed in the *Statuta*. There is a Latin form which every one signs and sends to me.

Are they perfectly aware of what they are signing?—They are perfectly aware of what they are signing. If the *Statuta* are looked at, it will be seen it cannot be misunderstood; every man is obliged to write over the whole.

Would it not be more regular to take the certificate from the parish register?—We have always hitherto taken their own declaration.

Would you not think it an improvement, and a more regular mode of effecting the object, and preventing any fraud of that kind, to have a certificate from the parish register of the actual age of the candidate?—Perhaps it would.

Do you think there would be a difficulty in getting certificates, from medical students coming from Ireland and foreign countries, from these registers?—I think there would be great difficulty.

Would it not be desirable to have the best evidence that could be obtained from Scotland or England, or any where else where registers are kept?—Yes; perhaps it would. In regard to the age, I may mention, it cannot be supposed that a man of twenty-one will enter at once into practice as a physician. If he enters upon practice at all at that age, he enters as a general practitioner, and is an assistant almost always to an elder man. If a man propose to practise as a physician from the first, if he take the degree so early as that, he always anticipates to be some years more a student attending some of the foreign schools, or in London.—It has no doubt been stated by men of eminence in the profession to be desirable that all medical men should have a more complete literary and scientific education than at present; but we conceive those gentlemen greatly overrate the power of the University in this matter. If the advancement of medical men throughout the country depended on the better-informed members of the profession itself, their wish might be accomplished, and perhaps with good effect. But while the advancement of medical men throughout the country continues to depend upon the favour of the public at large, who neither understand general science nor value it, as far as we can judge, in their medical attendants, it is mere speculation to suppose that the University, which educates only a part of the medical practitioners in the country, and which has no power over the degrees or diplomas, on which a majority of the medical men practise, can do anything which shall operate rapidly and generally towards the accomplishment of that wish. In short, any improvement in medical education, not only that it may be safe for the school admitting it, but effectual for the benefit of the public, must be made cautiously and with due regard to the demands of the public, as well as the speculative views of any individuals. In the next place, we conceive that the real advantage of extensive attainments in general literature and science to medical practitioners has been very much overrated by some of those who lay so much stress upon preliminary education. The attempt to regulate medical education at the present day by reference to the opinions of medical men some time ago, when the knowledge of medicine was not so much advanced as at present, is not making a step forwards, but rather backwards. Nobody supposes now that the art of medicine is anything mysterious, to be acquired only by a long-continued study of the abstruse sciences, or of the older authors. It is generally understood now, that what fits a man for

University of Edinburgh.

Professor Alison.

23 October 1826.

the profession of a physician is the habitual observation of the living human body, as affected by disease, and as influenced by remedies; and that all the studies of medical men are necessary to them only so far as they qualify them for understanding and judging of the phenomena that are seen in the actual observation of disease, and applying the means of influencing these —that by far the greater number and more important of the phenomena that are seen in the human body admit of no comparison with, and are not susceptible of any illustration from, anything that takes place elsewhere in nature, except only in other living bodies—and, on that account, that the useful applications of any branch of general science to medicine must be very limited. For example, it has been stated that a knowledge of Natural Philosophy is of great importance to medical students; and certainly that branch of study we can recommend as one peculiarly habituating the mind to accurate scientific inquiry. But the idea of its being generally applicable in the explanation of phenomena of the living body in health or disease, is one that belongs to the last age and not to the present. As Anatomy and Physiology have been improved, and as the observation of disease has been better conducted, medicine has been in fact separated from all other sciences, and placed upon the sure basis of the simple observation of nature. The functions of the animal economy, that can be explained by reference to mechanics, optics, or hydraulics, or any other departments of Natural Philosophy, are few; and farther, the departments of this science, that are applicable at all in medicine, are simple and easily enough explained in general. It is where the phenomena of the living body differ from those that are seen in the other departments of nature, and not where they coincide with these, that the real difficulty and importance of physiological knowledge begins. To enable a practitioner to judge accurately of the application of remedies to obscure or dangerous cases, or to judge of the merits of proposed improvements in medicine, or to effect any improvements themselves—in such cases as these the general habit of scientific inquiry, which may be learned in other departments of science as well as medicine, is of great importance. But it is the habit, and not the actual knowledge of the collateral branches of science, that is important, which may be acquired in the study of different branches of knowledge, and very much in the study of the different branches of science, already comprised in our course of study. Accordingly, experience does not entitle us to say that the skill of physicians is by any means in proportion to their attainments in general literature and science. If that were the case, the graduates from Trinity College in Dublin should be accounted superior to ours, for their medical education is almost exactly the same, and they are all required to be Bachelors of Arts. Those who have not been graduates in Trinity College have another kind of degree, which is what they call a Testimonium, given to those who are not Bachelors of Arts: that is not considered to be of much use to any man in Ireland; and of course a great majority of those graduates, and all who are entitled to the degree of Doctor of Medicine, must be Bachelors of Arts. If the knowledge of literature and science were considered of paramount importance, these men might be considered superior to our graduates; but we know that the reverse is the fact. It often happens that students who have had a full course both of general and medical study in Dublin, qualifying them for the degree there, find their advantage in completing their study and taking their degree from us. A more extensive and minute knowledge of Natural History particularly, and other collateral branches of Physical Science, is required of graduates in Paris and in other countries abroad than here; but we do not believe that, as practitioners, their graduates are generally more esteemed in the world. In fact, we may safely assert that the talents and habits of mind by which great and varied acquisitions of literature and science are made, and which a long-continued course of such study is calculated to form, are very different from those attainments by which the most judicious practitioners are distinguished. Besides all this, we must confess that the duties of physicians are many and various, and that their scientific knowledge forms only a part of the general stock of the attainments by which they live. Every medical man has, besides, to acquire habits of business, observation of mankind, and a knowledge of the world. These acquirements of themselves make up to many medical men for the want of scientific knowledge; but the knowledge of all the sciences cannot make up to them for the want of those; and, in general, I believe we may say that the habits of a student, who has gone through a very long and varied course of literature and science, are not those which will fit a man for that kind of intercourse with the world by which a physician must live. In illustration of this, I would beg to read a short extract from a letter in regard to our regulations for the Medical degree, written by Dr. Barlow, of Bath, who is a gentleman who has paid particular attention to medical education, and who has written several pamphlets upon the subject. He says, in regard to our altered regulations two years ago, "That the prescribed course is sufficient for all purposes of speculative knowlege, I believe; but observation has long satisfied me, that the grand deficiency of the regularly educated physician in his early career is in practical promptitude and decision, and to this cause, more than to any other, would I attribute much of that increasing confidence which the public repose in the more assured general practitioners. Familiarized as these are by opportunities of Clinical observations which are afforded to them in cases intrusted to their management under their respective masters" (he alludes to those men who are bred in a great measure by apprenticeship), "they learn rapidly to judge for themselves, and display at the bedside a confidence and self-possession, which are sure to make a favourable impression on the bystanders. It cannot be wondered at that this disparity alone, the only one of which the ignorant can judge (and who, even among the most enlightened, are not profoundly ignorant of a physician's real merit?), should have the effect of creating a distrust of the physician's powers, and yielding the palm to his more confident rival." Accordingly Dr. Barlow, who at that time was writing on the subject of our proposed new regulations, did not recommend a more extended literary or scientific education, but he recommended merely additional attendance upon Clinical wards and Clinical lectures, with some alteration in the way of conducting that kind of instruction.

University of Edinburgh.

Professor Alison.

23 October 1826.

Where did Dr. Barlow take his degree?—I believe from Edinburgh. If I might be allowed to proceed, I would say that we admit the habit of scientific inquiry to be often very useful to a physician; but we maintain that the taste for general science is frequently carried too far for the general usefulness, and still more frequently for the general success, of a physician, and that the knowledge attained by it is seldom applicable to any useful purpose in the practice of medicine. In the next place, I would beg to remark, that the course of medical study now in force in this University comprises within itself a very considerable extent of scientific acquirement, certainly more knowledge of science, and particularly of those branches of science which are most applicable to the purposes of life, than the education for the other learned professions. Independently of the practical knowledge of Anatomy and Pharmacy, and of the practice of Medicine and Surgery, which every medical student here must acquire, there are different subjects, such as Chemistry, Botany, Physiology, and Pathology, all of which he has to study, and on which he is examined at the end of his course by the respective Professors. These are so many distinct sciences in different stages of advancement; but all of them are cultivated at the present day according to the proper method of scientific inquiry, and the student accordingly becomes habituated to that, in the course of his studies upon these subjects. In making these sciences separate objects of study and examination, this University has already, for many years, gone much beyond what the schools of medicine in London require, which nevertheless educate a great number of medical men, who practise all branches of the profession with reputation and success. Probably we may say that the best tests of the true spirit of scientific inquiry are zeal for the acquisition of knowledge, and freedom from prejudice in the estimation of knowledge. In these respects, I believe we may say that at this moment the pupils of this school are equal, at least, to any other medical school in Europe. For instance, Mr. Lawrence, one of the most eminent of the London teachers, says, in regard to students from the Scotch medical schools (which may fairly be applied particularly to those from Edinburgh, who form probably three-fourths of those whom he has seen), "The usefulness of a school may be well estimated from the zeal and industry of its pupils. Extensive intercourse with pupils from all quarters has taught me, that, in these valuable qualities, those from the Scotch schools cannot be surpassed, and in general are not equalled. I find them uniformly assiduous, well-informed, and anxious to improve every opportunity of gaining information." We must beg, therefore, to deny, that candidates for the medical degree here labour in general under those deficiencies which some seem to have supposed in regard to the habit of scientific inquiry, which I have stated as the chief use of extra-professional scientific studies to medical men. On the contrary, as their acquaintance with physical science is more extensive, so we believe their knowledge of the proper method of scientific inquiry is more accurate than that of those in either of the other learned professions. It is farther to be observed, that the additional professional studies which are now to be demanded of our graduates, and the additional year of study which has been imposed by the last regulations, which have not as yet come into effect, will tend to raise the whole of them, in point of study and attainments, nearly to the standard of the best-informed of our present graduates. I would beg next to observe, that there is a peculiar difficulty in enforcing any extensive course of preliminary study on our medical students, on account of the great diversity of their circumstances before they come here as students of medicine. Those persons for whom we legislate when we make regulations for the medical degree are for the most part strangers to this country. During the last 13 years, out of 1,354 graduates in this University, only 422 (that is, not one-third) have been Scots; the remaining 932 have been strangers. Of these, 769 have been English and Irish, and the remainder were chiefly from our Colonies. We have a few from foreign parts. A table of the whole numbers has been given in. When we contemplate the imposition on all graduates of a preliminary course of academical education, not only in the classes but likewise in Mathematics, Natural Philosophy, Natural History, Moral Philosophy, and Logic, (for all these have been pressed, and certainly to a certain degree have a claim, on our attention,) and, also what in the present day is of as much importance as any one, the Modern Languages. When we contemplate the imposition of all these studies upon medical graduates, we must remember that a great proportion of the strangers have not the means of acquiring information in all these—some of them have not the means of acquiring in any, at least by attendance on Universities, or even upon public institutions, before they come to Edinburgh as medical students; and certainly it is impossible for them to study such a variety of subjects along with the branches of medicine during the few years they have to spend after coming here, before they enter upon the practice of the profession. To require a full course of study on all these subjects previously, of all our candidates, would be to place the medical degree in many cases beyond their reach, and compel them to practise upon inferior degrees only. I would beg to advert particularly to the case of English graduates. The number of these has been much increased of late years, as will be seen by the table that has been given in; but it is still actually less than the number of Irish graduates, and of course the proportion they bear to the whole number of practitioners in a country so populous and rich as England, must be less than their proportion to the other practitioners in Scotland and Ireland. It seems clearly for the benefit of the public, as well as the University, that this increasing class of graduates should be encouraged; and I may state, that as a body the English graduates are decidedly the best class we have in medical knowledge. In proof of that, I may mention that, for several years, the proportion of rejections that have taken place among the English candidates for graduation has hardly been more than one-half of what it has been either among the Scotch or Irish; but very few of these gentlemen have had a University education;—they come here as medical students, and for medical instruction only.

Does Dr. Alison know any cause to which he can ascribe that?—I think I shall mention just now what it is: their medical education is generally more complete than that of any other

University of Edinburgh.

Professor Alison.

23 October 1826.

class; the greater number of them have been apprentices in the country, in the first place, to surgeons, or apprentices to the provincial hospitals for three years; after that, in consequence of the reputation which the London school has all over England, they must necessarily be one or two winters in London; and then they are obliged, besides, to have three winters of University education, which they have either wholly here, or partly here and partly at Paris. In short, their medical education has been conducted more leisurely, and it is more full and complete, than that of either of the other classes.

Are they of more advanced age generally?—A good many of them are, but not uniformly.

Are they upon an average more advanced in age?—I think they are, perhaps, a year or two older, upon an average, than the others. Very few of these gentlemen have had it in their power to get such a preliminary general education as can be had in the Scotch Universities, and in general they cannot obtain this without relinquishing for it one or other of the branches of their previous medical education before they come here. If all were obliged to take the degree of Master of Arts, they must give up for it their education in London, or give up for it their education as apprentices in the country, both of which are considered by many of them, and by their parents and friends, to be too important as preparations for actual practice to be dispensed with. Similar difficulties would occur, if a preliminary course of study, in all those different branches, were to be required of our candidates from Ireland or from the Colonies. If this were adopted, our medical school, being then adapted only to the institutions of Scotland, would cease to send its graduates, as it does now, wherever the English language is spoken. The Medical Faculty expect, of course, as a consequence of the new regulations which have not yet come into effect, a diminution of the number of our graduates, which will be produced by an extension of their medical education, such as we are well assured will add to the value of their degrees in the eyes of the public; but we may be allowed to deprecate any such diminution of their number as may be produced by means that cannot be shown to have a tendency to enhance the value of the degree in public estimation. We are told, no doubt, that there is at present, in all parts of this country, a general desire for scientific instruction, such as never before existed, and that, if our regulations do not fall in with that general feeling of the public, the value of our degree will be rapidly depreciated. In answer to this we would only observe, that if the desire for scientific instruction is so strong in general and extends to branches of science which are not included in our course of study for the degree, and if it should be permanent, it will naturally produce permanent effects, in the establishment and maintenance of seminaries in all parts of the country, for teaching these branches of general science. And we conceive it will be time enough for the University to adopt regulations enforcing a more extensive and more varied literary and scientific education of medical students, when the public in the countries from which our candidates come, and for the service for which they are destined, shall have made such provision for their previous education. Then it is said, that in the Universities abroad there is a more complete previous education, and a more full medical education, required than here; certainly there is a more complete previous education in France and in other foreign countries. To that (besides one answer that the practical usefulness of these graduates does not seem to be proportionally increased) I would say, that it is to be remembered that in these foreign countries the same despotic power which regulates the Universities regulates the different minor schools all through the country, and adapts the studies in the minor schools to the demands of the Universities; for example, at present in France they do not take any man as a candidate for a medical degree who is not what is called Bachelor of Letters and Bachelor of Science. But the means of becoming Bachelor of Letters and Bachelor of Science are to be had in all the provinces, by regulations of the same general board of education which regulates those Universities, which is not the case in this country. Farther, I would say the graduates in those foreign countries are protected, after they have gone through their course of study, in a monopoly in the practice of their profession to a degree which is not the case in this country. The policy of the Government of this country, in regard both to the seminaries of education and the exercise of the medical profession, is different from what it is abroad, and the resort of students to any school, and its usefulness, therefore, must depend not upon any orders of the state, but merely upon the character of the teachers and the adaptation of the rules of the school to the general demands of the public. I have taken the liberty to make these statements, to show that the Professors of the Medical Faculty have not been inattentive to the recommendation of previous literary and scientific education, which has been made in this University and out of it; we have considered it in all its bearings; we think great caution is necessary, not merely for the good of the University, but likewise for the good of the public. There is one farther suggestion I have to make, and which has likewise been considered by the Medical Faculty, that, if it be deemed an object of public importance to have a certain number of medical men more highly educated than hitherto has been the practice, it is easy to do so without materially altering the study for the present degree, by instituting a higher degree. There is a title which is given on the Continent, and which I believe has been given formerly in Oxford and Cambridge, namely, Doctor in Medicine and Philosophy. If it be thought of great importance that there should be a number of medical men who should receive a full, scientific, and literary education, such a degree may be instituted here, and we shall have the opportunity of judging if it will be an object of real importance to medical men to possess such a degree; at the same time we should avoid the risk which I apprehend would follow from any great alteration in our present degree of transferring the functions of physicians in practice to the surgeons and apothecaries.

Would there be any objection, where a medical student has been previously educated and has obtained his degree of Master of Arts, to state in the diploma of such an one the different degrees he had got, as indicative of his scientific pursuits?—I think that a Master of Arts, when he is also a Doctor of Medicine, has it put in his diploma; at all events he puts it in the title-page of his thesis.

University of Edinburgh.

Professor Alison.

23 October 1826.

Does he put it in his diploma?—I do not know what the practice is; the Secretary of the University can mention it.

Could there be any objection to it?—No.

Are the Commissioners to understand that the statement you have just now made from the notes in your hand is not merely your own opinion, but likewise that of the Faculty of Medicine in this University, concurring with you in that statement?—This statement was read over to the Faculty and approved of by them, and I consider it to be their opinion, as well as my own. There are some points which some of the Professors might be disposed to urge further than I have done here.

As far as you have stated, do they all concur?—I think so. I should mention that Dr. Duncan, senior, has not generally been in the habit of attending the meetings of the Faculty, and that I believe he has some notions, which do not agree with what I have stated; but all the other members have heard the whole of this, and have approved of it.

You have stated, that, if it were considered necessary or an improvement to have men in the medical schools of more enlarged attainments, a higher degree than that which is conferred might be introduced; do you think yourself that the introduction of such a higher degree, having that purpose in view, would be beneficial or not?—I think I would consider it more an experiment than any thing else; if it were done, I do not think it would be often asked for by men going into practice; but it might be of use to some men whose intention it is to be teachers, who propose to lecture on Chemistry, for instance, as is the case with some who live by it, or to lecture on Physiology, perhaps, or those who may be induced to become authors, or to conduct medical journals. There are some medical men to whom it might be desirable, but I do not think it would be generally asked for by men who intend to practise.

Is it your opinion, and the opinion of the other Professors who have concurred in the statement which you have made, that it would not be desirable to educate students for the medical profession higher than they are at present educated in this University?—It would not be desirable to *enforce* an extensive previous course of literary scientific study. I may mention that it appears to me there will be no objection—it could do no injury—perhaps there might be some benefit—from requiring of our graduates in future that they should show that they studied not only Latin, which is required at present, as they are examined in Latin, but French, and I would say likewise Mathematics; but I certainly would hardly consider it safe at present to require more to be done in this University or in any other.

Are students examined by Professors of Chemistry and by other Professors in their respective classes?—Not in their respective classes, but upon their respective subjects, when they come for examination for the degree.

Are they examined on those particular subjects previous to obtaining the degree of Doctor of Medicine?—Yes, they are.

You have stated that there are additional regulations in progress, and which are to be made necessary for a medical degree; when are they likely to be so shaped as to be promulgated?—I referred to those that have already been made, but which were not made imperative on students who commenced their studies previously to their publication, which are imperative on those who commenced their studies last winter, or who are now commencing them.

Did you not state that it was in contemplation to have still further regulations?—There are some other alterations which several of us have in view.

Are they not yet prepared?—I would mention to the Commission what several of us have thought.

Will you state generally what further improvement in the shape of regulations you have it in contemplation to propose?—One considerable improvement, I think, might be made upon the mode of examination by dividing the examination for a degree into two parts,—taking only one branch of the subject in one examination, and another at a subsequent one, allowing a year to intervene—not that a year should necessarily intervene, but that a year may intervene between the two examinations. We require at present of all our students, who are now commencing or who commenced last winter, four years' study. Except in particular cases which are mentioned in the Statuta, we would take a man for examination at the end of his third year's study, upon all the elementary branches, and at the end of his fourth year for the more practical departments, at the same time giving permission to those who think themselves fitted for it, to take both examinations at the end of the fourth year. That would be necessary, for there is a considerable proportion of our graduates who are only one year with us. The advantage of that would be, that I think we should make the examinations in that way stricter without being more formidable, because what makes the examination particularly formidable to medical men, and even to men who we know are well informed, is the great variety of subjects upon which a man may be taken in the course of an hour, or two hours' examination. Then we should likewise have the advantage that the students in the third year of study, as well as the last year, would be looking forward to examination at the end of the session, and may be supposed to be more industrious in that time. I may mention that, in the medical schools of France, they divide the examination into five parts, taking two subjects for each examination; perhaps that is a greater division than is necessary, but I think it is a considerable improvement upon our plan of taking the whole in one single examination.

Is that one of the changes now in agitation?—That is one change which we have thought of; but, in order to effect that, we would require to have more examiners, and that is the greatest difficulty several of us have felt in regard to that; because we cannot well make additional Professors examiners without their receiving payment for it, and the burdens upon the students are already very considerable.

In the course of your examination, you have stated that Dr. Barlow approved of the new regulations, but that he recommended some alterations, particularly in regard to the Clinical

University of Edinburgh.

Professor Alison.

23 October 1826.

lectures; can you state what Dr. Barlow's observations were?—He recommended an additional course of Clinical lectures to be attended; and likewise he recommended that some means should be taken of giving each Clinical student a certain degree of charge over the patient, and responsibility. That last part of the plan we think could hardly be adopted here, on account of the great number of students attending the Clinical lectures. It may answer very well where there are only a few students, from 10 to 20, attending one Clinical teacher, that he may give each of them a charge under him of so many patients; but, when he has 180 students attending a Clinical ward along with him, he cannot give much instruction in that way, and he cannot depend upon knowing the students so well as to be able to give them any such trust.

Having mentioned one of the changes which are in agitation, is there any other you would mention?—There is one change that has been talked of a good deal, which I believe almost all the members of the Faculty would approve of; the subjects of Surgery and Anatomy are taught as one course at present by one Professor: I certainly think myself it were desirable, and I think it is the general opinion of my colleagues, that there should be two separate courses, one of Anatomy only, and one full six months' course, upon the principles and practice of Surgery, given at separate hours.

Would you propose that those courses should be given by the same Professor, or under different Professors?—At present Dr. Monro is Professor of Surgery, as well as Anatomy, by his commission; of course, in order to effect that plan, it would be necessary that he should resign his situation of Professor of Surgery; at least he should resign one or the other. I understand there are a number of subjects in Surgery to which he has paid particular attention, and which he wishes to teach; perhaps the best way, by which that object might be accomplished would be, if another Professor were conjoined with Dr. Monro as Professor of Surgery; it would enable Dr. Monro to give a full course of six months of Anatomy, and, in conjunction with another Professor, to give a full course of Surgery likewise.

Would that be in the nature of Assistant Professor?—Yes, or Joint Professor.

Do you happen to know if Dr. Monro holds his commission subject to any regulation that may be made by the Patrons for the purpose of dividing these subjects of Surgery and Anatomy?—I believe he does, but I am not certain as to that. One advantage from that change would be, that we should have an additional examiner. A Professor of Surgery would come in as an examiner, and then, as we should have several Professors of Surgery as well as of Medicine in the University, it might be, I think, proper that the University should give a degree in Surgery as well as in Medicine, which has not hitherto been done, but which is practised in the University of Glasgow.

Is such a degree given in any other University except Glasgow?—I am not sure.

Will you proceed to mention any other change that you would recommend?—Perhaps additional examiners might be taken from those professors who lecture on medical subjects, but who are not members of the Medical Faculty, as it is called, that is, who are not now empowered to examine. Then there is another improvement I think might be made in regard to the Clinical lectures. The Clinical lectures are given just now by four of the Professors of the Medical Faculty in rotation. The consequence is, that each professor has the charge of the Clinical wards for three months every second year, and the number of students attending is greater than it ought to be, in order that the students may derive the whole advantage they should do from such a course. For several years past, there have been about 180 students and upwards. If the Managers of the Infirmary were to put under their Professors two additional wards, there would be an opportunity for two courses of Clinical lectures going on every winter; and then each Clinical Professor, instead of lecturing every second winter to 180 students, would, upon an average, be lecturing every winter to 90 students, which would be additional labour no doubt, but, for my own part, I would prefer that much, both for my own improvement, and likewise because I am sure the pupils would derive more advantage.

Who are the four Medical Professors that have this duty imposed upon them?—The duty may be taken by any of those who have commissions as Professors of Medicine, or of the Theory and Practice of Medicine; but it is generally taken only by a certain number; at present it is taken by Dr. Home, Professor of the Practice of Medicine, Dr. Duncan, junior, Professor of *Materia Medica*, Dr. Graham, Professor of Botany, and myself.

Supposing other Medical Professors chose to assume the duty, is there any ground upon which it could be prevented?—Any one of what we call the Medical Faculty, as the regulations are at present, is entitled to do it. The power of that rests with the managers of the Infirmary, but the regulation is, that the Professors of Medicine in the University shall have the charge of these two wards, and there are seven professors at present who hold commissions as Professors of Medicine, and any of these, who choose, may take it in rotation, according to the present regulation.

Suppose out of the seven there were six chose to decline doing the duty, what would be the consequence?—It would be entirely done by the one, unless another Professor were appointed for the purpose.

Is it properly a duty attached to any of the Professors?—I do not know whether the Professors could be forced to do it. For many years past, there have always been at least two Professors of the Medical Faculty willing to do the duty. For many years there were not more than two. The late Dr. Gregory and Dr. Francis Home were the only Clinical Professors for a good many years.

Do you not think it would be an improvement if there were some certain rule imposing it as a duty to give Clinical lectures, either by rotation, or attaching it to particular classes in the University?—I have thought it would be proper that it should be attached to certain of the medical professorships only: but perhaps I should not state that, for it might seem to be

University of Edinburgh.

Professor Alison.

23 October 1826.

wishing to appropriate it to the professorship to which I am myself attached. A case may often occur in which a professor is appointed professor of Chemistry, or of Botany, by the Patrons, whom they may not consider a proper person to deliver Clinical lectures; and in that case I should think, that the proper way would be to appoint him professor of Chemistry or Botany, but not of Medicine. At present, the professors of Chemistry and Botany hold commissions as professors, the one of Chemistry and Medicine, and the other of Botany and Medicine. And if at any time the Patrons wish to appoint a person professor of Chemistry on account of his known proficiency in that science, without wishing to give him the charge of Clinical wards, they might do so by making him professor of Chemistry, and not of Medicine; in which case, as I understand, by the regulations of the Infirmary, he would not be entitled to give the Clinical lectures.

Might not a person be appointed professor of *Materia Medica* who had very little medical experience?—The business of the professor of Materia Medica has been understood here always, I believe, as well as elsewhere, to imply the teaching of the application of Medicines, as well as the preparation of them; and therefore I presume the Patrons will always think it their duty to appoint a man there, who is a practical physician, and who is understood to be conversant with the practice of Medicine.

Are there any other observations which you would wish to make?—There is the subject of Clinical Surgery in regard to which, there was a good deal of discussion the last time the regulations were considered. That is a class which is taught here in the hospital, and which is no doubt a very useful one, and which might be useful to almost all our graduates. There were two objections which have been strongly urged against making that class imperative on the graduates; the one is, that we have no security for the professor of Clinical Surgery being necessarily attached to the hospital; and therefore we have no security for his possessing any means of teaching the classes in point of fact. The present professor of Clinical Surgery is, by special appointment of the managers, a consulting surgeon at the Infirmary. But unless there were some understanding with the Managers that the professor of Clinical Surgery should always be either attending or consulting surgeon, I fear we could not properly make it imperative on our students. Then there is another fact I would mention in regard to Clinical Surgery: I think that it would be hard to impose that on many of our candidates for graduation who come from London or Dublin, or other established schools of surgery, and who have studied it there, and do not attend Edinburgh with that view; and, therefore, if that class were to be made imperative, I would except from the operation of that law all who have taken the degree of Surgeon in London or in Dublin, or elsewhere, where the degree of Surgeon is given, without that course being made imperative.

Would you wish to recommend any further alterations or improvements?—There is one other subject that is of considerable difficulty in regard to the regulations of the medical school, on which there was a good deal of difference of opinion in the Senatus Academicus, and which was the cause of the unfortunate delay which took place in regard to forming the last regulations; that is, the degree of allowance which ought to be made in this University for medical studies in schools which are not Universities; it was thought we could not impose an additional year of study on our candidates, without making some allowance for studies there, particularly in London, where we know a great deal of useful medical instruction is received. But a great difficulty was felt by many of the members of the University in regard to receiving the certificates of attendance upon lectures of men who are not members of Universities, and who, in general, are in fact self-appointed lecturers. The way that was arranged ultimately was, that we allowed six months of a year of attendance on hospitals, though unconnected with the University, independent of three years' University studies, to reckon as equivalent to an additional session of University study. But I do not think that arrangement is altogether satisfactory; for if a student who has been three winters here means to take his fourth winter in London, which he may do according to the present regulation for the degree, he is allowed to reckon that winter in London as one of study, qualifying him for the degree, although he attends an hospital only; whereas, if he studies here, he is obliged to attend two medical classes besides the hospital, to constitute a year of study. Besides that, we know that the course of study we absolutely require by our Statuta is not so great as what almost all the students take; in fact, they find it necessary to attend some of the classes twice, and I think it ought to be enforced by the Statuta, that a part of the medical classes should be attended twice; but we do not think that we can with propriety do that, as long as we admit only attendance upon Universities, because it might be said to be stretching our own monopoly too much. Now, it appears to me it would be not only an improvement upon our course, to require three, at least, of the medical classes to be attended twice, but to allow the additional or second attendance to be taken either in the University, or upon established lectures out of the University, either here or in London; and, if that were done, I think the studies for the degree would have the appearance to the world of being more complete than they are just now; I should mention that that is my own opinion, but I cannot say it is the opinion of the whole of the Medical Faculty.

Do they think certificates should be confined to University education?—They think certificates of attendance upon lectures should not be received, if they are not connected with the University, though they do take certificates of attendance upon an hospital.

Have they always taken certificates of attendance upon an hospital?—Not until now, by our new regulations. Until these regulations were made, studies in London did not reckon at all as qualifying for a degree; now they are allowed to reckon for the additional year which has been imposed.

Would it not answer to make the student in London who attends an hospital bring certificates of his having attended lectures there?—That is what was my own idea, and what

University of Edinburgh.

Professor Alison.

23 October 1826.

was the opinion of several members of the Senatus, but the majority of the Senatus were averse to receiving certificates of lectures out of the University.

Was it a majority of the Senatus who were against that alteration, and not a majority of the Medical Faculty?—I cannot say exactly; some of the members of the Faculty at one time had an opinion, which they afterwards changed; there was a good deal of difficulty and doubt felt by many members of the Senatus Academicus on that point.

But was the majority of the Senatus Academicus clearly against it?—Yes.

Would you propose that you should receive certificates of attendance upon any lectures that were merely described as being medical?—There would be a considerable difficulty in fixing what lectures should be taken. The proposal before the Senatus Academicus at that time, which I thought would have answered, was, that we should take certificates of attendance upon lectures of all who are members of the College of Physicians or Surgeons in any of the particular towns, London, or Edinburgh, or Glasgow.

By the term Members, do you mean those who are Fellows?—Yes, Fellows of the Colleges; it were desirable that we should be able to limit such lecturers as we should take; but at the same time it is to be considered that any attendance of that kind, if an addition only of a three months' course, is more than we require by our present regulations; at the same time it is not more than what our better students are in the habit of doing.

Do you wish to state any thing in addition to this branch of your observations?—There is one other improvement which I think may be made, not in regard to graduations, but in the way of examinations. It has been proposed sometimes to teach some parts of the medical classes in the way of examination, and some of the professors have been in the habit of examining; but as far as I can judge, and from any thing I can understand, I do not think we can undertake to teach medicine to any extent by examination. But I think it would be an improvement to give notice to the students at the beginning of a session that such of them as wished to have particular certificates of their attendance upon the subjects of lectures and proficiency in their studies, should submit themselves to examinations at stated periods during the course, and every professor should be entitled to give certificates at the end of the course according as the students answer at those examinations; at present we have no means, as we have no such examination, of certifying of any man that he has attended carefully, and that he has studied faithfully and diligently, which otherwise we might, by these examinations, certify at the end of a course. By giving certificates upon this plan, we should secure a greater degree of attention on the part of the students, particularly in the earlier part of their studies, whereas at present we have no means of securing that object.

Would you say that you have no means of ensuring regularity of attendance?—There are no means employed just now, further than that there is a general regulation that all medical students shall insert their names at the beginning of every month in the Album in the library; and no man can have a certificate of having been a student who has not so enrolled his name.

Must the name be inscribed by his own hand, or may it be done by another?—In his own hand.

Might not that be done by a person living at Perth coming once a month to Edinburgh, and writing his name in the book?—I do not think many people would come once a month in that way. In fact, since that regulation was made, I know that several persons in practice in the country, in Scotland or in England, have written or come here asking for indulgence in regard to that; but, as the request was not granted, they have renounced their intention of taking the degree.

Was there any particular reason for requiring this?—Yes; that was required chiefly because we understood there were complaints made in London, of persons who were engaged in practice there, having come down at the beginning of a session and taken tickets, and immediately gone back to London, going on with their practice, and, after that, been examined and received their degrees here.

Was it not understood that the same thing was done by medical men residing in Scotland, at such a distance as Dumfries?—I do not know of any instance of that kind. I know of instances from London. We had a letter from Sir Henry Halford; and, to ensure that every man who graduated should have been *bonâ fide* a student, we made that regulation; but the certificate which is given upon seeing these signatures in the Album at the stated period, is the only certificate that is given at present.

Will you inform the Commissioners whether a declaration of regular attendance would not be as satisfactory as a declaration of age, which is at present accepted for candidates?—Perhaps it might. I never heard that proposal made before.

Would you wish to continue your observations upon the subject of improvement?—As to examinations for certificates, I think by means of them there would be a greater number of students who would be known to professors as to their proficiency when they came before them as candidates for their degree. I think these are all the improvements that have occurred to me as necessary to be made.

What proportion does the number of candidates who are rejected bear to those who receive the degree of Doctor of Medicine?—It is various. I am not sure that I can tell exactly. There are different modes by which their rejection takes place. It is a common practice, when we are not satisfied with the examination of a man for the first time, to tell him so, but that if it is of great importance to him to graduate this year, we will receive him for examination again some weeks afterwards. Some come forward in that way, and others decline. These may be considered as rejected; if we take in them, the proportion of rejections may sometimes be one-tenth.

What number of hours may be occupied in examinations for degrees?—The private

University of Edinburgh.

Professor Alison.

23 October 1826.

examination, which is the only one that is really strict, is from an hour and a half, to two hours; and in many instances it is prolonged by adjournment for the same length of time to some weeks afterwards.

Is the examination all in Latin?—The examination is all in Latin. There is a permission given, by an understanding lately between the Senatus in general and the Medical Faculty, that the Faculty shall have the liberty to question in English when they think it necessary, to ascertain the proficiency of a person in some branch of a subject; it being fully understood that it is the duty of the Faculty to ascertain his proficiency in Latin in their examinations, as well as in Medicine.

Are there any means of ascertaining any literary qualifications at present in candidates for Medical degrees, other than by some knowledge of Latin which may be collected in that way?—There are no further means than what are employed in his passing an examination, which is, for the most part, always in Latin, and by his writing a Thesis, which is declared to be his own writing, and is examined by the professor as the first part of his examination.

Is it your opinion, and also the opinion of the Faculty of Medicine, that no literary qualification should be required before taking a degree, other than the knowledge of Latin and a little French, which you said you would suggest?—I think I would require a knowledge of French, Latin, and Mathematics. I do not say that I would go farther than that.

Do the Medical Faculty consider graduation in Medicine to be a graduation in a learned profession in the University of Edinburgh?—Surely.

Would you not require, then, any other qualification to entitle a person to a degree in the learned profession of Medicine than a knowledge of Latin, French, and Mathematics?—None, except those branches of science which are implied in the Curriculum.

Would you require no knowledge of Greek?—No. I cannot conceive that a knowledge of Greek can be of great importance to a medical man; I am very confident that not one medical man in five hundred reads Greek. If we were to require a knowledge of languages, I would say that a knowledge of German is of more importance than Greek, in the present state of the science. There are very good medical books in Greek, and there are very good medical books in Arabic; but the substance of them is in many other books, and those medical men who consult them, almost always do so by the Latin translations.

Are not many of the medical terms Greek words?—Many of them are Greek words, but a great proportion of them are diverted from their original meaning in Greek, and therefore their derivation is of no importance. We should rather deceive ourselves than derive any benefit from a knowledge of their precise meaning in that language; for instance, the word Asphyxia is a Greek word, and it is one which is in common use in medical language at this day; in Greek it signifies the loss or stoppage of pulse, but in the medical language in this country, in France, and Germany, it is always understood to mean the stoppage of respiration; death by Asphyxia is death by suspension of breathing, and, when death takes place by suspension of the pulse, we call it death by Syncope.

May not this misapplication of the term have arisen from ignorance of the original language?—It is possible; but every medical man knows what is meant by death by Asphyxia. I recollect an observation of Mr. Dugald Stewart's with regard to scientific terms in general, that he thinks it a very fortunate thing when a scientific term has lost its pedigree, for otherwise one is apt to be misled in the use of the term by the original derivation of it.

Will you have the goodness to inform the Commissioners how those examinations to which you have alluded are conducted, and the average length of time that each professor examines the student upon the different subjects that are embraced in that examination?—The examination is always commenced by the professor in whose house it is; he examines generally above half an hour or three quarters of an hour, which is the longest examination.

Is it solely upon his own subjects?—No; the first part of his examination is upon anatomical and physiological subjects, and, after that, the professor goes to his own subjects. The professor of Chemistry, for instance, after some general anatomical and physiological questions, goes on to chemical questions.

Do you consider that you gain a tolerably accurate notion of the candidate's proficiency in those branches of knowledge which he has been studying by those examinations?—In some cases it is very difficult to judge, and we are obliged to take more time than in others, and even to prolong the examination to a subsequent day; but in many cases I have no doubt that we inform ourselves very accurately as to his proficiency, so far as it can be ascertained in the way of examination.

Did that permission, which you say exists from the Senatus, to examine in English, arise from a sort of impression that, by a strict examination in English, you could more accurately ascertain the progress of the students?—Yes; it was thought, upon some branches of the subject, it was often very difficult to be certain of the student's proficiency by a Latin examination only, for, when a man hesitates, it is difficult to say if it is owing to his want of knowledge of the language, or want of a knowledge upon the subject, or occasionally to misapprehension.

But, for the purpose of ascertaining the candidate's knowledge of Latin, is it your opinion, that, with a view to ascertain his attainments in medical science, and in the subjects on which he is examined, it would be better to examine him in Latin or English?—I think decidedly it would be better to examine him in English upon most medical subjects. There are some of the most standard books which are in Latin and with which every medical man should be well acquainted, and be accustomed to read them.

Supposing some short examination were first to take place in Latin, for the purpose of ascertaining whether he has paid adequate attention to the language as a means of attaining medical knowledge, and as a branch of liberal education, might it not be preferable to conduct the main part of the examination in English?—I rather think myself it might; but there was

University of Edinburgh.

Professor Alison.

23 October 1826.

great objection made at the time the last alteration was made, in the Senatus, and out of the Senatus, to doing away with Latin examinations; it was thought it would lower the character of the degree in the country, and it was thought by the Senatus that the best way would be to give a discretionary power to the Medical Faculty to examine in English when they thought it necessary, but to require positively that they should examine in private as to the student's having a sufficient knowledge of Latin, as well as Medicine.

How are examinations conducted at Paris?—I believe they are conducted in French entirely. There was a regulation some time ago, and there were two out of the five examinations to be in Latin, the remainder in French; but, if I am not mistaken, (and I made some inquiry about it at Paris last year,) they are all in French now.

Supposing any measure were introduced, such as you have proposed—that there were to be two examinations, one more elementary than the other, with a view to secure higher attainments in the more difficult branches of science, might it not be an improvement that the former should be in Latin and the latter in English?—For the most part.

How are the Theses at Paris written, in French or Latin?—French.

Is it your opinion, that by enabling a young man entering upon his profession to treat a scientific subject in a language which is likely to obtain general circulation, there are more opportunities of distinction, and greater incentives to study than when the Theses are confined to Latin?—I do not think that there would be much difference in that respect, for the great majority of Theses cannot be expected to contain any thing worthy of being published. Those who do (as now and then it happens) write Theses upon subjects, to which they have paid particular attention, and which are really worthy of being published, have always opportunities of publishing the substance of them in some of the journals or collections of medical works. A work is now published, containing an account of the Transactions of the Medico-Chirurgical Society here. I am Secretary to that society; I have read in the society, and got inserted into their Transactions, the substance of several Theses of men who had been in practice in the army and navy, and made observations that seemed to be worthy to be made known.

With regard to Theses, is it not a matter of fact that a great proportion of them are not written by the candidates for degrees?—I suspect it is in regard to some of them. I believe at present there are very few candidates who do not write their Theses in English in the first instance, but many of them receive great assistance in putting them into Latin.

Would it not be a better test of his knowledge to examine upon some classical author, than to require these Theses which he so seldom writes in Latin?—I think, if we carry on a great part of the examination in Latin, it is as good a test of his knowledge in Latin as examining him upon an author.

As you have proposed a different allotment of some of the medical subjects at present treated of by one professor, and a division of Surgery from Anatomy, would it be part of that proposal that the subject of surgery should be taught by a practising Surgeon?—Certainly, or at least that it should be taught in part by a practising surgeon.

Would you not separate it entirely from Anatomy?—What appears to me is, as Dr. Monro has been in the habit of teaching surgery, and has been giving seventy lectures upon surgery in a year, and as he has his commission for teaching surgery, the better arrangement would be that he should continue to teach, but that there should be a joint professor, who should also teach probably the more practical part, such as the operations; but there should be a separate hour for teaching surgery, and there should be a complete course of it, for six months.

Would you propose that that course should be given by a practising surgeon?—In part.

If Dr. Monro had not this commission, would you not think it would be an improvement in the University that there should be a practical surgeon who should give a complete course of Surgery, and a professor of Anatomy totally apart from that?—I think it would certainly; but at the same time there is a considerable part of surgery which is altogether independent of the operative part of it, which can be taught very well by a person who is not in the habit of practising operations. In Paris, the subject of surgery is divided into what is called the Pathologic Extreme, and the Medicine Operative, which is just the division of the operative from the scientific part of surgery, and which does not require manual operation, so that I do not think there will be any injury from the circumstance of having two professors teaching surgery, one of whom is not employed in the practice of operations. There are many consulting surgeons who do not practise operations; for example, the late Dr. Monro was continually in the habit of being consulted in all surgical cases of difficulty requiring operations, as a consulting surgeon, though he never operated, and the same is the case with many great surgeons, particularly when they become advanced in life.

Is there any other change you would recommend in the distribution of the different subjects of medical instruction among professors in the College?—No other has occurred to me than what I have mentioned.

You mentioned you had made inquiries in Paris in regard to the subject of medical instruction there; will you have the goodness to state, if, generally speaking, their system of instruction is analogous to that which obtains in this University?—In a good many respects it is; they have several advantages in Paris, but I think they are not in the mode of teaching, but from adventitious circumstances; their hospitals are more extensive; their opportunities of Practical Anatomy are greater; they have a system of arranging and classifying diseases in a way which is not done in any hospital in this country, which gives a great facility to the study of disease:—For example, there is one hospital, in which there will be found hardly any but diseases of the chest and lungs; and another, in which we find all diseases of the head; and in another there is all diseases of the skin; there is another in which they have all the diseases of children. A man, by attending at one of these hospitals, acquires a greater experience in regard to one class of diseases than he can do anywhere here; but I would say,

247

University of Edinburgh.

Professor Alison.

23 October 1826.

in general, that I think the advantages which the French School of Medicine presents, are such, that a man can much better avail himself of them, after having studied the profession to a considerable extent previously, than by going there as a mere student. Most men who derive much benefit from it are those who are far advanced in their studies before they go, or those who have already graduated, and who go there to inform themselves farther upon points on which they had difficulty, or upon which they have not had sufficient experience.

Would you say, upon the whole, that instruction in Surgery is more combined with the study of Medicine in the University of Edinburgh than it is generally in the school in Paris, or is there a greater separation, in short, in France, between Surgery and Medicine, than in this country?—I would rather say the studies are united there more than they are in London greatly, and perhaps more than by our students.

Does the College of Physicians in London allow any person who practises midwifery to bear the degree of Doctor of Medicine?—No, I believe they have a separate set of men who are permitted to practise the midwifery department only.

Would you say Medicine and Surgery are more united in Paris than in this University?—Yes; a much longer course of surgical study is required of students in Paris than here; in fact, the education is the same for medicine and surgery, the difference is only in the examination. I am not quite certain of that, but, if there is any difference, it is very small.

Do you understand that that is the case in most of the foreign Universities?—I believe it is.

Is that a change you would wish to see introduced into this University?—I think certainly every man who is to practise as a physician ought to have a full knowledge of surgery likewise, and that is one reason why I think a full course of Surgery here would be an improvement, and also I would say a course of Clinical Surgery, probably not requiring a six months' course, but a three months' course, provided the difficulties I have stated as to that class could be removed.

Would it be part of your proposal to make the class of Surgery, the establishment of which you are recommending, imperative as part of the Medical Curriculum?—Certainly. Surgery is required of them already, but it is only taken along with Anatomy; it is taught along with Anatomy here, and at Dublin.

Do you know if it is separated at Glasgow?—Yes, it is separated at Glasgow.

Upon the subject of the preliminary University education of Medical Graduates, have you occasion to know what was the opinion of your uncle Dr. Gregory?—I cannot say exactly; I do not at present remember having conversed with him upon that subject. He was certainly very fond of classical acquirements; I would say he was more attached to them than most men of the present day are, but, in regard to the practical usefulness of any very extended course of literary or scientific instruction to medical men, I think he entertained very little opinion of it.

Had he made any proposal in his time to enforce such a course of preliminary education?—No.

As there have been at various times in the profession of Medicine men of the highest possible classical and scientific attainments, are you aware that many of them have recommended a general course of preliminary education as necessary for the medical degree?—Men of very high attainments have stated it to be very desirable that all physicians should have a full previous course of study, and that they should be very well informed upon such subjects; but I think the generality of these have not adverted to the consequences that would result from making that imperative upon all who are to take the medical degree.

Was it the general result of your observations, which you stated some time ago, that rendering the attainment of the medical degree a matter of greater difficulty would lead a greater number to practise upon the diploma of a Surgeon?—If the difficulty were much increased, a larger proportion would practise on that degree, or on that of an apothecary only (which is very much the case in the country in England). It would tend to increase that, and fail of its object in raising the character of the medical profession throughout the country.

You stated you thought there would be considerable difficulty in introducing a system of examination in the medical classes; will you state what these difficulties are in your opinion?—I think the classes are much too large for examination to be conducted with much effect. In the first place, the professors can hardly be expected to have time (for length of time would be necessary) for examining to any purpose so large a class as 250, so as to acquire a knowledge of their proficiency. In regard to several of the medical classes, it is to be considered (of those who have most connexion with the practice of medicine) that in order that the professors may speak with decision, and likewise that they may speak with authority, and that what they speak may have due weight, it is necessary they should themselves be engaged in practice more or less at the time, and be well conversant with the subject; that being the case, a certain degree of economizing of their time is quite necessary; and, besides, a great part of the students have several classes in the University and out of the University at the same time, which they are attending; if there were some two hundred students collected to be examined by the professor, he could not get over a thorough examination, in the course of an hour, of more than 10 or 15 of those students; the remaining 180 or 190 would very soon be tired of it; they would be acquiring but little information, beyond what was previously gained by the lectures, and I am pretty well satisfied they would not go into it with any spirit. In fact, the examinations by Dr. Home and Dr. Monro in their classes are attended but by a small number of the students. I may mention further, that Dr. Duncan, junior, and Dr. Graham had both the intention of teaching particularly Clinical Medicine, by examination, and both of them were dissuaded by the students, who stated they were quite sure they would get much more information by lecture than by examination, for that, by that mode of teaching, so much time was lost.

With reference to the age at which medical degrees are conferred at this University, is 21

University of Edinburgh.

Professor Alison.

23 October 1826.

the age in the other Universities?—I am not sure as to the other Universities; 22 is the age required by the College of Surgeons in London.

Do you know what the regulations are as to age in Paris?—I looked over the regulations in Paris, and I could not see any with regard to age.

You mentioned that one disadvantage which you thought would result from some of the changes you had been adverting to, was, that the same number of medical graduates would not be sent out from this University to the world as is the case at present; do you think that there is any great advantage resulting to the study of medicine from the Edinburgh degree being conferred after one year's attendance at this University, while the rest of the education is followed out at other schools of medicine?—There are certainly advantages in different respects, which people may derive from attending their course of studies in different schools; and I do not think we should throw obstacles in the way of that: we should acquire a character of illiberality if we were to do so. It is only by one of the last regulations, that one year here is required: it was formerly stated that it was understood and expected men would take one year here, but it was not absolutely required, and latterly it became a practice, which was rather increasing, for men to come here from Dublin who had attended all their time there, and who came here merely to graduate; and, as we had no means of knowing the character of these men, we thought some abuse might be practised in that way, for men might come who had been rejected there, and it seemed desirable to know a little more of their character; that regulation was therefore made absolute, whereas it had formerly been only understood that graduates should have one year here.

How would you apply that system of having two different sets of examinations to those who only attend one year?—In this way: it should be generally understood there would be two examinations; but at the same time we would let those, who consider themselves qualified at once to go through both trials, give in their names for both trials the same year, and we could make some weeks of interval between them, and in that way we would not compel more attendance than the single session.

Can you state what proportion of the Irish graduates have gone through their medical education at Dublin?—There is a table which is given in, which shows that, as far as I can make it out.

Of the Irish medical students, not of the graduates, what number of them have gone through a part of medical education at other Universities, Dublin or elsewhere?—I have no means of knowing that; as Dean of the Faculty I take only those who come forward for graduation.

You have stated your views in regard to the addition of one class to the Medical Curriculum; will you have the goodness to state your views in regard to the class of Medical Jurisprudence?—I have thought, and still think, that the class of Medical Jurisprudence might be made imperative on all candidates for graduation; but there was a good deal of objection made to that in the Senatus, and the class has never been fully attended by medical students; it was thought better to put it on the footing which was done in the last Statuta; it is put among the other courses that are recommended to medical students, and of which they are compelled to take two, but no one of which is made imperative; the reason is, that there are some of the students to whom one class is of more advantage than others, and to whom it is more necessary than others, in consequence of their previous education.

Is there a course of Medical Jurisprudence in the University of Paris?—Yes, which is imperative in all the Continental schools, so far as I know, where a course is imperative at all; but there are some schools on the Continent where there is no imperative rule, but where the degree is given only upon examination.

For some years the attendance of students upon the class of Medical Jurisprudence has not exceeded five or six, and in no one year, according to the return, has it been above thirty-six; do you consider that this fact is a satisfactory test by which to judge of the propriety of adding it to the Medical Curriculum?—I do not know that it is, but still it was strongly urged at the time upon the Senatus, that it would have an ungracious appearance to make a class imperative, which, though it had been taught for a considerable length of time, had never become generally attended; that if it had been of so great importance as to make it imperative, the tudents would have been more in the habit of attending it than they had been.

Do you consider it a valuable addition to the system of Academical discipline?—I think so; I may not be a competent judge, perhaps.

As to the class of Natural History, have you any thing to suggest as to the propriety of adding it to the Medical Curriculum or the Medical Faculty?—As to the Medical Faculty, I think there would be no objection to extending the meaning of the term Faculty so as to include classes not made imperative on students; but there is a Report in the Appendix before the Commissioners, which will express the opinion of the Faculty in regard to that change. But, as to making Natural History imperative on the medical graduates, I do think that the subject is too extensive, and that a great part of it is too much a matter of general science, and too much removed from the practice of medicine, to be important, and that an examination upon Natural History would be very formidable to medical students; and the knowledge that they were to be examined on so general a subject as that, might have the effect of diverting their minds from more important branches of study, on which they ought to prepare themselves for examination for degrees.

Is not a knowledge of the distinctive characters of minerals of considerable consequence, before attending the class of *Materia Medica*?—I think all the knowledge which is really necessary for a medical man, in regard to the characters of minerals, may be taught in the class of Materia Medica and of Chemistry.

Is the Professor of Materia Medica in the habit of exhibiting specimens?—The present Professor is.

244

University of Edinburgh.

Professor Alison.

23 October 1826.

Does he likewise exhibit specimens of other minerals that resemble those which are used in the practice of medicine?—I should think he does, but I cannot say with certainty. As to Natural History, there is one suggestion I made to my colleagues, which I may mention here, namely, that, as that department of it, which seems most important and most connected with medicine, is that of Zoology and Comparative Anatomy, it would be well if there were a separate course, suppose for three months, given by the Professor of Natural History upon those subjects. I would not say that I would consider it important to make it absolutely imperative upon medical students to attend that course; but I think the lecturer on those subjects might be added to the examiners, as those are subjects so intimately connected, particularly with Physiology.

Have you any observations to offer with regard to the study of Military Surgery?—As far as I recollect, the professor of Military Surgery did not propose that his class should be made imperative upon all candidates; I think it is now upon the footing it ought to be—that it is one of those classes which are recommended, of which two must be taken; and of course a man going into the army will take that, in preference to others, which may be of more use to a civil practitioner, or he might take Military Surgery in preference to Natural History, which another man, who wished to be considered a man of general science, might prefer.

Suppose a separate Professorship of Surgery were established, such as you have recommended, would you in that case consider the objects of the class of Military Surgery as absorbed in the more general class?—I do not think that I am qualified to speak exactly on that point, and think still that although there were a complete course of surgery, yet, to men going into the army or the navy service, a separate course of lectures would be useful.

In that case, would you leave it upon the footing it now stands?—I think so.

What are the regulations at present in observance in the army and the navy in regard to medical education?—I cannot state them just now, but I have the regulations, and can produce them if it is wished; but the course of study required is very full in the army and the navy, but it is not required that it should be received in a University; at the same time there is always a preference given to men who have the degree of M.D. from the University.

Is the Anatomical Museum in the College of Edinburgh put on a different footing now from what it has been?—It is not exactly put on that footing yet, but preparations are going on, and it will be in the course of the session.

Has it been understood that the previous state of that Museum has been a drawback to the interests of the medical school at Edinburgh?—I think it would have been an advantage to the medical schools if it had been more open to all the students than it is now.

When any collection of preparations is introduced by a professor, belonging to himself, into the College buildings, and made use of for the purpose of instruction in his class, is there any regulation of the Senatus or of the Patrons, by which the extent of that collection, with reference to the public collection, is ascertained, so as to prevent confusion?—Yes, there is a regulation as to the arrangement which has been made lately between the Patrons and the Senatus Academicus in regard to the Museum.

Was there any regulation previously?—Previously there was no regulation in regard to it by the Senatus Academicus; there is a regulation now, that all preparations which are the private property of Dr. Monro should be marked separately, but the whole of them are to be exhibited openly to the public.

Has the College of Surgeons been forming a considerable Museum of late?—Yes.

Have the members of the University and the students access to it?—The professors have permission given to them, but the students of the University have not, of course, without paying—if they pay, I suppose, they will; and those professors of the University who are members of the College of Surgeons, Mr. Russell and Dr. Ballingall, will have permission to introduce their students to the Museum.

Is your Museum to be open hereafter to all medical students?—Yes, but not without payment. The regulation is upon payment of seven shillings annually, but it is to be made imperative that those who come for graduation are to pay one guinea, which, if they pay at first, they are to receive a ticket for the whole of their attendance, and all other students are to be admitted on payment of seven shillings a session.

Are there a great many lecturers in Edinburgh in connexion with the College of Surgeons?—The regulation of the College of Surgeons is to take the lectures of any Fellow of the College of Physicians, or of the College of Surgeons, as equivalent to lectures in the University upon the same subject, provided they are of the same length.

Can you state if there are any, and what number of lecturers upon the Theory and Practice of Physic in Edinburgh, besides the professors in the University?—I think there are two lecturers upon the Institutes of the Theory of Medicine, and there are two, I think, upon the Practice. I do not remember at this moment if there are more.

Is there any principle of co-operation between the University and the College of Surgeons as to the system of instruction, or are your regulations formed after any previous communication?—No, there is no official communication; there are often private conversations.

Is the degree which you have mentioned (the high degree of Doctor of Medicine and Philosophy) in present use, in any part of your profession?—I have understood it is, but I do not know myself. I believe I understood from Dr. Duncan that there was such a degree given now in Germany.

Are there any suggestions you have to offer as to the mode of teaching the Literary classes?—There is one change that has occurred to me in regard to the Literary classes, namely, that it would be desirable, if the session were made longer than it is, as there are so great a number of young students who might be employed during the vacation, as well as during the session of the College, which is only six months. It would be desirable that there were a summer course of three months, as well as a six months' winter course.

University of Edinburgh.

Professor Alison.

23 October 1826.

Is there any other distribution of the Philosophical courses that you would propose different from that which exists?—No, I have not thought of that subject.

Would you wish to prescribe any order for attendance upon the Philosophical classes?—I think it would be right to prescribe an order, with a view to the degree in Arts.

Will you have the goodness to state the order in which you would wish to see those Philosophical classes taken?—I have not attended particularly to that subject, but I should think, of course, that the Latin and Greek classes should be first, then the Mathematics, and perhaps the Natural Philosophy and Logic in the same year.

Would you propose that Moral Philosophy should be last?—Moral Philosophy, perhaps, should be the last. If there were a second degree, or a higher degree in Arts given, or two degrees, one a Bachelor of Arts and the other a Master, I think it might be a subject of consideration whether an additional course of study should be required for the higher degree, or whether it should be only given by additional examinations, making the examinations much more strict. There is one consequence that would result from making the examinations very strict for the degree of Arts, that there would arise in the neighbourhood of the University a set of men similar to what there are for the medical degrees—men who teach privately with a view to these examinations; probably they might be men who had already taken the degree of Master of Arts, and going to the Church, or to qualify themselves for professorships; and no doubt there might be very respectable men who would employ themselves in that way for some time, and act much in the same way as tutors in English Colleges. For those who are aiming at a higher degree in Arts, there would be a system of instruction established in a way that would be similar to what is carried on in the English Colleges, and in Trinity College, Dublin.

Would it be a useful auxiliary of public instruction in the University?—I think so.

Would not that interfere with the attendance upon public lectures?—Attendance upon public lectures should be required too. There is certainly a great deal of instruction given to medical students here just now, by men who have small classes—eight or ten only, and who instruct them upon subjects upon which they are expected to be examined for the degree. There are some very respectable men who devote themselves to that kind of instruction.

Is that not found to interfere with the attendance upon the classes prescribed for the degrees?—It may to a certain degree, but not materially or detrimentally. I believe the same students who distinguish themselves with us, distinguish themselves as private pupils of these men.

How long do they attend these private teachers?—Perhaps three months; some of them longer.

Is that before taking a degree?—They often attend three months of the winter before they go to graduation.

With regard to the junior classes of Greek and Latin, is there any alteration or improvement that you would wish to suggest?—There are considerable alterations that have taken place since I attended them, and of course which I do not actually understand. No further suggestion has occurred to me which regards them, than that the course should be longer than it is.

Would you wish that the system of teaching the Elements of Greek in the University should be abandoned?—I have heard it suggested that it would be desirable that neither Latin nor Greek should be taught in the University, except to the advanced students, and I think it might be so.

Would you think it an improvement in the system of University education in Edinburgh, if any general Prizes were given for essays open to the competition of the whole students in the University, which might be awarded in a more public manner than class prizes?—I have no doubt it would in the classes of Arts. I should be a little doubtful, if much good would be done by prizes in the medical school, for there is no want of zeal in the medical students. They all know they are working for a profession, and the subject has more interest than many subjects taught in the University, but there is rather a tendency in many of them to dwell longer upon, and pay more attention to, particular branches of the subject, than they can derive any practical advantage from, and neglect the more practical branches, in which they have not the same opportunities of distinguishing themselves by showing their knowledge. It would not be easy to institute prizes that would not have that tendency. I have thought that if Prizes were to be given at all in the medical classes, they should be given out at the end of a session, so as not to interfere with their time, and that thus something would be given them to do in the vacation, on which they might be examined at the commencement of the next session.

In Literary classes, would you approve of Prizes being given, the competition for which should be open to the whole University?—Yes; there should be some opportunity for the young men to distinguish themselves more in the eye of their fellow-students and the public, than they have at present.

Was it consistent with your experience, when you were a student in these classes, that there was very considerable inattention and want of emulation on the part of young men coming from school to these classes?—I would not say there was great inattention, but I think there was not so much emulation or industry, as there might have been among persons of that time of life, if there had been more done in that way.

Would it be necessary, if the system were abandoned of teaching boys the elements of the two learned languages in the University here, that some means should be devised of prolonging their stay for a year, or for two years, as it might be, at school?—One regulation should be accompanied with another; either that, or perhaps there should be an examination instituted at the commencement of the studies of a young man who proposed to be a candidate for the degree of Arts, which should ensure that he had a tolerable knowledge of the learned languages before.

University of Edinburgh.

Professor Alison.

23 October 1826.

Do you think, that with such an examination, it would be safe to abandon the teaching of the elementary branches in the University, without a positive provision for their previous acquirement?—Perhaps a positive provision would be the best plan. I have not attended to it particularly.

At what age do young gentlemen come to the University to learn Latin and Greek?—The first class of Greek and Latin generally used to be attended at the age of 14.

Do they come younger than formerly, or are they rather older now?—I have understood they come rather older; there are not so many young ones, but I have known several. Upon an average, they are rather older than they were 10 or 15 years ago.

Do you know how examinations in some of the medical classes in Glasgow have answered?—No, I do not.

Are their classes much smaller than in this University?—Some of the classes are large. The Anatomical class is very well attended, I am told. I understood from some of the Professors at Glasgow, that what they thought a great improvement was the compelling of attendance upon some of their classes repeatedly, which we are against doing here.

Edinburgh, Tuesday, 24th October 1826.

The EARL of ROSEBERY in the Chair.

Dr. *William Pulteney Alison* called in and further examined.

[*The Witness produced a copy of the Regulations of the Army Medical Board in* 1824.]

Professor Alison.

24 October 1826.

Can Dr. Alison inform the Commissioners if there is a greater number of lectures upon Anatomy now than formerly?—Certainly.

Do you know if a number of the students also dissect privately?—I should think very few of them by themselves.

Do not a number of them join for that purpose?—They attend the private dissecting rooms of private lecturers.

How many private lecturers are there at present upon Anatomy?—I think there are five.

With reference to some observations which you were making yesterday, will you have the goodness to inform the Commissioners at what age the medical students commence their medical studies?—It is very various; it is according to the way in which they are educated: those who begin by apprenticeship often commence at 15 or 16 years of age; those who do not serve an apprenticeship begin, I would say, from 17 to 19 in general. I think so, but I am not positive.

In regard to the circumstances of students who have not served an apprenticeship, can you state if they are very straitened generally?—Some of them are.

Can you afford the Commissioners any ground for drawing a comparison between them and the students of Divinity in that respect?—I think their circumstances in general are not so much straitened as those of students of Divinity.

As the Church has prescribed a previous course of study in literature and philosophy to students of Divinity, might it not from thence be inferred, that the same course might be prescribed also to students, whose circumstances are at least not more straitened, and who seem to commence their medical studies about the period when students of Divinity enter the Divinity Hall?—In regard to those who have not served apprenticeships, I do not think that the objection to such previous education is so much upon the score of expense as the other circumstances which I endeavoured to state yesterday.

Supposing considerations should lead to the adoption of any rule enforcing some previous education in literature and philosophy, do you think that the ground of expense would be a serious objection?—It might be a serious objection to part of the students, but I think not very generally. I have no doubt a part of the graduates will be cut off by the new regulation imposing the additional year of study; some of the poorer Irish and Scotch graduates will certainly be cut off by that, but we do not think that to be any serious loss upon the whole, for we are sure the value of the degree, in the estimation of the public, will be increased by that change.

With reference to the previous employment of the time of those students who do not serve an apprenticeship, does it not appear, either that some examination, before they enter upon their medical studies, or some other regulation of that sort, would ensure stricter attention to the cultivation of the branches of literature and philosophy during the earlier years of their life?—The great difficulty lies in the great variety of previous circumstances and opportunities of those stndents, who come from so many different parts of the world.

As to the Scotch students, might not such a regulation lead to the improvement of many of the schools throughout the different parts of the country, supposing the students could not obtain their education at the Universities?—Yes; such a regulation as an examination before they begin their studies.

Do you think it would ensure necessary attention being paid to those branches of study?—It would certainly have some effect in that way, but I should suspect it would have more effect in diminishing the number of our graduates; it would operate chiefly in that way, at least if the examination were made very rigorous; there would be considerable difficulty also in determining how that examination should be conducted, by whom, and upon what subjects.

Suppose a young man not to begin his studies so early, but meaning to enter the medical profession at 18 or 19 years of age, do you not suppose that the previous years ought to be dedicated to literature and philosophy?—I think that some previous years in almost every such case will be employed in some studies; literary, or perhaps scientific: but these will be various in different places.

University of Edinburgh.

Professor Alison.

24 October 1826.

Might it not be reduced to a system in this University?—I think not, because the young men come from so many different parts of the world, and they do not come here for general literary or scientific education, but merely for medical education, and often cannot afford to come for both.

You said, in your examination yesterday, that the University of Glasgow had disagreed with your regulation of making four years necessary; do you not think it would be of great advantage that all the Universities should agree as to the space of time which should be considered necessary?—I do not know that there would be any practical advantage in that; perhaps the competition between the Universities is better when each adopts its own regulations.

Do you think, that when the regulations are different, there can be the same fair competition as when the regulations are the same?—I should conceive that there may be to a certain degree a competition, both as to regulations and as to the mode of teaching the classes.

Do you not think that if this University were to sanction a smaller space of time to get a degree than at another, it would be sanctioning the power of underbidding other Universities, in order to get a number of students; you having already stated that it would diminish the number of your graduates if you enforced the regulations that have been alluded to?—I am not exactly certain that I understand that question: it will certainly diminish the number in a certain degree. For example, I think it is very probable, from our now requiring four years, when the University of Glasgow refuses to make that addition, we shall have a smaller number of graduates, and they may possibly have an increase of the number; but I do not think we shall lose in the estimation of the public upon the whole, and I think it probable that they will soon see the propriety of raising their qualifications to a level with ours.

Do not the University of Aberdeen and the University of St. Andrew's, under the new regulations, require that candidates for degrees in Medicine shall have taken a Master's degree?—The University of Aberdeen does, but I think St. Andrew's does not. I looked at the regulations lately.

Do you not think that that circumstance may render their Degrees more respectable than yours, upon the same principle that you have stated the four years' study to be likely to render your Degree more respectable than that of Glasgow?—I think not, because our fourth year of study is all in the way of medical education, and we are confident that it adds to the estimation of the degree in the eyes of the public. Their additional regulation at Aberdeen requires the Degree of Master of Arts previously, which we do not think, as far as we can judge from observation, is likely to add in the same manner to the reputation of the degree in the estimation of the public, as additional medical instruction will do. My own impression is, that that degree in Aberdeen will not be often asked for, and that if they wish to become a great medical school, they will by-and-by see the propriety of doing away with that regulation.

You stated yesterday you did not think a knowledge of the Greek language necessary for a person who was to enter into the medical profession; are you not aware, that, with regard to the Apothecaries' Company in Dublin, there is no Irish student who must not undergo an examination in the Greek language before he can be admitted?—I am not aware of these regulations in Dublin.

Do you not think, upon the supposition that that is the case there, and that it is the case in the University of St. Andrew's and Aberdeen, that you may run a chance of your degree being undervalued by your requiring a less previous proficiency than in other seminaries of learning?—I do not think so myself; if that were to be the effect, we should soon see it, and we should feel the propriety of requiring such preliminary qualifications; but, as far as I can judge from what I see of the medical profession throughout the country, and the qualifications for which medical men are esteemed, I do not think we are likely to lose by it. In regard to the study of Greek, I cannot consider it otherwise than as an accomplishment; it may be called an ornamental accomplishment for a medical man, but I do not think it adds to his professional skill, and I do not think it will generally add to his chance of professional success; and therefore I do not think that the University will gain an advantage, or the public, by its being enforced on our candidates for graduation.

Are you not aware, that in that paper which you have produced to-day to the Commissioners, the Regulations of the Army Medical Boaad, it is stated that a liberal education is indispensably requisite, and the greater the attainments of the candidates are in various branches of science, in addition to competent professional knowledge, the more eligible will they be deemed for promotion?—I know that those are the words, but I have pretty good reason to believe that the amount of scientific education in the young medical officers, beyond what is included in our course of study, is not to any great extent.

Does not that sentence convey to you the expression of the sentiments of the Medical Board, that scientific knowledge is desirable, over and above the mere medical professional knowledge?—No doubt it does, but they do not make this imperative on their young men; and if they were to do so, I apprehend that they would derive no advantage from it upon the whole.

Do they not say it will be a recommendation for promotion?—They do.

Would it be impracticable for a student of Medicine, who had not attended a course of philosophy before he entered upon his medical studies, to attend lectures upon philosophy for one hour a-day during two or more of the first years of his medical studies, consistently with other attendances, supposing the hours to be adjusted?—Certainly it would not be impracticable for him: such a regulation as that might be applied to our students who are their whole time here; but a large proportion of them are only a part of their time here: many are only

University of Edinburgh.

Professor Alison.

24 October 1826.

one session here; within the last two years we have graduated between 60 and 70 men, who were one year only here, and to whom we should have a difficulty in applying the regulation.

Must not the persons so graduated have been in attendance upon other medical lectures in other Universities?—Yes, they must have been in attendance somewhere. But there is another consideration. In requiring four years of medical study, we considered that to be, as far as we could judge, about the actual amount of study of all our better graduates in the medical branches only, and therefore we should not conceive that the young men would have time, or be able to attend as closely as might be desirable, to other branches of study during four years. At the same time there is a part of the regulations by which certain classes are recommended to the students, of which two must be attended; and among these the Natural History class is included, which is a branch of general science, rather than of medical knowledge. It was likewise proposed that the class of Natural Philosophy should be included. My opinion was, it might be included with advantage in that list.

Are those regulations now in force?—They are, upon all students who commenced their studies in the year 1825, but Natural Philosophy is not included; it was proposed, and several members of the University, and I among others, thought it might be put in, on that footing.

Is Natural History included at present?—Natural History is included.

What other branches besides Natural History are included?—The others which are put upon that footing are Practical Anatomy, Medical Jurisprudence, Clinical Surgery, and Military Surgery.

With reference to the amount of medical studies which you consider to be requisite, do you not think it would be expedient that the length of the session should be increased?—I have thought it might: I have thought that the session might be made seven months, by beginning early in October; because at the end of the session just now several of the Professors are obliged to lecture twice a-day to get over their subjects, and, in some instances, the course is necessarily made to a certain degree incomplete. For example, the late Dr. Gregory was hardly ever able to complete his course, and he used sometimes to take up one part of the subject in one year, and another in another, in order that he might give the students an opportunity of hearing his lectures upon different subjects.

Do a considerable proportion of medical students, who are attending for more than one year at this University, leave Edinburgh during the period of vacation?—A great many of them; a considerable number of them leave it at the end of the winter session, and a greater number at the end of the summer session in July.

Are many of the summer classes, particularly of that of Botany, which is one of the classes included in the Curriculum, attended by a very considerable proportion of medical students?—The Botanical class and the Natural History class are attended in summer by a considerable number.

Do you think there would be any lack of attendance by the medical students if the length of the session were increased?—No, I do not think there would be any considerable falling off in the attendance.

Will you have the goodness to mention some particulars as to that system, which you stated would be useful as an auxiliary to the University by means of a sort of medical tutors?—I have not a great deal to say in regard to that; a number of young men who are preparing for examination put themselves under the charge of tutors, generally in small classes from six to twelve at once, and are examined by them upon a variety of medical subjects.

Is not that technically known by the name of Grinding?—Yes, it is. I may mention that I hardly think any system of examination by Professors would supersede that kind of education among the students; for the number of students being very small who attend these classes, the student is encouraged to put a number of questions, and to get the teacher to solve difficulties, which he would hardly do in the presence of the whole class, by addressing himself to the Professor.

Is it your opinion that if, in the institution of the London University, much attention shall be paid to the cultivation of the study of medicine in that seminary, it will greatly affect the medical school in the Edinburgh University?—If they give Medical degrees, which I dare say they will by-and-by, it may affect it. I rather think that the effect of the institution of the London University would be to increase the amount of professional education, similar to what is done here, and to make many such young men, as are now educated chiefly by apprenticeship in England, take the more regular education, or what we consider the fuller education, by attendance upon lectures, hospitals, and examinations, in addition to apprenticeship.

Do you anticipate any effect prejudicial to the interests of the Edinburgh medical school from the institution of that University?—To a certain degree it may be prejudicial, but I do not think very materially.

Supposing any means could be taken by which the qualifications upon which the Diploma of Surgeon is to be granted could be raised here, might not that in part obviate some of the objections which you alluded to yesterday, in regard to the education of a Physician?—If the education of a surgeon were raised here it would not obviate the objections I should have to additional qualifications being demanded of a physician, which are not likely to be of use to him in his profession, and which are not medical. I may say that my own conviction strongly is, that the more medicine is improved and advanced as a science, the less necessary it will be considered for a medical man to have an intimate acquaintance with other branches of science, just as it is not essential to a chemist to be a great mathematician, or for a mathematician to be a great chemist. Formerly, when medicine was in a less advanced state than at present, a man, from being merely a physician, was not considered to have studied any science very

University of Edinburgh.

Professor Alison.

23 October 1826.

particularly. At present the various departments of medicine are cultivated much more scientifically than they were before, and the mere circumstance of having gone through a full medical education, and having submitted to examinations in all the different parts of medical science, implies, that a man has a pretty general acquaintance with the proper methods of scientific inquiry, which was not the case in former times.

As to the prosecution of medical studies, is there any particular reason why the degree of Doctor of Medicine should be given at so early an age as 21, especially as you stated that a proportion of those who take it intend to follow, and do in point of fact follow out their medical education, after taking the degree, in the various methods to which you have alluded?—I have thought it might be desirable to raise the age; but at the same time there are several instances which have come to my knowledge since I have been in the University of young men who are rather under the age applying for indulgence, and it has been granted in several instances to those who came of age within the next three months succeeding the graduation day. This has been granted as an indulgence to a few whose course of study had been more complete than usual; of course, we attend particularly to those young men when they come forward for examination; and in several instances we have found those young men to be uncommonly well prepared, and fully as likely to do us credit as men considerably more advanced in life. In all these instances these young men have been for the public service, and of course were put under the charge of other medical men at first; they went as hospital Mates and Assistants, and I presume they had no great responsibility imposed upon them for some time. Those who are going into private practice are always at a more advanced period of life before they settle, unless they act as Assistants to practitioners in the country; in which case they are under the control, to a certain degree, of another, and assisted by the advice of a senior practitioner.

Is it chiefly for those who are entering the public service, and who have it in contemplation to establish themselves in the country, as you mentioned, that you think it desirable a degree should always be taken so early?—It is chiefly those who do take it so early—those who are going into practice as general Practitioners, or as Partners or Assistants to senior Practitioners in the country, or those who are entering public service.

Is there not a number of young men who study medicine here, and intend to take the degree here, to whom it would be very inconvenient to come back to take it at a future period, as they go and complete their education at Paris before they enter into private practice?—There are many to whom it would be more convenient to take the degree before they leave this University.

In such cases, do you consider that medical education is in fact carried on practically after they have obtained the degree?—Often for two years.

In such a case, is there a great deal of reputation as well as learning which is not attained as the Alumnus of this University?—A great deal of the practical knowledge is not obtained in the University; a great proportion of the knowledge which is useful to a practitioner must be always acquired out of the University; it is not possible to give complete practical instruction within the walls of the College.

As to the teaching of Clinical Medicine, you stated, that with a view to divide the class of students into smaller numbers, you thought it preferable that two Professsors should be lecturing upon Clinical Medicine, than that one Professor alone should be appointed for that purpose, whose class might be too large; will you explain your reasons for that?—At present, there is only one Clinical Professor lecturing at one time; he is one of the members of the Faculty, who take it in rotation. I think it would be a great improvement, if two of the members of the Faculty were lecturing at the same time; and I should have mentioned more fully yesterday, that in that case, the two might go on lecturing for nine months, both the winter session and the summer session; in which case, there would be six courses of Clinical Medicine each session, that is, twelve courses in two sessions; and if there are four Professors (as at present there are in the Faculty) lecturing in that way, each will have three courses in two sessions; perhaps some would have more, for some of the senior professors might decline the summer course, which is less profitable.

Would you prefer that to the instruction of a separate Professor of Clinical Medicine, who should alone be the person to lecture under the regulations of the Managers of the Infirmary?—As to that, I cannot wish the Commissioners to take my opinion. I cannot give an unbiassed opinion, as the Clinical Lectures are the chief source of the emolument which I derive from the University: I wish they would take the opinion of persons wholly unbiassed. But it does appear to me tehre is no disadvantage, but rather an advantage, in the same Professor, who is bound to teach the principles of Medicine, being likewise authorized and required to exemplify those principles before his pupils in the Clinical wards; that is the practice which has always been adopted here, and which has generally been approved of.

Is there not another advantage arising from the rotation of lecturing, that students see the different modes of practice, by the different physicians?—To a certain degree it is an advantage. I may mention, it has been stated by a gentleman, whose opinion is entitled to great weight in all medical matters (I mean Dr. Thomson) that the practice is different on the Continent—that there is a separate Professor of Clinical Medicine; but in two instances, at least with regard to professors in Paris, that is a mistake: the two physicians at Paris who have distinguished themselves most of late years, as Professors of Clinical Medicine, have been Pinel and Laennec, and both of them were exactly in the same circumstances as the Professors here; they were both teaching the Theory and Practice of Medicine in schools, and at the same time had the charge of hospitals, and gave Clinical Lectures. Laennec, who died lately, and who was a man of great reputation, was Professor of Clinical Medicine in the School of Medicine, but he was Professor of the Theory and Practice of Medicine in the Collége de

France, and was giving lectures there at the same time, which were attended by a number of young men, who were witnessing his practice in the hospital; therefore substantially, so far as he was concerned, the system was the same as ours; and the same observation is true with regard to Pinel, the author of the *Médecine Clinique*. Pinel was Professor of the Practice of Medicine in the École de Médecine, and Teacher of Clinical Medicine at the Hospital of Salpêtrière. Besides, the plan of having one Clinical Professor only, would not obviate what I have stated as an inconvenience attending the present system of Clinical lecturing, namely, the crowded state of the wards, and the great number of students. To obviate that, it would be necessary to have two Professors of Clinical Medicine. At the same time I would say this, that I think the education by Clinical teaching of such importance, that it would be proper to have it determined in future, that Clinical Medicine should be taught always to the extent I have mentioned. If at any time so many of the Professors of Medicine in the University should decline the medical wards, that there should not be enough of them willing to undertake that duty, then I think it would be proper that a Professor of Clinical Medicine should be appointed, in order that the duty may be performed. In that way a Professorship of Clinical Medicine would be upon the same footing as the Professorship of Clinical Surgery is now. I understand there is a regulation that the Professor of Surgery and Anatomy in the University is entitled to give Clinical Lectures on the surgical patients in the Hospital, if he chooses; and it was in consequence of that duty having been declined, that the lectureship, and afterwards the Professorship, of Clinical Surgery was instituted. I should think the same thing might with great propriety be done in regard to Clinical Medicine. It has been stated likewise by Dr. Thomson, that the same objection, which long ago was urged by Dr. Gregory to the system of rotation of the surgeons in the Infirmary, applies likewise to the system of rotation among the Clinical Professors. But Dr. Thomson has not noticed that Dr. Gregory, in the same memorial, has considered and answered that very objection, by stating that, in the first place, a rotation of four or six men is a very different thing from a rotation of forty or sixty, the whole College of Surgeons. The Professors of Medicine are a small body selected from the College of Physicians, by the Patrons of the University, and partly with a view to the performance of that very duty; and further, it is not necessary for the Clinical Professors of Medicine to take in patients continually, as the surgeons or ordinary physicians of the Hospital must do. The usual practice of the Clinical Physicians is not to take in new patients for the two or three last weeks of their attendance, and the evil of transferring patients, during the acute stage of their disease from one practitioner to another, may be avoided by that means. It happens, accordingly, that few patients have to be transferred from one Clinical Professor to another, and those are in general either convalescents, who require no medical treatment but only rest and quiet, or patients who have perfectly chronic diseases, to whom it is an advantage rather than an injury to be transferred, after having had a full course of treatment from one individual, to another; that other receiving full information of all that has been previously done. These statements are all contained in that Memorial of Dr. Gregory.

But conceiving the division of students to be so great an object, do you prefer the plan of having two Professors lecturing at the same time in different wards in Clinical Medicine, to the institution of one Professor, whom the whole students shall attend?—I think so, certainly.

How would you remedy the evil that must arise from one Professor having more pupils, or being reckoned abler as a lecturer than another; or might not that bring a greater number of students to the one than to the other?—An equal division cannot be secured, but it can always be made secure that there shall be Clinical instruction going on in two wards; and there will be a certain number of students in one, and a certain number in another: whereas at present, there being Clinical instructions given only in one, all the clinical students must necessarily be in one ward.

Is there an order prescribed in your *Statuta* in which the medical classes shall be attended by graduates?—No; that has been repeatedly talked of; it was thought we could not lay down a definitive order, which should be imperative upon the students, in consequence of the great variety of their previous knowledge. Many of them come here with a certain knowledge of some subjects: some come from private schools of Medicine or Surgery: they come under a great variety of circumstances; and the professors are always in the habit of giving private advice to students upon the subject of the course of study they should pursue, and the classes they should take, according to their several circumstances.

Is there any order in which they must attend that year in which they have to give attendance upon the hospital?—There is no regulation as to that.

Do you not conceive that a student who has studied Medicine for two years is much more capable of benefiting by attendance at an hospital, than a man attending the first year?—No doubt he is in general, but some practitioners recommend that students should attend the hospital from the first throughout, and some do that.

Do you not think that there would be an advantage, if only one year's attendance at an hospital is required, that there should be a regulation that that year should be at an advanced stage of the student's education?—There are two years required now for attendance at hospitals.

Do you not think that there would be an advantage, that those two years should be the third and fourth, or the second and third years, rather than the first?—Certainly, it would be an advantage, and in the private advice to students it is generally recommended; but we could hardly require, according to the regulation as it stands now, the hospitals to be taken the two last years, for a certain proportion of the students, whom we contemplate to have by the new regulations, are those who have been apprentices in the country, and afterwards have attended lectures, and taken a year at the hospitals in London before they became students in the University.

University of Edinburgh.

Professor Alison.

24 October 1826.

Is not that part of the regulation dangerous, if they can purchase tickets in London without having ever attended the hospitals?—I am not aware of that being a practice in London; but that can easily be avoided by requiring certificates. In every case that I remember to have seen, where students have brought evidence of their attendance in London (which has not been requisite as yet, but which we are always glad to see), they have brought certificates from surgeons or physicians, stating that they had not been pupils merely, but had actually attended the hospitals.

Have they not, antecedently to these regulations, been in the habit of producing tickets merely as evidence?—I do not remember to have received tickets of attendance upon the London hospitals; they were always certificates I received.

Has not that been the case with regard to the Dublin hospital?—In regard to the Dublin hospital, there is only one in which clinical lectures are given connected with the school of physic, which is Sir Patrick Dunn's; those students always bring certificates. In regard to others which I may have taken, I cannot charge my memory at this moment, but my impression is, we have received certificates from them too; but at any rate, in future, when that part of the study is made imperative, of course it will be certificates only that we shall receive.

Does not any advice previously given to the students, as to the order in which they should attend the classes and the hospitals, have reference of course to their previous attainments?—I do not mean to say that advice is given in all cases; some of the Professors mention in their introductory lecture what they consider to be the proper order. I rather think that is the practice with Dr. Duncan; but any of the students who feel a difficulty as to what the proper course shall be, are in the habit of applying to the professors and telling them their previous studies.

Are no general means taken to ascertain what the attainments of the students have been before they came to the college?—None.

Would there be any difficulty in acquiring such knowledge of their previous attainments?—No, there would be no difficulty.

Would it not be a very desirable thing to do so, in order that you might regulate the course of their studies?—I rather think there would be an objection to that, as a general regulation. On the part of the students it would be unpopular; they would suppose that we were disposed to recommend more attendance upon our own classes, and less upon the private lectures, which they are very much in the habit of attending.

Would not the objection on the part of the students arise from this, that many of them wish to pass for having greater attainments than they really possess, and would not like to be subjected to a very rigid examination?—The whole of their studies must be brought forward in the end; they are all aware of that when they become candidates for graduation, such of them at least as do so.

You mentioned yesterday, that, with reference to the attendance at the Clinical wards, it might so happen that the Professor of Chemistry might not be a physician; do you consider it expedient, with reference to the interests of the medical school, that it should be left possible for that to happen?—I hardly think a person would apply for the Professorship of Chemistry who was not a medical man, but a case might occur of a person whom the Patrons of the University might think fit for the Professorship of Chemistry, whom they might not think fit for the charge of Clinical wards; in which case they would have only to give him the Professorship of Chemistry, without that of Medicine. At present, the Commission says, "Professor of Chemistry and Medicine," and it has been so for a length of time past, but it was not always the case; the Professor of Botany was not Professor of Medicine until 1738.

Should you consider it an advantage if those Medical Professors who are not at present examiners should be added to the number?—I think that it would, with a view to the proposal of dividing the examination into two parts, which I think would be an advantage; but I confess I feel a difficulty in regard to the Professor of Natural History being made an Examiner upon the whole subject of Natural History, but I believe some of the members of the Medical Faculty would not object to it.

Supposing that were done, should you consider it a proper mode of bringing it about, that those gentlemen should be named Professors of Medicine in their appointments, and thereby become Examiners, as some of the others are at present?—Perhaps it is a matter of no great consequence. Perhaps the better way would be, that they should not necessarily be styled Professors of Medicine, but that authority should be given to them by the Senatus to examine. It appears, in former times, that the authority to examine for the degree has been given both by the Senatus Academicus and by the Patrons, and in several instances by the Senatus alone: I mean in former times; for prior to 1726, I believe there was no Professor in the University who received any commission, empowering him to examine, by the Patrons, but there were, nevertheless, degrees in Medicine given. A single Professor of Medicine and two Fellows of the College of Physicians were at that time employed, by the Senatus Academicus alone, to examine.

With reference to the Answer to the 34th Query of the Commissioners to the Senatus Academicus, allusion has been made to a short Memorial that was presented, and which has since been laid before the Commissioners, and which has been published in their Appendix; and that Memorial refers to the subject of Examiners being appointed, the mode in which that has hitherto been done, and the way in which it now stands: does Dr. Alison think that it is now clearly defined in whom is vested the power of appointing Examiners for taking degrees generally, or for the taking of Medical degrees in particular?—I apprehend that is rather a law question. The power of appointing Examiners certainly appears, by our records, to have been exercised repeatedly by the Senatus, independently of the Patrons,

There are records of appointment of Examiners for Medical Degrees prior to 1726, and for Degrees in Arts, subsequently to that time.

Does Dr. Alison think that the appointment should rest as it now does, or that it should be altered so as to be vested clearly and accurately in some one body or other, and if so, in whom would he recommend it to be vested?—I think it should be the same body that regulates the course of studies for degrees, who should have the nomination of Examiners; otherwise a good deal of confusion would arise, and probably some jealousy between the different bodies.

Is the Senatus Academicus the body that regulates the course of study?—That has hitherto been the case, but that power is claimed by the Patrons, and is the subject, or at least the principal subject, of the law-suit which is going on. I believe it has been suggested by one or two members of the University (and it appears to me a very proper suggestion), that it would be right that any regulations of that kind, which are to impose any burden upon the students, should always be subjected to the sanction of a body superior to the Senatus Academicus itself.

When you speak of burdens upon the students, do you allude to the fees that are payable by them?—Yes, and additional studies; but it certainly does appear to me, that there are very great objections, in point of expediency, to that power of sanctioning such regulations being vested in the Patrons or Town-council.

Do you think it would be expedient that the course of study, and the appointment of Examiners, should be solely vested in the Senatus Academicus?—I think that all acts of the Senatus Academicus in regard to that, should be controlled by a superior body, but a small body, and one that should be permanent.

Do you think that the first nomination of an Examiner should be in the Senatus Academicus?—Yes; there should be a proposal by the Senatus Academicus, subject to the sanction or control of a superior body.

Would that superior body act something in the way of a court of appeal or court of review?—Something of that kind.

From any consideration you have given to the matter hitherto, how would you recommend that such a superior body or controlling power should be formed?—I cannot say I have attended to that subject particularly: I think it might be appointed by the Crown: it would act somewhat in that manner in which I understand Visitors act in some of the English Universities.

Would you propose that it should be a kind of system of permanent visitation?—Yes.

Have you ever turned in your mind whether the appointment of a Chancellor would have a beneficial effect?—I think it might; in that way the Chancellor of the University would be the permanent head of such a body.

Do you think there should be persons nominated to assist him in the office?—Yes, I should like to see that. My objection to such a power of control being in the Town-council is not at all that I suppose they would have any intention, in any case, contrary to the interests of the University; but, in the first place, I think they are too numerous a body to have such a power; and besides, they are a fluctuating body, changing every two years. In the next place, they have too many other subjects, which are continually imposed upon them, to have time for fully considering such matters; and, in the next place, I think they can hardly be considered a competent body to judge of the regulation of the studies in the University: in fact, if I am not mistaken, the Council state in some of their communications, that they would not consider themselves to be qualified to judge of such matters in general, but they can always take the advice of other persons who are capable of judging. Now, if that were the case, the power would be, in fact, vested neither in the Senatus Academicus nor the Town-council, but in a third body, which would be under no responsibility. There is one other reason I would beg to state, which seems to be a fair one, that the only member of the Town-council, in general, who can be supposed to be well conversant with the Medical School in the College, is the President of the College of Surgeons, who is necessarily the head of a different school, and, in certain respects, of a rival school. I am quite sure that the School of Medicine in the University derives great benefit from the existence of the College of Surgeons as a school, and from the encouragement given to private lecturers by the College of Surgeons, and from the degree of emulation that is thereby excited. But I should certainly not consider that I, or any of my colleagues, were fair and impartial judges of what is done in regard to the regulation of studies in the College of Surgeons. I should think it an absurd thing, that any of us should have any power over the College of Surgeons in regard to the degree they give. It seems equally reasonable to say, that it would be absurd that any of them should have a controlling power over us, though I have no doubt, at the present moment, the gentlemen at the head of the College of Surgeons are exceedingly well disposed towards the University; yet, in general, I do not think it can be expected that they should be impartial judges of what is done in the University, any more than we should be of what is done by them.

Do you consider, then, the practical effect to be, that the authority which is to be exercised by the Town-council is very much vested in the Deacon of the College of Surgeons?—I think so; in the present instance I may say I am pretty confident that is the fact.

Are you of opinion, for that and the several other reasons you have stated, that the Patrons are not a fit body for exercising the power of appointing Examiners for degrees, or for directing the course of study at the University?—I think it is not expedient that that power should be vested in them.

Do you know upon what authority the Medical School in the University of Edinburgh was originally formed, and under what authority the original regulations for medical study were

University of Edinburgh.

Professor Alison.

24 October 1826

put forth?—In regard to the original regulations for medical study, they were formed by the Senatus exclusively. The first regulations, enjoining a particular course of study, were as late as the year 1767; the qualification of candidates had previously been judged of by examination only.

Do you know anything with regard to the formation of the Medical School itself?—That, I suppose, is rather a law question. What I have understood is, that the power to give degrees, which is what constitutes the Medical School, must have been implied to have been given by the original charters or acts which constituted this as a University; certainly the power was exercised in a number of instances prior to the act of the Town-council in 1726, which appointed Professors of Medicine, with authority to examine for degrees. There were various instances previous to that time in which degrees were given upon the authority of the University.

Have you ever attended to the constitution of the Universities of Scotland, with a view to ascertain how far they are entitled to form new Faculties, or to institute new Degrees?—I should conceive they are entitled to do so, from the circumstance of this University having instituted the degree of Medicine about the year 1705, without any special authority, as far as I ever knew, further than what was implied in the act of King James, constituting this a University.

Supposing a University to be formed with the establishment of Professors and Faculties of Arts and of Theology, does it follow from that, in your apprehension, that the University has a right to superinduce on the original establishment the Faculties of Medicine and Law, for instance?—I presume that would depend upon the original charter upon which the University was formed.

Laying aside the recent subjects of controversy, are you aware if any general practical evil has arisen to the University from the patronage and control of the Magistrates and Town-council of the City?—In regard to the patronage, I am certainly not aware of any; in regard to the control of the Town-council over the regulation of studies in the University, as far as I am aware of the history of the University prior to the recent controversy, it has hardly ever been exercised at all.

Do you think the persons of whom the Town-council generally consists are, from their situation of life and habits of education, fit persons in whom the regulations of the Medical Curriculum should be vested?—I think a great number of them are not.

By the term University, which you used in an answer you gave to a question a short time ago, did you mean the Senatus Academicus, or the Patrons of this University?—I meant the Senatus Academicus.

Have you any suggestions to offer as to the mode of appointing Professors?—It has never occurred to me that there was any objection to the system of patronage existing in this University.

Are there any other suggestions you have to offer to the Commissioners relative to the constitution of the University?—I think there is nothing more than what I have mentioned. There is one point in regard to the Medical School which I did not mention yesterday. It has been talked of at different times, that there should be an appointment of a Professorship of Mental Diseases; that is what has occurred to me as being an improvement that might be useful in the University—not that it might be imperative on the students, but that it might be an adjunct to the Medical School. A number of men study here, who afterwards become physicians to Lunatic Hospitals in different parts of the country, and have the charge of many persons there confined, and to whom it is an object to have the cure of such patients. I have thought, if that were the case, there might be a sort of Clinical ward put under the charge of such a Professor in the establishments for Lunatics here, which are very considerable. There is an institution of that kind at Paris; there is not a Professorship attached to it, but there is a physician, who has the charge of the Lunatics. At the Salpêtrière, there is a full course of lectures given on the subject; I have heard some of them myself; they have been attended by several friends of mine at Paris, Englishmen, who thought it very useful; and a similar institution I think might be easily formed here.

Would not that interfere with the treatment of the patients?—Of course, if such an establishment were formed, it could not be all the Lunatics that could be made the subjects of Clinical Lectures, but a certain number might.

Does your class embrace the subjects of Physiology and Pathology?—Physiology and Pathology are always taught in the Theory class, but they are not taught by me. There is a third subject, Therapeutics, or the principles in regard to the action of remedies, which I have taught some years.

Is the subject of the Theory of Medicine such as to be embraced in the compass of one class, or would you recommend any division?—I do not consider myself qualified to speak decidedly on that subject, from never having given a full course of it; but I think, considering that there are certain parts of the subject in the Theory of Medicine class, which are treated of to a certain degree in other medical classes, that in the course of six or seven months, a sufficient degree of information may be given upon all the branches.

So that you do not think the institution of a new professorship, limited to Pathology, would be necessary, especially if the course of study were extended to seven months?—I should think not. A great proportion of Pathology is necessarily taught in the class of the Practice of Medicine; a part of it will be taught in the class of Surgery, particularly if that be made more extensive; and part of it is taught under the head of Midwifery and the Diseases of Women and Children; and of course it is not necessary, in the class of the Theory or Institutes, to dwell upon it at very great length; otherwise, no doubt, there would be room for a complete course of lectures on that subject alone.

259

University of Edinburgh.

Professor Alison.

24 October 1826.

Do you consider the subject as treated of sufficiently in the other classes to answer the purpose of such subsidiary instruction?—Yes, in the Practice class, the Surgery, and Midwifery, to a certain degree, and likewise in the class of Anatomy; for there is always an exhibition of the morbid parts, and explanations of the manner in which these are formed, in a course of Anatomy.

Is there any one medical class in which subjects may not be treated, that are also treated by other professors in some other of the medical classes?—Almost every class contains subjects which may be treated of with propriety in other classes.

If that is the case, what objection could there be to allowing Dr. Monro to give a course of lectures upon Surgery as he now gives, and to having a separate practical Professor of Surgery, farther than that there would be some degree of interference?—I should not consider the interference any material objection; but, if Dr. Monro continues to give the course of Surgery he does now, he would also continue to give the Anatomy as he does now; whereas if there were a separate course of Surgery instituted, and if he were assisting in giving another course, it would enable him to give a more full course of Anatomy in six months; at present it is only four months or four and a half; it might be made a seven months' course.

So that, as to Anatomy and Surgery, you would consider it an advantage that there should be two separate and complete courses?—Yes.

Is his course of Surgery at a separate hour?—It is partly at a separate hour; but part of the course of Surgery is given at the same hour with Anatomy, only I think at the end of the course. I think it will be found, in the answers to the queries, that Dr. Monro states he teaches Anatomy four months and a half.

Is that long enough for a complete course of Anatomy?—I think a six months' course would be more complete; at the same time I would mention, Dr. Monro's lectures upon Anatomy extend to an hour and a quarter, or an hour and twenty minutes; whereas, if he lectured six months, probably he would not feel the necessity of extending them beyond the hour.

If he had not to lecture upon Surgery, there would be a six months' course upon Anatomy?—Yes, there would.

Would that be an improvement?—Yes, I think so.

Does the ticket or certificate of attendance upon a course of Surgery which Dr. Monro now gives purport that the student has attended for six months?—No, not for a course of Surgery. I believe Dr. Monro's ticket is not received by the College of Surgeons here as not being for a six months' course.

Is Dr. Monro's ticket received by the medical departments of the Army and Navy?—The medical departments of the Army and Navy require two courses of Surgery; I think one must be a full six months' course; I think it will not be received alone without another, but I cannot speak positively as to that.

Will you inform the Commissioners whether it is found that medical students are apt to go away towards the latter part of the session before the classes close?—In the month of April a good many begin to go away; but by our late regulations requiring them to insert their names in the University Album every month during the session, in order to get certificates, we compel attendance at least until the beginning of April.

As the lectures go on until the end of April, might not a man sign the book on the first of April, and go away upon the second?—Yes. We have thought of making that regulation of signing in the book more frequent, if it should appear in practice desirable, or if there shall appear to be evasion by pupils going away in that manner.

You do not think that it should be desirable that that regulation should extend to the last week of the session, even if the students signed the book once a month during the session?—I think it were desirable that it should extend to very near the end.

Have the students ever been questioned why they went away, or given any reasons for going?—I do not remember putting the question; but I believe the reason is, many of them have spent their money.

Notwithstanding, do you consider there would be such an attendance upon a prolonged course, or during a summer course, as to render it expedient the session should be lengthened?—I rather think it should be prolonged.

Do you not apprehend that that would diminish the number of medical students?—Perhaps to a certain degree it would. There are a number of medical students who are not looking forward to our degree at the time of signing their names in the Album. Those who were looking forward to the degree would remain, perhaps, and it would make them more careful not to spend their money in the earlier part of the session.

Is there not a greater number of men educated for the medical profession than can find respectable employment?—I believe there are in most parts of the country.

Would there not be a considerable difficulty, if this proposed addition were to take place, for students to find hours of attendance?—I think there is only one addition which I have suggested that would require an extra hour, namely, the Surgery class, which is at present only for a part of the season. If the class of Clinical Medicine were conducted in the manner I have mentioned, it would require no additional time, for two attendances would be given at the same time in different wards.

When should the course belonging to the professor of Mental Disease be attended?—That might be a short summer course; and also the Clinical Surgery, if it were made imperative without qualifications, as I mentioned yesterday; and I think it would be an advantage if there were more summer courses than there are at present.

To which of the branches of your own particular class are you disposed to give the greatest degree of prominence, or to attach the most importance?—They are all very important; the

University of Edinburgh.

Professor Alison.

24 October 1826.

subject of Physiology is that upon which I should think it necessary to dwell the longest, because it would be less fully given in the other courses.

Do you conceive that your lectures upon Physiology can be well understood by one who has not previously studied Chemistry and Anatomy?—No, certainly not; and I think they never would be attended by any who had not studied these.

Do you think that your class is generally not attended the first year of medical study?—I think never.

Is there any concert among the Professors of kindred branches of medicine, by which it is possible to avoid a collision of opinion taking place in the same University, in the most important branches of medicine; or are there any different theories brought forward?—It is hardly possible to have complete uniformity in regard to matters which are so doubtful as many medical doctrines; but I think there is no Professor in this University who speaks confidently on matters which are considered doubtful, or teaches doctrines confidently as certain, which are reckoned doubtful by other medical men.

Does Dr. Monro lecture on Physiology?—He gives a course of incidental lectures on Physiology in the course of his Anatomical lectures.

Do you conceive that there is any interference between his lectures and yours?—I have never yet lectured on Physiology in the University; I should not apprehend any evil from such an interference.

Did you not say that a portion of the subjects in your class were lectured upon by Dr. Duncan, your colleague?—The whole subjects of Physiology and Pathology are lectured upon by him.

Is that an arrangement among yourselves?—Yes it is; he had always been in the habit of lecturing upon these subjects, and he expressed his wish to go on.

If a student presented himself to you for a ticket to attend your class, who you happened to know had not studied Chemistry and Anatomy here, should you think it incumbent upon you to ascertain that he knew something of these branches before you granted him a ticket?—It has never been the practice to institute such a preliminary examination. If a preliminary examination of that kind were to be instituted at all, it might be in regard to those who had studied here, as well as those who had studied elsewhere. If a young man came to me, who I thought had not attended to those branches, I should tell him that I did not think him qualified to attend the class. If he had attended to those branches he might have profited or not, whether he attended here or elsewhere. In general, I should ask a man who came for a ticket, if I did not know he were a student here, whether he had attended the preliminary branches.

Is it consistent with your experience and observation, that the objects of medical study being for practical utility are pursued somewhat more systematically and more upon regular views than the studies for other professions are?—They are pursued certainly with very great zeal, and generally very assiduously, by a great majority of our students, and I think generally upon a regular plan recommended to them at the beginning of their studies by some of their relations and friends who have been medical men, or by some of the first Teachers or Professors, to whom they are recommended.

Is the course of their studies frequently directed by the surgeons, if they happen to be apprentices?—Yes, they are directed almost entirely by them when they are apprentices.

Do you suppose that practical evil arises from no particular order being prescribed in which the medical classes should be attended?—No.

In practice, is the object attained from the circumstances you have mentioned?—Every young man, I believe, acts under the advice of some one competent to give it, according to his circumstances.

Could a considerable proportion of a course of Physiology be well followed by young men who had not studied the subject of Anatomy?—It could not be followed at all, at least a great part of it.

When the certificates are laid before the Medical Faculty, is any particular notice taken of deviation from the proper order of study; for instance, if one man were to attend the Theory and Practice of Medicine the first year, and postpone Anatomy to the last, supposing that were possible, would it deprive a person from being taken on trial?—It does not comport with our regulations to decline to examine such a man; but in general the Professor, who examines and who looks at the certificate, would question him as to the unusual deviation from the common course, and expect to have some explanation of it; and, if that explanation did not appear satisfactory, of course the examination would be so conducted as to ascertain as fully as possible his proficiency upon any of those subjects upon which it might be thought, from the irregularity of his studies, he might be defective.

Would it not be better to regulate the order?—I have mentioned the reason why I think we cannot, namely, the great variety of their previous circumstances, many of them having been apprentices, and having attended different other schools of study.

Dr. *Duncan*, senior, Professor of the Theory of Physic in the University of Edinburgh, called in and examined.

Professor Duncan, senior.

Are you Conjunct Professor of the Theory of Physic in this University with Dr. Alison?—I am.

Have you had an opportunity of seeing the several Queries that have been submitted to the Senatus Academicus, and their Answers to them?—I have.

Do you concur generally in those Answers which you have read?—Very generally.

University of Edinburgh.

Professor Duncan, senior.

24 October 1826.

Have you any further observations or suggestions to make with reference to those Answers?—I have not.

Have you any observations to make in general upon the state of Education in this University, with a view to its improvement or its discipline?—I have been aiming at some things, which I think would be improvements in the University; but people will differ upon them. I long had an idea, that it would be a great improvement to have a Professor of Horticulture, as well as of Agriculture. I have published upon that repeatedly, in discourses to the Horticultural Society, and I wanted them to apply for such a Professorship. There is another Professorship I thought would be of great consequence to the University. We have got a Professor of Anatomy, but the philosophy of the animal system is so great, that I think we ought to have a Professor of Comparative Anatomy. I think these would be great additions to the University. There is a very eminent Professorship, under Cuvier, in Paris.

Have you had an opportunity of seeing some notes that Dr. Alison has referred to, and which he stated the Faculty of Medicine had either perused or heard him read, containing many suggestions in regard to this University?—Why, I heard those in part, but very imperfectly; and I can give no opinion upon them. The truth is, I am an old man, and I have not attended much to the business of the Faculty of late.

Would you rather wish to decline giving any opinion upon these notes?—Yes.

As to those parts which you did hear, do you concur in the sentiments contained in them?—In general, I think I do.

Do you lecture in your class upon two branches of the Science?—Why, the course was divided into two great parts, Pathological Physiology, which I keep to myself entirely, and the other part of the course, Therapeutics, I give to my assistant Dr. Alison.

Did not Dr. Alison print and circulate a detail of the grounds upon which an alteration in the Statuta ought to be made?—Why, there were different plans in regard to the Statuta, to some of which I objected very much; I am now told that there is a new edition of them in the press, which I have really not seen. I do not know exactly what they are, but there are several things I objected to, which I find they have changed completely. For instance, one of the changes, which I believe was reported by Dr. Alison, is, they had left the printing of a Thesis optional, but now they have made it imperative, as it was formerly.

Do you approve of that late alteration?—I do highly.

Was there anything else in the original edition of the Statuta which has been since altered that you approve of?—There was something I found fault with besides that.

Have those things which you found fault with been altered?—Yes, they have. There was one thing I wanted adhered to; I do not know if it has been or not. It was at one period made conditional that the students should be examined in English: I was clear that the original law should be adhered to—"*Exercitationes omnes antea dictæ Lingua Latina, peragendæ sunt,*"—that every thing should be taught in Latin.

Are you decidedly adverse to examinations in English for degrees in Medicine?—Yes. No man, I think, ought to be a Doctor of Medicine, who is not able to answer questions in Latin.

[*Paper transmitted by Dr. Duncan,* senior, *as Supplementary to his Evidence.*]

"Since Dr. Duncan's examination, he has seen the edition of the *Statuta Solennia,* which was at that time in the press. To the Regulations which it contains, he thinks there are many strong objections. These new Regulations do not require the publication of an Inaugural Dissertation *eruditorum examini subjecta,* which he thinks is indispensably necessary for the honour of a Degree in Medicine. The new Regulations admit of examinations in English, which will lead to Edinburgh degrees being conferred upon ignorant empyrics; and they abolish entirely the examination in Greek, by relinquishing the Commentary on the Aphorism of Hippocrates.

"The new Regulations will, indeed, diminish very much the trouble of the Medical Faculty; but they will, at the same time, diminish very much the honour of the degree of M.D. from the University of Edinburgh; and Dr. Duncan, senior, is decidedly of opinion that the *Statuta Solennia,* printed and published in 1819, should be continued without any alteration whatever."

"*Adam's Square, 30th October* 1826."

Dr. *Andrew Duncan,* junior, Professor of Materia Medica, and Secretary to the University of Edinburgh, called in and examined.

Professor Duncan, junior.

Are you Professor of Materia Medica in this University?—Yes, I am.

Have you seen the several Queries that have been sent to the Senatus Academicus, and the Answers returned to them?—I have; I took considerable pains in preparing those Answers.

Do you concur in those several Answers that have been given in to the Commission?—Substantially I do. If it were not asking too much, I would wish to state how these Returns were prepared, as I was the chief person engaged in drawing them up.

Are you Secretary also, as well as Professor of Materia Medica, in this University?—I am Secretary of this University.

Will you state shortly the manner in which those Returns were prepared?—I will state it as shortly as I can. As soon as it was known that the Royal Commission was issued, a Visitation Committee was appointed by the University, upon the 21st of August 1826, in order to facilitate the objects we conceived the Commission might have in view. We experienced, at the same time, great difficulty, from the whole of our minute-books and all the documentary papers belonging to the University being then in the process of declarator raised by the

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

Patrons against the University, and at that time they were, in fact, in the hands of the opposite counsel, who were preparing the revised condescendences. The Senatus, on the report of that visitation committee, resolved, on the 29th of August, to prepare certain sets of papers, chiefly relating to the subjects for which the Senatus had petitioned for a Royal Visitation. While the Senatus was engaged in preparing these, and also in offering to the Patrons to submit all differences to this Royal Commission, and also in a correspondence with the Honourable Patrons on the subject of Fees, the queries were received by us upon the 6th of September, and the Senatus was led to understand that answers would be expected by the 27th. The Senatus met on the 7th of September, and, after reading the queries, they referred them to the visitation committee immediately, which continued to sit after the breaking up of the Senatus. The committee took the questions into consideration, and divided them into various classes. One class was sent to the Honourable Patrons, from whom alone answers could be obtained. Other questions were marked to be answered by every Professor in the University individually; some were sent to the Deans of Faculties, to receive the general answers from the Faculties, and many were left to be answered by the Secretary, or by the Principal. The Committee also took the liberty of printing the questions, and upon the 9th of September sent a copy to each Professor, and upon the 11th a circular letter, pointing out the questions upon which answers were expected from him; and eight days only were allowed to return answers. Upon the 12th the Senatus agreed upon the terms of the offer of submission which was made to the Patrons, and the Senatus also appointed a committee to digest the answers of the Professors which were now coming in. That committee consisted of the Rev. Dr. Andrew Brown, Dr. Hope, Mr. Dunbar, with the Principal and the Secretary; but it was an open committee, and the assistance of every Professor was requested. On the 15th of September the Senatus received a refusal to our proposal to submit the difference with the Town-council to the Commissioners. Upon the 21st the Senatus sent a remonstrance to the Patrons in reply to this refusal, and immediately proceeded to digest the answers received. Upon the 26th the Senatus sent to this Commission the sets of papers, and upon the same day the Senatus first received the answers to the queries which had been sent to the Patrons; and from this time the committee sat incessantly. On the 28th the committee addressed a peremptory circular to the Professors, of which there is a copy produced, calling on them to comply with the requisition of 11th September. On the 30th the rough draft of the digested answers was presented to the Senatus Academicus; 31 of those were read and determined upon—some being adopted *simpliciter*, others being modified; but, as this took up too much time, it was then resolved that in regard to the remaining questions, if the committee should be unanimous, it would not be necessary to read and discuss them formally in the Senatus. Upon the 3d of October the Senatus met, and the committee then reported that they were unanimous as to all the answers which were prepared; they were accordingly ordered to be transmitted to the Commission forthwith, which was done.

Is that a statement of the manner in which the business was conducted, and which led to the answers which the Commissioners have received?—Yes.

Would Dr. Duncan make any observations, or state any opinion which he has formed with respect to any changes in the University, by which its education or discipline might be improved?—In reply to that question, I may consider, first, anything that might be done in regard to my own chair; next, with regard to the faculty to which I have the honour to belong; and lastly, to the University.

If you prefer that order, will you proceed, beginning with your own chair?—In the commission which I hold from the honourable Patrons, Materia Medica is the only branch named, but in all our statutes Pharmacy is coupled with Materia Medica, and it is almost the universal practice to teach Pharmacy along with Materia Medica. It is likewise considered that the art of Prescription, or writing Formulas, belongs to the chair of Materia Medica, as a subject of medical education, which, however, has not always been taught. In fact, the subject of Materia Medica, as it is now viewed, is almost too extensive to be discussed in one course, consisting of about 140 lectures, the number which I give. The art of prescription, I think, would form a very good summer course; but I have hesitated about the propriety of doing it, for I think that subdivisions of the subjects of the various chairs are not to be rashly made. There is great danger of the Professors, from their zeal in forwarding their own profession, subdividing the subject too minutely, as is done in the German schools in particular, and of their giving a disproportionate importance to certain branches. There is likewise a danger of injuring the principal course by removing the most useful and popular parts, and leaving the least interesting to the imperative class. The check of abuses of this kind would, however, be found in the want of pupils, or in demonstrating the necessity of a new Chair to take up one of the branches.

The class of Materia Medica, as I now teach it, is taught by lecture, by experiment, and by exhibition of specimens and of plates; and the apparatus and collection of Materia Medica which I have brought together is now very considerable, and, I think, valuable.

Is that collection your own private property?—It has been entirely collected and purchased by me. There is a question as to its being private property, inasmuch as I and others of the Professors levy half-a-crown upon each student, for the purpose of experiment money, for meeting these additional expenses. It may be a question, whether it ought not to be considered public property.

Is it paid for by any fund from the Town?—No, it is entirely out of the fees paid by the students, and the presents and donations given. I applied to Sir Thomas Munro, at Madras, to get a collection of the Materia Medica of India, which he was kind enough to direct Dr. Shuter, one of the surgeons, to procure. It came home; and it is, I believe, the most extensive of the kind that has ever reached Europe. It is now deposited in the Museum of Materia Medica.

2b3

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

Upon account of the levying of that money, has it not been considered questionable whether the apparatus is exclusively your property?—It has been questioned whether the collection of Materia Medica is, or not. I meant to consider it as public property; I have not committed myself by saying so. I was about to mention another thing, that, when I came to the Chair of Materia Medica, there was no collection whatever, and I applied to the town to assist me with some money, and they actually voted to me £100 for that purpose; but I have never drawn it, lest I should subject myself to their control, and lest they should claim the whole collection afterwards as their property. I therefore have never asked for it.

Have you never received any sum of money from the Patrons towards the collection of Materia Medica?—No, never. If I might be permitted I would proceed to observe, that I have not employed examination in the teaching of my class; it appears to me scarcely practicable in such a class as mine, the hours of teaching being 140. Were we to allow half of them, 70, for examination, it would give a quarter of an hour per session, to each of 280 pupils, which is the average number of my class.

Do you calculate the hours of teaching to be 140 because you have 140 lectures?—Yes, I now give 140. If each student were examined seven times, upon this calculation, the examination would be but two minutes for each. It appears to me this sacrifice would be too great for any advantage that could be derived from it.

Would not the knowledge of the change of being called up whet the attention of the whole, without their being actually examined?—It is possible. I think, however, that the examination, if it were practicable in point of time, would be confined to that lower or easier information which is readily acquired from books and other sources, and to the most elementary knowledge. Class examinations, as far as I have observed, lead to routine questions, and have a tendency to contract rather than to enlarge the mind. I do not think examinations well adapted to uncertain sciences, such as that of medicine, upon which the best informed entertain different opinions; and in examining young men the Professor would insist upon receiving as true his own opinion, which would render the pupils servile followers of his school or sect. I have also observed, that examination is not well adapted to classes of students such as ours, where the individuals are of very different ages, and in very different degrees of advancement. Young people, even with limited knowledge, are sharper and quicker in answering than the elder and better informed. The young men are apt to get conceited, and the elder ones to get shy. The success of examination, I think, depends very much upon quickness and readiness in the Professor—qualities which every person does not possess. In a slight trial that I have made, at least, I have not found myself qualified to examine. The better informed, and the more valuable students, also dislike examinations. I once proposed it, and announced my intention in the class; but I immediately received so many and such strong remonstrances against it as a waste of time, which, instead of being occupied in giving intruction to all the class, would be spent in teaching a catechism to a few, who besides might learn it from books and private teachers, grinders, that I abandoned it. This is all that occurs to me upon the subject of examination.

Will you inform the Commissioners whether, even with your opinion of disapprobation of examinations in your class, you think it might be advisable or beneficial to the education of those gentlemen who frequent your class to have a general examination at the end of the session, or at any particular period previous to their finally quitting the University?—I do not see any objection to such examination, farther than the time it necessarily would occupy. In my own class I lecture to the very last day in April, in the winter session, and therefore, were I to examine, I must cut off a week of the course, or begin a week earlier to get over all the subject.

Supposing time could be properly found for that object, would it, in your judgment, be attended with beneficial effects to the students?—I think it might be so conducted as to be attended with beneficial effects, chiefly at the end of the course.

Do you deliver any syllabus or heads of lectures to your students?—The Pharmacopœias of the country may be considered as the syllabus I use. These are translated, with commentaries in many forms, and in a work called the "Edinburgh New Dispensatory," of which I have now edited eleven editions. That I recommend to my pupils as a text-book. I have published also a catalogue of the medicinal plants, according to their natural orders, with a small notice, in explanation to the students, of what use is to be made of it. The plants enumerated are to be the subjects of lecture in the order in which they are enumerated.—[*The witness presented a copy of the work alluded to*].

Instead of an examination at the end of each course of lectures, do you not think it would be very useful if a Prize were given for the best account of the lectures, prepared by the different students in your class in writing at the end of each session?—I think that such a mode of examination, and such a prize, might be sufficiently useful.

Upon such a subject as yours, without entering into the mysteries of mere speculation, might it not be practicable to examine the students briefly upon such subjects as the doses of medicine, and the manner of distinguishing the substances used in medicine, the answers to which questions might occupy little time?—The reply I have to give is, that the doses of medicine always form a subject of examination when the medical graduate comes for his degrees; but it is one upon which I am very delicate and tender with the students, for I find my own memory, much versed as I am in those matters, does not always serve me. The doses of medicine will be better got by not altogether trusting to the recollection of what is taught in the lecture, but from printed tabular views. Physicians get into a kind of routine practice, and become masters of the prescriptions they use, but there are none of us who will, off-hand, tell the doses of all the articles of the Materia Medica; nor would it be useful to load the memory when a tabular view can be had.

But, as to the most important medicines chiefly, must it not aid the memory, as a medical

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

man advances in life, if these had been early impressed upon him, and he had found the necessity of attending to them?—It is one of the points upon which we insist much with our students, in requiring that they should attend to them, and it is probable that by exercises they would be more confirmed in their minds; but that is the very lowest species of useful information regarding Materia Medica.

You stated your opinion was rather in favour of a summer course, and consequently of a division in your class; and you also stated various reasons against the introduction of that change: is it your opinion, upon the whole, that it would be desirable to have that subdivision made, and a summer course introduced, or to keep the class as it now exists?—Were a summer course made for the art of prescription the instruction would be much more practical than at present. Then examinations would be much better introduced, for the students might be called upon to give in written formulas, which would be subject to the criticism of the Professor; this would take up too much time in the winter course, when we can only give the general principles of the art of prescription, and refer them to printed formulas, or quote examples of good and bad formulas. But a class for exercises in the art of writing prescriptions, in the summer, would be useful.

Would not a summer course be objectionable, in so far that a great number of the students are hardly able to complete their winter course, and be confined to the richer students, or those who happened to reside in Edinburgh?—That is another objection; but it would not bear so hard on medical students as the students of other Faculties, as in Divinity, for example. Many of the medical students come from a very great distance; and when once they are in Edinburgh they remain eight or nine months, which is an advantage to them rather than otherwise. In my opinion summer education should be much encouraged; there is too little temptation for young men to remain here during the summer. I have always regretted that the term of academical instruction was not prolonged.

Do you think that the advantages that are likely to accrue from a summer course in the way you have pointed out, preponderate over any objections which may be stated against the introduction of it?—I am not prepared exactly to balance the advantages and objections; for it will be observed that the summer course will be entirely optional, and it may be a question how far the students would attend it. No doubt, it would be useful to these individuals, but I would still be obliged to give the whole course in the winter. All the subjects which I think myself obliged to teach should be taught in the winter, and this summer course would be merely an amplification of a single branch.

Would you wish, with a view to the subject you have stated, to have a summer course tried experimentally?—I should have no objection.

Would you think it objectionable to make the summer course imperative?—I think so in the first instance.

If you had two students, both eager for the acquisition of knowledge, do you think that the student who employed the summer in reading those works that you directed in the course of your lectures, or the student who attended a summer course, would make the greater proficiency?—That would very much depend upon the judgment and industry of the student. I think that the students, if they leave Edinburgh and go home, and read only the books they take with them, do not probably study a great deal; but I have no doubt a student could just as well employ his time in reading in summer as attending other lectures, provided he had access to books.

But, if he did not attend many lectures during the summer course, might he not have ample time and greater opportunity of study here than he could have elsewhere?—I think a student could very well take two classes during the summer, and also read upon the subjects of his winter studies.

With regard to your own class, do you exhibit specimens of the various substances?—I do; I exhibit the most complete collection that, I believe, is exhibited by any lecturer in the kingdom.

Do you consider the lectures upon Materia Medica to serve the purpose for which they were intended, without this exhibition?—I certainly think the exhibition is calculated both to excite young men to attend to the subject, and to give them a great deal of information. At the same time, I may say my predecessor taught without specimens, and some persons think they are unnecessary. There is a diversity of opinion upon the subject.

Do you find this exhibition an interruption to the lecture?—Quite the contrary. They are so laid out that there is no interruption, and, in general, a considerable time is employed after each lecture by the students coming down to the table, which is very large, and examining the specimens, and in tasting and smelling them, and otherwise acquiring a knowledge of them.

Do you circulate them round the room?—No, it is impossible; it would interrupt the business of the lecture.

Must not those who sit at a distance be unable to ascertain the distinctive qualities?—It is quite impossible for them, unless they come down to the table after the lecture.

Do you give them that opportunity?—I do.

Does not that interfere with another hour's attendance upon another class?—It does. Dr. Home lectures the following hour; but it is in the power of the students to arrange their time.

Do you not conceive the exhibition of these substances might be considered a sort of examination which might be carried on at a separate hour, and means might be taken to ascertain if the students acquired a correct knowledge of them?—It might be, but it would interfere with the hour of some other Professor; there is no vacant hour that could be taken during the day.

Do you perform the Pharmaceutical Operations?—Yes, I do.

Did you first perform that branch in this University?—So far as I am acquainted with the history of the University, I am the first Professor of Materia Medica who did so.

2b5

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

Do you conceive it quite essential to the improvement of students?—I think it conveys a great deal of information to them.

Do you know if, in teaching the Chemical class, these Pharmaceutical Operations are exhibited?—In the Chemical class it is what is called Chemical Pharmacy that is chiefly taught, where there is more of the precise science, and precisely-understood chemical action; and, therefore, for my experiments and preparations I prefer those that are called Galenical, where the chemical action is not so well understood by chemists, but which are commonly practised in the shops of apothecaries.

Can your lectures be well understood without a knowledge of Natural History and Chemistry?—There is no branch, I may almost say, of medical lectures that does not presume a certain degree of knowledge of every other branch; it is a perfect circle of science. For example, in Materia Medica, which is often considered one of the early branches of medical education, there is constant reference to Natural History, Botany, Physiology, Pathology, and to the practice of Physic. All of these come into play; and, in fact, there is no beginning in such a science as Medicine; there is no point at which we can begin, as in the Mathematical science, supposing nothing to be known before. I endeavour to give the pupils such a knowledge of Natural History and its classifications at the same time as suits my subject, making it intelligible to them; and, in fact, the order I follow in regard to the vegetable Materia Medica is that of the natural system of Decandolle.

Would it not greatly facilitate the understanding of your lectures, and enable you to devote more time to the peculiar business of your class, if these fundamental branches of Chemistry, Natural History, and Botany, were previously understood?—I do not think it would at all facilitate the object. The manner in which I view these subjects is different from that of their Professors; Dr. Grahame, for instance, teaches the Linnæan System of Botany: I follow the natural order. I merely tell the students the classifications, and the advantages to be derived from them; but it would be impossible, or improper, indeed, to teach them thoroughly.

Do you teach the uses of plants, which Dr. Grahame does not treat of at all?—I teach them more at length than he.

In exhibiting specimens used in medicine, is it not of advantage to compare with them other substances to which they bear a very near resemblance?—It undoubtedly is; therefore it is that my catalogue is so extremely numerous. There is not one-tenth of these, or I may say one-fiftieth, that are used by common practitioners in this country; but, as the students we educate go to all parts of the world, it is quite necessary they should have at least a slight knowledge of the analogous substances in other countries. There is a single point I would mention as to the hour of lecture. The hour at which I give my lectures is eight in the morning, which is certainly not a proper hour for a class of Exhibition and Experiment. But the reason of getting such an hour is this: certain chairs have been, from the earliest date, in possession of certain hours. Anatomy is lectured upon at one o'clock, because Dr. Monro often employs an hour and a half in his lecture—at one time it was the last class taught; the Chair of Chemistry is in possession of 10 o'clock—it has been taught at that hour ever since I recollect; the Hospital is at 12 o'clock, and it is a rule in the Medical Faculty that no Medical lectures shall be given at 12 o'clock; the consequence is, that very few hours are left unoccupied for the other Professors. At one time it was thought unimportant at what hour they lectured; the Senior Professor had his choice. The Institutes of Medicine and Materia Medica have been taught alternately at the hours of 8 and 11 o'clock, the Senior Professor always selecting the latter. But certainly the Professor of the Institutes, not using experiments nor exhibitions, might lecture with less disadvantage at 8 o'clock in the morning than the Professor of Materia Medica. I lecture during one half of the course by gas-light.

Have you any observations you wish to make on the Clinical lectures?—The Clinical lectures in this University are given in rotation by any of the Professors who are entitled Professors of Medicine, and constituting the Medical Faculty; they have never been given by any of the Regius Professors in time past. Ever since I became Professor in this University, and even I may say before I was a regular Professor belonging to the Faculty in the University, I have taken my turn in delivering these Clinical lectures. These Clinical lectures appear to me to be one of the most important branches of instruction here, and, in my opinion, there is too little of it required by the Statutes of the University. We insist only upon six months of these lectures; but Clinical wards are open, and lectures are delivered during nine months. The attendance of students in the winter course is too numerous; the wards are too crowded; but the summer course not being a compulsory attendance, although it is followed by a sufficient number of pupils, affords no remuneration to the Professor, and it has hitherto been continued only by the zeal of the Professors.

Have they any fee for the summer course?—They have a smaller fee; but there is no adequate remuneration, and no Professor would give that summer course except from zeal for professional improvement. Clinical instruction is conducted very differently in different schools. In this school it consists, first, of a daily visit to the hospital at 12 o'clock, continuing one hour, and often more, *but that is often complained of;* second, of observations made upon the cases, and examination of the body after death, when the consent of friends is obtained. The physician is assisted by two advanced pupils, who are selected by himself, and are called clerks. He has the right, or the tacit right, of selecting from among patients who present themselves at the waiting-room for admission into the hospital. The first thing the Clinical Professor does is to go into the waiting-room, where the ordinary physician has marked what patient shall be received into the hospital; and among the patients so admitted the Professor makes his selection, according to the vacancies in the wards. The next step is to draw up a very accurate account of the case of these patients; this is done by the clerks, and there

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

is a kind of printed form or schedule (originally drawn up by my father) which I put into their hands, to show the circumstances that ought to be attended to in drawing up the case. After the case is so drawn up it is brought to the Professor, who revises it, criticises it, and desires the clerk to procure additional information upon the case. If it be urgent, the Professor makes an evening visit—indeed he does this in almost every case, and sees the patient, particularly in the new cases that require attention. The Professor almost always makes a morning visit; and different Professors go at different hours to see what has occurred during the night, and to be prepared for the public visit at 12 o'clock; the next part of his duty is to report publicly, in the English language, and to prescribe in Latin, upon the case of each individual patient in the ward, at the bedside. Before, however, dictating the report upon the case of the patient, it is the business of the physician to examine the patient; and this is an art of considerable difficulty, which is to be acquired only by experience. The Professor exhibits before the students the mode and manner of examining patients, the nature of the questions to be put, and how the truth is to be elicited from them, for they often endeavour to conceal and impose. He then reports the result of the examination, which all the students write down in their case-books, into which they had previously copied the history of the case upon admission: and this is done daily until the case terminates, either by recovery, or by death, or otherwise. In case of death, as I have already mentioned, we are always exceedingly anxious to investigate the changes which have been the consequence of disease; and most of the Clinical Professors make it their business to attend in the dissecting-room, and to explain *extempore*, not only to their students, but to the whole students of the hospital, the morbid appearances that are observed, and to connect them, as far as he can, with the causes preceding death. Besides these instructions, which all take place in the hospital, the Professors give two lectures weekly, at the hour of four o'clock, upon the cases of the patients. These lectures are sometimes written and composed with great care. When I first taught Clinical Medicine I wrote fully out all my lectures, and it was a work of considerable labour; but of late I have very frequently given these lectures without any notes, except the case-book, and I think that such lectures are more impressive than the others. When we are permitted to remove the most remarkable morbid parts these also are brought to the class-room, and demonstrated and exhibited to the students; and very often we are called upon also, either by ourselves or by means of advanced pupils, to make chemical experiments upon various matters connected with the patients; as, for example, in the case of diabetes, to take the specific gravity of the urine, and in cases of fever to take the temperature of the patient's body. We generally speak of each patient twice in the lectures; once when they are first admitted, and once upon the conclusion of the case. I have now detailed the manner in which we give Clinical lectures in this place; in some other countries a different method is followed. There is a single Professor of Clinical Medicine, and sometimes he has nothing else but the Clinical ward under his charge; most commonly he is also Professor of some branch in the University. In these cases, I may remark, the Clinical Professor has very different powers from what he enjoys here: he is first Professor of Medicine in the University, and has control over the whole medical school: the hospital is entirely under his management; he is responsible to nobody, but to a Minister of State, probably. No pupils are admitted into his Clinical hospital or ward but the Clinical pupils, whereas here the Clinical wards are open to the whole pupils of the hospital.

Is he the only Clinical Professor?—In the case I allude to he is the only Clinical Professor.

In what country is that?—That takes place in Vienna. When I was there the celebrated Frank was Professor of Clinical Medicine; and in places where the pupils are but few in number a patient is given to each advanced pupil; particularly to all those who are seeking for medical degrees, it is one of the required exercises to take the charge of a patient under the direction of the Clinical Professor. He desires the pupils to examine the patient in the presence of the class and himself; he asks his opinion as to the diagnosis of the disease—what he conceives is liable to be the result; then he directs him to prescribe; if he has erred, he corrects him, and takes care that the patient shall not suffer. But it appears to me such a plan of instruction is quite incompatible with the circumstances of this school, and I very much doubt if the managers of our Infirmary would permit it to be practised. When the pupil is undergoing this kind of Clinical instruction everything else gives way to it. The Clinical Professor is Lord Paramount of the whole school, and he detains pupils in the hospital as long as he pleases—if he thinks fit, for two hours. We could not do that here, for the length of time it would consume would be so inconvenient that any attempt to introduce it must fail. I attempted it in a summer course but it did not succeed. I have nothing more to say on that subject.

With a view to that branch of the subject to which you have been adverting, namely, the Clinical lectures, is it your opinion that much inconvenience arises from the duty being performed in rotation by the Professors of medicine at present?—On the contrary, I think it is one of the great advantages of this school that that particular branch is taught by the Professors in rotation. Almost every practitioner, even the most skilful and experienced, gets into a kind of routine practice, and in less than three months that practice is known to all the students, so that they look merely for a repetition of the same thing; whereas almost every two practitioners have a different routine practice. But by our method the students have an opportunity of seeing a variety of practice, which, I think, is very beneficial to them.

Would you think it desirable, with a view to divide the attendance upon the Professor giving Clinical lectures, so that there may not be too many students at one time in one ward, that two Professors should be lecturing at one time, with a certain number of wards allotted to each?—If the hospital accommodation would permit of such an arrangement I have no doubt it would double the labour of the Clinical Professors; but I am sure that they would not regret it, for in that respect they are not saving of themselves.

2b7

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

Is the size of the Class unwieldy for this purpose?—Yes, it is; from the number attending the ward it is both hurtful for the patients and inconvenient for the teacher and the students. My advice to the students who complain that they cannot see or hear is, that they should not attempt to follow the case of each patient, but should take alternate patients, or every fourth patient, or make any other arrangement they please so that they might get close to the bed of those cases they were following, and take the different kinds of cases in succession.

Is there any obstacle, from the construction of the Infirmary, to such an arrangement as you have alluded to, of two Professors lecturing at the same time?—I am not aware that if the Managers chose to give up four wards to the Professors there are any obstacles that might not be got rid of.

You have expressed your opinion of the importance of Clinical lectures, and stated a wish that more attendance should be given to them; and you have also stated that at present the Regius Professors are not appointed to these Clinical lectures: is it your opinion that the Regius Professors should be added to the Professors who are now appointed?—The Regius Professors have generally not been so intimately acquainted with the practice of Medicine as those who now perform the duties of Clinical lecturers. The Regius Professors are those of Military Surgery, Clinical Surgery, (this Professor has his own Clinical department,) Medical Jurisprudence and Natural History, with none of which Chairs is Clinical Medicine properly connected. Clinical instruction, if I were to judge from the commissions of the Professors, is most intimately connected with the Practice of Medicine and Materia Medica.

If you would not add the Regius Professors to those who now perform that duty, in what way would you recommend additional attendance to be given to those lectures?—At the time when the last regulations were under consideration it was proposed by the Medical Faculty that nine months of Clinical attendance should be required. It was conceived that six months of the winter course, and three months of the summer course, would be advisable; but the Medical Faculty were overruled by the other Professors in the University, who were afraid of giving too great importance to mere professional study.

Was it overruled at a meeting of the Senatus Academicus?—The Clinical Professors were outvoted.

By that proposition was not the additional attendance to be given by an enlargement of time, and not by an increase of the numbers of those who now perform the duty of attending the Clinical lectures?—Such was the proposal at the time.

Could not a double course of Clinical Lectures be accomplished, supposing two Professors were appointed, and each Professor taking a side of the ward, so as to divide the students?—It could not be done, for the reports must be dictated in a very loud voice, which would disturb the opposite side. In the time of the late Dr. Gregory there used to be constantly students called repeaters, who had good loud voices, and who repeated what the Professor dictated.

In regard to Clinical Surgery, is it your opinion that it ought to be made imperative upon students, or left as it is at present?—I think it should be left as it is at present. The Medical degree is for a Physician; the Clinical Surgery is chiefly for instructing the professional Surgeon: and to a Physician, although no doubt he ought to know the principles of Surgery, the detail is not so absolutely essential; at the same time, I would privately recommend students to attend Clinical Surgery.

As you are well acquainted with the state of foreign Universities in general, can you state if, in the system of Medical Education abroad, Surgery is as much separated from the study of Medicine as in the Edinburgh school, or less separated from it?—With regard to France I can say nothing, for during the time I was upon the Continent the war prevented me from entering the country. In Germany the profession of Surgery, not long ago, was in the hands of an inferior class of persons. The professions of surgeon and barber were still united in a great measure when I was on the Continent. Some few men, such as Richter, and others, have risen and distinguished themselves as Philosophic and Scientific Surgeons. Surgery was then emancipating itself; but every barber was understood to know something of surgery, and to practise all the minor operations. Upon the Continent, I think, as far as I can judge at this moment, they are more separated than here. The regulations of most of the despotic countries draw the line very sharply, and they will not allow an individual to practise Medicine who is not a Doctor of Medicine; and they have not that numerous class of anomalous practitioners which we have in this country. It is now a constant practice in all Germany to grant degrees in the Universities, not only in Medicine, but in Surgery, and also in Midwifery. Supposing an individual chose to practise all those branches he must get the degree in all; and accordingly, in their inaugural dissertations, some are Doctores Medicinæ, others Doctores Medicinæ et Chirurgiæ, and others Doctores Medicinæ et Chirurgiæ, et Artis Obstetricæ; but we never find the degree given in Surgery or Midwifery, except in connexion with Medicine.

Is there a separate course of study prescribed for Surgery?—Except in the Austrian States, there is no prescribed course at all; but, on the contrary, the ascertaining of the qualifications of candidates is trusted to examination. The constitution of the foreign Universities is exceedingly different from ours. The Professors there are of three classes: there are the ordinary Professors, who are similar to what we call a Medical Faculty; then there are extraordinary Professors; then there is a third class, which is adjunct—I forget at this moment the title. Although sometimes the Professors have the particular titles of Professor of the Practice of Physic, or Anatomy, or Surgery, it seems to me the practice in Germany that every Professor lectures upon any subject which he chooses, or for which he can get pupils; and accordingly, it is quite a common thing for ten Professors in the University of Gottingen to advertise that they will give lectures on Anatomy, half a dozen to give lectures upon Chemistry, and four others upon Materia Medica. It is thus advertised, but perhaps only one in reality gives the course. But there is a competition among the Professors, who are left to give what they

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

please. The public course consists of a few public lectures, which they are obliged to give; but the chief teaching is by private lectures, and the Professors take from their pupils what fees they can get. It is left open to each Professor to demand what he pleases, provided he can get pupils. There is no compulsory course. I have heard of one Professor of Law who took so much as 80 guineas from a single pupil; he had only that pupil. The courses are multiplied by a free permission to lecture on every branch, and there was the strangest mixture imaginable.

Looking to the nature of our session, and the number of lectures that are delivered, is it your opinion, that as full a body of instruction is given by the Professors in the Medical Faculty in the University of Edinburgh as in any of the foreign Universities with which you are acquainted?—I think there is an equally useful professional course of study, but certainly we do not go so fully into the whole profession as they do. There will be found there a gentleman giving a course of lectures upon the diseases of the Eye alone; another giving a course of lectures on the diseases of the Skin alone; another upon the diseases of the Mind alone: in short, they subdivide to the minimum of what they can get the pupils to make them remuneration for.

Are any of these courses made imperative upon the Universities?—In the Protestant Universities they were not imperative when I was there. I believe, of late, an imperative course of study has been introduced.

What was the duration of these courses which you have mentioned?—The duration of the courses was very various; sometimes they were short, sometimes the lectures were twice and three times a-week, sometimes they last four weeks or six weeks; everything is left to the Professor; he is allowed to fix his hours, he does as he pleases, and there is no limit upon him, except his not finding pupils.

Was that system found to lead to desultory instruction, or was it your opinion that well-educated students came out of such Universities?—Very well educated students came out of these Universities; at the same time, I think it leads to desultory instruction.

Had each Professor a variety of these subjects, or were there as many Professors as subjects?—Each Professor had a variety of subjects, but the same subject was taught by various Professors.

As to Clinical Lectures—supposing that the cases were stated by the Clinical clerk or student, that you have selected, and you reported upon them in your room, and you afterwards adjourned to another room, where all the students might more conveniently hear you, would not the instruction be better given to the students, and you at the same time get rid of the inconvenience of a great number of students being present?—I understand perfectly the object of the question; and certainly, if our Clinical Hospitals were such as I attempted to describe, great advantages would result from doing that occasionally. I have often felt a strong temptation to do so when I was full of my subject, and could have given a better lecture immediately after than at another time; but the other portion of our Clinical Lectures often requires great care and preparation, and consultation of books, and comparison with what different authors have observed on the subject. The great objection to what has been pointed out is, that it would interfere so materially with the Professors who teach at the subsequent hours; for example, Dr. Monro lectures at one o'clock; it is frequently difficult for me to let my students be there in time for the commencement of his lecture; although the wards are open, and the students may go away when they please, they are apt to remain, and be too late in going to Dr. Monro's lectures. Every session he makes two or three complaints to me, that I detain them too long.

In many cases of disease is it not injurious to the patient to hear the case read, and the physician report upon it in his presence?—There may be cases where it is injurious, but we are as delicate in these matters as possible; indeed, we conceive that our first duty is to cure the patient, and the second duty to communicate instruction to the pupils. Occasionally we dictate in Latin, in regard to females, where the subject is a little indelicate, or where they might feel a little hurt; at the same time, it is astonishing how soon the nurses get acquainted with it.

Does not delicacy towards the patient impede that accurate information which might be given to the student if the lecturer were to retire from the bedside of the patient, and deliver his opinion upon the case in another room?—There are very few cases where it can possibly do harm. The Professor never gives his opinion at the bedside of the patient: upon the contrary, almost every Clinical Professor strongly cautions the students never to speak in the wards of the opinion that has been passed in the lectures on the case.

Where are the lectures given?—In the College, at four o'clock. The observations in the wards are more in the style of remark, to those pupils within reach or near at hand, than anything like lectures with a loud voice, to disturb the patient.

Are they not in the hearing of the patient?—The remarks upon the redness of the skin, or the eruption of the small-pox, or upon what are the peculiar changes from day to day, are made in the hearing of the patient, and the remarks cannot injure him.

Are they indicative of the opinion of the Professor?—No, not in the smallest degree.

Do patients ever evince dislike to the observations that are made before them?—Some patients unquestionably do; and when we find such patients we remit them to the ordinary physician. But, in selecting patients in the waiting-room, there is a great deal of discretion used; we altogether avoid taking very delicate young women.

Are the observations more intended to direct the attention of the pupils to appearances and phenomena in the case?—Yes.

Are they at all meant to convey the opinion of the Professor?—No, the prescription is read aloud in Latin.

2h9

University of Edinburgh.

Professor Duncan, junior.

24 October 1826.

Is the lecture upon particular complaints not given until four o'clock the same day?—They are given twice a-week at that hour: and we generally speak of the patients only twice while they are under our care,—once when they are admitted, when we speak of the diagnosis and prognosis, and the intended treatment; and again after the case has terminated, when we often have to criticise ourselves for having mistaken the disease altogether.

Edinburgh, 18th October 1826.

The EARL of ROSEBERY in the Chair.

Macvey Napier, Esq., Professor of Conveyancing, called in and examined.

Professor Napier.

18 October 1826.

Are you Professor of Conveyancing in this University?—I am.

Have you seen the several Queries which the Commissioners sent to the Senatus Academicus, and read over the Answers which have been returned to them?—I have.

Do you agree with the opinion contained in those answers?—Substantially I do agree with what is contained in them.

Are there any suggestions you wish to make to the Commissioners with respect to any of these answers?—That is a question which is apt to suggest a great many views regarding the University; but I doubt if I could at the moment digest those views which I entertain into any form calculated to be of much use to the Commission.

Among those ideas are there any that particularly present themselves to your mind which you think it would be of use to the Commissioners to hear with reference to that object?—I can scarcely take upon myself to judge what might or might not be useful for the Commissioners to hear. I have certainly thought a good deal about the University, both regarding its government and constitution, and its means of instruction; and I might be able to state a few particulars on those subjects which appear to myself to be of some importance; but I beg to repeat, that I doubt if I could enter into them in an unpremeditated *vivâ voce* statement in any way that would be very satisfactory.

First, with respect to the Constitution of the University, what suggestions would you wish to make to the Commissioners?—That is perhaps the broadest question that can be laid before any Professor in this University; for we have no Constitution in an articulate form, and therefore any suggestions upon that subject would necessarily include a very wide field.

Do you mean to say that the Constitution, in your opinion, is so defective that it ought to be altered, and that it could be so altered beneficially?—I would rather mean to say generally, that the constitution is in that state that it would require to be reduced into a much more certain and definite form in every particular in which it ought to be upheld than it exists at present.

Do you mean by that that the several powers of the University ought to be more clearly defined?—Certainly; that in part is my meaning.

What suggestions would you make with regard, first, to the Senatus Academicus?—I think the powers of the Senatus Academicus stand in need of being more clearly described and defined than they are at present.

Do you mean by that their power over the Professors as well as over the students?—Their powers, both in regard to Professors and students, in regard to fixing the various *Curricula* of study—in regard to the rules to be observed by their office-bearers—in regard to the administration of the Library, Museum, and Observatory—all stand in need, as I think, of being ascertained and described more clearly and particularly than at present. In fact there are few or no positive regulations, in a distinct form, upon any of these heads, or even with respect to the immediate business of teaching. With reference to the last, I think the Senatus Academicus ought to have a power of inquiring whether the several classes are taught at the stated times: they ought to have a power of fixing the hour at which each may most conveniently be taught, and of apportioning the use of the class-rooms among the different Professors. It ought also to be ascertained whether the Senatus Academicus has the power to grant occasional leave of absence to Professors; and the conditions upon which such leave may be obtained should be fixed.

Do you think their powers ought to be settled, and that it should be clearly defined to what extent they exist?—In regard to all the particulars I have mentioned, their powers and authority ought to be clearly fixed; and the whole of those powers ought to be vested *primarily* in the Senatus Academicus: but my views as to the constitution of the University lead me to think that its government should consist of two branches, a primary and an appellatory one; of which the Senatus Academicus should constitute the first.

If those views were carried into effect, in whom would you vest the appellatory jurisdiction?—I consider that to be one of the most difficult problems in academical policy, and I have not been able to fix upon any plan which would be altogether satisfactory to my own mind. All that I am thoroughly satisfied about is, that there ought to be such a branch or tribunal.

Are you not prepared to say what, in your opinion, is the best tribunal for that purpose?—Not entirely; I have not been able to form any plan that is not encumbered with difficulties and objections.

What appears to you, after the consideration you have given to this subject, to be the tribunal the least exceptionable?—I cannot specify any tribunal that does not appear to me liable to some exceptions or difficulties; but, judging from the analogy of other Universities, the establishment in this of the office of Chancellor has occurred to me as a plan that might be adopted with advantage. If such an office were established, and if the Chancellor were to be assisted by a board of assessors or advisers, so formed as to collect the opinions of men well

University of Edinburgh.

Professor Napier.

18 October 1826.

versed in subjects of academical government and discipline, I am inclined to think that the result would prove very beneficial to the University.

Would you also have an officer something like the Lord Rector in other Universities?—No; I do not see that there is now room or occasion in this University for the office of Rector, for the duties of that officer belong by usage to the Principal or to the Senatus Academicus.

Do you think that the duties now exercised by the Principal, but which in other cases are exercised by the Rector, are as well in the hands of the Principal, and ought to remain therefore as they are?—It would be difficult to fix generally the duties of a Rector; they vary in different Universities. One can see, from the history of Universities, what the office was originally intended for; what its duties should be now, were the office to be created in this University, it seems difficult to say.

Do you know if originally the Rector was understood to be a resident member of the University?—He was, I believe, understood to be a resident member; and I conceive that one object of the institution of that office was to procure a University judge, who should decide not merely in matters purely academical, but in all cases where students were concerned. Universities thought themselves ecclesiastical establishments, and refused to allow their students to appear before any ordinary tribunal. So far as regards these judicial duties, there is no reason now for creating any office of that kind. I do not know what duties could be fitly discharged now in this University under the office of Rector, unless under that name he were invested with powers of review, or appellatory jurisdiction of the kind I have pointed out.

Upon the whole, would you rather approve of a Chancellor, with assessors, than any other tribunal?—I would; but the name is of little consequence if the object is accomplished.

Do you approve of many of the questions being left to the unlimited decision and control of the Senatus Academicus?—I think that all questions regarding academical government and education should be *first* considered and decided by the Senatus Academicus, but subject to be afterwards brought under review by appeal to a competent tribunal.

Are there any other observations which you would wish to submit to the Commissioners with respect to the University at large, its government, or regulation; and next with respect to the course of study?—I should wish certainly, as I have already stated, to see the Senatus Academicus vested with the power of judging in the *first* instance in regard to the various *Curricula*, or courses of study fit to be prosecuted in the University.

Laying aside the question of power, what are the observations which Mr. Napier could submit to the Commissioners as to the course of study in Arts and Philosophy generally in the University?—I confess that I think the present distribution of subjects or sciences among the classes in the Faculty of Arts exceedingly imperfect, and that I should wish to see that distribution re-modelled, so as to present an arrangement more consistent with modern ideas, and with rules of classification founded on the present state of the sciences.

In what particular way, or by what method would you alter the distribution of classes?—The present classes of *Intellectual Philosophy* were formed by breaking the old four years' Curriculum of study into parts, divided among different Professors, instead of being wholly taught by one. This division took place in 1708, chiefly with a view to shorten the course of study, and it was not effected, or even attempted to be effected, upon scientific principles; yet the classes here alluded to still stand nearly upon the same basis on which they were then established. I may make myself better understood by stating the objects of these classes according to the commissions under which they are taught. The commission of the Professor of Logic makes him Professor of Metaphysics and Logic. Now I do not know if any man could define precisely what is here meant by *Metaphysics:* I mean that probably no two persons, in giving a definition of what a Professor of Metaphysics ought in their estimation to teach, would assign to him exactly the same province. I think, that to found a class, in whole or in part, upon a term referable entirely to the old Philosophy is a great defect. Were the class in question advertised as the class of *Metaphysics and Logic*, instead of the class of Logic singly, it would be impossible for a student to know, or to form any tolerably correct guess even of what he was to learn under the term Metaphysics. I do not mean, in the most remote degree, here to insinuate that the class alluded to is not properly taught; I only mean to point out a defect in the constitution of the class, arising from its having been formed of a part of the old Curriculum, and its continuing to take the definition of its objects from that antiquated source. It is owing entirely to the same cause that the Professor of Moral Philosophy is, by his commission, constituted Professor of *Pneumatics and Moral Philosophy.* I rather think, that any man seeing the term Pneumatics coupled with Moral Philosophy, would be at a loss to know what sort of task it assigned to the Professor. We can say what Pneumatics meant in the darker ages; but what a Professor ought to teach now, under that term, it would be rather difficult to say. The objection to such a distribution and nomenclature of subjects does not rest upon the mere name; it extends farther, and in this way:—The Professor of Logic, by being made Professor of Metaphysics and Logic, thinks himself entitled to enter at large into the analysis of the intellectual powers. It is better that he should do so than anything else, with reference to the term Metaphysics; but in the same way the Professor of Moral Philosophy, by being made Professor of Pneumatics, also thinks himself entitled to enter into a similar analysis; so that these two Professors, during a considerable part of their course, lecture, or may lecture upon precisely the same subject and topics, which could not happen in my view of the matter, under a different and more scientific arrangement.

Will you define with more precision what each Professor ought to teach?—I would wish to see a partition of the subjects belonging to that great department of knowledge at present in

271

University of Edinburgh.

Professor Napier.

18 October 1826.

view, more consonant to the present state of science. I do not know that the Professors could do anything better than they now do, under the present arrangement; but it would be better, certainly, that their subjects should be so divided and defined, that two Professors could not lecture for a considerable space upon precisely the same topics. In the class of Moral Philosophy, under the two last Professors, who were both very distinguished philosophers, a large part of the course (more particularly in the case of the last of them) was occupied with what is not Moral Philosophy, namely, with an elaborate analysis of the intellectual powers. It was the best thing they could do under the existing constitution of the classes in this department; but the whole might be better arranged for the education of youth. If the classes in question were arranged upon proper principles, there ought, according to my ideas, to be four different classes in this department. The first ought to be devoted to the subject already mentioned as taught in the first part of the course of both the Moral and Logic classes. It ought, in a word, to be devoted to what is called generally the Philosophy of the Human Mind, or *Intellectual Philosophy.* The second class ought to be limited to *Moral Philosophy;* meaning, however, by that term, the science both of Ethics and of General Jurisprudence. The third class ought to have *Political Philosophy* for its object; and the fourth, Logic and Rhetoric, or what I would call *Instrumental Philosophy.*

Would you put that as the last class?—Yes. Perhaps I may be allowed to add, that if it should be doubted whether four classes could be established for those four subjects, so as to maintain Professors of eminence for each, the whole of the foregoing subjects might be thrown, with tolerable utility, though not upon a perfectly scientific plan, into three distinct Professorships. I would then include in the first the Analysis, or Physiology of the Mind, and Moral Philosophy, to be designated the class of *Intellectual Philosophy;* I would devote the second to *Political Philosophy;* and the third to Logic, properly so called, and Rhetoric, or *Instrumental Philosophy.*

Would the first class be very nearly what the class of Moral Philosophy is now?—Yes, very nearly; but if its objects and those of the last class were thus defined and limited, it could not happen that the very same subject would be discussed at length in both.

Would you disjoin a considerable proportion of what is now taught in the class of Logic, and conjoin with it the subject of Rhetoric?—The third class, as already mentioned, I would limit to Logic, properly so called, and Rhetoric.

Would you include in the third class the Theory of Evidence, and similar subjects?—Yes.

Under the class of the Philosophy of the Mind, do you include the History of the Senses?—Yes; the analysis of the powers of external perception I include in the first of the classes. In the class of Political Philosophy I would include all those parts of political science that do not fall under the immediate province of Ethics; such as Government, International Law, and Political Economy.

Have you anything to suggest by which regularity in the attendance of the classes, and a stimulus to the students, in order to promote their studies by honours or otherwise, could be ensured?—The course of study must depend somewhat upon the arrangement of the subjects of the classes. It must depend, for instance, upon the class of Logic being formed as I have suggested, or its being constituted as at present, whether it ought to be first or last in a course of Philosophy. If it is taught as at present, and there is no other class where the Philosophy of the Mind generally is illustrated, it ought to be the first; if it is limited to its proper province, it ought to be the last in the course of Philosophical study.

Supposing the course were to be settled according to the way you think preferable, have you anything to suggest which would be an improvement as to students passing from the one class to the other, so that they should not be allowed to take the one or the other as they think proper?—In the University of Glasgow there is a system of examination on passing from a lower to a higher class, commonly called the *Blackstone* examination, and which is certainly useful, as obliging young men to prepare for that occasion. But the thing itself, at least when I attended the Language classes in that University, was little more than a mere piece of form, there being then no instance of a rejection. I am very doubtful whether any such system could be followed in this place, particularly in the higher classes, where even ordinary examinations are comparatively so little in use. There can be no doubt, however, that the Curriculum of Study for the Degree of Master of Arts, and the mode of conferring that Degree, requires revision, and every species of enactment that can render it of more importance in the eyes of the students and the public, it being of little or none at the present moment. I should be inclined, for my own part, to establish a higher Curriculum and a lower one; the lower Curriculum should be adapted for and lead to the Degree of *Bachelor,* the higher to that of *Master* of Arts. This last should be given publicly, perhaps upon examination, though I do not attach great importance to that; but it ought at any rate to be conferred in presence of the whole University, with suitable academical honours, so as to enhance its value, and render it an object of honourable ambition to the students.

Do you think that if the degree of Master of Arts was to be given, accompanied by an efficient examination, it would get to be a mere form?—I rather think that the history of Universities would show that public examinations themselves have all ultimately degenerated into mere pieces of form and routine. They may be sustained for a time by active Professors and new regulations, but their tendency is but too certainly such as I have described. On a few subjects public examinations might no doubt be made efficient—in those belonging to the Language and Mathematical Classes for example; but on such subjects as Moral Philosophy, Logic, and Rhetoric, they would ultimately settle in mere routine.

Do you think they might be made efficient in Languages and Mathematics?—With respect to these there would be no great difficulty of continuing examinations upon an efficient plan.

University of Edinburgh.

Professor Napier.

18 October 1826.

Although it is the tendency of public examinations, if not properly superintended, to degenerate, might it not be very possible so to superintend them, and from time to time, as occasion might require, to revise the system, as to prevent that degeneracy?—No doubt the thing is possible; but looking at it as a system intended to work on for generations, I think it would run the usual course here, and come to mere form, or something near it at last. The original constitution of this University required that there should be public examinations, conducted with great pomp and parade, before the Degree of Master of Arts could be obtained. That practice was observed for a considerable period, but it gradually became an empty show, and was at last abandoned.

Were not public examinations at the University in old times connected with that system by which the Regent carried on the students until the whole class ended in the Magistrand class?—Yes. No student could obtain the Degree of Master of Arts until he had concluded his course in the *Magistrand* class when a public laureation took place, the degree being then conferred upon the whole of that class.

Was the system of examination necessarily connected with that state of things?—It was necessary to the obtaining the only degree then given in this University; for there was no other degree given for more than a century.

Did the system of examination continue after the Professors were appointed to teach the separate Arts and Sciences?—I believe it did continue for a very short time; how long I have not had the means of ascertaining.

Was there any attempt to revive that system?—I believe there were some such attempts; but they were unsuccessful.

Is it not probable it fell into disuse from the decay of the system of teaching upon which it was founded, and from not being applicable to the times which followed?—It is impossible now to point out exactly the causes of its abandonment.

At what particular period in the course of study would you propose that the Degree of Bachelor of Arts should come in according to your plan?—With reference to a lower and a higher Curriculum leading to two different degrees, the classes in the *Mathematical and Physical* section of the Faculty of Arts should be remodelled, so as to include Natural History and Chemistry, properly so called. In order to be admissible to the Degree of *Bachelor*, the student should be required to have attended the classes of Mathematics and Natural Philosophy in that section, and the class of Intellectual Philosophy, perhaps also that of Instrumental Philosophy in the other. In order to be admissible to the higher Degree of *Master*, he ought to have attended the whole of the classes in both sections of that Faculty.

According to your view of the system of education, ought students still to commence their education with Latin and Greek?—Yes, if Latin and Greek shall continue to form classes in the University.

Would you leave anything but Political Philosophy for the higher Degree?—For the Degree of *Master* I leave in the Physical department, Natural History, and Chemistry, properly so called. I leave in the other, besides Political Philosophy, the class of *History*; meaning, however, that that class shall be so constituted as to afford a separate course, or series of lectures, on the History of the Sciences and the liberal Arts.

You have expressed your fear that if public examinations were instituted in this University, they would, in the progress of time, degenerate into a mere form; but you have also stated that you think it would be a great improvement to have the Mastership of Arts, and even Bachelorship of Arts, conferred upon the students; do you not think that if those degrees were conferred without previous public examination, the giving of degrees would become a mere matter of form?—I think that the course of all these matters is to come more or less to form; and that all that can be done effectually and permanently is to secure a regular and complete course of study: but I still think that the degree of Master of Arts might be made of more consequence than at present, by a higher and more complete course of study, and by being given publicly, with honours, in presence of the whole University.

Do you not think that public examination, previous to conferring such Degrees, would be a great check against their becoming mere forms, and would contribute also to produce emulation among the students?—I have already stated generally my opinion on that head. There is, I may add, some difficulty in conceiving how a *public* examination upon such subjects as Intellectual and Moral Philosophy could be properly conducted. If, indeed, each Professor in these departments had a text-book, his students might be examined with reference to that text-book. In any other way it is not easy to see how a public examination upon such subjects could be otherwise than vague and unsatisfactory. But there could be no objection of this kind to public examinations in the Languages and exact Sciences; and I have no doubt that the Degree of Master of Arts might thereby be rendered more important.

Would you suggest that the study of Intellectual Philosophy should precede that of Physical Science?—No; for though some minds are more disposed to the former than to the latter, I think that a regular course of study, either for the degree of Bachelor or Master of Arts, ought to begin with the Mathematical and Physical Sciences.

Would you include Natural Philosophy?—No, not at the commencement of the course; for I cannot suppose that any great proficiency can be made in Natural Philosophy, certainly not in the higher branches, without a considerable knowledge of Mathematics. I would rather say that, in a complete course for the higher degree, Natural History ought to precede Natural Philosophy, in order to give the student time to complete his mathematical studies before entering that class. The mind will be better prepared for Intellectual Philosophy after a previous acquaintance with Mathematics.

Would you extend that so far as to recommend the study of Natural Philosophy before commencing a course of Intellectual Philosophy?—No, certainly I would not. The study of

273

University of Edinburgh.

Professor Napier.

18 October 1826.

Intellectual Philosophy might be commenced in the second year of the philosophical course, and carried on thereafter jointly with the study of the physical branches.

Did you not mention that your own studies were carried on at Glasgow?—Yes, they were begun there.

Did you attend the Logic class there?—No; I came here to attend the Logic class.

Are you generally acquainted with the system of instruction carried on by Professor Jardine?—Only from his work.

Have you considered that work?—I have read it.

Do you approve of the method of conveying instruction by making examinations a necessary part of the duty of the Professor, and the attendance upon them imperative on the students, in such classes as the Language and Philosophical classes?—I approve of examinations by each Professor in his own class, wherever they can be properly introduced; and I think the want of them a great defect in this University. With regard to Professor Jardine's plan, its success must depend much upon the zeal and habits of individual teachers; it may not succeed so well in other hands, but in its general features I would say generally that it was a useful plan.

Do you think it might be extended to the Philosophical classes, even modelled in the way you are now suggesting?—I conceive that examinations might be advantageously introduced into these classes. Whether the whole apparatus of Professor Jardine's plan could be introduced here is a different question. His class required two hours a-day for his method. In a University like this, where there are so many young men desirous of acquiring a general acquaintance with science before entering into professions, and who are obliged to attend various classes in the same session, it would be impossible to give two hours a-day in each for the sake of that method.

The object being to improve the system of instruction in each class, might it not be of advantage not to encourage the practice of young men attending so many classes at once?—I am afraid it would be thought hard to prevent that. If a young man comes to study for a Degree, he must necessarily follow out the plan of study prescribed by the University; but it would be hard to tie down those who came to study with different views to that course.

In your opinion is the object of instruction to those who are bound to attend particular classes in part sacrificed to adapting attendance at these classes to those who may wish to attend a great number at once?—I could not approve of any plan for this University that would interfere materially with the objects of general study. In the class of Moral Philosophy, modelled upon its present plan, I conceive that it would be impossible for the Professor, limited as he is to an hour daily, to give a full course of lectures, and at the same time to follow out Mr. Jardine's method. He might have examinations certainly, and he might prescribe a few exercises. I believe the present Professor does prescribe exercises, but I do not think that he attempts, or ought to attempt to follow out Professor Jardine's plan to its full extent.

Might there not be some advantage in adopting the system which is followed at one of the colleges at Aberdeen, where, to prevent attendance on too many classes at once, they teach certain classes, namely, Natural Philosophy, Moral Philosophy, and Logic, at the same hour?—I should be against any plan devised to prevent a student from attending any class he thought fit.

If a Curriculum were prescribed for persons intended for particular professions, say students of Divinity, would it not be desirable to make the system of instruction in each class perfect, although it may interfere with some students who are attending a greater number of classes at the same time?—The system of instruction in each class ought certainly to be as perfect as may be; but I doubt if any such degree of perfection ought to be aimed at as would diminish the inducements and means of general study.

Will you inform the Commissioners whether, in your opinion, the system of conveying instruction merely by delivering lectures, without any regular system of examination to ascertain the attention of students, and their application to the subject, is really of much practical benefit to the generality of students?—I would say, generally, that every class is capable of being rendered more useful by examinations than by lectures alone. I consider it a defect in this University that we have no effective system of examination.

Are inattention, idleness, and a want of the habit of application, increased by that defect?—I can only repeat in answer, that I consider the want of regular examinations as a great defect.

As to Logic and Moral Philosophy, and classes of that description, though a few may be so interested by the lectures as to make voluntary exertion, is not the system one under which a great deal of inattention and idleness may go on utterly unknown to the Professor, and which the existing mode of instruction does not tend to check?—The Professor cannot know exactly whether his students attend or not. He does not, I believe, call a catalogue regularly, as is done in Glasgow. I cannot, however, speak with certainty upon that point. I rather think that in these classes the catalogue is called occasionally.

Are there any means of ascertaining the habits of attention in the students?—No farther, I believe, than by occasionally prescribing exercises, which is an exceedingly imperfect test; and the performance of the exercises is always voluntary.

Professor Napier having incidentally mentioned, in the course of his examination, that he was of opinion it would be as well not to teach the Language classes, or some part of them in this University, will he have the goodness to say whether it is the whole of the Language classes, or the junior ones only, or what particular parts of these classes he would think it advisable altogether to do away with in the University?—If there were competent schools in the country, I should wish these classes entirely done away with in the University; but I

University of Edinburgh.

Professor Napier.

18 October 1826.

should still wish a single class devoted to Grecian and Roman literature, where the students should have readings in the higher classics, accompanied with criticisms and lectures upon ancient literature, manners, and institutions. I do not, however, say this with reference to any defects in these classes as at present taught. I have had the means of knowing that both the present Professors have introduced great improvements in the mode of teaching, and that they are both of them men of eminent skill, and unquestionable zeal. My objection is general. Mere teaching must proceed in a very imperfect manner in the University, whatever may be the zeal of the teacher; and so long as classes for teaching exist in the Universities, there never will be schools of that kind that are to be wished for.

Do you think, that having those junior classes taught in the University, has a direct tendency to prevent the growth of a superior order of schools in Scotland?—Unquestionably. There would be more schools similar to the one lately established in this place, the *Edinburgh Academy*, which is formed on very good principles, and well conducted as far as my observation goes. Such schools would be far more beneficial than the Universities for teaching the ancient languages; and young men would come from them to the University at a period of life when they are better qualified for University pursuits.

Would the initiatory class which you spoke of introducing into the University be a class for teaching, not merely the languages, but for the cultivation of Grecian and Roman literature?—I would have that class taught two hours a-day; during one of which the Professor should read and criticize some of the more difficult Greek and Roman classics, and examine upon them; and, during the other, lecture and examine on subjects of Grecian and Roman literature, and the higher Philology.

Professor Napier having adverted to the probability of the growth of schools which would carry the boys further in their knowledge of literature, so as to enable them to be prepared for meeting the classes when they came to the College, provided the alterations were made which he suggests, might there not be considerable difficulty with reference to a great number of young men who come to College, not having the means of attending these schools (students of Divinity for instance), and who look to the University for the commencement of the very rudiments of classical learning?—In my way of viewing the case I should not look upon that as a misfortune, but the reverse. I think the students of Divinity are at present very imperfectly educated, and that it would be highly advisable that their education generally were improved before allowing them to enter upon their own particular studies. If schools of the kind to which I allude were once viewed as affording the best means of classical education, they would exist in every great town as well as in Edinburgh, in Glasgow, Perth, Aberdeen, &c., so that they would be within the reach of every person; those intended for the study of Divinity as well as others.

Are there not many students of Divinity who have not the means of affording themselves that species of preparatory education, and might it not be very hard upon those individuals, and (seeing the nature of the Scotch Church) detrimental to the Church itself, that so much difficulty should be thrown in the way of these young men?—I think that involves a preliminary question. I never could conceive it detrimental to the Scotch Church that men more thoroughly educated than at present should be required to enter into it. I rather think the character of the Church would be raised by requiring a more efficient system of education than is at present thought necessary for students of Divinity. The character of the Church, as a learned body, would be raised, and men in a higher sphere of life might be induced to enter it, though, as their livings are so small, this could not be counted on in the same degree as in other professions.

The question not pre-supposing that a learned education was not of great importance for a clergyman, but adverting to the difficulties existing in this country, arising out of the nature of the Church establishment, and out of the circumstances of a vast number of those who devote themselves to the ministry, how would you answer the question in that point of view?—I can only say, generally, that I think a better class of schools would be created by excluding the classes I have mentioned from the University, and that that would be an advantage generally to the cause of learning. How it might affect the Scotch Church in particular I cannot exactly say; but I may observe, that I should think any change beneficial for it that should produce in it more learning than it possesses at present.

Would you venture practically to recommend the alteration in the Language classes which you pointed out, in the belief that it would be followed by such a change in schools as to supply the defect?—I should have no hesitation in giving that recommendation.

Can you suggest any means by which that change can be made gradual?—I could not conceive any change at all justifiable which should deprive the present Professors of their livings and employments.

With reference to the state of education in this country, without any change gradually occurring in the public schools, would you venture to apply your view practically, so as at once, putting the emoluments of the Professors aside, to alter the classes in the College?—There seems no reason to apprehend, that in the course of a few years there would not be schools sufficient for the purpose I have alluded to, formed throughout the country. I cannot say exactly what space of time would be required; it would certainly require some time.

Practically speaking, what space of time would you suggest to the Commissioners, in your opinion, within which it would be safe for allowing these alterations to be made, or changes to be effected?—It is difficult to fix a space upon any certain grounds; and I can only say, in answer to such a question, that in a few years,—in a space not exceeding eight or ten years,—schools might be formed containing masters qualified to supersede that sort of assistance in teaching Greek and Latin which is at present derived from the Universities.

Are you contemplating a system of public schools, such as obtains in some parts of the

275

University of Edinburgh.

Professor Napier.

18 October 1826.

Continent?—Where there are schools, such as the High School of Edinburgh, which is, in some respects, a public school, their constitution, or means of instruction, ought to be adapted to the change now in view.

Are you contemplating an establishment of public schools instituted by Government, or by public authority, or under public inspection or control?—I certainly contemplate the establishment of such schools as would ensure to the youth of the country the means of instruction in the Greek and Latin languages, without obliging them to resort to the Universities so early as they do at present. The proper economy of these schools is a different question, which no doubt requires much consideration.

Have you it in view to recommend, that by public authority there ought to be instituted over the country a system of public schools, so that the public should carry on the education of boys as they carry on the education of young men at colleges?—No.

Would you leave the schools to rise up from the necessity which would be found to exist for them?—Yes: I conceive that the spirit of the times, and the abandonment of the business of mere teaching in the Universities, would necessarily and naturally lead to the formation of sufficient schools, without the interference of public authority.

Are there any suggestions you would wish to make as to your own particular class in the way of improvement or change?—No; if I saw any improvement wanted, I should think it my duty to introduce it if it were in my power. I hold, in regard to my own class as well as every other, that it would be a very great advantage to teach by examinations as well as by lectures; and in point of fact I had very nearly resolved to introduce examinations last winter, being the first winter that I lectured in the University: but, after consulting a number of my friends, particularly at the Bar, I found the majority thought so unfavourably of the success of the measure, that I really had not courage to proceed with it. But, in consequence of further reflection, I have resolved to make the experiment during the ensuing session; of course making the examinations voluntary, both because I have no means of enforcing them, and because it would be highly inexpedient to make the attempt in the case of so advanced a class.

Have you any Prizes in your class?—No.

Have you any Fund for any?—No.

Is there any difference between the class as it is now constituted in the University, and the old class as it was conducted before by the Writers to the Signet?—None whatever; seeing that the subject is the same.

Is it imperative that a person must attend your class before he is made Writer to the Signet?—Yes.

Do the Solicitors require attendance in your class?—So far as I know they do not.

Do you propose to have a list of those gentlemen who wish to undergo examination?—I mean to ask those gentlemen who are willing to submit themselves to examination to put down their names, and to endeavour to prevail upon them to allow the whole class, as well those who so enrol their names as those who do not, to attend; in the hope, that after seeing the mode in which the examinations are conducted, the greater part may fall into the plan.

Would you have a separate hour of examination?—No; as my course embraces only a part of the Law of Scotland, it is not nearly so extensive as that of Professor Bell; and therefore I can devote some time to examinations, without the necessity of taking a separate hour.

Will you mention the principle on which it was conceived that your class would be more useful if incorporated with the University?—In the first place, every class must be thought to be taught under more advantageous circumstances, and to be placed in a more dignified point of view, by being taught in a University. This observation applies equally to the various branches of Law as to the other sciences. In the next place, it was found a very serious inconvenience to the students to be obliged to run some distance from my class to Mr. Bell's, and from Mr. Bell's to mine; the hours of lecturing being necessarily consecutive, so as not to waste the time of the young men attending chambers.

Do you call a roll or list of students?—No, I do not. The students who attend my class are so advanced that it may be supposed they attend for such instruction as they can get; and I have no reason to complain of the want of attendance.

Do you conceive the subjects you have to treat of, in the course of your lectures, could be effectually treated of by the Professor of Scotch Law, combined with the other branches of the science?—Certainly not; I do not know any kindred subjects forming classes in the University that are so capable of being separated, and which, with reference to the business of teaching, interfere so little with each other. A scientific course of lectures upon the whole Law of Scotland must necessarily be very different in its outline, divisions, subdivisions, and details, from that of a course of lectures limited to Deeds and Conveyances.

Edinburgh, Thursday, 26 *October* 1826.

The EARL of ROSEBERY in the Chair.

Dr. *Andrew Duncan,* Junior, called in and further examined.

Professor Duncan, junior.

23 October 18226

Will you have the goodness to resume your observations respecting the education of the Medical students, or the branch of the subject which you proposed to take next?—There were one or two observations which I omitted in my last examination; they are very brief, I would beg leave to add them. The Chair of *Materia Medica* does not only require one hour of lecture, and the time which is necessary for preparing and improving the lectures, but a great

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

many hours' occupation in the Laboratory and Museum in preparing for the exhibition of experiments; and I am obliged to have an assistant, with a salary, which is varied, but which is at present £30. I may also add, that I have been thinking, since I was last here, upon the possibility of introducing examinations into my class, and it is my intention, in the latter half of the present course, to make a trial of it, though I am doubtful of its success.

With reference to a paragraph which appears in the Answer by the Senatus Academicus to the seventh Query, relative to the conditions upon which the former Professors of *Materia Medica* held that office, would you have the goodness to explain more in detail the circumstances connected with that arrangement?—Before myself, there have been only two separate Professors of Materia Medica in the College; the first of these was Dr. Francis Home, who, before his appointment, was King's Second Physician; and upon his resignation of the chair of Materia Medica, his son was elected; before his death he resigned the office of King's Second Physician, and his son got that office also. By an arrangement between the Professors of the Practice and Theory of Medicine and of Chemistry, the salary of King's First Physician, when held by one of them, is divided equally among them; and all of these Professors returned that salary, as a salary connected with the Professorships.

Was that arrangement, by which the division of the salary which you have mentioned took place, a private one between the parties, or one which you conceived to be binding on the successors?—I should understand, that it was entirely a private arrangement between the parties.

Can you state to the Commissioners how it happened that those sums, the portions of which they receive as King's Physicians, were returned as part of their salaries?—I can only state that it was contained in the Returns of those three Professors individually; and that I suppose it arose from their anxiety to bring before the Commissioners every sum they seemed to receive as Professors.

Are the Commissioners to understand that their successors are in no degree bound by the existing arrangement?—I should think not. Every new Professor, who has got it, thinks himself bound by the same arrangement existing; but I do not believe the successor, if he refuse to divide it, could be forced in a court of law.

If his Majesty appointed a person as his First Physician, who was not one of these Professors, could they have any claim whatever upon him?—None whatever.

Will you have the goodness to pursue your train of general observations?—I was mentioning that the Clinical lectures in this University were given by the Professors of Medicine, or such of them as chose, in rotation. I have, since the last meeting, been looking into the practice in the Universities of Germany and Italy, and I find that it is almost the universal practice, that the Clinical lectures are given by the Professor of the Practice of Physic. It appears to me quite essential that the Professor of the Practice of Physic should at least have an hospital at his command occasionally; but it is almost equally essential to a Professor of *Materia Medica*. When the last physician was elected for the Royal Infirmary of this place, I urged that argument with the managers, that one of these Professors should be named one of the Ordinary Physicians; but my representation was not successful.

I would now read a few notes with regard to the Medical Faculty. The Faculty of Medicine has always consisted of those Professors who were nominated by the Patrons Professors of Medicine. On the 9th of February 1726 there were only the Professors of the Theory of Medicine and of the Practice of Medicine, of Chemistry and of Botany; although a Professor of Anatomy was already in the University, and although a Professor of Midwifery was appointed of the same date, neither of these seemed to belong to the Medical Faculty. Anatomy appears to have been added to the Faculty on the 19th of June 1754, when a new commission was issued to the Drs. Monro, as Joint-Professors of *Medicine*, Anatomy, and Surgery. The Materia Medica was added upon its being erected into a separate professorship in 1768. After that there was no change in the Faculty till the date of 1824, when the Professor of Midwifery got a new commission as Professor of Medicine, Midwifery, and the Diseases of Women and Children; and was added to the Faculty by the Senatus Academicus.

The duties and privileges of the Medical Faculty in this University are in the *first* place, to have attendance on their classes compulsory upon the candidates for the degree in Medicine: this, however, although the universal custom, is perhaps not necessarily a privilege. They have also the privilege to give Clinical lectures, the exercise of which is, however, voluntary, some of them taking it in rotation, others declining it. They have also exercised the privilege of proposing alterations in the rules for graduation, subject however to the approbation and decision of the Senatus; the Faculty always decides, in doubtful cases, upon the qualifications of candidates; and *lastly*, it is their duty to examine the candidates for medical honours; and this duty is compulsory, and one of the most important which they have to discharge. At present there are seven members of the Medical Faculty, but the fee for examination is divided among the six seniors; that was fixed when Dr. Hamilton claimed to be admitted: he always said, "I do not mean to interfere with your personal interests, therefore I will take no share of the fee for graduation;" and it was fixed to be divided, by the direction of the Town-council, among the six seniors.

Is he required to take a share in the examination?—He has been required, but has never attended.

Has he assigned any reason?—He states, that until the disputes between the Town-council and the Senatus Academicus are settled, he thinks it most prudent not to attend; or that he has been advised not to attend.

Does the examination take place at hours when he could attend consistently with his public duties as a Professor?—Certainly. One of the examinations takes place at ten o'clock—it

277

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

lasts commonly until near twelve; and he lectures in summer at ten o'clock; but that is not the reason, he gave to us for non-attendance.

Are the examinations chiefly in summer?—The examinations commonly begin about the beginning of April, and they last continuously until the whole students have gone through their first examination, which is always almost done before the 24th of June. We have two examinations daily; one at ten o'clock and one at three o'clock.

Since these classes have been added to the Medical Curriculum, do any other Professors examine the candidates upon the subject of Dr. Hamilton's class?—Very frequently questions are put upon the Diseases of Women and Children—upon the Diseases of Women very frequently, and also upon the Diseases of Children; upon the pure art of Midwifery questions are certainly never put.

Is the matter remaining in dispute between the Senatus and Dr. Hamilton, merely a question whether the necessity of attendance upon his class should draw back to the students who had entered before 1825?—That is the matter of dispute.

Consequently, are the candidates now, not within the rule of the Senatus, though they are within the rule of the Patrons?—I believe that is correctly stated. I have mentioned, that it is the practice of the Medical Faculty, that the junior Professor should be Dean of the Faculty, which is an office of very great labour, and is still discharged by Dr. Alison.

Has that ever been offered to Dr. Hamilton?—Not exactly perhaps in plain terms; but he has been called upon to discharge his duty as one of the Medical Faculty, but he has declined it, for the reasons already given.

With regard to the Medical degree; I would say that the Medical degree of Edinburgh is purely professional, and it is in high estimation both in this empire and in its colonies, as is proved by the great number of individuals who come here to graduate. It is likewise in estimation upon the Continent. It is merely a designation by which the public know, that the individual has had a certain amount of professional and general education, and has been able to pass through a certain course of examination. The Doctors of Medicine in this University acquire thereby, however, no monopoly in the practice of Medicine. There appears to me great danger in altering the character of this degree: but little danger would arise from increasing the professional acquirements of those who obtain it, because it is for these, that it is valuable to the public, and if these were raised, it would become more valuable; but there would be great danger in rendering it more literary or scientific. Medicine, as a practical science, requires the whole time of the student to attend to it. The languages are only useful to him as a source of professional information.

Did Dr. Duncan hear Dr. Alison, as Dean of the Medical Faculty, read, or state the substance of, certain notes upon the subject of the expediency or inexpediency of requiring greater literary qualifications for Medical Degrees?—I did.

Did you concur in the substance of those notes?—I concurred in the substance of those notes.

Have you anything additional to suggest, in the shape of argument or observation, to the notes of Dr. Alison, which you have had an opportunity of hearing?—I may merely mention, that it is customary upon the Continent for physicians, who wish to have a high literary and philosophical character, to take the Degree of Doctor of Philosophy as well as Doctor of Medicine. Almost all the Professors of Leipsic and of Sweden are Doctors of Philosophy and Medicine. I have here a dissertation of a medical gentleman, upon taking his degree of Doctor of Philosophy; although the dissertation is written upon a chemical subject, it is not for the degree of Doctor of Medicine, but of Doctor of Philosophy.

Do you make that statement in order to point out a mode by which, if persons are desirous of superadding the distinction of literary acquirements to those of medical knowledge, the object may be obtained without making the same literary education an indispensable requisite for all Medical Graduates?—That is my intention.

Would you approve of such a degree being introduced into this University, with the opinions you hold generally with respect to the proficiency that ought to be required in medical students?—It would enable those students who are able to take such a degree, to distinguish themselves from others, and therefore it would be valuable in that respect.

Dr. Duncan has stated, that there would be danger in rendering the profession more literary or scientific than it is at present; would it not at least be desirable that every physician should be moderately versed in all the branches of liberal study which are considered essential to the education of a gentleman?—I am decidedly of opinion, that all medical men should be moderately versed in every thing that constitutes the education of a gentleman; the difficulty in practice is, how to obtain the proof of that qualification.

Do you consider physicians in general as being fully as well educated as they were 80 or 100 years ago?—Professionally, infinitely better.

Do you consider physicians in general as being fully as well educated with regard to literary and scientific acquirements?—If the modern languages are included, I would say more so.

Do you consider the Medical Works that are published in the present times as being written with a degree of perspicuity, elegance, and precision of language, fully equal to that of the more eminent medical authors who flourished about the middle of last century?—In the vernacular tongues, I would certainly say yes; but they are not now in the practice of writing Latin, as they were a century ago.

Is there not a tendency among medical writers to indulge in reasonings, founded upon mere hypotheses, to a greater degree than almost in any other profession?—I might admit that; but it arises from the nature of the subject not admitting at all of demonstrative proof.

Do you not consider a knowledge of inductive Logic of consequence to one who wishes to

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

form habits of scientific inquiry?—That is what is constantly inculcated upon the students that they should in the first place observe, and they then should deduce general conclusions from those observations.

Would you say that in the present day, and according to the existing system, physicians are as well educated in general literature, as you think sufficient for their professional education?—I certainly think so.

In examining candidates in Latin, do you generally find that they give their answers in accurate language?—I really cannot go so far as to say that.

Do you think the examination in Latin a sufficient test of the literary acquirements of a candidate for the degree in Medicine?—By the new *Statuta*, the Professors are enjoined to ascertain the competency of the candidate, in regard to the Latin language, before the professional examination begins, which then may be conducted in English.

Is the system of examination in Latin not a sufficient test of literary acquirement?—I did not mean to go so far as that, for I think that if a graduate can stand two hours' examination in the Latin language, he must be moderately versed in that language; but it is a more strict and better mode of ascertaining his knowledge in Latin, to try him in that language alone, independently of the professional examination.

Are we to understand that you are of opinion that no evidence of literary qualifications whatever should be made necessary for graduation for medicine, other than a knowledge of Latin?—Other evidence is required, and is brought out in the course of examination, because it is impossible to answer our strict examinations without having a knowledge of other scientific acquirements; but I think that it is not necessary to have a degree in Arts, for example, or any academic proof of literary and scientific acquirements in the candidate, and that it would be exceedingly hurtful to the profession generally, and to the public, were such qualifications required.

Do you think it unnecessary that the candidate should have a knowledge of the Greek language?—I do not think it necessary for the Medical profession.

Do you know how the regulations of the new *Statuta* in the University of Aberdeen stand upon this subject?—I have read them.

What is the nature of their regulations?—They require that the candidate, besides having as much professional knowledge as we do, shall also have got the degree of Master of Arts in a University.

Do you know the new *Statuta* of the University of St. Andrew's upon that subject?—I do.

What do they require?—They require also a very considerable previous information, and sufficient evidence of literary acquirement.

Do they require that a man should be either Master of Arts, or that he should be submitted to examination upon his philosophical and literary attainments?—They require that he shall be *liable* to such examinations: the candidate, if he be not in possession of a diploma, or the degree of Master of Arts, must produce a certificate of having had a classical education, and be ready to undergo an examination as to his proficiency.

What particular objection occurs to you to requiring evidence of having attended Philosophical classes in the Universities previously to taking the degree of Medicine?—The objection which occurs to me, and which is in my own mind quite conclusive against it, is, that a very large proportion of our graduates come from England and Ireland, where, during the period of their life before they begin their professional study, they have no means of attending those branches in a University, although they may acquire a moderate knowledge of them in schools, both public and private, and from their own private exertions. If we were to require evidence of their having attended them in Universities in addition to the four years of professional study, the degree here could not be obtained without a residence of not less than six or eight years, the effect of which would be that these gentlemen would take no degree at all.

Are you aware that, with regard to the Irish students, a man cannot be even admitted to the Apothecaries' Corporation of Dublin without proof of his understanding the Greek language?—I am not aware that it is necessary to understand the Greek language. I know it is necessary to understand the Latin language.

Although what you have now stated might be considered as an objection to requiring evidence of having attended public classes at a University, do you see that there would be any objection to such an examination being instituted into their Literary and Philosophical acquirements, as to ascertain whether they had had a well grounded previous education?—The objection to that plan appears to me to be, that students would not come up from a great distance, with the chance of being remitted, or not allowed to enter upon their professional studies at once.

Can Dr. Duncan state in what respect the Graduates of this University are better educated than those individuals of the Medical Profession who content themselves with taking the diploma of Surgeon?—The diploma of Surgery, as obtained in this place, requires very high qualifications; and almost the only leading difference between the education is, that as yet the College of Surgeons do not render Clinical Medicine imperative upon their candidates, although, in fact, they are to live by practising Medicine. Another difference: by the new Statutes, four years of professional study are required for a Medical degree; but three years are sufficient for a Surgical diploma.

Does the diploma of Doctor in Physic confer the power not only of practising Physic, in all its branches, but of teaching the Science?—In this country every man may teach it who pleases; there is no monopoly of the art of teaching any more than of that of practising.

Is not that a part of the diploma?—It is a part of the diploma: they get the right of teaching.

Do you think that if a previous examination with respect to the acquirements of students before entering this University were to take place, it might probably reduce the number of those who come up to it?—I think it would reduce the number very greatly.

Assuming that that reduction would take place, do you not think that such a previous examination might lead to that reduced number being a superior order of students, and afterwards of graduates?—I think that such a regulation would exclude the least informed part in literature and science of our graduates; but I am not aware that any advantage would accrue either to the public or to the profession in consequence.

Do you not think it would be an advantage to the public and profession to have the individuals, who are graduated, of a superior order, you stating in your evidence that you think by such regulation the less well-informed would not come up for graduation?—There is no doubt there would be more; they would have a higher literary and philosophical character; but as Physicians in ordinary I do not think they would be better fitted for the profession than those we now graduate.

Does Dr. Duncan think that it is more for the reputation of this University, and for the advantage of the public, that a very great number should annually graduate here, moderately versed only in scientific and literary acquirements, or that there should be a smaller number, with very superior qualifications of that sort?—Immediately, it would certainly have no effect whatever upon the reputation of the degree of Medicine as granted at this University. At this time the degree from Edinburgh is in the highest reputation of any degree of Doctor of Medicine, and attempting to raise it still higher, not on professional grounds, but upon literary and general philosophical grounds, would be to divert the attention of the students from their profession to other pursuits.

Would there not be, in the case supposed, a presumption in favour of Edinburgh graduates as Doctors of Medicine, supposing them to be universally deeply-versed in science and literature?—They would not be more successful in the object of their life, that is, in getting into general practice.

Is there not a strong presumption, when any medical man is a learned and scientific person, in favour of his skill as a physician, from that very circumstance?—The presumption in his favour would be strong, that he is a man of literature and science; but from experience, and looking round to the state of the profession generally, we do not find that those gentlemen who devote themselves to literature and scientific pursuits are in general most esteemed as physicians.

Do you know how the regulations stand in any of the foreign Universities upon this subject?—In some of the Universities they require very exact Curricula of study, both literary, philosophical, and medical. This is particularly the case in the Austrian States, and I believe also in Russia; but in those despotic countries the graduates have a complete monopoly of the profession, and no person can interfere with them; whereas the medical graduates of this University are exposed to two great hinderances to their success in life: the one is a certain monopoly, which is enjoyed by the graduates of Oxford, Cambridge, and Dublin, and which would not be conceded to our graduates, even if they were as highly educated; the other is the encroachment of the lower branches of the profession: so that, even in legislative enactments, the surgeons and apothecaries are recognised as competent to perform those functions that ought to belong to the physicians exclusively. The University of Edinburgh has, upon different occasions, found it necessary to petition Parliament in defence of its graduates: upon one occasion they preferred a petition against the Apothecaries' Bill; and I have here a copy of that petition,—and upon another occasion a petition against what was called the Irish Gaol Bill, by which the office of Physician to the Gaols, which until then existed in all the prisons in Ireland, was to be abolished from the whole of them except that of Dublin, and the duties were transferred to a member of the College of Surgeons. Now in gaols the medical attendance required is not surgical in general, but purely medical.

Do you know if a previous knowledge of Greek and Latin, and the acquisition of learned and philosophical attainments, are required in France and the Low Countries?—I am not well acquainted with what is required in France, but I believe it is now required there.

Is there no risk, that by enlarging the number of medical graduates beyond the demand for physicians, the profession may be ultimately degraded by having in the list of its members many persons in a state of absolute indigence?—The number of graduates that are furnished arise out of the demand; and I should think it a very unwise measure to interfere with the freedom of trade in making doctors; at any rate it would be better to diminish the number of graduates, by exacting longer and higher professional studies, rather than by acquiring higher literary and scientific qualifications.

Does Dr. Duncan mean to state there is not a greater number of persons educated for the medical profession than can find respectable employment?—Perhaps at present all the literary professions are overstocked; it does not depend on the University. I feel a reluctance in arguing against physicians being required to have high literary and scientific attainments; but I consider it would be hurtful to the public to require them of all candidates for degrees, though I should wish that they all possessed such.

Would you not consider it a reproach to the medical profession, if men in the situation of physicians were to betray, in the course of conversation, a complete ignorance of such branches of education as may be gained at a grammar school?—I certainly should.

Would you consider that degree of attainment indispensable?—I consider that degree of attainment, which can be got at every grammar school in every part of the kingdom, quite indispensable; and I trust all our graduates have attainments considerably more than that.

Has any one ever been rejected on the score of deficiency of grammatical knowledge?—Yes, there has.

Was that an instance in which the party rejected had sufficient medical knowledge?—They could not show their medical knowledge, if they were so exceedingly deficient in grammatical knowledge.

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

Is it not the practice, when a candidate misapprehends the question proposed in Latin, occasionally to give the explanation in English?—That is very rarely done; but occasionally it is done, for the purpose of ascertaining whether his ignorance be literary or professional.

Is the answer then in English?—It is sometimes in English, and sometimes attempted to be in Latin.

Have there been other instances where the answer in Latin has been satisfactory, but being unsatisfactory as regards the knowledge of the science, such persons have been rejected?—It is very rarely such cases occur. If a man betray throughout great ignorance of the Latin language, he would be rejected upon that score alone; but we almost always find that the two kinds of ignorance go together. Sometimes a part of the examination is carried on in English, not on account of the want of literary attainments in the candidates, but from the great difficulty of either putting the question or getting the answer in a dead language.

You have stated, in a previous part of your evidence, that you did not consider that Medical Works of repute were now so generally written in Latin, in this country, as formerly; is the Latin language as much used as formerly, as a medium for conveying medical instruction in those Universities upon the Continent in which you have stated that a certain literary education was prescribed as necessary for Medical Graduates?—It has got into disuse over the whole of Europe. In every country medical men now write in their mother tongue in general. There are a few works written still in Latin, particularly in Italy, very few in Germany, almost none in France.

Would you apply that observation as much to those States upon the Continent where a high previous literary education is prescribed for Medical Graduates, along with the knowledge of ancient languages, as to those States upon the Continent in which no such regulation is enforced?—In the best educated part of Germany and of France, where we have heard that high literary attainments are required, scarcely any Latin books are written. It is chiefly in Italy, where the language has considerable similarity with the Latin, that that language is still continued in some degree.

You have stated that there is in this University a sort of previous examination before the professional one is commenced, with a view to ascertain the candidate's knowledge of the Latin language and the extent of his literary education; will you have the goodness to state more particularly the nature and extent of that examination, and the objects to which it is directed?—The statute to which I made reference has not yet come into force; but I understood it was directed solely to a competent acquaintance with the Latin language, and if the candidate were found to be deficient in that, the medical examination would not proceed at all.

Supposing that the candidate's knowledge of Latin is ascertained, to the satisfaction of the examiners, is it your opinion, that with a view to ascertain his professional knowledge, the examination may more advantageously proceed in English?—I think it would more advantageously proceed in English; I think, that having assured ourselves that the candidate had sufficient literary knowledge, at least of the Latin language, the examination as to his professional attainments would be more satisfactory in English.

Has there been any regulation by the Senatus, or among the Medical Faculty, in regard to that sort of previous examination, whether it is to be merely by asking questions in Latin; or are the candidates to be required to give up a certain number of books, which they are to translate?—The intention, I believe, was, that the Professor in whose house the examination takes place should lay before the candidate a medical author in Latin, and make him, *ad aperturam libri*, read and translate it.

About what age are persons generally taken on trials for degrees?—No candidate can be taken on trial before 21, or at least he must be 21 before the day of graduation; but our candidates are very often much older,—some of them even men of 50.

Then, was not the object of that regulation, in fact, to secure that the candidate should previously receive a liberal education, so far as the knowledge of the Latin language is required?—That was the intention of it.

And was it without reference to the manner in which that education may have been pursued, either at the University, or at private schools?—Without reference to that.

It being assumed, in that regulation requiring a knowledge of the Latin language, that a liberal education to a certain extent must have been obtained, would there be any additional hardship in requiring (particularly considering the advanced period of life, when it appears the medical studies are begun) a knowledge of the Greek?—I do not think that a knowledge of the Greek language would be of any use to a physician.

Looking to the fact that you have stated, that most of the medical works abroad are now published in the modern languages, in French or German, would it, in your opinion, be expedient to require a knowledge of either or both of those languages from medical graduates?—Every medical graduate ought to be able to read French fluently, and if he possessed a knowledge of the German language, it would be a very great advantage to himself; but I should doubt the possibility of requiring a knowledge of the latter language, as it is not easily acquired without going to the country.

Considering the time which the present regulations require to be employed in professional study, could there be any difficulty to prevent the student, during that period, acquiring an adequate knowledge of the French language?—I should think not. I think that every student might do so in the vacation. During the winter session he has no time to study it; but in the vacation he might acquire a knowledge of the French language sufficient to enable him to read it; at least he might during the years he is pursuing his studies, without interfering with his medical studies.

If, as is believed to be the fact, a very great proportion of medical works of value recently published, are written in the French language, would it not be expedient, under such circum-

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

stances, to require that a portion of the time belonging to the medical students should be employed in acquiring a knowledge of that tongue?—Perhaps it might be an advantage to require the same proof of their knowledge of the French language, as is required of the Latin, that they should be able to translate, *ad aperturam*, a French medical author.

You have stated, that in your opinion it would not be practicable to enforce the same regulation in regard to the German language?—I should think it quite impracticable.

Is it your own individual opinion, then, that the knowledge of the French language should be exacted from the medical students, and that that qualification should be added to the curriculum of the University?—I should think it would be no very great hardship to add it, and it would be in the power of every candidate to acquire it.

Do you consider that the examinations, which have hitherto been had, were sufficient to ensure in the graduate a competent knowledge of the Latin language, looking not merely to the general nature of the examinations, but looking to the manner in which practically they are carried on?—I think, upon the whole, they were, and that the present examination ensures a competent knowledge of the Latin language.

Do you consider that any of the Philosophical classes should be attended by the students along with the medical classes; or, after their medical studies are commenced, is their time so occupied during their attendance at the University, that you think they could not attend any of the Philosophical classes during the first year of their Curriculum?—I do not think they could attend any of the Philosophical classes with advantage to themselves.

Do you think, that whatever previous education at a University might be required from medical students before graduation, must, in your opinion, precede the commencement of their medical studies?—I think it ought to precede the commencement of their medical studies.

If longer attendance at a University is required, would you prefer it for the sake of professional studies?—I think that our professional Curriculum errs in not having a sufficient length of time for Clinical education.

Supposing an additional year's attendance at the University for that object were thought necessary during those latter years, and before graduation, might not the attendance upon some of the Philosophical classes be more easily combined with the prosecution of their purely medical studies?—I apprehend that this University, by extending the term of professional study to four years, has gone to the maximum of time our students can possibly afford in order to obtain degrees.

Did your previous answer apply to the former *Statuta*, and not to the recent ones?—To the former.

Will you have the goodness to state the nature of the objection that was made to the bill to which you formerly alluded?—The nature of the objection I could state as well by reading the petition itself. It is as shortly stated as I should be able to do now. The petition which I now hold in my hand was not actually presented, but it was prepared, in case Mr. Brougham brought in his bill again. The Apothecaries got a bill, I think in the year 1814, by which every person practising as an apothecary (that is, in England, as a physician in ordinary) should have had *five* years apprenticeship. From some error in the bill, however, it was found not to work well, to use a technical term, and Mr. Brougham brought in a bill to amend it. As soon as he brought in that bill, it was opposed, not only by the University of Edinburgh, but by the College of Surgeons of Edinburgh, as tending greatly to interfere with the good education of medical practitioners in general; and so much opposition was made to it, that the bill was passed for a single year. The petition was prepared, to be presented in case Mr. Brougham was to bring in a motion to render his amended bill permanent; but he did not, and the consequence was, the petition was not presented.

[*The Witness produced a draft of the Petition, and read the substance of it; and the same was given in, and laid on the table.*]

With reference to the regulations which you stated to subsist in France, do you know whether the education of students before they attend the University at Paris is prescribed in such a way as to ensure attendance at preparatory schools?—I am not sufficiently acquainted with the practice in France to trust myself to give an answer; it is only by hearsay that I could answer it.

Is it your understanding?—I do not think, so far as I know, that with all their regulations, the French physicians have a better preliminary education than we have.

Is it your understanding, that before entering at the University, they are obliged to show proof that they have attended any of those preparatory schools which are equally under the control of Government?—I believe they are.

Then is the whole previous course of education, preparatory to entering a University, regulated by authority with reference to a University education?—It is entirely regulated. From the very first commencement of their studies, that is had in view.

Is that the case in the Austrian states?—I believe it is.

Is it the case in Bavaria?—I do not know.

Is it the case in the Netherlands?—No.

Is it the case in the Russian states?—I believe not.

You have mentioned that a new regulation was about to take effect as to the examination of students in Latin; what circumstances led to the adoption of that regulation?—The circumstances that led to the adoption of that regulation, were the general opinion, that by examination in English, we could much sooner and more satisfactorily ascertain the professional knowledge of the candidate; and in order not to lose the tie upon them, that they should have a liberal education, in place of the examination being conducted in Latin, the preliminary examination upon Latin acquirements was introduced.

Dr. Duncan has stated, that Greek is useless to a physician; but notwithstanding that it

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

may be the case, does he not think a moderate knowledge of the Greek language would afford a better test than any other, of the student's acquirements in other branches?—A moderate knowledge of Greek would certainly imply a considerable knowledge of the Latin language; but with that exception, I am not aware that it would otherwise.

Was not the extension of the period for the studies of a physician to four years suggested to the Medical Faculty here, from the knowledge that four years were the period adopted by Medical Faculties abroad, to entitle a person to get the Degree?—The extension to four years has long been a favourite object with some of the Professors; but we are not always at liberty to exact from our candidates the very highest qualifications we would wish to require, for other schools grant degrees upon lower qualifications; and we have not yet been able to prevail upon the Glasgow University to require the same extent of time for graduation that we do. There is a competition among schools of Medicine, as well as among other bodies.

Are you of opinion that the time should be the same, if it could be so arranged, with all the Universities in Scotland, with regard to the Medical classes?—It certainly would be of advantage, in so far as it would compel those who now are content with the lower qualifications, to take the higher; but as there are other schools in the empire, which also give Degrees, and over which no control can be had in this part of the kingdom, we would always have these to compete with;—for example, Dublin. But, first, it would be right to mention, that there are two degrees granted at Dublin; the one of which is equivalent to the degree of Doctor of Medicine in Oxford and Cambridge. But as a great number of the Irish students could not afford the time or the expense to obtain this degree, the Medical Faculty, if I may say so, of the University of Dublin, proposed to grant another degree; and the distinction between the two is simply one word: the one is, to be called Doctor *of* Medicine, and the other Doctor *in* Medicine,—the latter being the high degree, equivalent to Oxford and Cambridge. The Degree of Doctor of Medicine was intended to retain the Irish gentlemen at home, and to prevent them from coming here. It had that effect some years. Many gentlemen remained, taking the *testimonium*, as they call it, of Doctor of Medicine in Dublin.

Is that supposed to be equal to the degree of Doctor of Medicine in Oxford and Cambridge?—It was supposed to be equal to the Doctor's Degree in Edinburgh.

What was the difference of attendance requisite for taking the Degree of Doctor *in* Medicine and Doctor *of* Medicine?—The one had to attend the medical classes three years, after having graduated as Bachelor of Arts; the others give the same professional attendance, without having taken the degree of Bachelor of Arts.

Do you know if there were a previous examination before they could receive the Degree of Bachelor of Arts in that case?—Before the degree of Bachelor of Arts, certainly it was a high degree.

Then, was the professional education for a Doctor *of* Medicine the same as a professional education for a Doctor *in* Medicine?—The same, the difference being in the other branches of learning; but after a time, the high University men declared the *testimonium* to be of no use, and that the degree was no degree; the consequence has been, that the Dublin students, even those who study their profession entirely in Dublin, sometimes come here to graduate. I have the Regulations of the School of Physic in Ireland, when those degrees were granted.—[*The Regulations were delivered in, and laid upon the table.*]

You stated the fees payable upon examination were given to the six senior Professors; what is the amount of the fee?—It may seem awkward that I could not answer that question exactly; I think the amount of the total fees for medical graduation is 13 guineas.

Is that the amount of fees for examination for degrees?—I think it is in evidence already; I think it is 13 guineas.

Is that the whole expense?—Yes, of which 10 guineas are divided among the six senior examinators.

How long in general may the examination of each candidate last?—The length of the time of examinations has been gradually increasing; when I was examined, they seldom lasted an hour; now the average is, I may say, two hours.

Is every candidate examined upon the same principle?—Every candidate is examined upon the same principle.

Do these examinations take place twice a-day?—Yes, twice a-day.

Are any of the candidates examined oftener than once, supposing you happen not to finish an examination at the same meeting at which it was commenced?—Sometimes, at the end of the examination, when two hours are elapsed (and we seldom prolong our sitting), the Medical Faculty differ in opinion whether the candidate ought to pass or not, or they are not able to make up their mind with regard to his qualifications, and they sometimes tell him that he will get another examination; that is, when they are not decidedly of opinion that he ought not to pass. Sometimes, when they think he ought not to pass, there is a petition for a second examination; and having failed in that, in a very few instances they have granted a third, but that is very rarely done.

Has the number generally been above 100, of late years?—Considerably.

Do not the examinations interfere with the private practice and the other occupations of the examinators?—The duty of examining is, in my opinion, both more laborious, and almost more important, than the giving of lectures.

Is the only emolument arising to the Professors from such examination, their proportion of the sum of ten guineas, divided among six, or it may be among seven?—It is the only emolument.

Does the necessity of attending examinations detain the Professors frequently in Edinburgh, when they would otherwise be desirous of leaving it?—The present six senior Professors never absent themselves from that duty; but I have no doubt they would not remain in

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

Edinburgh so constantly, if they were not examining. In my own case, I may say, I would have visited France; but I have not been able to find time to do it, in consequence of the examination.

Do they take place at two periods of the year?—No; only one period of the year now.

At what time does the graduation take place?—The graduation has been hitherto on the 1st of August; but by the new regulations it will be anticipated, and take place in July.

Will it be late in July?—On the 12th.

Do you consider, that, if there were no other object in the examinations than merely the fee to be obtained, and no public duty to be performed, the emolument arising from such examinations could be any compensation for the consumption of time and labour attending the performance of the duty?—I certainly do not consider the emolument as at all a compensation for the consumption of time, the labour, the responsibility, and the interference with professional success.

If any regulations could ensure the addition of 50 or 100 Medical Graduates to this University, without being attended with any benefit, or increasing reputation to the school, do you consider that the mere increase of fees arising from that would in the least influence Professors in forming any such regulation?—I do not think that such a consideration would influence the Medical Professors.

Is the performance of the examinations reckoned a very great burden by the Professors who have to engage in it?—A very great burden.

Does it interfere grievously with their time and their other pursuits?—Yes; and we are placed very frequently in the most painful circumstances, when it is necessary to remit, not school-boys to their studies, but men advanced in life, and married men, with families depending upon them, who have come up here, after being settled in practice, to get a degree, and they are sent home without it, to their utter ruin.

Is it your opinion that the examinations interfere more with the time medical professors might employ in private practice, than the discharge of the duty of lecturing and other duties in attending their classes?—I do. It adds three months more; it keeps them now until August permanently, and constantly in Edinburgh.

Looking to the particular nature of the practice of the Professor who has hitherto, from the circumstances you have mentioned, declined taking any share in these examinations, do you consider it would be likely to interfere with the necessary calls upon his time, if he engaged in them?—I can scarcely see the possibility of his performing that duty.

Must it not have interfered greatly with the private practice of Dr. Gregory?—It did very materially, but Dr. Gregory discharged the duty most conscientiously; he made his arrangements, so as to give the greatest possible time he could to these examinations.

Must it not have been to him, as it is to every other physician in practice, a very serious interruption?—Certainly.

Is it necessary that all the members of the Medical Faculty should be present at every examination?—All the members of the Medical Faculty are summoned to every examination, and they are almost always all present.

How many may be considered as forming a quorum?—From the great number of medical graduates that have appeared lately, we have been under the necessity of examining two candidates at a time; in this way the candidates are placed in separate rooms; three Professors examine in one room, and three in the other; after the first examining Professor of each of the candidates (who examines in chief always) has finished and satisfied himself, he then goes to the room where the other candidate is examining; in short, they change places, and in this way each professor hears half of the examination of every candidate; they change places from room to room, so that two candidates are examined at one time, and two Professors are held to be a quorum. We never examine, unless two Professors are present. Two must be present in one room, and generally three in the other, but most commonly three in each.

Then there are not fewer than four in all?—Not fewer than four. Were fewer Professors to come, from accidental circumstances, one candidate would be dismissed, and the whole three would examine one candidate.

With reference to the subject of examination, would you inform the Commissioners, in whom, or in what body, you think it would be best to vest the power of appointing Examiners for the Medical School?—I think that a selection of examiners would be best vested in the Medical Faculty, and that it ought to be a committee nominated by the Medical Faculty who should be examiners; that is, if the Faculty are too numerous to be all called upon to examine them.

Do you think that the power of appointing examiners should be exclusively in the Medical Faculty, without appeal to the Senatus Academicus, or to any other body in the University?—I think, considering what ought to be the constitution of a University, there should be an appeal to the Senatus Academicus in all cases finally. If any Professor should think himself aggrieved by not being nominated one of the examiners, he should have the right of appeal to the Senatus Academicus, but there, I think, it should rest finally; the original appointment should take place by the nomination of the Faculty of Medicine, who heretofore have been the examiners.

At present, are the Professorships of Anatomy, and of the Principles and Practice of Surgery, united in one and the same person?—They are.

Do you think it would be an improvement to separate those two branches of science, and to have a Professor of Surgery distinct from the Professor of Anatomy?—I have long thought so, and urged it upon my colleague.

Would you, in that case, make the professorship a conjunct one, or totally and entirely distinct from the other?—In future, I would have them totally and entirely distinct; whether,

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

upon the present occasion, the arrangement should not be as Conjunct Professor, I am not able to say.

Looking to the propriety of making it a Conjunct Professorship at present, do you say that more with a view to the situation Dr. Monro holds, than what you think actually the best permanent arrangement for the University?—The best permanent arrangement would be, to have a separate and distinct Professor.

Is there any one Medical Professor in the University, upon whose course of lectures another Medical Professor may trench, so as to treat of the same subject?—Many.

Is there any one class in which the Professor can avoid taking views in his course, which relate to the direct subject upon which another treats?—Certainly not; no Professor gives a course, some part of which is not also lectured upon by some other Professor, in a different point of view.

Why should there not be a Professor of Surgery at present, although Dr. Monro may in some degree interfere with the object of his direct occupation?—I apprehend it would not be for the advantage of the University to make a Professor of Surgery at this moment, unless Dr. Monro were to bestow the whole of his time upon Anatomy. The advantage of the arrangement would be, that Dr. Monro could extend his Anatomical lectures to full six months, whereas, at present, a certain portion of the time is employed in Surgery.

Then you suppose that the present arrangement, under which he is Professor of Anatomy as well as of Surgery, is a detriment to the University, inasmuch as there cannot be so full a course of Anatomy as there would otherwise be?—I think it would be better, if there were a longer course of Anatomy.

You have described the duty of Examinator to be one attended with circumstances of considerable hardship and great inconvenience to the Professors who are obliged to undertake it; suppose the Faculty had power to name the examinators, would it be a relief to them, and unattended with any detriment to the public, if they had it in their power to name as examinator an eminent physician, not a Professor, but a Graduate of the University of Edinburgh?—I see no absolute objection, except that, in the first place, I scarcely think there would be found qualified medical men, unconnected with the University, to undergo the labour for the emolument; in the next place, although, as I said before, the compensation is not adequate, yet still the respectability and reputation of the School depend so much upon the Examiners, that I believe the Professors in general would not like to give up the examination, or to delegate that task to any other person.

Supposing a separate Professor of Surgery to be established, distinct from the Anatomy, are you of opinion that he ought to be a Practising Surgeon?—I should think that there would be an advantage in his being a practising surgeon, but, perhaps, not a surgeon, in what is called very full practice. It would be better, if he were an Hospital Surgeon, merely to prevent his other avocations interfering with his academical studies.

In recommending the appointment of Examiners to be placed in the Faculty of Medicine, you have stated it to be your opinion, that there should be an appeal from that Faculty to the Senatus Academicus; in that case, would you propose that their decision should be final?—I think so.

Do you think, that for the general discipline of the University, there ought to be any Court of Appeal, or Chancellorship, or body of men appointed, existing something in the shape of a Court of Appeal from the decision of the Senatus Academicus upon general matters to them, and that the decision of that separate body should be final?—I think it would be of advantage to this University were there a Chancellor, with some Assessors or Assistants, to form such a Court of Review and Appeal from the decisions of the Senatus Academicus.

In your judgment, would you make the assessors or assistants to such a Chancellor, individuals belonging to the University, or individuals selected out of the University?—I should think individuals out of the University preferable.

Does Dr. Duncan think that the Curriculum for Medical Graduation, as established, is capable of improvement?—The Curriculum for study, as now established, has not yet been tried by the test of experience; I have no doubt but, in time, it will be capable of improvement. I am, however, of opinion, that all changes upon the Curriculum in matters of study should be very gradual; and if we find that this extension of study to four years is borne out, it may then become a question, whether it may not be extended further, or increased in some other way.

Are you of opinion at present that no improvement could be suggested upon that Curriculum?—The improvement of making a separate Professor of Surgery might be made immediately, or, at least, as soon as it could conveniently be adopted.

Is it your opinion that the addition of such a Professorship would impose unreasonable hardship upon the students?—I do not think so, from the circumstance that the students who pass at Surgeons' Hall, who are very numerous, and many of them graduate here, are required to take a class of Surgery distinct from that of the Professor; for the College of Surgeons do not admit his course to be equivalent to a course of lectures upon the Principles and Practice of Surgery.

Is it understood that the candidates for Graduation generally satisfy themselves with the medical instruction communicated in the University, or is it not the general practice for the medical students to attend the other lecturers in this city?—I believe it is their universal practice to receive part of their education from private lecturers, and not from professors; and therefore it is, that in the Curricula, we demand but a single course upon certain subjects, where the candidate ought at least to take two, if not three; but they are permitted to take a reduplication of the classes from private lecturers.

Would you regret to see any University regulations established, which would tend to prevent that attendance upon private lecturers to which you have alluded?—I would.

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

Has the University at any time attempted, in virtue of any supposed legal right to teach solely in Edinburgh, to interfere with the exertions of private lecturers?—Not to my knowledge; certainly not since I have been acquainted with the school.

Are any of the regulations of the University so formed as to interfere with the attendance upon private lectures?—None.

Have any complaints been made by students, that any of your regulations did so interfere with the attendance upon private lectures?—None that I ever heard.

Have such complaints been received from the private lecturers themselves?—Never to my knowledge.

In your opinion, are the facility and opportunities of attending private lectures an important part of the instruction obtained in Edinburgh as a great Medical School?—I think so.

Are they material for supporting the interests of the University itself?—Even so.

You have mentioned, that you do not consider at present any improvement in the Curriculum for medical studies is required; do you consider it material that the attendance on the class of Military Surgery should be required from all medical graduates?—I think that all medical graduates should have a certain portion of surgical knowledge, and hitherto that acquired from the Professor of Anatomy and Surgery has been esteemed sufficient. If the plan of separating Anatomy from Surgery, and making each of them distinct professions, were carried into effect, that would be quite sufficient for a medical graduate; for we grant Degrees to Physicians, and not to Surgeons; and I do not think there ought to be two Surgical Professors where there is but one Professor of the Practice of Physic; it would be paying too great attention to Operative Surgery.

Do you consider attendance on the class of Clinical Surgery material?—It stands in the same relation exactly. In this University there are three Professors who are entitled to teach Surgery, and one to treat upon the Practice of Physic; yet physicians have to practise Physic, and not Surgery.

Would you require from all graduates attendance on the class of Clinical Surgery?—Not as compulsory.

Do you consider it material that attendance upon the class of Medical Jurisprudence should be required from all medical graduates?—My own opinion is perhaps partial, but I am more inclined to that.

Is it a class of more general interest?—It is a class more distinct from the others. The kind of information acquired there, is not what is acquired in any other class; for though all the subjects are treated of in the other classes, they are not treated in the same accurate and precise manner, that they are by the Professor of Medical Jurisprudence; but, though the present professor teaches the class exceedingly well, he has not been able to render it popular; and I fear to render it compulsory would be thought a hardship by the students, though afterwards, I am satisfied, they often repent of not having attended it.

In Foreign Universities, is not attendance upon Medical Jurisprudence deemed necessary to acquire a Degree?—In those Universities where fixed Curricula exist, it is; I believe it is in Austria; I have the Curricula of several of the Foreign Universities.

In Paris, is it deemed necessary?—I am less acquainted with the French Schools, never having been in them.

What is your opinion upon that subject as to the class of Natural History?—I should think it exceedingly dangerous to render the Professor of Natural History an examinator.

Would you consider it useful to add attendance upon his class to the Medical Curriculum?—I think it would be just a burden on the student, without any equivalent advantage; those gentlemen who have a turn for Natural History, or who are likely to be placed in situations where Natural History may be useful to them, take care to attend that class; but to compel all the Graduates of Medicine to be Mineralogists and Geologists, would be quite preposterous.

Is your opinion against the propriety of adding that Professor to the number of Examinators, founded upon the same circumstances which induce you to think that the class should not be added to the Medical Curriculum?—Upon the same circumstances; the Professor of Natural History, of course, would require considerable knowledge of Natural History from candidates, and would examine to see whether they possessed them. This would compel all students, at least, to get as much technical Natural History as would enable them to answer the questions, and I think their time would be infinitely better employed in getting more proper professional knowledge.

Did you state, in the previous part of your examination, that you considered a previous acquaintance with Natural History as necessary for attendance on your class?—I stated, in answer to one question, that the science of Medicine was of that nature that a previous acquaintance with other branches was always supposed in the students: and with reference to the Natural History of articles of Materia Medica, I considered it my duty to give as much Natural History to students as serves their purpose.

Would previous attendance upon the class of Natural History supersede that explanation of the subject in your class which you deem essential for the purpose of conveying instruction?—It would not at all supersede it. I would have just to give the same quantity of Natural History that I now give.

Are you not of opinion, that though attendance upon a class of Military Surgery to get a degree is not requisite, still the introduction of a new Professorship into the University, leading the students to that species of study, would increase the attendance, both on the Clinical Surgical lectures and on the lectures concerning Military Surgery?—I am not aware that it would have that effect; for, though not in the University, there are lecturers who give a full course of

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

Surgery; and the introduction of a Professor of Surgery would not, I think, affect the students in regard to other classes.

If a Professor of Surgery were established, might not his lectures embrace the whole of the different subjects of Military and Clinical Surgery?—If a Professorship of Surgery were established, it would embrace all the subjects of the Principles and Practice of Surgery; but there are some things which the Professor of Military Surgery teaches which scarcely fall under the Principles and Practice of Surgery—for example, the duties of a Military Surgeon towards the sick, and in preventing diseases; perhaps the class might rather be called Military Medicine than Military Surgery. Then there are the duties of the Naval Surgeon in a great many departments, which would not be treated of by the Professor of the Principles and Practice of Surgery; the diseases of warm climates he speaks of, though it is interfering with the Professor of the Practice of Physic, still they have particular views; he speaks also of the management of Military Hospitals, of General Hospitals, and of Regimental Hospitals, of conveyance of the sick from the field of battle: all these things, at least the details of them, belong to, or are treated of by the Professor of Military Surgery; no doubt the Professor of Surgery might treat of them, but he would find sufficient occupation independent of it.

Would it be more for the interest of the College that a Professor of Surgery should be instituted, who would treat of the subjects in the general manner you have described, or that there should be no Professor, and that the subjects should be treated in the manner they are now?—If there is to be a choice, there should be one Professor of the Principles and Practice of Surgery, rather than that it should be treated of by different individuals.

Supposing such a Professorship to be established, would you propose that it should be added to the Curriculum, besides the lecture upon Anatomy?—I certainly would.

Would the establishment of a Professorship of Practical Surgery supersede that of Clinical Surgery?—It would not, particularly if the Professor of Clinical Surgery lectured upon his own patients: it so happens that he is not able to do so, from the state of the Hospitals. Besides the Professor of the Principles and Practice of Surgery for Surgeons, there should be a Professor of Clinical Surgery.

Does Dr. Duncan think that it would be attended with benefit to this University, if the Degree in Arts were rendered more important and respectable than it now is, by making it necessary to undergo examinations in order to attain it; or has he any suggestions to make upon that point?—I have really no suggestion to make in regard to the Degree in Arts; I can only say it is not much sought after. Not many Degrees are granted; why they are not sought for, I am unacquainted.

Does Dr. Duncan think that by rendering them an object of emulation among the students, in consequence of any honour that might be attached to them, that that would be an incentive to the young men attending the classes of the Faculty of Arts?—It is quite evident, that at present, the students do not in general esteem or desire the Degree in Arts; it is probable it either brings no honour with it, or no advantage.

But setting advantage out of the question, and supposing it were made sufficiently difficult of attainment, so that none could attain it who had not undergone an examination calculated to display considerable proficiency, would not that have the effect of stimulating students?—I think it is because it does not bring honour enough with it, that it is not desired.

Have you turned your attention at all to the consideration of that question, with a view to the general improvement in the system of education of young men in this University?—I have not.

Were you named Professor by the Town-council?—I was appointed Professor of Materia Medica by the Town-council of Edinburgh.

Have you anything to suggest to the Commissioners upon the mode of appointment of Professors?—I believe it is already stated in the Returns that the Professors are appointed in various ways—by the Town-council, by the Crown, and some of them by a kind of mixed presentation; and I am not aware that any evil has been experienced from any of these modes of nominating Professors. The Town has not increased the number of Professorships, I believe, since the separation of Materia Medica from Botany; all the late additions have been Crown presentations, or chiefly so; I do not see any reason for interfering with the present practice.

Will you have the goodness to state what you consider to be the best mode of appointing Professors, speaking theoretically?—Apparently, the best mode would be that by competition, as takes place in France in some of the chairs.

By whom do you think they might be best appointed?—I really cannot say; both the Crown and the Town have appointed the Professors with considerable judgment; no doubt, it would appear that the Town-council of Edinburgh are not competent judges, but in general they consult various individuals, whom they think competent.

In the constitution of a University, who do you think would be the best nominators?—In almost all the other Universities the Professors are appointed by the Crown or College—by the Crown in almost the whole of the Foreign Universities. In Paris, they are elected by the Faculty, after a very strict comparative trial.

Which of those two systems of presentation do you prefer—the Crown or the Faculty?—I should think the Faculty, upon the whole, to be the most competent; but I should doubt the propriety of even giving them the power without control.

Is Dr. Duncan disposed to state any reason for not wishing to give the power to the Faculty?—I think there are very obvious reasons why the Faculty ought not to have the power; it would excite dissensions among themselves—it would be a golden apple thrown among them, and perhaps matters are just as well as they are.

287

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

Do you think fit desirable, supposing, in other respects, the object can be attained, that the power of adding new Professorships to the University should be left with such a body as the Town-council?—I would say no; except that experience shows they have not hitherto abused it, but certainly not theoretically.

Do you think it desirable, for the interests of the University and of science generally, as well as for the credit of the University, that the power should be continued in that body?—I think it ought not to be continued without some restraint. Whatever body had the power of creating new Professorships, there should be some check upon it. I would almost require the consent of at least two sources, perhaps both the Town and the Crown, that they should unite before the new Professorship is formed.

Is Dr. Duncan acquainted with the origin of the appointment of Public Law and the Law of Nature and of Nations in this University?—I am not further acquainted with it than by reading Bower's History of the University. I sent to the Commission the other day copies of the original documents in regard to it. I understand that a number of bursaries were thrown together to create such a Professorship; if I recollect right, it was opposed greatly by the Patrons; notwithstanding which, the Professorship was carried into effect.

Is it a Regius Professorship?—It is.

Do you know anything of the source of those bursaries?—I do not know.

Were the bursaries in the gift of the Crown?—They were.

Was a sum annually paid for that purpose?—Certain money was allotted for that purpose.

Were any mortifications absorbed for that purpose?—I understand so.

Were any sums, destined by individuals or by public bodies for the creation of such bursaries, absorbed in the institution of the Professorship, or was it a deviation of a sum annually allowed by the Crown from one purpose to another?—I am unable to answer the question, without reference to the papers which are upon the table.

Have you any further suggestions to offer in regard to the University?—There is one reason I would give for the propriety of instituting the office of Chancellor in this University, which is, that it would render this analogous to other Universities in some respects, for it is supposed by some of the public that such an office exists; and, accordingly, the Torrie collection of Pictures, Bronzes, and Marbles, has been left to the College of Edinburgh; and among the trustees named is the Chancellor of the University: if we have no such officer, the University has no connexion with that collection, except that it is to be placed within its walls.

By whom does Dr. Duncan think the Chancellor should be nominated?—I think by the Crown.

Is that the common mode of nomination in other Universities in this country?—I believe it is by election.

Can you state what is the average annual expense of a student of medicine, including the fees for lectures, as well as the ordinary charge for living?—I consider, upon an average, students may attend three courses of lecture, two in the University, and one out of the University, which would bring the expense of mere tickets to perhaps 12 or 14 guineas, according to the number of classes he takes annually. With regard to his other expenses, they are exceedingly various: I have known instances of students getting through the winter on less than £10; I have known other medical students spend almost £500 or £600; but upon an average, I should imagine that the board of a student at a respectable boarding house would be at the rate of £80 a-year for a whole twelvemonth.

Do you not consider that a very great proportion maintain themselves upon a much smaller sum than that?—A large proportion certainly do; but when the average is taken I think it will not be much less than £40 for board for six months, but then they have clothes to add. Many of the students who come from England and Ireland remain the whole twelve months in Edinburgh or its vicinity; the Scotch students generally go home during the holidays.

With reference to that subject, do you know if it has been generally thought that the increase of the fees to the Professors has had any effect in deterring students from coming to the University, or whether it has been complained of by the medical students?—There is no evidence of its having had any effect in deterring the students; I believe the numbers are larger than before, and it has never been complained of to my knowledge.

Would you prefer an arrangement by which the same amount should be paid to the Professor, but that, by increasing the salary, the fees should be lowered to two or three guineas; or would you prefer continuing it on the same footing, the interest of the Professor being supposed to be entirely out of view?—Throwing the interest of the Professor wholly out of view, I think it better that his whole emoluments should be derived from the students, otherwise it will lead to the evil of educating them of a still lower class than is now done.

Has there been any complaint of smaller payments being required of the medical students and others, for the janitor and the library funds, and other things?—I have never heard of any complaint in regard to the library fund, as it entitles them to the use of the Library. With regard to the small fees now alluded to, no student ever complained to me of them; in some of our communications with the Patrons, we are told of such complaints, but I am unacquainted with them.

Do you know if ever there were a period when the medical students lived within the walls of the College?—There was a period when some of the students lived within the College, but I apprehend it was before the institution of the medical school.

Do you consider that the dispersion of students over so large a town as this is, interferes with the regular attendance upon the classes?—I do not think it does materially. I must mention, generally, that the medical students, and particularly those who intend to graduate, are very regular in their attendance; they come up here voluntarily for the sake of information, and

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

they endeavour to get as much as they can. For my own part, I often advise my students to live in the New Town in preference to the City, that they may be compelled to take sufficient exercise for their health.

Is it not your impression that, in general, medical students prosecute their studies with peculiar ardour?—I think they do, and I think that ardour is increasing; it is greater than when I was a student.

Do you consider them to be distinguished above the students in other departments by the zeal and ardour with which they pursue their studies?—I have that opinion, but I may not be sufficiently acquainted with the other departments.

As there has been a regulation laid down between the Senatus Academicus and the Town-council, in regard to the use of the Anatomical Museum, do you understand, so far as you have had opportunities of knowing the feelings of the medical students who are coming to Edinburgh this session, that there is any likelihood that there will be any discontent in consequence of that regulation?—I do not think so. I have no reason to believe it; I think it is very much for the advantage of the students.

Is it not your opinion that the previous state of that Museum had been prejudicial to the medical school of Edinburgh?—Hitherto that Museum has entirely been for the single chair of the Professor of Anatomy, and the other Professors did not make use of it; of course benefit will arise, provided care be taken that it does not suffer by being thrown more open.

When other preparations, or when philosophical instruments are procured by a Professor from his own individual funds, is there any regulation by which the amount and value of such addition is ascertained, so as to prevent confusion in the event of his death?—I am not acquainted with the existence of any such regulation, and I believe the evil alluded to has taken place.

Have you reason to suppose that, in any instances, either preparations or apparatus have been claimed as private property, which, if the intention of making a claim had been previously known, might by arrangements have been prevented from becoming private property?—I have no doubt, in some instances, that evil has occurred; for in some cases it is even difficult for the Professor to say whether the preparation is intended for himself or the public; for example, the former Professor of Natural History considered, that whatever was directed "To the Professor of Natural History," might be claimed as his own, being directed to him individually; but if it were "To the University of Edinburgh," it became the property of the public.

Is that the opinion of the present Professor?—I believe very far from it. I believe Dr. Walker considered, that when a specimen was directed "To Dr. Walker, Professor of Natural History," it was addressed to him individually; when it was addressed "To the Professor of Natural History," he thought it belonged to the public.

Do you consider it would be desirable and creditable to the University itself, that no addition should be made either to the Collections or Apparatus by the Professor out of his own private expense, without some regulation by which hereafter such addition might be kept distinct?—I certainly think there ought to be some regulation. I have seen great foreign collections of Entomology, and the Professor's initials were on all those specimens that belonged to himself individually; and this was open to the Curators of the collection, so that they saw in his lifetime what he was claiming as his own private property.

At present is there any control exercised by the Senatus Academicus or by the Principal, over the management of such collections of preparations or apparatus, or over the individual Professors?—I think it is one of the evils of this University that there is not sufficient control by the Principal over the individual Professors in the Senatus. From the constitution of the University not being fixed, and its being challenged by the Patrons themselves, the consequence is, the Professors scarcely think themselves now under the control of the Senatus Academicus.

Are there any suggestions in particular you would wish to offer on that subject?—I have no particular suggestions, except that in some shape or other there should be more controlling power vested in the Senatus Academicus, that they may see if the Professors discharge their duties, not only as Lecturers but as Examiners; and to look and inquire into the state of all public collections and museums that are attached to, or connected with their chairs; and in a variety of other respects, that they should enforce attendance upon their meetings. There have been Professors of this University for 50 years, who were never once at a meeting of the Senatus Academicus.

Do you think that the power of the Senatus Academicus ought to be more accurately defined?—I think the powers of the Senatus ought to be more accurately defined. There is one point I would beg to suggest. As Secretary, I have felt the evil of Professors not being compelled, by any efficient law, to return the lists of their students, as they ought to do, according to the regulations or understanding of the University; besides it is a grievous evil often to the student.

You have stated you never heard of complaints as to fees; did you ever hear any complaint as to the charge of graduation fees?—Never. There was an addition of a tax, but there was no complaint about it.

Do you think that a regulation that should prescribe the course of studies that a Medical student should attend in the first, second, third, and fourth years, would be of any use?—I think quite the reverse; it would be very hurtful.

Can you state why you think it would be hurtful?—Because our students do not all of them begin from the beginning, if I may say so. They have many of them got a large portion of their education elsewhere; and each of them takes his education in that order which his own want of knowledge and circumstances require. I think it is one of the great advantages, not

289

University of Edinburgh.

Professor Duncan, junior.

26 October 1826.

only of this school but in the best schools in the north of Germany, that the students are left very much to direct their own course of education; and I apprehend they do it better than by having a fixed Curriculum laid down.

Are you aware if there are fixed Curricula in many Universities abroad?—Yes, in France, in Austria, and in Italy.

Is that the case in the Low Countries?—They follow the example of France probably. It was not so formerly. In the days of Boerhaave there was no Curriculum at all, and in the Northern Universities there is none; students follow what course they please. It is the practice with students abroad, to go from University to University, so as to take the most celebrated Professors in each, and in whatever order they think fit.

Would you prefer leaving it entirely to the discretion and voluntary choice of the students?—Entirely; many of our students, for example, come up here excellent anatomists, who have studied that branch at London, or in the College of Surgeons of Dublin. These students, by our Curriculum, must attend Anatomy once; but they take it the very last year. If any man begin the study of Medicine here, I recommend him to begin with Anatomy and Chemistry. Many come up excellent chemists; many have served apprenticeships for five years; many of them have been surgeons in the Army or Navy before they began their Academic studies. All those individuals take a different Curriculum, and do not begin at the beginning: it is best to leave it to each individual.

Would it be of no advantage to have a particular Curriculum of study prescribed to those students who commence their education at this University, and go through with it?—I think not, for that also would very much interfere with their attendance upon private lectures. If such a plan or rule were laid down, it could not be rendered so complete as to give them a full medical education in this University; for, in place of making them attend Anatomy once, or Chemistry or Materia Medica once, it should require them to attend Anatomy three times, Chemistry twice, and so on, which would not be borne.

Does the Principal, except being Chairman of the Senatus Academicus, possess any authority in this University?—None.

You have said that you thought it advisable to give the Senatus Academicus authority over the Professors; should you think it a good thing to give the Principal of the University any authority of that kind?—I think the Principal ought to have as much authority as can be given him; but I am not aware what description of authority it would be. I think the Principal's office should be one of greater distinction than it is: he is here merely Chairman of the Senatus Academicus, and has no more power than any other individual; indeed his deliberative vote is in challenge, so that he has less.

Have you made up your mind as to what additional authority he should have?—I can scarcely conceive what personal authority he could exercise.

Do you think he ought to possess a deliberative voice in the Senatus Academicus?—I think he ought to have both a deliberative and a casting vote.

Has it not always been practically held that he had a deliberative voice?—We so seldom come to a vote of that description, that I do not know. But one example is on record when it came to a casting vote, and that has now been challenged.

Do you conceive the powers possessed by the Principal to be the same he originally possessed, or do you not rather think that some of the powers originally involved in the constitution of his office have been lost by disuse?—I think some of the powers have been lost by disuse, and also from the increasing numbers, reputation, and power of individual Professors. There are individual Professors here who have such great power, that the Principal has as little or less influence in the Senatus Academicus than they have.

Was it not formerly the practice of the Principal to visit the classes in the University?—From history it appears that he visited the lower classes when they were taught by the Regents.

Are there any regulations prescribing the original power of the Principal?—There are printed Latin regulations, which have often been referred to in the answers.

Has the Principal power to go into any class he pleases, without the consent of the Professor?—I think he ought to have that power, but he has never attempted to exercise it. I do not know if any Professor would resist; I should not.

Do you conceive that he has it?—I think he has that power; still, were it to be disputed, I do not know how he could enforce it.

Was it not the practice of Principal Robertson to visit the classes in the literary department?—I never saw Principal Robertson in any of them during my time.

Does it not appear that the power of the Principal is not known to himself or to the University?—I rather think that is the case. We have very few laws, and very little constitution.

Are the Commissioners to understand, from a former answer of yours, that the regulations for medical education in this University require a shorter period for attendance on the classes included in the Curriculum, than would be necessary if the regulations had not been framed with reference to the instruction afforded by private lectures?—If the Senatus Academicus had not reference to the instruction that may be afforded by private lectures, I have no doubt attendance on certain of the branches would be required oftener than once; but I do not know that the years of study would be extended.

University of Edinburgh.

Professor Alison.

27 October 1826.

Edinburgh, Friday, 27th October 1826.

The EARL of LAUDERDALE in the Chair.

Dr. Alison called in and further examined.

The Commissioners having been informed that you wish to make some additions to your evidence, will you have the goodness to make such observations as you think necessary?—There were one or two things I was asked, in regard to which I should like to give a little explanation. I was asked, if I knew what Dr. Gregory's opinion was in respect to some parts of the alterations that have been talked of for the Medical Degree. I have since recollected that several times he mentioned to me, he was afraid the examinations for the Medical Degree went rather too much into collateral sciences, that were not clearly essential to a medical man, and from that circumstance (though I have not a recollection of his having said so to me), I think that he would not have been inclined to recommend the making imperative other studies in branches of science, not more immediately connected with medicine than those in our present Curriculum. I recollect his having stated several times, that he thought medical men were often deficient in the knowledge of general reasoning, and therefore, if he had recommended any collateral scientific studies, I think he would have recommended rather Mathematics, and a little Natural Philosophy, than Natural History. I think he would have been disposed to concur in any measure which could have been thought likely to secure a more thorough knowledge of Latin to our graduates than some of them at present have; but he never made any proposal for any plan of that kind. And in regard to the knowledge of Greek, I know, from notes on his lectures (for he used always to give a few lectures on the History of Medicine), that he thought that every physician who had a wish to be considered a scholar, ought to have a general knowledge of the writings of Hippocrates; but he did not consider it essential that he should study them in the Greek. He mentioned several works, in which those opinions could be learned, both in Latin, English, and also in French. He mentioned the same in regard to the works of Galen. Therefore I may say, as far as I can judge, that I do not think he would insist on our graduates knowing Greek. There is another question that was put to me the other day, namely, whether I was aware of certain regulations of the Army Medical Board, stating that men who had acquired certain scientific knowledge in addition to that required of their medical men, would be considered more eligible for promotion. It did not occur to me to state, at the moment, what I think is important for me to mention, that the situation of the gentlemen at the head of the Medical Army Board, in regard to young men under them, is very different from our situation in regard to our graduates; for they have not only the education, but also the promotion of the young men in their power; whereas we have their education, but not in the least their advancement in the world under our control; and it seems to me that is the chief error committed by those who recommend to us so strongly, additional literary and scientific qualifications for our graduates. They argue as if we had in our power, at the same time, their advancement in the world and their education in the University. Their advancement in the world is no further in our power than as the regulations, which we lay down for their studies, correspond to the general demands of the public in regard to the education of the higher class of medical men. In regard to these general demands, we are to judge more from the evidence of facts than the opinion of individuals.

Do you not think it ought to have an effect upon the education you prescribe, that the Medical Boards of the Army and Navy, who have the advancement in life of men to a certain degree in their power, require those qualifications?—It ought to a certain degree, but I think it is not ordered. Those qualifications they recommend. They say that they will consider the students more eligible on account of them.

Do they not hold out to them those qualifications as ensuring promotion?—As making them more eligible for promotion, no doubt; that is one fact which we ought to keep in view, but we must consider other facts at the same time. I was asked likewise whether I thought it would be expedient to allow the different Universities in Scotland to grant degrees upon different terms, or whether it would not be proper to assimilate all regulations in the Universities; and the College of Aberdeen was particularly alluded to. In regard to that, I would wish to be allowed to say, that if it were thought proper to lay down one general rule of study for all graduates, I should hope it may be thought right to take as a model rather one of those Universities, where Medicine is regularly taught with a view to Degrees, than one of those where it is not, as in Aberdeen. I say that for this reason—I think one of the best means we have of judging of what additional qualifications may be expedient for our graduates, is the experience and practice of our best students, and of those men who we know, when they go into the world, do us credit, and have generally attained to very high rank in the profession. It is very much from the observation of the practice of our best graduates that we have been led to think it proper to make the alterations that were made two years ago. I have mentioned several other alterations that I think might be made now, and in which we should be guided to a certain degree by the same principle.

With regard to Aberdeen, is there not a Professor of Medicine in Marischal College, and another in King's College, and four or five lecturers attached to both Colleges upon Anatomy, Physiology, Midwifery, Surgery, and Materia Medica, and the Institutions of Medicine?—I know there are, but, as far as I have learned, the instructions which the gentlemen give are intended for surgeons almost exclusively. I have not heard of any persons, and I should think there are very few, who study at Aberdeen for the Medical Degree. The general practice is for the young men to receive instruction at Aberdeen, and not to graduate there, but go to London, and graduate with the College of Surgeons there, who receive the certificates of instruction at Aberdeen, equally as at other schools.

291

University of Edinburgh.

Professor Alison.

27 October 1826.

Do you understand there is anything in the situation of Aberdeen to prevent the University or Universities there from forming a Medical School, more especially as it is understood there is a good Hospital established in that City?—I know nothing to prevent them from being formed into a good Medical School; but, as yet, I believe they do not instruct with a view to the Medical Degree.

When were the Statuta formed in this University as they at present exist with regard to Medical Degrees?—In the end of 1824; they were published in the beginning of 1825.

Were there not various Statuta published in the course of that year?—Not various Statuta; there were different proposals, some of which were printed, but there were no Statuta published until the beginning of 1825.

How many editions were printed in the course of that year in the University?—I do not recollect; there were several editions printed merely for the use of the Professors, before they were put into Latin; there were several editions of the projected alterations.

How many editions were rendered into Latin?—Only one.

Could you furnish the Commissioners with the different projects that were before the Professors?—I think I have two or three copies.

Will the Minutes of the Senatus Academicus contain the different proposals?—I think they will.

Will you communicate to the Principal the wish of the Commission to have them?—I will.

Were any alterations made in the Medical Curriculum from 1767 to 1824 or 1825?—There was no material alteration on the Curriculum; there was one regulation as to the age of graduates, and another alteration requiring two classes to be taken each year; the length of time was never increased until 1825. I have said that I think there are several improvements that may at present be introduced, or very soon; but, considering how many great alterations will then have been made in the course of two or three years, I should think it prudent after that to pause for a little, and to see how our graduates turn out, how our numbers stand, and what other schools do; for, at that time, we should be considerably in advance on the subject of the professional qualifications required of any school in this country, where the Medical Degree is studied for and given.

Would you require more qualifications than other schools?—Where medicine is taught for degrees—I mean particularly Dublin and Glasgow; these are two schools where Medicine is taught with a view to degrees.

Would you set Aberdeen aside on account of Medicine not being taught there with a view to degrees?—At present I would. After that, I think we may perhaps go a step further in regard to our qualifications, for undoubtedly I consider it to be our duty to give as complete and scientific education as we can to our graduates, consistently with what we judge to be the existing demands of the public, in regard to the qualifications of the higher classes of practitioners; but if we lose sight of that principle, it appears to me we should lose our hold of the practical part of the profession, and thereby lose all power of being useful to the public by our regulations for the degree.

Is the Curriculum now required for the Medical Degree by the University of Edinburgh equal, in length and in the number of courses of lectures, to that which is required for the situation of Medical Surgeon in the Army and Navy?—If I am not mistaken, it is superior in point of length to what is imperative in the Army and Navy.

Is it also equal in the length of the courses of lectures and the numbers of the classes?—It is not, in regard to the number of classes. One reason is, that in the regulations for the Army and Navy they require several classes to be attended twice, which we have not hitherto required, and which we thought we could not with propriety require, because it would be considered by the public as stretching our monopoly too far. It was proposed, and it was the opinion of a good many in the Senatus, that we might require several classes to be attended twice, but we could do so only if we recognised a certain description of private lecturers, and allowed the additional attendance to be either out of the University (under certain restrictions as to the private lectures), or in it.

Then is the principal reason why the University of Edinburgh has not required attendance oftener than once upon some of the more important medical classes because they consider instruction in those branches of the science is, in practice, usefully obtained by means of atendance upon private lectures?—In regard to the class of Anatomy, in particular, no man comes before us who has not attended a class of Anatomy twice, or, if he has attended once, he has also attended a course of dissections; but we thought it would have an ungracious appearance, and that it would raise a clamour against us if we were to require that additional attendance exclusively in the University.

Does the student attend the University class of Anatomy once, and a good private lecture here or elsewhere also?—Yes, very generally.

Is it necessary to produce a certificate of attendance at the private lecture?—We always receive certificates of private lectures, but we do not require them; they are entitled to come forward, though they have them not.

Does the Army take certificates of attendance upon private lectures of physicians?—The Army say, in the recognised schools: I think that is the phrase which is known in the Army Regulations.

Does not the Army require certificates of attendance upon Anatomy eighteen months, and upon Practical Anatomy twelve months?—I think they do; I am not sure that Anatomy is so long as eighteen months, but the Regulations are before the Commissioners. I have some reason to think that there are private regulations by which the number of courses required by the Army and Navy is sometimes lessened with regard to certain students, probably those whose opportunities may have been greater than usual.

University of Edinburgh.

Professor Alison.

27 October 1826.

If you have in view attendance upon private lectures as an important and generally as a common attendant or auxiliary of academical study, would there be any objection to require certificates of medical students having taken additional attendance upon the important courses of private lecturers?—My idea was, that we ought to require three, at least, of the classes which are considered most important to be taken twice, and to allow such additional attendance to be given either at this or any other University, or upon private lectures under certain restrictions.

What are those restrictions?—What was proposed was, that the private lectures to be admitted should be those which were given by Fellows of the College of Physicians or Surgeons, either here or in London or in Dublin; and I think another was, that they should be such lecturers as had already been lecturing for a certain number of years, from three to five years, for it was supposed, that if a man continued to lecture for five years he must have established some character, and useful instruction might be derived from him; and those lectures should also have six months' duration.

Do you exclude the lectures of the Licentiates of the College of Physicians or Surgeons in London?—No, not of the Licentiates of London: we would include them. The Fellows of the College of Physicians are those who have been educated at the Colleges of Oxford or Cambridge.

Are there very eminent private lecturers in the City of Edinburgh?—Yes, there are; I think I have mentioned something to that purport already.

Do you concur generally in the reasons that were urged, for adding the class of Medical Jurisprudence to the Medical Curriculum, in a printed paper submitted to the Senatus Academicus by the present Professor?—I thought those reasons were very strong, and I was of opinion it might be added with propriety; but there was considerable opposition made to it, and it was thought, upon the whole, best, and I concurred in the arrangement, to put it on the footing that it is now.

Is your opinion generally grounded on the reasons stated in that printed paper?—I think the reasons there comprise almost everything that can be said in favour of that class.

Is it your own individual opinion that that class ought to be added to the Curriculum?—That has been my own opinion.

Is it the case in some of the Foreign Universities?—It is the case in all the Universities, or nearly all; it is the case in France, at Vienna, and, I believe, in Italy.

Dr. *Home*, Professor of the Practice of Physic in the University of Edinburgh, called in and examined.

Professor Home.

Are you Professor of the Practice of Physic in this University?—Yes, I am.

Have you seen a paper drawn up by Dr. Alison?—I have.

Were you present when that paper was submitted to the Medical Faculty, and in which it is understood they concurred?—I was not present; I read it, and in general I concurred in it. If I might be allowed, I would remark, with reference to the Answer to Query No. 7—it is there stated that the former Professors of Materia Medica held the office of Second Physician to His Majesty in Scotland, with a salary of £50. This is not the fact. I believe that, before my father, there was no Professor of Materia Medica, who held the office of second physician. I have got the date of his appointment from the Exchequer, and it appears to have been in April 1761, and he was appointed to the class of Materia Medica in the year 1768, seven years after he had enjoyed the office of second physician. In June 1806 he resigned that office, and I was appointed, eight years after I had been Professor of Materia Medica, so that there is no connexion between the two offices, which would be implied by the Answer to Query No. 7.

Is that the only alteration you wish to make in the Answers to the Queries?—That is the only alteration.

Have you any suggestions to offer to the Commissioners relative to this University, and the system of education pursued in it?—In consequence of what I understood to be the object of this Commission, I put down a few notes upon different subjects. First, with regard to my own class of the Practice of Physic, I would mention, I am the only one, until very lately, I believe, who has taught it, not only by lecture but by examination. I certainly find very great advantage from these examinations.

Do those examinations take place in the same hour with the lectures?—No, at a different hour.

Do you give two hours a-day?—I give two hours, generally twice or thrice in the week, at separate hours, and this is at least for three or four months during the session. I find the greatest advantage from that mode of teaching; it forces my students to attend more carefully and pointedly to the lectures; it obliges them, from the strictness of the examination, to read at home, and to make the information they get from me, or from books, much more their own. It brings me much more in immediate contact with the young gentlemen, and I am enabled to know a good deal of their talents, character, and information, before they come for private examination for a Degree.

Have those examinations been complained of by any students?—On the contrary, they are sought for. I have been asked by many, who have entered this session, if I meant to continue them.

Is the examination conducted in the same hour in which the lecture is given?—No.

Does not that happen in any case?—It could not be, as examination would be substituted for lecturing.

What proportion of your students attend these examinations?—A very great number, perhaps the half.

293

University of Edinburgh.

Professor Home.

27 October 1826.

Was the total number of the class during last year 232?—Probably it was that number last year, but it has been at 270.

Out of that number, has one half attended examinations?—One half attended at first; but from the strictness of the examination, from many not being able to afford the hour, they generally fall off. I have been obliged to choose the hour of two o'clock, which interferes with an extra lecturer, Mr. Allan.

Generally speaking, do you find that all those who mean to take degrees attend these examinations?—Those, and many others.

Do they, however, generally attend?—A great many of them, but not all.

Do you hold out the prospect of a more favourable certificate being given to those who distinguish themselves in such examinations?—We Medical Physicians give no certificates; the only certificate is the certificate of attendance upon the Medical classes, which is merely a certificate made from the Album of the University. It is impossible we could give any other certificate, with such a number as 230 or 300, than of mere enrolment in our lists, which the certificate from the Album implies. We could not give any certificate of character or qualifications, except from examination.

Do you then give certificates to those who distinguish themselves at these examinations?—Yes, I give certificates according to my knowledge of them.

Would you wish to have attendance on these examinations rendered imperative?—It cannot be adopted generally, and certainly it cannot be made imperative; it would take up too much of the time of the students, and too much of the time of the Professor; and I do not believe any other Professors than those who have given up all ideas of practice could bestow time sufficient to carry on examinations with full effect. It would require at least an hour of examination for every hour of lecture; as I give six lectures in the week, it would therefore require six additional hours for examination. With regard to its being rendered imperative, I apprehend it could not be the case, for a great many of the students beg of me that they may be allowed to come to the examinations, but that they may not be asked questions; I have, however, rendered it absolutely necessary, that whoever comes should submit to examination in the same way as the others. Many from modesty do not come; there are others, far advanced in life, who would not submit to be examined along with those whom they consider to be mere boys.

Do the examinations relate chiefly to points of practical importance?—Principally: for instance, I ask the symptoms of disease—the mode of distinguishing one disease from others nearly connected with it; and when I come to the treatment, I ask them in a very particular manner as to that. I should hope they get that information from their attention to minutiæ which it would be impossible in any lecture to give.

Do you avoid occupying much of their time with theoretical views?—I avoid that as much as possible, not only in the lectures, but in the examinations. I confine myself to mere fact. The consequence is, that those gentlemen are certainly the best informed, with regard to these minutiæ, that come before us.

Do you think it would be attended with advantages to the students, if (consistently with the convenience of the Professors) the same course of examination could be pursued in the other medical classes?—I think, in most of them, it might.

Do you not think it is more particularly requisite in the class of the Practice of Physic, of which you are Professor?—I was led to the practice from the circumstance, that when I was Professor of Materia Medica, and first took the class, it was upon an average from 50 to 60 in number. It gradually increased to 100, 150, 200, and even 300. I had not then a room to myself. At last it got to 300. I was frequently obliged to change, and at last I lectured in the room of the Professor of Scotch Law. I could not therefore treat Pharmacy, which was one of my branches; and I desired the pupils to get their knowledge of Pharmacy where they could: I even pointed out a rival lecturer, where they could get it with advantage; and I said I would take care that they should be well informed upon that branch by my examination. The consequence of this was, I carried on examination in that branch, and I believe they were very well disciplined in that department of the class of Materia Medica and Pharmacy; and afterwards, finding the advantages, I carried it on in the Practice of Physic, and they now request me to continue the examinations.

Have you any observations you wish to make with regard to Clinical Medicine?—The duties of Professors of Medicine who are Clinical Professors are the most laborious that we have. With regard to Clinical lectures, the number of students has gradually increased to such an extent, that it is very inconvenient for students, and very improper for the patients of the Infirmary, and altogether uninstructive to one half who cannot get near to see the patients; and if some means could be devised by which the number of the students could be diminished, it would be an improvement in that branch of Medicine. I have thought of two methods by which that might be accomplished. There are four Professors at present, and we are divided into two sets, and each physician takes three months. Now, if one set, that is, two physicians, were going on at the same time, and if the Managers of the Infirmary appropriated two distinct sets of wards for Clinical practitioners, it would diminish the number of students by one half, one Professor taking one ward, and another Professor another. This year Dr. Duncan and myself officiate as Clinical Physicians: Dr. Duncan takes the duty for three months; he has the whole 150 or 160 students with him; I shall take it the last three months, and then I shall do the same. If we were to divide, he taking the women, and I taking the men, or *vice versâ*, we should diminish the numbers one half, and thus remedy the inconvenience.

Have you ever made that suggestion to the Managers?—No, it only struck me a few days ago. I have suggested it to Dr. Duncan: it would remedy the inconvenience of increasing

University of Edinburgh.

Professor Home.

27 October 1826.

the Clinical wards at present, for we will now have an over proportion of patients, and will not be able to finish within the hour.

If twenty-eight patients were divided between two several Professors, each taking fourteen, would that answer the purpose of enabling you to fill up the hour?—We generally exceed the hour.

Would fourteen to each Professor be sufficient, according to your plan?—There are more than fourteen in a ward; the wards are increased; I do not know how many they contain now.

Would there be any difficulty in carrying your plan into execution in that case?—I think it would be a great ease to all concerned; it depends upon the Managers.

Have you any other observations to make upon the subject of that improvement?—With regard to Clinical lectures, I apprehend it would be an improvement in the Medical Curriculum, if more than one course were rendered imperative. We had that frequently before us in the late arrangement of the Curriculum, but there was a division in the Faculty itself, in regard to it. Others supposed, that if two courses of Clinical lectures were rendered imperative, it would be an improvement, and we (as it was the Clinical lecturers who insisted upon it) thought it would appear to be attending too much to our own interests to insist upon it, and it was given up. If I had no connexion with the Clinical lectures, I am quite clear that two courses of them (for practice is the great object of medical education) should be rendered imperative; and in all those cases where I have the complete direction of the education of students, I desire them to attend the Infirmary, and Medical, Surgical, and Clinical lectures, from the very commencement of their studies.

Have you any other observations to offer to the Commissioners?—The next point which I have noted is with regard to the constitution of the Medical Faculty. I apprehend, that since the admission of Midwifery, for which from the beginning I was always an advocate, that no other course could be properly added to the imperative part of the Curriculum.

Do you concur generally in what Dr. Alison has stated upon that?—I do not remember that he stated any thing as to the addition of the Curriculum; I read his paper of notes in so cursory a manner, and it was in an imperfect state.

Did you generally concur in what was stated by Dr. Alison?—I generally concurred.

Have you any particular objection to add the class of Natural History to the Curriculum of Medical Study?—Very great objections.

Upon what ground would you object to such an addition?—Upon the ground that it is not a necessary study for the medical profession.

Might it not save much of the time of the Professor of *Materia Medica* if the students were previously acquainted with it?—No. I apprehend the whole of Natural History which appertains to medicine ought to be taught, and is now taught, in the *Materia Medica* class. For the same reason I think Botany ought not to be made an imperative class; the portion of it belonging to medicine is extremely small, and it may be taught, and was for many years taught, as a branch of *Materia Medica;* and indeed, until the year 1768, the two branches were conjoined in one; the Professor of Botany was Professor of *Materia Medica.* It takes up a great deal of time of the student, which is employed in attention to minutiæ, that are of no service whatever afterwards.

Is it not the practice of the Professor of *Materia Medica,* in lecturing upon those subjects from the vegetable kingdom which are used in medicine, to adopt the Linnæan system?—I apprehend not. I do not know what system he adopts. I believe he adopts the arrangement which is denominated the Natural Order.

Has it not been the practice to adopt the Linnæan system?—When I was Professor of *Materia Medica* I adopted it.

Did not your lectures in that class presuppose a knowledge of Botany on the part of the students?—Some degree of knowledge of Botany; so do the lectures in different branches of medicine presuppose an acquaintance with a variety of other studies; there are some other courses presupposed besides, as Natural History, Natural Philosophy, and others.

Do you think none of those should be made imperative?—No, none of them should be made imperative. I have now done with the Medical Faculty. The next improvement that suggests itself to me is, that the degree of Master of Arts ought to be made much more dignified than it is at present: I understand it is granted to any person who chooses to ask for it, after perhaps a mere attendance upon some of the lectures; I think that examination also should be enjoined as imperative on those who take the degree.

Are there many ask for it at present?—Not many, not above two or three in the year, and that is very much owing to its being of little importance, as it is granted merely as a matter of course, when asked. I do not know what classes they are obliged to attend, but certainly there is no examination such as we have for the degree of Doctor, and therefore no distinction is acquired by it.

Is it your opinion that examinations such as you carry on in your class, and such as are required in the Philosophical classes at Glasgow, ought to be introduced in the Philosophical classes at this college?—I apprehend that it would be the means of instructing them better; but I am not competent to judge of these matters. The next thing I would beg to remark upon is with regard to the University in general. Upon that subject, I am not a very competent person to judge whether the patronage ought to be left as it now is, or whether it ought to be altered. We have thriven very well under the present system of patronage; but this may not always be the case, the Town-council and Patrons being very incompetent judges of many branches: but I feel a difficulty as to where it should be put; therefore at present I am inclined to keep it where it is.

Do you not think it is a good ground for keeping a thing where it is, when it has been for

295

University of Edinburgh.

Professor Home.

27 October 1826.

a length of time well conducted?—Improvements should be conducted with caution certainly, particularly when we have flourished so well under this system. We have had a good deal of talk in the Senatus about a Chancellor, and so forth. I do think, that if it could be properly constituted, we ought to have some Court of Appeal, some body beyond ourselves; we ought to be able to look to some court that might have the power of terminating any dispute arising between the students and the Professors, or between the Professors themselves, or between the Senatus and the Patrons. But I am not competent to judge in whom that Court of Appeal should be placed, whether in a Chancellor or others; but if appeals are to lie from us in case of disputes between the Senatus and the Town-council, I apprehend the election of this Chancellor, or whatever officer it may be, ought not to belong to the Senatus Academicus, as he might be supposed to be partial to the Senatus Academicus.

Would you for the same reason consider that it ought not to be the Town-council?—Yes, for the same reason; therefore, I do not know where it ought to be placed. Perhaps, if it were placed in some of the constituted authorities, such as with the President of the Court of Session and the Lord Justice-Clerk, or some other permanent body, it might be the best mode.

The practical evils arising from the want of such a court ought to be obviated?—Yes, they should.

Have you experienced those evils?—Yes.

Have you any further observations to make respecting the constitution of the University?—I would say, with regard to the Senatus Academicus, that we are certainly a very ill-constituted body: in short, we have no constitution at all; we are a heterogeneous mass, collected together without any constitution. It would be desirable, if any regulations could be made, so as to give us some settled and fixed constitution, by which we could be empowered to make bye-laws; for I apprehend we have no such power at present. We attempted some time ago to enforce regular quarterly meetings, but having no power to impose fines to make attendance compulsory, we attended very ill. Something that would give the Senatus a power of making bye-laws would be an improvement in its constitution.

Is it also desirable that their powers should be defined more accurately?—Yes, it is; they should be authorized to enforce regular meetings, and to impose fines for non-attendance; indeed we have imposed them already, but some will not pay them. It is necessary they should have power to fix *curricula*—and in case of difference of opinion, to arrange the different Faculties—to call for and examine the books of the several Faculties, which is not done at present—to appoint substitutes for absent and sick Professors—and to fix the hours of teaching. We sometimes have disputes, as to the hours of teaching, and we very often interfere with each other. The Senatus Academicus ought to be empowered to make rules in general for the proper discipline of the University, and especially for the students.

Would you propose that these regulations upon such points should be subject to the review of the body, which you desire to see established?—Yes, when they are complained of.

Is it your opinion that the Principal should have more authority in superintending the University?—As President of the Senatus Academicus, he should have more authority; but independent of the Senatus Academicus, I do not think that it ought to be conferred on any individual.

Would you not think it prudent to give him any superintending power?—No, except as President of the Senatus Academicus.

Would you give him the power of examining the classes?—If we had the power, we would order him to do that, and not make it optional.

Do you conceive that the Principal now exercises the power that he did in former times?—I do not know any such authority that he had in former times.

Are you acquainted with the original constitution of the office of Principal?—I am not.

The next point upon which I would make a few remarks is with regard to our Medical Degrees. It has been a great dispute in the Senatus (in the arrangement of the last Curriculum) whether any previous literary education should be made imperative or not; and I conceive that it would be desirable to have our Medical students, especially those who take degrees, as well educated as it is possible: yet there are great difficulties in that, because they come from all quarters of the world—of course, well and ill educated; and any imperative regulation, with regard to literary studies, would diminish the number of students who would come to this University.

Are not these students, who come to this Univerity ill educated, and who may here gain a degree, likely to go abroad again with such a stock of acquirements as would do little credit to this University?—Not in Medicine; perhaps there may be those who are not good scholars, or are not good Natural Historians or Natural Philosophers, but I apprehend none go away from this University having a degree, who are incompetent to practise Medicine, which is all we look to at present, at least it is our principal object. It has been suggested, that a higher degree might be conferred on those who have a previous high literary education, or who may afterwards choose to receive it, as in Foreign Universities, where they have various degrees: they have a Doctor of Medicine, Doctor Chirurgiæ, a Doctor Artis Obstetricæ; and to these, besides, is added Doctor Philosophiæ, which constitutes a higher degree than the Doctor Medicinæ only.

Do you understand that the degree of Doctor Chirurgiæ is distinct in other Universities from the degree of Doctor Medicinæ?—Yes, all of them are distinct. In some of the Universities, they have a Doctor Artis Obstetricæ alone, but there are very few who take this degree higher; it is only those who require it for particular purposes, such as to become authors or teachers. Few would take it in this University.

Does the Doctor Chirurgiæ rank as high as a Bachelor of Physic?—I apprehend not; I am not particularly aware of any such thing.

University of Edinburgh.

Professor Home.

27 October 1826.

There is another remark with regard to the degrees, which perhaps might be thought an improvement. Instead of making the examination take place all at once, viz. at the end of their studies, perhaps the examination ought to be separated or divided. This plan would have the advantage of rendering the examinations much more minute, and of making the students much more skilled in the previous studies, such as Anatomy and Chemistry. I think it would keep up their attention. We know at present some very clever, but idle lads, who do not think of applying seriously to their studies until perhaps half a year before graduation; then they get on somehow or other in their information. If the course of study is to last four years, and if there were an examination at the end of two years, and another at the end of the four years, I think it would be an improvement; but the examination then should be rendered optional in the students; it could not be rendered imperative, for there are many students who come for two years only, sometimes for one year, and sometimes they do not attend the University at all, but come merely for graduation.

Was that the case under the former Statuta?—Yes, but now they are obliged to attend one session at least in this Univerity.

What is your opinion of the practice of conducting Examinations in Latin?—Why, we have had a good deal of discussion among ourselves in regard to that. Many of the students are well acquainted with Latin, and speak it well. Others speak it extremely ill, being very barbarous Latin hardly to be understood; and the time they have occupied in getting this barbarous Latin has taken them off from other studies. Besides, these young gentlemen, not being able to express themselves fully in the Latin language, we do not always get at their knowledge of Medicine itself. I am convinced, therefore, that many would make a figure in examination with regard to their medical knowledge, who at present make a very bad figure when examined in Latin. Sometimes, though we are conscious that a man possesses a considerable degree of medical knowledge, we have been obliged to reject him, because he could not answer the questions in Latin.

May not the necessity of conducting examinations in Latin compel the Medical Professors to keep up their acquaintance with their former literary attainments?—Perhaps it might.

If the examinations were required only to be conducted in English, might it not be possible for Professors to occupy Chairs in this University, who were quite deficient in the knowledge of those branches which are considered essential to the education of a gentleman?—Perhaps it might be the case, as the Patrons have it in their power to appoint any person.

By an expression that fell from you in the course of your examination, is it to be understood that you are desirous of seeing an examination or competition before the appointment of Professors to their situation?—The best test would be to allow them to teach two or three years previously, so as to see how they teach: but that could not be done.

You have proposed, if the examination for degrees is divided into two, that one should take place the second year; do you not think it better it should take place the third year, when the students are more advanced?—They should only be examined in branches they had already studied.

Would not that lead to the prescribing of a particular line of study for the two first years; and is not that a principle that seems to have been rejected by the Faculty itself?—It would do so; for though we do not wish imperatively to prescribe any course of study, yet there is a certain course we wish to see observed. Thus I would not advise a young gentleman, beginning his studies, to commence with the Practice of Physic; I would advise him to begin with Anatomy and Chemistry; those are naturally taken first.

Would it not be highly advantageous for students attending this University, though you did not make a particular attendance on various classes imperative, that there should be some document conveying to them what line of study the Professors in the University would wish them to pursue?—Certainly; and whenever any of us are consulted with regard to medical studies, there is a certain routine of study that we prescribe or recommend; but some of us differ in the exact course to be followed.

Are you of opinion that it would be advantageous if a line of study were pointed out, though not made imperative?—Yes, and we do so.

Is it consistent with your observation, that there is one particular line or course of study which, generally speaking, is observed by the students?—There is, for those who commence their studies here. Medical students come with a variety of previous education: many of them, for instance, have studied most minutely Anatomy and Surgery in London or elsewhere; it would be highly improper to make that person commence his studies here with Anatomy. In the recommendations individual Professors give as to the course which students ought to take, they consider the previous education of the person, and direct him accordingly.

Would it not very much lessen the examination for degrees, if all the Professors were to examine in their several classes, so as to acquire considerable knowledge of the attainments of the students before they offered themselves as candidates for the degree of Doctor?—I do not think that it would lessen the labour of examination, which is very great; for it is necessary to go over all this again, and that each should examine in his particular branch; for it is not only the individual Professor, but the other five or six, who must be satisfied as to the candidate's knowledge.

But would it not lessen the examination if every Professor, individually, were to have the opportunity of satisfying himself previously as to the knowledge and attainments of the students?—The other five would not be satisfied, for instance, with the knowledge he might have previously exhibited of Chemistry or Materia Medica, before the Professors of these.

If the student has attended only one year at this University, could he be examined by more than one or two Professors?—Yes.

Is there any point upon which you would wish to make further observations?—Another subject I have to mention is, with regard to the Thesis or Inaugural Dissertation, upon gra-

297

University of Edinburgh.

Professor Home.

27 October 1826.

duation. At present the publication of it is optional—formerly it was imperative; he must, however, give in a Thesis or an Inaugural Dissertation. I apprehend the Thesis should be entirely done away, for it occupies a very great portion of his time to write it in Latin; and, in general, we are afraid that it is neither composed in English, nor in Latin, by the student.

Do you then think it is generally not composed by the student, and that when it is, it is useless?—Very often it is not composed by himself; and when it is, it contains very little new matter, and nothing interesting to the public; it is also a considerable expense, if it is published.

Would you substitute in its place stricter examinations?—Yes, there should be an additional examination, or the present examination should be carried on to a greater extent.

If you were to dispense with the Thesis, would the sum it usually costs enable a student to attend two or three different classes?—I apprehend not so many. I do not know what they pay to the gentlemen who compose it, but, upon an average, it must be £8 or £10. Besides, the printing of a small Thesis of about twenty-five pages is not less than £6 or £7.

Do the students still go through the form of publicly defending the Thesis?—Yes, but it is a mere farce.

Have you any other observations you wish to make upon the subject of education in this University?—I apprehend it would be a very great advantage in this University, if the Professors had the power of retiring; that is, a retired pension to look to. In this way there would be always Professors in their vigour; and it would give these men something to look to, who have given up every other professional profit and advancement. The only difficulty is, whence the pension should come. It cannot come from the Government, for I fancy it has too much to do with its money; it cannot come from our Patrons, for they, perhaps, have still more to do with their money. The only plan which suggests itself to me is, that the successor should be taxed with this; and I have not the smallest doubt that there is not a Chair in this University that would not be filled by men very able to teach it, even although a portion of the profits were allotted to his predecessor. At present, Professors have nothing to look to; and this is perhaps harder with the Medical Professors than with any others, for such is the duty now attached to their Chairs, that it is impossible for Medical Professors hereafter to look to any great professional emoluments, as it is impossible to carry on the duties of their Chairs and practise medicine. There are many out-lecturers, who press us so hard, that if we did not keep somewhat before them we should very soon lose our classes. If it were possible to look to some such pension it would be an advantage, and prevent persons too far advanced in life occupying Chairs.

Might not the sanctioning of such an arrangement lead frequently to a good deal of private arrangement in the appointment of the successor?—Not, if it were done in the way that takes place in many of the Foreign Universities. It is not an ideal proposition. In the last Constitution, perhaps, that has been given to any University, I mean that of the University of Wilna, there is a particular regulation that the Professor, after a certain number of years, shall retire upon half allowance.

Are there any other Foreign Universities in which that is done?—I am not aware of any other; that information was only put into my hand yesterday.

Do you remember the number of years that are necessary to elapse before the Professor is allowed to retire on that pension?—Twenty-four or twenty-five years. If it were understood that the succeeding Professor was bound to give a certain portion of his income to his predecessor, the competition would be fair, and there could be no private arrangement; whereas, at present, there is often a private arrangement, which would be defeated completely by those means, and ensure a good successor; for it would be the interest of the Professor to see that a good successor somehow or other should supply his place.

Do you think that the successor would see, that though he made a sacrifice at the time, yet he would look forward to the future enjoyment in the same way as his predecessor?—Yes.

Do you think that in that way it would be the interest of the retiring Professor to see that the best possible person succeeded him?—His interest would be the same as that of his successor.

Is the provision to which you have alluded in the University of Wilna, furnished from the funds of the Russian Government?—The Professors there, as in most other Universities, seem to be pensioned by an allowance of one-half of the salary; for their profits do not depend upon fees.

Does the new Professor come in then only upon one-half of the appointments?—Yes. I am quite convinced there is not a Chair in this University that would not be filled by very able people on these conditions.

Are there any further observations which you have to offer with regard to the discipline of the University?—I think we have too little ceremony in our University. I may say we have none. I think some greater degree of ceremony would be of advantage, and add to the dignity and respectability of the institution. For instance, the session might be opened in a formal way, and closed by some public oration, and by conferring Degrees of Master of Arts or Degrees in Physic. We might invite our Patrons and make a greater show, and also the Chancellor (if we have one) should be invited. This would not be mere parade, but would add to the dignity and respectability of the University.

Is it the case in many of the Foreign Universities, that the Dean, or one of the members of each Faculty, is in the practice of commencing the session by a discourse upon the studies that ought to be followed?—It is the case in the German Universities.

Is it the case in the French Universities?—These have been so much altered since I was there, that I do not know if it now takes place.

University of Edinburgh.

Professor Graham.

27 October 1826.

Dr. *Robert Graham*, Professor of Medicine and Botany in the University of Edinburgh, called in and examined.

Are you Professor of Botany in this University?—I am.

Have you seen a paper drawn up by Dr. Alison, which it is understood he communicated to the Faculty of Medicine?—I have seen a paper that was read, it is believed, at this Board by Dr. Alison, not exactly drawn up by him, but nearly so.

Do you concur in all the observations contained in that paper?—I do indeed.

Have you anything to add, for the information of the Commissioners, in relation to the subject-matter of that paper, or which would be advantageous for the Commissioners to know in relation to this University?—I took the liberty to write down a few notes. I understood the subjects of inquiry might likely be, first, in regard to the University generally; secondly, to the Faculty to which I belong; and thirdly, to the individual Professorship which I have the honour to hold. I understood it was likely I should be asked, if I could suggest any alteration in the constitution of the University. It strikes me, certainly, that it would be very important for the University generally, if it were to approach in its constitution to other Universities throughout the country, and throughout Europe, in having a Chancellor, and, perhaps, a Court of Assessors, which might be a Court of Appeal, in reference to any disputes that might arise among the students, or any academical disputes or difference of opinion that might arise in the Senatus Academicus in fixing the Curricula, or any dispute between the Patrons and the Senatus, in short, any dispute whatever. The chief difficulty that occurs to me, with regard to these office-bearers, if I may so call them, would be where their nomination should lie. I do not think it is very important, but there may be a difference of opinion upon that subject. The nomination should either be in the Crown, or the Senatus themselves. There are many questions that might be brought before the Senatus which might occasion discussions, and unpleasant ones sometimes; yet such would not occur in the nomination of arbiters to settle disputes which might never arise; it is only in the moment of irritation that there is any difficulty in managing them. It strikes me it might be well, if these assessors were appointed by the Senatus, as competent judges of such matters. The number should be limited, because where there are many men, there must be a variety of opinion, and it would be desirable that the number should be small; three or four assessors, with the Chancellor, might decide all those matters —the Chancellor to have a deliberative and a casting vote. It is of little consequence where the appointment lies; some persons think it of more consequence than I do. I think if competent men were appointed, it makes little difference where they come from. If the appointment came from the Crown, it could not be better.

Would you object to an appointment by the Town-council?—I would indeed; I think they are quite incompetent to exercise it.

Might it not be proper that the appointment of the Assessors should lie with the Chancellor himself?—The idea never occurred to me; but at the moment I see no objections to it whatever. Since the Patrons have been spoken of, I may state that it is conceived by some, though I do not think with good reason, that it is unwise to have the Patronage of the Chairs in the Town-council. I myself see no objection. If, however, the patronage of the chairs be removed from them, it cannot be lodged in better hands than those of the Chancellor and his Assessors. I do not, however, object to the present arrangement, although it has been objected to by some.

In practice, has it not always proved productive of good effects?—I recollect no instance in which it has not. I know no instance of mischief having arisen from it. As to the Senatus Academicus itself, there should be fixed periods at which they should meet regularly, say quarterly; and there should be a power of calling extraordinary meetings, and that power should rest with the Principal, or with the eldest Professor of Divinity in town, or any three of the members of the Senate. This is the way in which extraordinary meetings should be called. I do not remember an instance in which three members of the Senate called a meeting; but I think they should have that power: I do not know if they have it now. The duties of the Senate, it strikes me, should be to determine Curricula of study for different degrees, and also to grant degrees. I do not think, however, that the proposal should be made at the Senate table to grant professional degrees at least; for those degrees require professional knowledge, and the professional knowledge should be tested by the Faculty to which the degree belongs. There is one degree which is purely honorary, the Degree in Laws, and that might, with great propriety, be proposed at the Senate table; but with regard to Degrees in Medicine, and even in Divinity, they should originate in their respective Faculties. I think churchmen should have some hand in originating those degrees in Divinity, which have honours in the Church. Degrees in Laws should originate at the Senate table, or with the Faculty, being purely honorary. The Senate should have power to arrange the Faculties, and to receive and judge of Reports from them. They should possess a power over the students. We must suppose extreme cases to illustrate general observations. Suppose a delinquency should be found to exist among the students, the Senatus should be entitled to call them before them and reprimand them, or, through the Principal, to prescribe any punishment that might be thought right, by suspending their degree, or even by expulsion (a power which has been exercised), or in any other way that might be thought proper. I think the power to expel ought to be declared to belong to the Senate.

Is it not the Senate that do exercise that power?—It has so rarely occurred that I can scarcely say they do exercise it at present; but they have exercised it. I think, also, they should have a power of imposing fines, or using any other mode that might be thought right, to support discipline among the students. The Senate should have power over its own members, by inquiring whether those members discharge their duties. They should also have a power

to reprimand Professors if they did not do their duty, or even to suspend them. I conceive it would be right, if a Professor were rendered incompetent to teach his class by sickness or any other cause likely to be of short duration, that a substitute should be appointed, *pro tempore*, by the Senatus. If, on the other hand, that substitution were likely to be long, or if it appeared that the Professor could not again resume his duties, the power of appointing a substitute should be given to the Patrons. The Senate should have the power of visiting and inquiring into the discipline supported in each class. It were well to enable them to enforce the discharge of minor duties among the Professors, and to inflict minor punishments among themselves; it should be declared that they are entitled to exact fines for neglect of duties, non-attendance at meetings, and so forth. I can speak in regard to the practice in the Medical Faculty; we there fine each other for non-attendance, and have found the practice attended with good effect.

Do they not fine in the Senatus?—They never did exercise such a power, and I question if they have it.

To what purpose would you propose to apply the fines exacted in the Senatus?—To the Library.

Have not fines been demanded in the Senatus and refused?—I am not aware that any have been demanded. What I would call donations, rather than fines, have been expected. It is understood that each Professor, when appointed, should pay a small sum to the Library. I think this should be increased. Each pays five guineas upon his installation. I can speak as to the practice of another University: I paid £20 when I entered that of Glasgow; I do not know that that can be called a fine. I have no recollection of any fine being exacted by the Senatus. During my incumbency there has not been any, or, if there has been, it has escaped me. The duties of the Faculty should be, I conceive, to initiate degrees,—to appoint examiners. It, however, may be a matter of doubt, whether the Senate should not appoint examiners; there should be an appeal to the Senate in all cases. I think the examiners should be appointed by the respective Faculties; for they are most able to judge of these matters. I conceive, certainly, that in the Faculty of Arts the members in that Faculty are more competent to say who should be Examiners for Degrees in Arts than I am; and in the Faculty of Medicine I conceive that I am a better judge in such a matter than the gentlemen of the Faculty of Arts. For the same reason I think the Faculties should originate the regulations in regard to the Curriculum of study, and propose alterations on them for the decision of the Senate. Each Faculty should have a Dean, appointed by the Faculty itself. The duties of the Dean are to summon meetings; but I conceive two members of the Faculty should also have this power. Further, his duties are to communicate with the students, to keep the Faculty book regularly, to write the minutes—in short, to act as the clerk; to prepare Reports of the Faculty and propose arrangements regarding meetings, for the examination of candidates for degrees. This is a very serious labour in the Medical Faculty; for the number of examinations we have is so very great, and the number of students whose certificates are to be examined by the Dean is so large, that he has really a great deal of duty. It is of less consequence in the other Faculties. I conceive in every thing there should be an appeal from the Professors to the Faculties to which they belong, and from them to the Senatus, and thence to the Chancellor, or his Assessors. The Principal presides at all meetings of the Senate. There is less form, perhaps, in the opening and closing of the session than I think is dignified. I think that every session should be opened and closed by the Principal, at a general meeting of the whole students, if a new room shall be provided in the new buildings sufficiently large for that purpose, which I believe is not intended; or each Faculty should be met and addressed by the Principal at the opening and close of each session. It is the duty of the Principal to confer degrees. Degrees in Medicine are conferred in a solemn manner on one day annually—of late, on the 1st of August; it is now, I believe, proposed that they should be conferred on the 12th of July. Whatever the day be, there should be one set apart, and I think towards the end of the summer session, on which degrees should be conferred. Degrees in Arts should be conferred with as much solemnity as those in Medicine, which is not now the case, and on a fixed day, about the same period. It is the duty of the Principal to propose all the business at the Senate meetings, and to become the organ of the Senate in conferring rewards and punishments. These are all the observations that occur to me to state with respect to the Senate itself. As to the Medical Faculty, a few remarks are all that are necessary for me to make. The Commissioners are already informed, by the answers given to the queries, what the term Medical Faculty means in this University. It means merely a Committee from the medical department, who are employed in the examination of candidates for Degrees in Medicine, and whose classes must be attended by candidates for a Degree in Medicine, and who have it in their power to deliver Clinical lectures upon the patients of the Royal Infirmary. This is all that is meant by the term Medical Faculty; though perhaps it is an improper expression, it does not mean the whole medical department of the University. At present it consists of the Professors of Anatomy and Surgery, Chemistry, Botany, the Theory of Medicine, the Practice of Medicine, Materia Medica, and Midwifery. To these I have always been inclined to think one should be added in the present state of the School, namely, the Professor of Medical Jurisprudence. I conceive his branch to be a very important point of medical education which is very much neglected. It would be very important to our graduates if they had a better knowledge of Medical Jurisprudence than they have at present. That has always been my opinion, and I have expressed it strongly in the Senate. There would be considerable advantage in adding one other Professor to the examiners, even if his class were not made imperative, for I think it would enable the examinations to be made more efficient than they are. The present examiners, I may take the liberty of saying, make the examinations as efficient as it is possible by the present arrangement; but I think they may

University of Edinburgh.

Professor Graham.

27 October 1826.

be made more efficient than they are by dividing the examiners. The candidates for degrees, it strikes me, should be examined twice. Candidates find a great difficulty in coming forward for examination in the multiplicity of subjects on which they are to be examined at one sitting. Their heads get distracted, and they find it difficult to show the information they possess; whereas, if even a short space of time, no matter how short, were to intervene between an examination upon one set of subjects and an examination upon another, even though the student had no opportunity in the interval to acquire additional information, I feel satisfied, from experience, he would be able to show he possessed more knowledge, and I feel assured the Professors would be able more thoroughly to determine the degree of information he possessed. It would be well, perhaps, if those two examinations took place in two distinct years; but that, I am afraid, we cannot make an absolute law, on account of the great diversity of circumstances in which students are placed who come forward for examination. We graduate a great many men, who are here for one year. It should be optional for the student to pass before his examiners in two successive years: first, after the third year's study, and again after the fourth, at the termination of his course; or that he should take both examinations during one season.

Might not a rule be made applicable to those students who take the whole of their medical education at this University, and a different rule in regard to those who come for one year; and do you not think it would ensure greater attention in the students to take the examination in two several years, by exciting emulation in them to prepare themselves in the two years, instead of applying so strenuously immediately before their examination in the last year?—I conceive it would be an advantage to examine in two years, instead of entirely in one. So many come forward for graduation after attendance for one year only in this University, (a fact brought out in the answer to one of the Queries,) that though I do not see any great reason to object to it, yet I doubt if it would be found beneficial in practice to make two distinct positive enactments; I rather think it would be well to leave it in the option of the students. I do not see any reason, however, for saying that there should be no such positive enactment with regard to those students who take the whole of their course here. The advantage, therefore, to which I alluded at first, of having an additional Examiner, appears from this: we have at present only seven Examiners; we should then have eight, and we might divide the Faculty into two Committees of four each.

Have you seven Examiners in the Faculty?—Yes, reckoning Dr. Hamilton; he has not examined, but is appointed to examine, and he is entitled to do so, and probably will, at the next graduation, or the following one. By having two committees of four, we should be quite sure that the examinations would always go on. We cannot examine with propriety unless three Examiners are present; but when medical men are Examiners, it is not unlikely that one may be absent. I would, therefore, hardly recommend that division to take place, unless there were two Committees of four. It is of more importance for students to attend lectures on Medical Jurisprudence than they appear to think. All the branches of medical study which I have named should be imperative on the students; and besides these, I think two other branches of medical education, provided circumstances would admit, should be added to the Curriculum. I think the lectures on Clinical Surgery should be added, provided it were put upon a better footing than it is at present; but the footing on which they now stand is such, that I think the Senatus could scarcely impose them upon candidates for degrees. I will explain the situation in which the Professor of Clinical Surgery stands: he has no right, but what is received from the Managers of the Infirmary, granted indeed to him during life. The *Chair* has no right in the wards of the Infirmary, though the present Professor has made an arrangement with the Managers, by which privileges have been granted to him during life: but after his death the Managers may not see right to give that liberty to the next Professor; therefore, were the Senate to add Clinical Surgery to the Curriculum, they might, perhaps, be requiring students to attend lectures, which none of their own members might have it in their power to deliver. This would be unbecoming in the Senatus, and I think more than they are entitled to do. In the next place, the Professor of Clinical Surgery is exceedingly awkwardly placed in not having patients of his own, but being obliged to lecture on the patients of others. I should feel that my observations would be cramped in such circumstances. I could not so well speak of the practice of others as of my own, nor so freely of another's blunders. I conceive the class of Clinical Surgery cannot now be rendered so efficient as it would be if those two difficulties were obviated; if they were obviated, I think attendance on that class should be made imperative on the students of Medicine. The Professor lectures now on the patients of the Ordinary Surgeon. The other branch of medical education, which I would recommend as an addition to the Curriculum, if circumstances would admit, is Practical Anatomy. Unfortunately the present state of the school does not admit of this. If bodies could be procured in sufficient number to supply the demand, I think it should be rendered absolutely imperative that the student should dissect a complete body before being admitted as a candidate for a degree. With respect to the mode of conducting examinations, there has been a great diversity of opinion as to whether examination should be conducted in Latin, or in English. I have no hesitation in giving a decided opinion that if, *in the first place,* by the examination of the student in Latinity, apart from scientific examination altogether, it should be ascertained that he has a competent knowledge of the Latin language, the scientific examination should be conducted in English.

Might not some of the Language Professors be added to your body as examiners?—I am afraid that they would be more nice than they ought to be.

Might it not be desirable, that for the purpose of ensuring a very considerable degree of knowledge of the language, Language Professors should be added?—I hope the Medical Professors are quite competent to ascertain that the candidate has a sufficient knowledge of Latinity.

University of Edinburgh.

Professor Graham.

27 October 1826.

Would it not relieve the Medical Professors of part of their duty?—It would; but as the degree is granted almost upon our responsibility, I think it scarcely right that any other Professor should be added to the examiners.

Do you consider examination as to attainments in the Greek language necessary for a medical man?—I do not indeed. An acquaintance with Greek, to a certain extent, is a desirable accomplishment, and every man in the higher ranks of life will require a certain degree of information in the Greek language; but I do not think it is a subject that should be forced upon the students, who perhaps may be in circumstances scarcely enabling them to acquire such information. I conceive it not at all necessary for the due exercise of the profession.

Is not a knowledge of Greek necessary to enable one to understand the signification of technical expressions?—It has been remarked that the sooner those technical words become arbitrary terms, the better. I am not quite sure that I am disposed to go the whole length of what has been said by others; but I am quite sure of this, that a great many of them had better have their original derivation forgotten—the arbitrary words expressing the thing whereas the derivation would give a wrong impression.

Do you think a sufficient knowledge of Hippocrates could be acquired without a knowledge of the original language?—Certainly I do; and I repeat that a knowledge of Greek is not in the least necessary for the due exercise of the profession. My reason for objecting to examination in the Latin language is, that it gives a man two difficulties to combat at the same time, which is surely never politic; and to speak Latin is a thing that is not taught anywhere. I am not aware that it is taught anywhere, except in the schools of the grinders: it is very different to speak, and to read Latin. With respect to Theses, if written at all, they should be in Latin; but I am inclined to think that writing Theses should be optional. If written, they should be printed and defended in public in Latin. My reason for thinking that they should be optional is, that we render imperative what a student may get another to do for him; and though we always take a declaration that he does it for himself, I am afraid by so doing we sometimes get a man to assert what is not true. I think it ought to be a principle in examinations of every sort, that every thing a person can get done for him should be excluded. At the same time, when a practitioner of some standing, as an Army Surgeon, comes to take his degree, and has a subject which it would be creditable for himself to publish, or for the University to print, it would be hard to refuse him leave to do so. Therefore, as in another University with which I was formerly connected, Glasgow, I think the Thesis should be rendered optional, not obligatory.

Is it optional in Glasgow?—Yes, it is; but if written it must be defended, though even then it is, I believe, optional with the candidate whether he shall print it.

Do you consider that the present mode of defending Theses is peculiarly solemn, and calculated to impress the public with the conviction of the extent of the qualifications of the candidate?—Not in the smallest degree. If, however, the number of Theses were diminished, it would be much more solemn; the period of time bestowed upon the examination of each Thesis would be much longer, and therefore the examination would be greatly improved; at present it is a mere farce.

Is it not understood that above 100 are gone through in a forenoon?—The average number has been about 115 in the last four years.

And is that number actually defended in one forenoon?—Yes, but there are three committees.

Would you consider it prejudicial to the University to abolish Theses altogether?—I certainly should not; I conceive that all examinations, and test of information, which are mere form, and which can be done by others, should be abolished; the writing of Commentaries on Cases, and the absolute stipulation that a candidate shall write a Thesis, and several other things of that kind, should be abolished.

Do you not think many candidates, who, as you say, have practised to a certain period of life, and may have become masters of particular subjects, and would like to print their Thesis, would rather waive it, in consequence of being obliged to defend it at a public examination?—No doubt; but when a Thesis is given out to the world, under the sanction of the Senatus Academicus, they should have a check on the subject of that Thesis, and should have it in their power, by examination in public, to sift the doctrine, and to state, if such is the case, that it is not the doctrine of the school.

Are any of the Theses commonly rejected on account of the doctrines they contain?—Not to my knowledge; I have returned Theses on account of the language repeatedly, but never on account of the doctrines they contained.

Would a Thesis be allowed to be printed, though it contained views directly opposite to those of a great proportion of the Medical Professors?—Undoubtedly; if it is a mere speculative matter, the sanction of the Senatus ought not to be withheld from the printing of it; but it is quite evident that doctrines and language might be employed which it would be exceedingly unbecoming in the Senatus to sanction.

If a Thesis was received which opposes the doctrines of most of the Medical Professors in the University, how could they issue it to the world with their sanction?—It should be understood that the speculative doctrines of a Thesis rest with the candidate himself; but let me suppose, for illustration, that a student should write blasphemy, I conceive it would be quite wrong in the Senatus Academicus to permit such a Thesis to be promulgated under their authority.

Does Dr. Graham think that Commentaries upon Cases, as they are conducted at present, might be abolished, as part of the trial; or might not that test of the skill of the candidate be resorted to, with good effect, if he were compelled to write them in the presence of the examiners?—I am afraid it is almost impossible that could be done; the length of time it

University of Edinburgh.

Professor Graham.

27 October 1826.

would occupy, the apartments that would be necessary for separating the students, render it almost impossible with our numbers.

Do you know if that is done in some of the Foreign Universities?—I believe it is. I know it is done at Copenhagen.

Are you aware of the actual method in practice in which it is done at Copenhagen?—Perfectly; I know that, in Copenhagen, the candidate is shut up in a room with pens, ink, and paper, a subject being prescribed to him; the door is not opened until the commentary is finished.

Has not that test of the skill of the candidates been understood to have added considerably to the value of the degrees of the Universities which have adopted it?—I cannot speak to that point. I know that the examination at Copenhagen is very rigid, and its degree does and ought to stand high; but I cannot say what particular parts of examination are considered most valuable.

Is the same practice resorted to generally in other Universities in the north of Europe?—Not to my knowledge; it may be; I cannot say.

If a Thesis were to be produced, denying the existence of contagion, and deriding all precautions that are so generally recommended for avoiding it, would that Thesis be allowed to be published?—I should think most certainly it ought; and had I the revision of such a Thesis, I would not object to it. I may state a fact: Theses have been frequently submitted to my revision, containing doctrines in regard to contagion, which I have considered quite fallacious, yet I never objected to these Theses being printed, because it is a speculative point. I do not think we are entitled to prevent its publication, for we may be quite wrong; and many doctrines we hold now were considered by our predecessors exceedingly heterodox; but I conceive that it would have been quite wrong in them to have prevented their promulgation and discussion. The yellow fever is a subject upon which the students from the West Indies frequently write. Some contend that the yellow fever is contagious, others that it is not; but the Theses are never objected to, according to the principle which I have stated, nor do I think they should be.

Would a Thesis be rejected if it were to recommend a mode of practice decidedly opposed by the Faculty?—No, I think not. Did a student write such a Thesis, and did I receive it for correction, I should certainly, when I came to such part of it, summon the student before me, and speak to him on the subject, and converse with and examine him, and dissuade him if I could, from publishing such a doctrine; but I would not positively prohibit the Thesis being printed.

In that case, would not the Thesis, so far from being a test of the skill of the candidate, prove his own utter incompetency to practise?—Certainly, as far as that particular point and my opinion went; but it might show great ingenuity, and research, and a well-educated mind, and I think it would be wrong to oppose it.

Is there any use whatever in allowing a candidate to have his Thesis printed, when it may only tend to lower him in the opinion of the University which grants his degree; or do you think that it should be allowed in any case, even though he may desire it?—I think it would be fair to allow it; there might be cases in which it might be hard to refuse it, for a man may put a feather in his cap by it.

Do you consider it should be allowed, even although the Medical Faculty disapprove of it?—If Theses were not rendered imperative, we might be a little more nice upon that question; but I think there is a danger in rendering ourselves responsible for the doctrine of Theses.

Might not a student be rejected, in his private examinations, if he recommended a practice which was decidedly disapproved of by the Examiners?—Not if their practice were all a matter of doubt; if he should recommend a practice, which in the eyes of all medical men would prove exceedingly injurious, most unquestionably he would be rejected, for such recommendation could only show ignorance; but if he should recommend a practice which is a matter of doubt and discussion among medical men, though it might be opposed to the opinion of his Examiners, I do not think it would be a sufficient cause for rejection.

Would you ascertain if he were aware of the other methods of treatment being recommended?—Yes.

Would you do so, in order to ascertain if it were ignorance, or an exercise of judgment, upon his part?—I conceive the object of our examinations is not to include doctrines which a man dare not transgress, but to ascertain if the candidate is thoroughly educated. Experience is read very differently by different men. One man asserts his experience leads him to such and such conclusions; another, from the same case, draws an opposite conclusion: the great purpose of examination is to ascertain information, not to inculcate doctrines.

Are those Theses generally read by other medical students?—No; I should think not.

What is your opinion as to Examinations in general by Professors, or different members of Faculties, in their own classes?—Examinations are of two kinds in Universities; they are modes of teaching, and they are the means of ascertaining the information of the students. It may be quite practicable, when the class is small, to teach by examination upon scientific subjects; but when a class is numerous, it is quite impracticable, without injustice to many of the pupils, many of whom come here for information, but would not submit, and could not be expected to submit to examination. If the classes were to be taught by examinations, I have no hesitation in saying that the time occupied in teaching would be so great, that the Professor could not possibly overtake his whole matter, and besides, he must confine himself to the lower branches; therefore, if better informed men were to attend such a course, they would attend to the teaching of the less informed students, and they themselves would derive no benefit; whereas, if the Professor were to teach by lecturing, he would have it in his power to go over a great many more branches—he would be able to do a great deal more in a given

University of Edinburgh.

Professor Graham.

27 October 1826.

time, and both classes of students would be benefited. But there is another object in examination, viz., to ascertain if the students have made progress. This may be done without injury to those persons who are better informed, and who come forward to attend lectures, with a view to acquire higher degrees of information; but I would not render examination imperative on any. When I examine in my class I do it very superficially, for want of time. I do not make it imperative, for all would not choose to be handed up before my class.

But when they are willing, could it be done efficiently?—Yes.

Do you examine in the same hour as you teach?—I do.

Have you a separate hour?—No; I occupy a short while merely to ascertain that the younger students have been attending to the subject. I have, however, two modes of examination: one is oral only, and very brief indeed. I have another examination upon Practical Botany, which is conducted without any interference with the time of lecturing. I prescribe to the pupils exercises in the garden, by affixing numbers to particular plants, and desiring that I shall be told next day what these are. In Practical Botany this can be easily done; but oral examination cannot be carried on, without great loss of time. I conceive it quite impracticable to teach a scientific subject to a large class by examination.

Are you aware if an hour for examination is set apart by Dr. Home in his class?—I am aware that an hour is set apart for examination, but he does not teach by examination; he merely examines to ascertain the progress of the students.

Do you consider that those examinations are beneficial to exercise those students who are willing to be examined?—Yes. With respect to an additional hour for examination, I may state, that really the time of the students cannot afford it; the whole day is occupied in teaching, and a separate hour might therefore interfere with other branches of their education.

Would there not be a greater difficulty in your case, from the distance you would have to take your students?—There would not be so much difficulty in my case, for in summer there are fewer classes; but if I were to carry the pupils to the garden twice, the distance would be a great objection. If I were to give them an additional hour, which I think I could not with advantage, it would be consecutively with the other.

Have you a great deal of private communication with your students?—Yes, I have; but my chief examinations consist in prescribing exercises in the manner I have mentioned. I do not render it imperative upon any man to undergo even that examination.

Do you consider Botany an indispensable part of the Medical Curriculum?—I am not a fair judge. The only answer I can give is, that Botany is rendered indispensable in every University where degrees are granted after a defined course of study; it also is made indispensable by the Army Medical Board. My own private opinion is, that it is an indispensable part of the Medical Curriculum.

What is the duration of your course?—Mine is a three months' course.

Have the number of your pupils increased?—My numbers have greatly increased. I lecture much more than one hour a-day during three months.

Do you give any description of the medical qualities of plants?—I do; I consider it part of my duty.

Have you had it in contemplation to give the students a second course during winter?—I have.

Was it for the purpose of making a second part of the same course, so as to require the attendance upon the Professor twice, or for the purpose of rendering the course of instruction, received from the Professor, more complete than the summer session enabled him to make it?—Solely with the latter intention: I had no intention to render it imperative. I think, however, that in the way I shall explain, it might be made optional with the student, which he shall take for his academical course. Suppose a gentleman to arrive in Edinburgh, with a competent knowledge of Practical Botany,—that he feels himself already prepared to undergo an examination in Practical Botany, and that he would therefore prefer, from the state of his own knowledge, to take the proposed second course; I think it should be allowed to pass for his academical course, but in no case would I require two courses. This is exactly what is done with the classes of the Professors of Humanity and of Greek: the candidates for degrees in Arts are bound to attend one course, but which course is not mentioned—it may be the first or the last; if they attend the last, however, they are not on this account exempted from examination in the rudiments of the language; neither do I conceive that attendance on any proposed second course should exempt from examination in the rudiments of Botany. Such attendance is the choice of the candidate, from an understanding that he is already able to undergo examination in the rudiments of the science.

With regard to the duration of the course, I was about to take the liberty of saying, that I think both the summer and winter session should be prolonged. We are always in a hurry at the end of a course, both in summer and winter. I think the winter session should begin a little earlier, and terminate a little earlier, that the summer course might begin sooner. If the winter course were to begin on the first of October, and terminate in the middle of April, the summer course might then begin, and terminate in the end of July.

Do you think that there would be any difficulty in having a sufficient number of students remaining in Edinburgh for the purpose of attending this prolonged course?—I think not. I have no doubt that towards the end of a course, whether it be one of two, or three, or six, or nine months' duration, the students will drop off; but my own idea is, that the actual duration does not materially affect this. If the course were prolonged, it would give the Professor a power of setting apart certain hours for examination; not taking two hours in the day, but one hour in the week occasionally, which would obviate the difficulty that it strikes me, at present exists, of getting hours for examination: it would prolong the course without

University of Edinburgh.

Professor Graham.

27 October 1826.

increasing the number of hours occupied in the twenty-four, which it would be difficult to manage. The Professor would have an hour for examination at his ordinary lecture hour, without diminishing the number of lectures.

Are you not apprehensive that there would be an objection to prolonging the course, arising from the circumstance of students, especially those of this country, not being able to command funds for such a long residence in Edinburgh?—There is no question that this is an objection. The only other department which I would mention is that of Clinical Medicine. The great difficulty we find in teaching this branch is the great number of students that attend. In summer the number is much smaller, not exceeding twenty. It seemed practicable, therefore, to Dr. Duncan, junior, and me, to teach at this season by examination, and at two different periods we attempted it; but the aversion of the students to that mode of teaching obliged us both to give it up. The difficulty that is found in teaching Clinical Medicine in winter is the crowd of students. The great object of Clinical Medicine is to familiarise the student with the appearance of disease as presented in the patient; but as in the winter the Professor has 180 pupils, all of them cannot see the patients. It has therefore occurred forcibly, I believe to all of us, as Clinical teachers, and to me among the rest, that it would be a great point gained, if we could divide the students, and get smaller classes. The method that occurs to me as the most efficient for doing so is, to have two courses of Clinical lectures going on at the same time, and to compel all the teachers of Clinical Medicine to lecture every year, instead of lecturing in alternate years, as they do now. We should, by this means, reduce the number of pupils to one half; but as a lecture upon Clinical Medicine is so very important a step in medical teaching, I will mention here what I have stated repeatedly at the Senate table, that I think the Clinical course should be prolonged, and that instead of attending six months upon Clinical Medicine, as the students are compelled to do now, they should be made to attend nine months, and the two courses of lectures should be delivered during the whole of that period. Means might perhaps be taken to divide the pupils still more. As it is only rendered imperative on the students to attend now six months, and as they cannot attend two summer courses without a very considerably increased expense, scarcely any attend the summer course excepting a few who are desirous of information; the ordinary pupils always prefer attending the six months in winter. The expense of attending in summer is increased, not only by the additional fee the pupil must pay to the Professor, but more by the additional hospital fee for the summer months; for two summer sessions being in two distinct years, he must pay two hospital fees. If the student shall still be required to attend only six months, he should be compelled, by a regulation of the Senatus, to attend one half of his course on one set of lectures for three months, and the other half of his course upon the other set of lectures. Let the Professors so arrange it, and I think it might be practicable to make them issue only one half of the tickets, or, after they are issued, to allot certain students to certain Professors, and to change them afterwards.

If two Professors were lecturing at the same time, though a proportion of the students might, in all probability, prefer one Professor to the other, would it not be at least necessary that there should be a division of the students to a certain extent?—It would certainly be necessary to secure the full benefit of the plan, that the division should be equal; and there might be an arrangement made, by which this would be effected. Any one who has fought his way, as I have done, from one bed to another, will easily understand the difficulty there must be in seeing patients; the crowd is such, that the pupils cannot see the patients as they ought. I certainly once thought of a plan, by which the unequal division of the pupils might be obviated; and if the Commission will allow me, I will add a note afterwards, for it has escaped me at this moment. The next point as to which I would wish to make an observation or two, is the impracticability of supporting the Royal Botanic Garden as an institution connected with the University, without greatly increased funds; and I hope the Commission appointed to inquire into matters connected with the University will see the propriety of recommending a further allowance to be given.

Has there lately been a new Botanical Garden instituted for the assistance of the Professor of Botany?—There has.

Have you a separate appointment, as Keeper of that Garden, from the Crown?—I have an appointment as Regius Professor of Botany and Keeper of the Garden in one commission.

Have you also another commission from the Town?—I have.

What are the funds which are at present allotted for the annual maintenance of that Garden?—£419. 3*s.* from the Crown, and £25 from the Town.

To whom do you account for that?—To the Exchequer for both sums.

Has that been sufficient for the annual maintenance of the Garden?—It has not. It was quite insufficient even for the expense of the old garden, which was little more than one third of the extent of the present.

Do you recollect at this moment what additional outlay there has been?—I cannot; the accounts for this year have not been summed up: I present an account annually to the Exchequer.

During the last year do you recollect the additional current expenses that have been incurred?—Nearly £300.

In what manner has that been defrayed?—Out of my pocket.

Has any part of that been repaid to you?—Not during this current year, nor during the last, but the debts were paid up to the end of 1824 by the Treasury.

To what amount?—Nearly £700.

Had you expended that out of your own private purse?—Yes, or incurred a debt to that amount. I had expended above £300, and above £300 was a debt then outstanding.

University of Edinburgh.

Professor Graham.

27 October 1826.

For what object was that excess of expense incurred?—For the support of so extensive a garden, for employing additional hands, and for the consumption of additional coals; indeed all the expenditure was increased.

What size is the garden?—Eleven Scotch acres and a half.

Does your gardener take apprentices?—He does not.

Would it not lessen the expense if he did?—To a certain extent it might; the objection to taking apprentices is, that we have less command over them—that is my objection; we have less authority: if an apprentice pays a fee, he conceives that he has a certain right in the garden, and that he is in a certain degree his own master.

Do you know whether any annual allowance is given from the Treasury for the expenditure of any other Botanical Garden in Great Britain?—Yes, for the gardens of Dublin and Cork. There is a large allowance for Dublin, and a smaller allowance for Cork.

What is the annual allowance for Dublin?—Above £1,600.

Is that Botanical Garden under the charge of the University of Dublin?—No, it is not.

Is it under the charge of the Professor of Botany at Dublin?—No, it is not.

Is it connected with the Medical School of Dublin?—Not in any degree to my knowledge; there is a University Garden in Dublin, but it is supported by the funds of Trinity College, which is very rich.

Is the Botanical Garden of Dublin the Garden of the Medical School otherwise than in as far as medical students may have accidental opportunities of access to it?—No.

Are any lectures delivered by any person there?—There are.

Is that a private institution?—Entirely.

What is the object of the Botanical Garden at Cork; is there a Medical school there?—There is no school; the garden has a small allowance, somewhere about £300.

What is the object of it?—To encourage the knowledge of Botanical Science.

Is that allowance for the garden at Dublin given to a society or institution?—There is a large allowance of £12,000 and odds, which is given to the Royal Society of Dublin, from which £1,600 is taken for the garden; the current expense of last year appears from the estimate, which was presented to Parliament.

What were the current expenses for the Cork Institution?—Two thousand pounds and upwards were the current expenses for the year 1825.

Do you know what have been the expenses this year?—No, I do not.

Is the establishment of the present garden at Edinburgh now as extensive and complete as you would desire for the state of the science?—Certainly not; the collection is very much neglected, in consequence of the want of hands: the establishment will very quickly go into decay, unless an additional allowance is given.

Are all the hot-houses built that you had it in contemplation to erect?—Certainly not; but I do not mean to ask for the erection of additional buildings, as I was explicitly told no more could be erected. All I ask is, to have an increased allowance to support such as are now existing. It were very desirable that there should be a lofty house for containing larger plants: as it is, I am afraid we must consent to cut the tops off these.

Do you heat by steam?—Yes.

Is there a great saving in that?—Not a great saving.

What is the annual expense of the Botanic Garden at Glasgow?—The expense in the year before last as stated in a printed Report, is £661. 8*s*. 5½*d*.

Is it as large a garden as yours?—It is six acres and a quarter: we have eleven and a half.

How are the expenses of that garden defrayed?—By subscription, by the interest of an allowance from the Crown (Government gave £2,000), and by the sale of plants.

Supposing that you are not able to procure an additional allowance from the Treasury, do you think it would be a safe measure to attempt to raise a fund by tickets of admission being given to persons in genteel life to walk in the gardens?—If I do not get an allowance from the Treasury, I must attempt it; but it has occurred to me, that for a time it might yield a small fund, and then fall off. I do not expect it to yield a considerable fund, even at first; for I have always thrown it open to those who wished to see it.

Have you no sale of plants here?—No.

Do you conceive yourself entitled to introduce such a measure of raising money by admission tickets, without the sanction of the Crown?—Certainly not. The garden at Liverpool, which is exactly the size of the old Botanical garden here, namely, five English acres, expended during the year 1825, £971. 8*s*. 2*d*. In this, however, several articles of expense were included that might have been saved, not being absolutely necessary, when the expenditure would have been reduced to £821. 6*s*. 2*d*.; but to this must be added, to render the cases parallel, the expenses which are peculiar to the establishment at Edinburgh, as in providing a large supply of plants for the purpose of teaching, and other matters arising out of the attendance of pupils, of which there are none at Liverpool; also the necessity there is for rearing a stock of plants to effect exchanges, as the only way in which the establishment can afford to keep up the collection.

Is that a public garden at Liverpool to which you have alluded?—It is a subscription garden. We never expend any thing in the purchase of plants, except a very few pounds. The only way of keeping up the collection is by rearing duplicates, which we exchange.

Do you exchange these with the people around Edinburgh?—Yes, and at a great distance, as at St. Petersburgh and Rio Janeiro.

Is the allowance now given for the New Garden exactly the same which was given for the old one?—Precisely the same, and the old garden went to ruin, from the impossibility of keeping it in repair from that fund. When I came to it, the rafters of the old houses were so

University of Edinburgh.

Professor Graham.

27 October 1826.

completely rotted that I could thrust my finger up to the knuckle into them; they were supported with bars of iron, but we were under the greatest alarm lest the roofs should be blown down and the whole collection lost.

Are the rafters of the new houses made of wood or iron?—There are two houses of wood, all the rest are iron. I hope I shall not be understood as complaining of the Treasury—they have acted most liberally; but the allowance is so inconsiderable now, that their former liberality will be lost to the University, unless the allowance is increased. I have to support about thirteen English acres upon the allowance that was originally given for five acres. I expended £300 last year out of my own pocket.

Is the Library sufficiently supplied with books in your department of study?—Very inadequately indeed.

Have the students easy access to such books as are in the Library?—I do not think the attendants at the Library are sufficiently numerous, and the students are consequently frequently detained too long in getting books. Every facility, however, is given that the present attendants can give.

Upon the subject of Examination for Medical Degrees, do you think that the present plan affords an opportunity to every Professor to ascertain, whether in his particular line of study the candidate has attained a sufficient degree of proficiency?—With the alteration I suggested in the manner of examinations, I am satisfied every Professor might; but at present, in consequence of the multiplicity of subjects the student has to attend to, he often becomes so much confused, that the examination is not always a fair test of his knowledge.

According to the present mode, is any one Professor generally present during the whole period of examination?—We are all present during the whole period. No, I had forgotten; such was the case until last year: we all met and were present during the whole examination of one individual; but the numbers that were examined became so great, that it was found absolutely impossible to get through our examinations in time. We therefore adopted a change, which proved to be an improvement in examination, as well as a great mean of economizing time. We divided ourselves into two sub-committees of three each; we met in the same house, three went to examine one candidate, and three to examine another in a different room; we afterwards changed places, so that each candidate passed before the six, though the whole six were not present at one time during the examination.

You suggested that the Senatus Academicus should have the power of determining Curricula of study; do you think they ought to possess that power without the sanction of some superior authority?—I think it is of little consequence whether they possess it without sanction, if there be a power of appeal. I certainly think there should be a power of appeal upon that, and every other question, to the Chancellor and his assessors. If there is no dispute about the Curriculum, I see no reason why it should not be enacted upon the authority of the Senatus alone; but if there is any dispute, the party disputing should have it in his power to appeal.

Was the alteration in the mode of examination to which you have just alluded introduced by the Medical Faculty, or by the Senatus?—I presume by the Senatus; it ought to have been; it was an oversight, if it were not; every mode of examination, I conceive, should be authorized by the Senate. I dare say it was so done in this case.

If there is a Minute of it to be found, will you send it to the Commissioners?—I will.

According to the mode you have described, may not the Professor of Anatomy be absent during the examination upon Anatomy?—No; we generally examine in our own branches, but it is not necessary that we should. The person who begins the examination, and in whose house it occurs, generally gives the longest examination. He begins the examination upon preliminary branches, but every Professor is understood to examine in his own department; and if the Professor of Anatomy were absent during the first part of the examination, he would examine on his branch at the second; and he does so in point of fact.

Will the same observation apply to all the other Professors?—Certainly.

You stated, that attendance upon the class of Botany was required by the regulations of the Army Medical Board; do you know if that is distinct from attendance upon a class of Materia Medica?—Quite distinct, and to twice the extent of Materia Medica. The Board requires three months for Materia Medica, and six for Botany.

Do you consider Botany a more essential part of education than a knowledge of Mineralogy?—Decidedly. I have not the smallest hesitation in saying so, though it is my own branch of which I am speaking.

Is such your opinion, because a greater proportion of the preparations in the Materia Medica are taken from the vegetable than from the mineral kingdom?—It is not only its connexion with Materia Medica to which I allude, though I believe I may say it is more closely connected with Materia Medica: I allude to the functions of life, Botany being connected with the Physiological department of Science.

Do you not consider Zoology as desirable for a medical man?—Every branch of Natural History it is desirable for a medical man to know.

What particular classes are there, if any, of Botany, specified in the Army Regulations?—None.

Do you know whether, in the present day, Materia Medica is taught in any class of Botany in Great Britain?—I recollect no University in which Materia Medica is not taught as a separate department.

Is it the case at Glasgow?—Certainly.

Is it the case in Dublin?—In Dublin.

Do you conceive it practicable for the Professor of Materia Medica to communicate a sufficient knowledge of Botany in his class?—I find I have got a great deal too little time in

University of Edinburgh.

Professor Graham.

27 October 1826.

three months; therefore I conceive the Professor of Materia Medica cannot do it. Materia Medica and Botany were formerly taught in this University in one Chair. The Chair was separated in 1768, and the two branches ever since have been taught separately. Dr. Hope resigned that, which he is not stated in his commission to have held, (the words Materia Medica are not included in Dr. Hope's commission,) but he resigned his Professorship *quoad* Materia Medica, which he held only by inference, and a separate Professor was appointed.

Edinburgh, Monday, 30th October 1826.

The EARL of ROSEBERY in the Chair.

Dr. *Thomas Charles Hope*, Professor of Chemistry, called in and examined.

Professor Hope.

30 October 1826.

Are you Professor of Chemistry and Chemical Pharmacy?—I am.

Have you had an opportunity of seeing the several Queries sent to the Senatus Academicus, and the Answers to them which they have returned to the Commissioners?—I have.

Do you concur in all those Answers?—There are a great many statements which depend upon official returns, which must rest upon the official people who furnish them; many of them are given by individual Professors, and these, I presume, rest upon the individual Professors; but I do perfectly concur with all the general sentiments. There are a number of clerical errors, but these, I fancy, will be corrected in proper form. One little matter, in point of fact, is, that in page 5, instead of the words "the former Professors," it should be "the two preceding Professors of Materia Medica" held the office of Second Physician to his Majesty in Scotland.

Do you generally concur in the opinions embraced in these several Answers?—I do.

Are there any suggestions which you are desirous of submitting to the Commissioners in the way of improvement in the University in general as a place of education, or with reference to its discipline, or any other matter connected with it?—There are a few matters that I shall beg leave to mention. To any one who has turned his attention to matters connected with the University, practical suggestions may arise; but whether mine are of any value, I will not pretend to say.

Will you have the goodness to submit your views of the subject to the Commissioners?—The first point I shall mention regards the completion of what I would call the Staff of the University. I think our establishment would be rendered more complete if we had a Chancellor, and probably also a Rector.

Would you approve of the introduction of those offices into this University which already exist in other Universities?—Yes.

Would you recommend that to those two officers any assistants should be given, in the shape of Assessors or a Council?—I think it advisable, though I am not at this moment prepared to say who the Assessors should be.

Would you recommend that there should be a power of appeal from the Senatus Academicus to those officers?—I would.

Are there any other general principles that you would propose to adopt, with respect to the Constitution of the University?—No; I have none relating to its general Constitution.

Have you any suggestions to offer with regard to the system of Education or mode of Discipline adopted in this University?—With regard to Discipline, there are some points I shall take the liberty of suggesting. In the first place, I think that a little more duty ought to be imposed on the Principal of the University. We have a method of beginning our winter studies, which I think is an unprofitable one, and occasions a great loss of time to certain individuals, and sometimes bears harder upon a proportion of our students than is necessary—I mean the irregular periods of commencement. I should be glad if it could be so arranged, that all the Professors should commence their prelections on the same day, which should be the 1st of November, if possible; and, therefore, it would be very desirable if the sacramental week at Edinburgh were over, previous to that day. The next point of discipline connected with that would be, that a duty should be imposed upon the Principal, (which, I believe, he is very willing to perform,) to have a regular opening of the session of the University, by means of an address to the students in the Great Hall, wherein he should point out the laws and regulations, and give at the same time such admonitions as would be suitable for them. I should conceive also, it were well if the Principal were to visit the junior classes repeatedly in the course of the winter, and be present at certain examinations, which should take place at those visitations. The Principal should take the general superintendence of all that goes on within the interior of the College; but for this purpose, his residence within the College would be indispensably necessary. I would take the liberty of adding, that an addition of salary should, if possible, be procured for the Principal, not only as some remuneration for the duty which he now performs, and the additional trouble which these circumstances would necessarily entail upon him, but also to enable him to support duly the dignity of the situation.

Do you conceive that the Principal has now no authority to visit the several classes of his own accord, without invitation from the several Professors?—I suppose he has that power. He has, I believe, occasionally visited them, and the preceding Principal did so, but whether in exercise of a right, or by invitation, I do not know.

Would what you are now recommending go beyond giving him that power, and would you desire, by a regulation, that it should be done?—Yes.

Do you conceive that the several Professors have now the right to refuse permission to the Principal to enter their respective classes?—I should scarcely think so, in regard to those classes in which examinations take place. With regard to the professional and other classes, where there is a prelection only, the door is open for every Professor to hear the lecture; but

University of Edinburgh.

Professor Hope.

30 October 1826.

there being no academical discipline in the class, I should be at a loss to say that the Principal had an absolute right to enter *togatus*, and in character as Principal.

Do you conceive the right upon that subject to be clearly defined or ascertained at present?—No. It has never been brought into any sort of question; but, I believe, every Professor who lectures would be proud of his presence as an auditor.

Has the Principal any sort of authority in the regulation of this University, acknowledged and known, farther than being Chairman of the meetings of the Senatus Academicus?—I am not aware that he has any more power than that.

If a question should arise as to the propriety of inquiring into the conduct of students, would the Principal's authority come into operation?—I believe he is merely the organ, in that case, of the Senatus Academicus. That would be our present understanding.

Is his deliberative vote at this moment a question of doubt?—It is.

Will you have the goodness to proceed with any other observations you may have to offer?—I conceive it would be of much importance that the power of the Senatus Academicus were accurately defined over the general discipline of the College, and that it should be understood, no change of measures of any kind, within the walls of the College, ought to take place without the approbation of the Senatus Academicus. This should apply to Professors, in regard to the time of commencing their teaching—to the duration of their lectures—alteration of hours—employing assistance in lecturing—giving additional courses—the trifling pecuniary demands that are exacted from the student (the general fees being fixed elsewhere)—and, in short, to all minor matters whatsoever. We think that they possess that power; but we are unwilling to make a full exercise of it, in case it should be disputed. If, however, it were clearly understood, all the Professors would acquiesce in it.

Are you now speaking of the power of the Senatus over Professors, and not over students?—Yes. I conceive that the same power should be extended decidedly (though I believe it exists with less doubt at this moment) over the students; for it has been exercised to its fullest extent—that is, to the extent of expulsion, and of every sort of admonition. No additional power would be required by the Senatus Academicus at present in that respect. There is one point of University duty, namely, the fixing of the Curricula of study, which, I think, should lie with the Senatus, but not without revision; and I would be very glad to see a Chancellor and his Assessors, or a Board of that description, established; and it would be very advisable, that though the Curricula should originate and have the sanction of the Senatus Academicus, it should have the further approbation of those more remotely connected with the University, such as the Chancellor and his Assessors, if such a Board shall be established.

Would you propose that the Chancellor, or Lord Rector and his Assessors, should in every instance confirm the decision of the Senatus Academicus; or merely, that there should be a power of appeal from the Senatus to this supposed court, in cases where it was thought necessary?—Were it not, perhaps, pressing too much upon that Board, I would conceive that it were well that all changes of magnitude should receive their concurrence, previous to their becoming determined regulations. With regard to the students, I conceive there might be some improvements in our University. The first relates to the means of ascertaining and enforcing the attendance of the students; this particularly, however, applies to the junior classes: there are difficulties certainly accompanying the means of ascertaining that attendance; but I have no doubt that those difficulties may be easily surmounted. From the number of our students, the calling of catalogues would require so long a period as to exhaust much of the time; but in the junior classes, by allocating the students to particular seats, and appointing Censors for on or two benches, it would be an operation of not more than two or three minutes to each censor daily; so that a regular record might be had of the attendance of each student in the junior classes. In the higher classes, the allocation of particular seats would be a matter of very great difficulty, and in several of the medical classes quite impossible. In the medical classes there is a double object in ascertaining the attendance of students; the one to encourage their attendance, and the other to enable the Professor to give a certificate of attendance, according to what that attendance has actually been. It has been a matter of considerable complaint, that the Medical Professors at Edinburgh do not give certificates of attendance. This is in consequence of a resolution entered into about thirty years ago, when the numbers of the students became so great as to render it impossible for the Professor to know whether a student attended or not. For some years the medical Professors have talked of a way in which they could learn the attendance, so as to enable them to give an honest and fair certificate, which they are aware may prove of great use sometimes to the young men, either when they settle in a place, or become candidates for medical appointments. In some of the other Universities, each student is required to write his name every morning as he goes into the class, but that would be quite unsuitable here. One method has occurred for the sake of all those who desire to have certificates—(our classes are made up of so many persons who are far advanced in years, and my own is composed of many persons who attend from mere amusement and curiosity, that to expect what I am now about to mention to be practised by all, is unreasonable). It is this:—that all those who desire to have certificates at the close of the session, should inscribe their name at the commencement of it in a book; that they should be furnished with a number of tickets equal to the number of lectures the Professor delivers; that each student shall inscribe his name on the back of each ticket; that a servant should be in the way to receive the tickets from the students as they enter, and a clerk should be employed on the Saturday to make an exact record of such tickets. This would impose a considerable duty on the clerk; and I think it but reasonable, that a very small fee should be paid to the clerk, either when the tickets are taken out, or when the certificates are given. In this way, I think we should be able to encourage the attendance of those who ought to attend punctually, and it would afford the means of giving an honest and fair certifi-

309

University of Edinburgh.

Professor Hope.

30 October 1826.

cate. In the junior classes, I conceive the examinations should be more frequent than I have understood they are, and should be made more formal. I dare say every Professor is disposed to throw the labour of examination off his own shoulders; still, I conceive, in these classes it would be a matter of considerable advantage. I am aware that though it would be of equal advantage in the professional classes, yet, from the length of our subjects, it would be a matter of very considerable difficulty. I will state, for example, with regard to my own class. I lecture six days in the week, with the exception of the few first weeks. Were I to devote one day to examination, I would lose about twenty-five lectures, which would be such a reduction of the course, as would not be compensated by the advantages of examination.

Would it be practicable to allow another hour for examination?—In regard to my class, the difficulties are two-fold: first, the business of the day is not the mere matter of lecturing; I have several hours' labour in superintending preparations for the succeeding day, and an additional hour would come to be a very great additional labour. But that is not all: the studies of the Medical students are so various, that there is no hour to be found from which a considerable number would not be excluded, which would not be fair. So satisfied, however, am I of the importance of examination, that during these last two years and the present year, my assistant has a class for examination which will meet twice a-week.

What number attends that class?—It has been very small, because my assistant extended its object rather too far; but this year he is to be limited to the small fee of half-a-guinea, and to the business of examination on the subject of the lectures.

Is that a private class entirely?—It is entirely a private class.

Is it not under Academical Regulations?—No. I have got the permission of the Senatus Academicus, and shall give the use of my class-room.

Is it a private class, with the formal permission of the Senatus Academicus?—With the formal permission of the Senatus Academicus.

Would the ultimate attendance of the students upon that class show the practicability of having a separate hour, and how many would be excluded from attending it?—It certainly would in some measure.

At what hour does that take place?—I believe that is to be regulated by the convenience of those who present themselves, and by an arrangement to be settled by my assistant with those gentlemen.

Has it not yet taken place?—This year, of course, it has not begun; last year it did, and there were two or three different hours at which he gave them an opportunity of attending.

What number attended?—To the best of my recollection, about 20; but that was connected with the farther matters of Practical Chemistry, which made it a little more costly, and of more minute attendance; but for the mere matter of examination, which is the object this year, I think the number will be increased.

Was it last year that you made the first experiment of this subordinate class?—No; it commenced three years ago under a different assistant, and was carried on also last year under my present one; both of them well qualified for the duty.

Is your assistant a scientific man?—Yes.

And have the students the benefit of your class-room and apparatus?—The examination class will meet in my class-room, and my assistant shall have the use of the apparatus for explanation, but not experiment. I would next mention, that along with the examinations in the junior classes, Themes and Exercises, within moderate limits, I should consider of very great importance.

Do you confine that recommendation, with respect to Themes, to the junior classes, or extend it to all the classes?—To the junior classes.

From your knowledge of the University of Glasgow, do you know if Professor Jardine examines his class regularly?—I believe he does.

Is his a numerous class?—It is; but he has more than one hour of regular teaching.

Is that practice confined to Professor Jardine in that University?—No; I believe it extends to all the Philosophical, as well as Literary classes.

Would you recommend that Themes should be made imperative upon students?—I would certainly have them imperative on all the junior classes; but in the Natural Philosophy and Moral Philosophy there is a description of attendants who would be driven away if those Themes were made imperative. They used to have an arrangement at Glasgow, by which there was what they called a public and a private class, though in part they were the same. There were individuals who attended the public courses, and who were necessarily obliged to go through the whole College discipline; there were others who attended the same lectures, but under the name of a private course, who were not obliged to go through the College discipline; and such an arrangement might be practicable perhaps in this University.

Would you propose that there should be a junior and a higher class, and that the examination should extend to all destined to any professional employment?—I would make it extend to those who are to obtain degrees in Arts, but I do not say that it should extend to all who are destined for professional employment.

In order to render that effectual, would it not be necessary to give a value to the degree in Arts which it does not now possess?—That is the next point I was going to mention. I should consider it of moment to encourage study by the distribution of prizes, and that in the most public manner—that every encouragement should be held forth to take the degrees in Arts. I certainly think that the method of examining for degrees at present is not so advisable as an examination in the presence of those Professors who compose the Faculty of Arts; but as that would be attended with great additional labour, some allowance should be made to the Professor for it. That every encouragement should be given to take that degree, and in the highest possible way, whether by future rewards or those rewards of fame, such as having their name

University of Edinburgh.

Professor Hope.

30 October 1826.

stuck up on the wall of the library, or in having their names read out at the beginning of the session, or in some way or other that might be devised.

Would you recommend classification for honours, as practised in the English Universities?—Yes, by some distinct and public method. I was so impressed with this the last year, that I brought it before the Senatus Academicus; the Professors were very cordial in it, and a committee was appointed to consider and report upon the best mode of carrying such a view into effect. I brought with me several of the publications from the English Universities, to show that the questions that are put to the candidates, thinking that we might have something analogous, as far as the constitution and practice of the University would admit of its introduction. I can only say, all the Professors of Literature and Philosophy seemed to go very heartily into the measure.

Has any Report been presented from that Committee, which you say was appointed?—No.

Is it expected in the course of this session?—It is.

Are you in possession of the papers of the English Universities which you have mentioned?—I am possessed of them; they do not belong to me; they have been with me several months.

When you say that you hope a report, in consequence of these suggestions of yours to the Senatus Academicus, may be produced, do you mean to state that it is still under the consideration of the Senatus Academicus?—I do.

Does the matter under the consideration of that Committee refer to your suggestions, with a view to have the degrees conferred with more honour and more publicity, and accompanied with examination?—Yes.

Do you think that those degrees would be more sought after, merely from the circumstance of being attended with more honour, unless some advantage were to be derived from them, professionally or otherwise?—I think this advantage would result, that every young man who studied Divinity, or who was anxious to be a tutor in a family (and these compose a considerable number of the students who attend the Literary and Philosophical classes), would be very solicitous of such honour, as it would be, I think, a sure introduction for him into a family of consideration, and probably open a very fair road for promotion in the Church. It would also be gratifying to a gentleman, who has no profession, to acquire such academical honour.

Do you think that it would be likely to raise the value of degrees in Arts, that they should be given at one time—that the competitors should undergo a regular trial, and that they should be classed according to their different attainments, as at Cambridge, or that there should be any other form of distinction?—Certainly.

Do you think that it would raise the value of the degree in Arts, if graduates in this University were allowed certain academical privileges after their graduation; for example, if those graduates who put their names in the books, and pay a small sum, were to be allowed the privilege of using the Library, and of visiting the Museum, and so forth?—Certainly.

You have said, it might make the establishment more complete, if there were a Chancellor in this University; do you think it might be advisable if that Chancellor were chosen, as he is in the University of Oxford, by the Masters and Doctors?—Considering the description of those most likely to take the degree in Arts, and those who actually take the Doctor's degree, I think it would not be advisable.

If the value of the degree in Arts were raised in the way alluded to, so that most young men, whether educated for a profession, or in general young men of fortune, were led to aspire for the degrees thus rendered additionally valuable, might it not be advantageous to have the election of the Chancellor in the same way as at Oxford?—I should be very doubtful with regard to it; for our class of students, who take their degrees here, are of a totally different description from those who take them at the English Universities. They would be in a far inferior range of life, and I do not conceive it would be advisable.

Although you think it not advisable as degrees are at present taken, yet if they were taken with the honours just now alluded to, so as to induce the most of the young men of family in Scotland to take the degree of Master of Arts, and thus raise the value of the degree, do you think it might not then be advisable?—Even should it fortunately happen that the students in the higher ranks of life should take their degrees in Arts, still, considering the number of the inferior description, as well as the nature of such elections, I entertain the strongest doubt of the propriety of such a measure.

Is Dr. Hope aware that the great majority of the graduates in the English Universities are not such as are commonly called men of family and fortune?—I am aware there must be many educated for the Church who are not of that description; but I have always understood it was the rank and wealth of England that are educated at the Universities.

Dr. Hope having expressed a desire that a Chancellor should be appointed in this University, and a great doubt whether his nomination should be in the Masters of Arts, even if that degree were raised in character and honour, will he have the goodness to inform the Commissioners in whom he would vest the appointment in the first instance?—In a Rector, if such shall be established, and the Professors: and, in the absence of a Rector, in the Senatus Academicus alone.

When Dr. Hope intimates the opinion that it would be best to vest the election of the Chancellor in the Senatus, does he advert to his answer to a previous question, that he would place the control of the Senatus in the Chancellor and his Assessors?—I am quite aware of it; I see no incongruity in it.

Would you propose that he should be annually chosen, or for life, or for a term of years?—I suppose for a term of years.

Would you propose, also, that the Rector should be chosen for a term of years?—There should be a shorter duration for the Rector than the Chancellor.

University of Edinburgh.

Professor Hope.

30 October 1826.

Do you propose that the Rector should be chosen by the Senatus?—I would not have it in the students, which is the case in some other Universities; for in my humble opinion very great evils result from it. I should think it safer to leave the election with the Senatus.

Of what nature are those evils to which you have now alluded, as being likely to arise from placing the election of that officer in the students?—The principal evil is the introduction of insubordination and disorder among the students, who, at the early age they are called upon to give their vote, I conceive to be altogether incapable of judging who should be a proper Rector.

With the functions which you propose to allot to the Chancellor and his Assessors, what use would there be, in your opinion, in having any Rector?—Principally to increase the staff of the establishment by the addition of an individual of consideration and weight.

What functions would you leave for him to perform?—The functions I would hold to be intermediate between those of the Senatus Academicus and the Chancellor.

Will you explain what the nature of those intermediate functions should be?—To have a voice in those matters of internal discipline which fall under the consideration of the Senatus.

Does Dr. Hope mean that the Rector should vote in the Senatus, or act as a Court of Appeal from the Senatus, in those matters of internal discipline?—I mean, in the greater arrangements, that he should have a vote in the Senatus Academicus.

Dr. Hope has stated he would have the Rector as well as the Chancellor elected by the Senatus; but as it might appear to many persons objectionable that those controlling officers should be elected by those whom they were to control, and as it appears to be objectionable, in Dr. Hope's opinion, that the students should have any voice in the election of the Lord Rector, or consequently of the Chancellor, would there be any objection, in Dr. Hope's opinion, to the Rector, at least, being elected by the Graduates of the University?—I think there would.

Are those objections of the same nature as you have stated to the Graduates having any voice in the election of a Chancellor?—Exactly the same.

Would you make the Lord Rector, according to your idea of this constitution, the Vice-Chancellor, in the absence of the Chancellor to perform his duties, and to take the place of Chancellor in the event of his absence?—Yes, within the College.

What does Dr. Hope understand to be the duties and powers exercised by Rectors in other Universities in Scotland?—I am not so well acquainted with the constitution of all the different Colleges as to be able precisely to answer that question. The Rector of the University of Glasgow forms a constituent part of some of their public meetings, and has a voice in the election of certain Professorships.

Does he not preside in what are strictly considered University Meetings?—In Glasgow the constitution is so very complex, that I find it difficult exactly to reply to that question.

Does the Rector or his Deputy preside upon the occasion of conferring Academical degrees?—I do not recollect who is the Deputy Rector. The Principal presided on every occasion which occurred when I was at Glasgow.

You have stated that you would vest in the Senatus Academicus of this University the sole power of framing regulations both of Discipline and Education, with respect to both Professors and Students, subject only to the controlling power of a new court, headed by the Chancellor and the Lord Rector; are you aware that at present the Patrons claim the power of appointment, suspension, and deprivation?—Perfectly.

Would you, under the new system for a constitution which you have suggested as an improvement to the Commissioners, recommend that the powers so claimed by the Patrons should be altogether suppressed?—I think so.

Would you also recommend that in the Senatus Academicus alone should be vested the power of appointing Examiners for degrees?—I would propose that it should originate with the Senatus, but have the sanction of that Court of Revisal.

By that do you mean the new court of the Chancellor, with his Assessors, including the Lord Rector?—Yes.

In the same manner would you recommend that the Senatus should be controlled in the authority they might exercise within the University?—Yes.

Of what nature should the assistant court of the Chancellor be, or of what class of individuals do you think that Court of Assessors should be composed?—I think it should consist of a mixture of men of high consideration and of learning.

Do you think it should consist of persons unconnected with the Senatus Academicus?—It should consist of persons unconnected with the Senatus Academicus.

How would you propose that the Assessors should be nominated or appointed?—I am not at present prepared to state my opinion on that.

Some time ago you stated that you thought it should not be allowed to any Professor to give additional lectures without the consent of the Senatus Academicus, did you mean that it should not be in the power of any Professor to have an additional hour in his class for examination,—for instance, the Professor of Logic,—without the consent of the Senatus Academicus? If it has not heretofore been usual, it ought not.

Has it been usual in this University for Professors to give additional lectures without the consent of the Senatus Academicus?—It has been sometimes done; and sometimes they have got the regular assent and approbation of the Senatus.

Will you have the goodness to state the reason why you think such additional lectures should not be allowed without the consent of the Senatus?—The new lectures may interfere as to the hour, or as to the subject, with existing establishments, of which I conceive the Senatus Academicus ought to be the judge.

Do you think it should be in the power of any Professor to lessen his lectures, or hour of duty, without the consent of the Senatus Academicus?—Unquestionably not.

University of Edinburgh.

Professor Hope.

30 October 1826.

Has it ever been the practice for Professors in this University to lessen the number of hours during which they taught, without such consent?—I am not aware of the fact.

Is it consistent with your knowledge that in the Logic class there was a greater extent of time occupied in teaching formerly?—I have no recollection that it was so; at least I can answer for 45 years.

Will you have the goodness to pursue the thread of observations which you have to offer to the Commissioners?—There is one change which I would be glad to see effected, though there are many difficulties attending it. I conceive that it would be more befitting the dignity of the University were the business of the junior classes, *viz.*, the Latin, Greek, and Mathematics, to commence at a higher state of progress in those branches than they now do. The classes should be calculated for pupils who have already made greater progress, by which means they might be carried to a greater length in those studies than they are at present; but in the system of education over Scotland this must be a matter of great difficulty. With regard to the Greek in particular, in consequence of its not being taught generally in the country schools, I am afraid it would be impracticable without considerable inconvenience. I am also aware that it would tend considerably to reduce the emoluments of the Professorships, and if that were the case, some provision should be made to preserve their emoluments at a due pitch.

When you state it would be attended with very great inconvenience, if not impracticable, to bring about the improvement you allude to in the junior classes, would you have the goodness to state the nature of those inconveniences to the Commissioners?—The particular inconvenience in regard to the Greek class arises, I think, from this circumstance: Greek is an imperative class for Divinity Hall and for the Degree in Arts; and if a young man were desirous of entering the Hall, or attaining that degree, as he could not arrive in Edinburgh from the country sufficiently prepared in Greek, it would compel his residence in Edinburgh for one or two years more, and by that means his residence at the seat of the University would be extended a couple of years beyond the present course of study, and which would be more than a large proportion of those students who now attend the Greek could possibly bear.

When you state that a young man could not come to this University sufficiently prepared with Greek, supposing the alteration effectual that you now speak of, do you mean by that that the schools in the country are not such as to prepare a young man sufficiently with Greek previous to his introduction at this University?—I understand that to be the case.

Do you not think that if an alteration were effected in this University with respect to the junior classes, by which the elements of Greek and Latin and Mathematics were not taught here, as they are now done, the consequence of that would be the erection of schools and the introduction of schoolmasters in the country of a higher order and description than at present exist?—That is a matter attended with so many difficulties, and is such a change of the whole system of education in the country, that though I might think it probable, I think the Commissioners could not proceed upon that principle.

Are you of opinion that the state of the schools in the country, in Scotland, is at present such as to prevent the possibility, or at least probability, of a young man attaining those elementary branches of education sufficiently well to fit him for coming to this University, so prepared as you would wish him to be?—I am.

Is that your opinion with reference to the general condition of schools, not to particular ones?—To the schools generally.

Would you have the goodness to pursue any further observations you have to make?—There are a few observations I have to make respecting the Medical Department. It would be a material improvement in the system of Medical education were Surgery taught in a distinct and separate course of lectures, which is not the case at present. This might be attained, either by the present Professor giving a complete and entire course of Surgery, independent of his Anatomical lectures; or at the demise of the present Professor, or with his consent, by a separation of the two chairs.

At present, is the Professorship of Anatomy and Surgery united in one person?—Yes.

Which of those two alterations would you prefer,—that there should be two separate chairs, or that the individual filling the united chair should give two courses of lectures?—Were there a vacancy, I would not hesitate to say that there should be two distinct persons.

Then you think decidedly that two distinct persons, putting out of the question all personal consideration with respect to the present Professors, would be the best arrangement for the University?—Certainly.

Do you recommend that the Professor of Surgery should be a surgeon in actual practice?—I would recommend that the person should be educated as a surgeon, and have opportunities of practice.

Is Dr. Hope aware of any provision in the Commission of the present Professor of Anatomy, reserving to the Patrons a power, if necessary, to make a separation, if subsequent experience should require it?—My only knowledge of it is from a pamphlet sent to me the other day. I was not previously aware of it; but I should hold, even for the interest of the University, that where they have been so long conjoined that no separation ought to be attempted without the most ample indemnification to the Professor, who for 26 years has held that office. In relation to Surgery, I should hold it an improvement were an arrangement made with the Managers of the Royal Infirmary that certain wards should be appropriated for the purpose of Clinical Surgery. I have the satisfaction, however, of thinking that that matter has not escaped the consideration of the Managers.

Are there any other subjects in the Medical Faculty upon which you would wish to make any observations?—I feel a little difficulty in touching the point, which I am now going to allude to, that of the Medical Curriculum.

Have you had an opportunity of seeing, or hearing read certain notes which Dr. Alison, the

Dean of the Faculty of Medicine, stated to the Commissioners, had been submitted to the rest of the Faculty; and if you have, do you approve of the substance of those notes?—I do. *University of Edinburgh.*

Have you heard them, then?—I have heard them; and conceiving they were delivered here as I heard them, I perfectly concur. Professor Hope.

Do you concur in that part of them which relates to the subject of previous preliminary education for medical students?—Yes, I do. 30 October 1826.

Dr. *Alexander Monro*, Professor of Anatomy and Surgery in the University of Edinburgh, called in and examined.

Are you Professor of Anatomy and the Principles and Practice of Surgery in this University?—I am. Professor Monro.

Do you, therefore, combine two subjects of Medical Study in one class?—I do.

Have you seen the several Queries that have been sent to the Senatus Academicus, and the Answers to them?—I have.

Do you concur in those Answers?—I concur generally; the statement with regard to myself is not quite correct.

What statement is it to which you allude?—As to the duration of my lectures.

Is it a statement which is in the Appendix?—I believe it is mentioned in the Appendix, and it is mentioned in the earlier pages of the Report.

Was it not furnished by yourself?—It was; but I had no opportunity of revising the proof.

Do you refer to the statement which appears in the Appendix, giving the description of the lectures delivered by yourself?—What I refer to is this: it is stated that I give lectures on Anatomy only during four months, whereas I give lectures on Anatomy for four months and a half. I may state, that I frequently lecture much longer than the time stated in the Report, as during the demonstrative part of the course. Other Professors may shut their book, and stop; but I must go on until demonstration is completed. In many cases, the parts of the body will not keep, and it often happens to me, in showing the more minute parts, as the distribution of the arteries and nerves, that the students come down after lecture, and examine the body themselves, and in doing so injure the parts so much, that I must sometimes go on to lecture for two hours.

You stated that in the answer to the 18th Query sent by the Commissioners, there is an error with respect to the time in which you give lectures; and it is stated in that answer, that you give your lectures on Anatomy five days in the week, each lecture occupying an hour and a quarter, the whole course continuing for a duration of four months; is that correct?—It should have been stated, that they are continued for four months and a half, instead of four months.

Is that a correct Return which states that you give lectures upon Surgery for one hour once in the week for four months, and eight hours in the week for two months?—I may make the same observation with regard to that as the other, that I very frequently lecture for a longer period. I am obliged to do so on account of the state of the subject.

Do your lectures frequently extend beyond the hour?—Yes.

In the return to the 18th Query, in the column stating the separate hour for examination, it is remarked that there is one hour on Saturday, for six months, in which you lecture; and it appears by your statement now, that you only lecture four and a half months on Anatomy; would you have the goodness to explain whether that remark refers to Surgery only?—I examine on Saturdays upon the whole business of the week; thus, during the Anatomical part of my course, I examine on Anatomy, and during the Surgical part of my course upon Surgery.

Are the Commissioners to understand that four months of Surgery follow four months and a half of Anatomy, so as to make eight months in the whole, or that during a part of the time when you are lecturing on Anatomy, you are also lecturing on Surgery?—My whole course lasts six months. I give many observations on Surgery during the Anatomical part, as may be seen by consulting my text-book, entitled Elements of Anatomy, and afterwards proceed to the Surgical part of my course. My course of Surgery differs far from any other Surgical course, for during it I give no Anatomy. I inquired of Mr. Allan, who lectures on Surgery, wishing to know how many lectures on Anatomy he gave during his course. Mr. Allan has stated to me, in his letter, that his course of lectures on Surgery extends to about 115; twenty of which are Anatomical, and a portion of several of the others has reference to the structure of the human body, especially to the relative situation of parts. In my Surgical lectures I give no Anatomy; but having premised the Anatomy of the parts, and previously explained it, I refer to what I have said upon the subject before.

During the period of six months, are you lecturing for two hours a-day?—No; generally for one hour and a quarter, and sometimes for two hours.

So that in that way each course has lectures for four months?—I give about ninety-three lectures on Anatomy, and I give seventy on Surgery.

During a portion of that time, do you lecture on Surgery alone?—During the latter part of my course.

Do the lectures on Surgery embrace a separate period of about one month and a half?—Yes, except on the Saturdays, of the Anatomical part of my course; on Saturday next I begin my lectures on a course of Surgery.

In your early lectures upon Surgery, can you make any reference to your Anatomical lectures?—I have constructed my course so that in the first Surgical lectures there is very little reference to Anatomy.

Have you any thing that you are desirous of stating to the Commissioners in the way of

University of Edinburgh.

Professor Monro.

30 October 1826.

improvement with regard to the education, discipline, or constitution of this University?—With a view to save the time of the Commission, I may say that I saw the notes of Dr. Alison and also of Dr. Graham, and that I will mention now only those things which they have omitted.

Do you concur with them so far as they go?—Yes, I do.

Are what you wish to state to the Commissioners some supplementary observations?—Yes.

What are the exact subjects to which the notes refer, and in which you concur?—A very great improvement in the Medical Department here would be to facilitate the acquisition of dead bodies.

Will you mention the particular subjects with regard to which you concur in the opinions expressed by Dr. Graham and Dr. Alison?—I may mention, I believe, that both Dr. Graham and Dr. Alison have stated that they thought it would be well, if some such office as Chancellor were instituted in this University.

Do you concur in the observations which Dr. Alison and Dr. Graham have made on that point?—I do.

Do you concur in the observations Dr. Alison made with respect to the previous education of students for the Medical profession?—Yes, I concur entirely on that point.

Do you concur in the observations made by Dr. Graham on the subject of Clinical Medicine?—As far as I recollect, his observations went to this, that it would be a very great improvement in giving Clinical lectures, if there was more than one Clinical lecturer officiating at the same time. I think that would be a very important improvement in the University. It occurs to me, that there are so many students attending the Clinical Ward, that they have not the opportunity of examining the patients in that minute way that is desirable.

Are you of opinion that the system of delivering Clinical lectures in rotation is a good system?—I think it is an admirable system.

Looking to the Constitution of this University, do you think the powers of the Senatus Academicus ought to be more accurately defined than they are at present?—I certainly think so.

Is it not a matter that is well understood, that their powers in the University, both with respect to discipline, as affecting the Professors and the students, are not so clearly defined as to be free from counter-claims and doubts?—I believe that to be the case.

Would you think it a great improvement to put an end to a doubt of that description, and have their powers clearly and accurately defined?—I do.

When you state that you concur in the propriety of the appointment of a Chancellor and his Assessors, which Dr. Alison alluded to in his notes, are the Commissioners to understand that you would make the Chancellor and his Assessors, and perhaps the Lord Rector united with them, a Court of Appeal from the Senatus Academicus?—I think that would be a very good plan.

Would you propose that the Senatus Academicus should have the exclusive power of enforcing discipline within the University, and of regulating the whole course of education?—I think so, with an appeal.

Would you propose this Court of Appeal should be elected by the Senatus Academicus; or how should it be chosen?—I think it would be better if it were elected by the Senatus, than by the students.

Would it be better to have a Chancellor nominated in any other way than by the election of students; or is that the preferable method, in your opinion, of appointing that officer?—I should have no objection to an appointment by the Crown or the Senatus.

Would you give the Senatus, under this altered system, the exclusive power of appointing Examiners for Degrees?—I should think so, as they do at present.

Are you not aware that at present a doubt exists with respect to the exclusive power of the Senatus of appointing Examiners for degrees?—No, I was not aware of that.

As you disapprove of the election of any superior Court by the students, such as has been adverted to, would there be any objection to the election of that high officer by the graduates of the University, as is the practice in the English Universities?—I do not see how that could be easily done in this University, for we have no resident graduates; we have no persons like tutors in this University.

If a system of graduation were established and acted upon, and degrees in Arts more especially came to be a considerable object, and to be much sought after, should you then think there would be any objection, provided the difficulty of finding the electors were thus removed?—Upon my word, I cannot well say as to that; I do not know what has taken place in the English Universities, having never been there, except upon an occasional visit.

Would you wish to offer to the Commissioners any observations with respect to the University at large, by way of improvement, beyond what has already been stated by yourself, or has been mentioned in the notes to which you have referred?—I think it would be useful if, on a certain day, the different Professors were to be convened, and if the Principal were to make a speech to the students, expressing the duties expected of them. At present, in consequence of the system pursued by different Professors, particularly by those of the Faculty of Arts, the students are ignorant as to the proper time of coming to the University; and they often arrive too late, and lose a valuable part of our courses.

Would you propose that every class, in all the branches of education, should assemble at one and the same time, and be opened by some kind of solemnity by the Principal?—Yes; and I think upon that day it would be well, that the Deans of the different Faculties should read the regulations relative to the particular Faculties.

Have you ever taken into consideration the propriety of public examinations in this Uni-

University of Edinburgh.

Professor Monro.

30 October 1826.

versity, and the classification of students according to their merits or attainments at the end of a session, with a view of raising in their own minds the dignity of the University, and making a superior order of degree?—I have had a good deal of conversation with my colleagues on this point, whether, before giving a certificate to a particular student, it might not be well to examine him upon his knowledge. It seems to me to be the opinion of several of my colleagues, that, if it could be done, it would be a matter of considerable moment.

Do you hold the same opinion upon that point as your colleagues?—I do.

In that case, would you withhold a certificate from those whom you thought not sufficiently instructed to deserve one?—Certainly.

Would you not propose, by such a system, to class them according to their proficiency?—That might be difficult. We do it to a certain degree. When a gentleman wishes a certificate after our classes have been finished, we write upon the certificate he has been diligent, or very diligent, or that he has merely attended.

But is there no public classification by which something like honour might be taken by individuals?—It has only been private hitherto.

Would you recommend that examination to be so public as to produce a spirit of emulation among the students?—I am afraid, with our students, that could not be carried into execution. I have been engaged in examining students every Saturday for an hour, and sometimes for an hour and a half, for twelve or fifteen years; and when students enter with me, I frequently ask them whether or not they wish to join the examining class. Some attend my examinations; others will not, and say it is treating them like schoolboys. There is a circumstance as to my examinations that has not been attended to—that is, as to the fee. For that examining class, I charge a guinea for the course.

Does the observation you just now made, with respect to students, apply to your particular class rather than to other classes in the University?—I mean it to apply only to myself.

What portion of students may attend that examination class, compared with the general body of the class?—When I began about fifteen years ago, I had between sixty and seventy pupils; they paid ten shillings, which I gave to the door-keeper; but I found I could not examine them to my satisfaction, and it struck me I should diminish the number if I increased the fee. I increased it to a guinea, and for six or eight years past I have got a guinea for that course, and the number has been diminished to about thirty-five.

Are those examinations conducted under the authority of the Senatus Academicus?—They are not; they know that I carry them on.

Is it conducted by their order?—No. I may mention that sometimes these examinations are conducted in Latin and sometimes in English.

Under what authority is the fee paid by the students?—When I stated to the Senatus that I charged a guinea for my course of examination, they said it was a sort of extra work at an extra hour; it was a sort of private paction.

Is there no authority from the Senatus for demanding that fee?—None; they all know I do so; I have stated it to them over and over again.

You stated that you communicated to the Senatus your intention of asking that fee; did you state it to the Senatus as a body, or to the different Professors, individually, composing the Senatus?—To the Medical Professors individually.

That communication was not made to them when they were assembled as a Senatus?—No.

Did you only get their concurrence from them as individuals, as a matter of opinion?—As individuals.

Have you any other points, from the notes you are referring to, that you would wish to mention to the Commissioners?—Yes; relative to the Anatomical Museum. By a late arrangement between the Patrons and the University it was determined that the Museum, which was bequeathed by my father, shall be laid open to the public, and that it shall be very much extended, and put upon a different footing. The agreement with the Town is, that they are to pay £100 annually for the support of this Museum, and that all students who shall afterwards get a degree in Medicine, should pay a guinea towards the support of it: but I consider the sum as completely inadequate to the purpose; for I should suppose that the greater part of the sum would be exhausted in paying the fees of the servants who are necessary for it.

What would you recommend in the shape of an adequate remuneration for that purpose?—I should suppose, if there were about £400 a-year set aside for that purpose, it might pay the servants and keep the Museum in its proper state, and also lead to the extension of it; for we must have a person who is deeply skilled in Anatomy, and who understands the art of making and preserving preparations. My colleague, Mr. Jameson, may easily obtain a Conservator who can stuff birds, and take the charge of insects, &c.; but the Conservator of the Anatomical Museum must be a man who has been educated properly, who has gone through a complete Medical and Surgical education, and who is competent to enter upon the practice of Surgery, which he would do if he found it more lucrative; therefore we must give him a very considerable salary.

Do you think the whole could not be done with propriety according to the present arrangement?—No; I do not think it could be done under £400 a-year, at least. At the Hunterian Museum, at London, there are four Conservators; the son of the principal Conservator was lately in Edinburgh, and thinking I should probably have some questions proposed to me upon the subject, I asked him as to the salaries—I did not ask him as to his father's, but he told me that of the Under-Conservator's; he said he was now in quest of one or two, and that they were willing to give £100, or £120 a-year; and if they found a fit person they would give him £50 more, making £170 a-year.

Did he state what was the expense of the Hunterian Museum?—He did not.

University of Edinburgh.

Professor Monro.

30 October 1826.

Is there any other remark you would wish to make as to the Anatomical Museum?—I think that the Conservator should have a house within the College, in order to receive anything that may be sent, and to be at hand to exhibit the Museum to any person who wished it; and it is material to the preservation of the Museum, that this officer should be at hand in case of fire. A Museum is composed of very combustible materials; we use a great deal of spirit of wine, wax and rosin, and oil of turpentine; and if a person were not always at hand, any trifling spark might lead to the destruction of the whole building.

Does the Conservator live in the Museum?—Not at present; he did formerly. Mr. Fyfe had for many years a house in the College, but his house was pulled down to make way for the new buildings, and the present Conservator lives in his own apartments.

Do you know if there will be accommodation for him when the new buildings are finished?—Perhaps a couple of small apartments might be obtained.

Keeping out of view any effect it might have on your own individual interest, would you recommend an additional Professor of Surgery, distinct from the Professor of Anatomy in this University?—As to that, I have already stated, that by the terms of my commission I am Professor of Anatomy and Surgery, and that during the long period I have been so, I have been engaged in preparing materials for my lectures on Surgery; and though it may not be a common opinion that Physicians do practise Surgery, I may mention that there is no existing law in the College of Physicians of Edinburgh against it, and that during my life I have practised all the minor operations of Surgery, as well as many members of the College of Physicians. If I were to be deprived of the Surgical part of my chair, I should be obliged to make a number of other lectures to fill up the hiatus, to lecture during an equal number of days as my medical colleagues.

Do you mean with a view to enrolment, or for the benefit of students?—By the rules of the University, every Professor of Medicine must lecture six months; now, if I were not to lecture upon Surgery, I must make a great number of additional lectures on Anatomy to prolong that part of my course.

Do you mean that that would be necessary to fill up the period of six months which you understand the Professor is bound to lecture?—Yes.

Putting aside for a moment the consideration of what the regulations of the University may be at present, do you think, for the objects of science and for the benefit of the Medical department, it would be an improvement in the Constitution of the University to have a Professor of Surgery separate from the Professor of Anatomy?—As to that, I may mention that at present, as Surgery stands, it consists of two branches, the Medical and the Manual parts of Surgery. The Manual part of Surgery is considered as the least important, and I shall here read an extract of a lecture given lately by Mr. Lawrence on that very point, to show that the Medical part of Surgery is by far the more important. Mr. Lawrence, in one of his lectures upon Surgery (which are the most extensive in London, now given in Aldersgate-street) has stated, alluding to operations, that it is the boast of modern Surgery to have greatly diminished their number, and an improved knowledge of the nature and treatment of diseases will probably effect a still farther reduction. Many Surgeons, in considerable practice, operate but seldom, and it would require a large city or district to furnish operations enough for the whole employment of one Surgeon. It is stated, in the history of the Academy of Surgery at Paris, and in the first volume, "the study of Chirurgical diseases, which may and ought to be cured without having recourse to operations, should at all times be considered as the principal subject of a Surgeon's attention. Painful methods are always the last remedies in the hands of a man who is truly able in his profession, and they are the first, or rather they are the only resource of him whose knowledge is confined to the art of operating."

Do you think that it is necessary or beneficial that Medical Surgery should be united with the Professorship of Anatomy?—I think it might; but really on that question, as I am a party concerned, I would rather not give a decided opinion. As to the operative part of Surgery, I may remark that my father, during the whole course of his life, practised operative Surgery, and he is mentioned repeatedly in the works of a gentleman well known, Mr. Benjamin Bell, one of the most celebrated surgeons of the day; and from these quotations, it is not only obvious that he practised Surgery, but that he also improved it.

Laying aside all reference to existing circumstances, and supposing that complete provision were made for every interest which would be at all interfered with by any different classification of subjects than that which subsists in the University, and without the least reference to animadversions that may have been sent forth to the public upon that arrangement which exists in the University, would you, as a scientific man, think it expedient, even supposing that the Professor of Anatomy embraces a great deal of Surgery in his lectures, that there should likewise be a separate Professor of Surgery?—I reply to that question by saying I do not profess to have performed many of the higher operations of Surgery, and it perhaps might, on that ground, be advantageous that there should be a course with regard to them: such as amputation, for example; or cutting a person for the stone; or the greater operations, as we call them. But then these subjects are embraced already by my colleague Dr. Ballingall: in his course of Military Surgery I apprehend he treats very much at large as to all injuries and operations; for example, as to trepanning, cutting off their legs, and so forth, and all cases that fall under the cognizance of a Military Surgeon.

Looking to the peculiar character of that class, is it supposed to be one in which the Professor is properly conversant with the ordinary operations of Surgery, except so far as they are connected with the peculiar and distinctive duties of a Military Surgeon?—I really do not see any difference between Surgery practised upon a soldier, and Surgery practised upon another. A man in civil life is liable to have his legs broken, and to be wounded in the same manner as a soldier.

University of Edinburgh.

Professor Monro.

30 October 1826.

Would the principles of Military Surgery embrace any of those operations which are performed upon women?—In answer to that I may say I do not know any operation, except those performed on the organs of urine and generation, that are performed upon a woman, that are not performed on a man, and the former are treated of by Dr. Hamilton.

Is it understood that Dr. Ballingall, in point of fact, or Dr. Thomson, considered a course of lectures upon Military Surgery to embrace the objects of general Surgery, such as Lithotomy for instance?—I really do not know whether Dr. Ballingall lectures on Lithotomy or not; it is a disease that is incident to soldiers.

Do you consider that his department would preclude him from it, if he chose?—If a Professor of Operative Surgery were appointed, Dr. Ballingall would have great reason to complain, for I suppose he treats of operations.

According to that view of the duties of the Chair of Military Surgery, would not the object at which some of the preceding answers were pointing, be completely attained by simply subtracting the branch of Military Surgery, and allowing Dr. Ballingall to teach a general course?—As I said before, I see very little or no difference between Military Surgery and Common Surgery.

Is it your opinion therefore, that a separate Professor of Surgery would not be necessary?—Not at present.

Does not the Professor of Military Surgery lecture upon gun-shot wounds?—He does.

Are not the soldiers much more subject to gun-shot wounds than civilians?—Certainly that must be admitted; but still we see many instances of them in others.

Does not the Professor of Military Surgery lecture upon wounds given by swords and bayonets?—Surely.

Are not soldiers much more liable to that species of injury than persons not in the military profession, though a man may be cut with a sword who is not a soldier?—The nature of wounds made by swords, or the scalpel of a surgeon, is very little different.

In point of fact, does the Professor of Military Surgery in this University, from what you know of his lectures, confine them mainly to that description of wounds to which soldiers are most liable; or does his course range into a general description of Surgery?—I cannot answer that question, for Dr. Ballingall told me two days ago, that he was going to publish a new projet of his course.

Does his old projet, which he has been in the habit of delivering at this University, embrace the general art of Surgery; or does it, upon a mere confined scale, point mainly, if not entirely, to the wounds and to the accidents which happen to a soldier in his military life, and to subjects connected with the peculiar duties of the Army and Navy Surgeons?—I believe it may be so; but I do not know, at this time particularly, the plan of his course.

Dr. Monro said, if it were not for the lectures he gives in Surgery, he would give a great many more lectures in Anatomy; would that not be an advantageous circumstance for the study of that important branch of medical science?—I really do not know; I give, as I stated before, about ninety-three lectures at present on Anatomy; I give a much longer course than is given in London.

Are the Commissioners to understand, that, in point of fact, four months and a-half enable Dr. Monro to give as complete and elaborate a course of Anatomy as he could give?—I could give a more elaborate course, by introducing more of the Anatomy of inferior animals, or Comparative Anatomy.

If you were to confine your lectures to a single hour, instead of an hour and a half or two hours, as you say you sometimes do, what length of time would your course occupy?—I think my course is equal to any six months' course, if I were limited to one hour, as is supposed in the question.

Are the Commissioners to understand from your last answer, that at present you have only time to refer to Comparative Anatomy as a necessary illustration of your main subject?—Exactly so; whenever any part of the structure of the human body is capable of being illustrated by that of the inferior animals, I always employ that illustration at present.

Are the Commissioners to understand that your course does not embrace a complete view of Comparative Anatomy?—Only in so far as Comparative Anatomy is illustrative of the structure and functions of the human body.

Do you lecture at considerable length on Physiology?—I frequently do.

Might your lectures embrace a greater share of that subject?—I think not; for another Professor of the University lectures on Physiology.

Do your lectures interfere with those of the Professor of the Institutions of Medicine?—We treat of the same subjects, and how far they interfere I really cannot say; but that deters me from entering so much into detail, as to Physiology, as I otherwise would do.

Do you consider a knowledge of Mechanics might be necessary as illustrative of Anatomy?—In some parts of Anatomy it might be of use.

Do you consider a knowledge of Mechanics of any value to a practical Surgeon?—I rather think of some, but not much value.

Would it be of use in the reductions of luxations and operations of that sort?—The mod of reducing luxations depends so much on the structure of the parts, that I believe machinery in general is not much resorted to in cases of dislocation, further than a table-cloth being put about the arm, and two or three people being employed to pull.

Is not a knowledge of the general principles of Mechanics useful?—A very elementary knowledge might be useful.

With a view to the improvement of Surgical Instruments, might not such a knowledge be of use?—I know it has been said so.

Do you not acquiesce in that opinion?—Not to any great extent certainly.

University of Edinburgh.

Professor Monro.

30 October 1826.

Suppose you did not add to the number of your lectures on Anatomy, but divided that part which is occupied with Surgery, in examinations generally, do you think that would be a beneficial improvement in the class?—I do not know that that could be carried into execution; for, as I stated before, the majority of our students will not submit to such examinations.

Suppose they were not made separate by a private arrangement of the students, but made a part of the ordinary business of the class, might not examinations be introduced to a certain extent?—There is the difficulty of finding time to examine so large a number of students, besides the difficulty of doing it in a complete manner; and besides, the students will not submit to it.

How many days in the six months are now occupied in the Surgical course?—I give seventy lectures.

You have said the students would not submit to examination; but, supposing the value of the Medical Degree from the University of Edinburgh to stand high, do you think that the students would rather not come to the University than submit to examination, if it were made imperative on them?—I really cannot say. I think it would be very difficult, as I have stated, to carry into execution the examination of 250 students; it would be a very difficult matter for sufficient time to be given. The students might say, "Why should we be examined in one branch, and not in another?" and if all my colleagues were to examine their students, there could be no time for these extensive examinations.

Do you know whether it was, or was not, the practice in the class of Military Surgery, while Dr. Thomson lectured, to examine?—I really do not know. I may mention that I consider that it would be a very great improvement if some means were taken to get students to attend during the summer as well as during winter; at present there are very few lectures given during the summer session. I know that on the Continent, at Paris for example, there are a great number of lectures given during the summer session, as well as during the winter, and I think it would be a very great improvement if something of that kind were carried on at this University.

But you would not propose that the winter course should be thereby shortened or rendered incomplete?—Certainly not.

Would you propose it as an addition?—Yes, as an addition, if some *bonus* were held out to the students to attend during the summer session.

Could you not make it imperative, without attracting them to it, by reward or *bonus*?—I do not know how we could make it imperative. It has occurred to me that something of the kind might be done. At present, students who wish to obtain a degree in Medicine are compelled to study during four years: now I would propose, that if a student could show that he had attended two summer sessions, I would let him pass in three years; for he would have studied as much as one who had been idle during the summer months.

Then, though the student would not gain in amount more than he does at present, but would gain it in a shorter time by your giving him a course of two summer lectures equal to one winter course, would you, for that reason, render only three years' study imperative, whereas four years are now required?—Exactly so.

Would you think it a still greater improvement if you could make the one summer session, or two summer sessions, positively an addition to the whole course of his learning?—Certainly.

If the summer lecturer were to have the means of employing a student who did not choose to occupy himself with private study during the summer, might it not be an interruption to the student who was disposed diligently to occupy his private time?—That might happen; but at present the summer session is only of three months' duration: therefore, if the other three months were dedicated to private study, perhaps that might obviate the objection.

Which would Dr. Monro prefer for medical students: the interval between the two winter sessions being employed in private study, if he were sure that every student would so employ it; or the attendance on summer courses?—Why, as far as my experience goes, I am rather disposed to think that students, by having so long a recess, get into habits of idleness, and it would be a matter of great moment that they should study during the summer session. There is one thing more I would mention; if the system of Medical Education were altered, I think it might be improved.

What is the nature of that alteration you would propose?—I would propose that the number of Examinators should be increased: at present there are six or seven since Midwifery was added. I would take in the Professors of Military and Clinical Surgery. I would have the examinations to take place, not during the same, but during two different years; and, as in Paris and some other places, I would propose that after these examinations had taken place, the candidate should be entitled either to practise Medicine, purely so called, or Surgery: in short, that we should give Diplomas in Surgery as well as in Medicine, as is done in Paris, and as I believe the Faculty of Surgeons and Physicians, as they are called, do in Glasgow.

Are you quite satisfied with the present mode of conferring Degrees in Medicine in all other respects?—I am.

Would you prefer examinations in Latin or English?—Upon that point I believe a considerable difference of opinion has been entertained. To come at a man's real knowledge, I think it would be well if he were first examined as to his classical attainments, and required to read Celsus, or some other author, in presence of the Professors; after which he should be examined in English. Thus we could give a more decided opinion as to the extent and variety of his knowledge.

Do you think the Inaugural Dissertation furnishes any test of the knowledge of the candidate?—I believe that the greater number of the Theses are, in part, written in English by the candidates, but that they receive a great deal of help from others in turning those English dissertations into Latin.

319

University of Edinburgh.

Professor Monro.

30 October 1826.

Do you think that the form of defending Theses, that is observed upon occasions of public graduation, is calculated to serve any good purpose?—It is a sort of test whether or not a man really understands the subject of his Thesis.

Is there any such strict public examination as to furnish a test, in your opinion, of the qualifications of the candidate?—We make it a rule at those public examinations to question the candidates upon any points we object to, and by entering into a conversation upon these, we upon some occasions discover the degree or extent of his knowledge upon that subject.

Has it ever been known that any one was rejected after appearing in public?—I believe not.

With respect to the language in which you would examine, do you give it as your opinion that it would be better to examine first with reference to the candidate's attainment in Latin, and next to examine in English, with a view to discover his professional qualifications?—I do.

Do you consider that the Theses are in general as well composed now as in former times?—I am sorry to say I do not.

Do you think they are declining in value?—Yes.

Both as to matter and language?—I do not exactly know; but I do not think the same pains are taken with them.

Do you apply that observation chiefly to the language?—To the language chiefly, and sometimes to the matter also.

Do you possess a series of Medical Theses that have been given?—I believe I possess one of the three most complete sets of the older Theses.

Do you consider many of the early ones, possessing much value, to be those that were published about the middle of last century?—I do so. Some of them are still the best treatises on the subjects.

Would you apply that character to the Theses published at the present time?—A few of them are so.

Do you think the literary attainments of Graduates in Medicine fully equal to what they were about the middle of last century?—I really cannot say that I am competent to answer such a question.

Do you think the Medical writings of authors formerly are equal in point of style to those of Medical authors of the present day?—That is a subject to which I have not directed much attention. We have no such writer of Latin in Scotland as the late Dr. Gregory, or the late Dr. Heberden.

Edinburgh, Tuesday, 31st October 1826.

The Right Honourable Lord BINNING in the Chair.

Dr. *Thomas Charles Hope,* Professor of Chemistry in the University of Edinburgh, called in and further examined.

Professor Hope.

31 October 1826.

Have you had an opportunity of hearing the notes that were prepared by Dr. Alison, which he brought to the Commission with him, and which form a part of his evidence; he stated that they had been read before the Faculty of Medicine?—I was at two meetings, and they were twice read over. I had no opportunity of hearing them after the final correction was agreed to, and which immediately preceded Dr. Alison's appearance before the Commission; but I believe everything to have been stated as was understood at these meetings, to which I accede.

Are the Commissioners to understand, that you concur in all the views taken by Dr. Alison contained in those notes?—To the best of my recollection I do.

Are there any suggestions you wish to make to the Commissioners upon any matters regarding the Medical education in this College, or regarding the previous education of those who are to be candidates for the degree of Doctor of Medicine?—I am not aware of any views I have in addition to those expressed by Dr. Alison; and, though I consider a liberal education a very desirable object, yet I am not aware of any Academic arrangements that could be safely introduced in relation to that matter.

Do you consider that the average education received by gentlemen who come here to graduate, whether received elsewhere or here, has generally been found adequate?—I think so.

Have you any further suggestions to make on that point?—No.

With respect to the Medical Curriculum, have you any observations to make?—The only observation I would make in regard to that, would be, that if the class of Surgery were to be made a distinct and separate class, it should be rendered imperative; and, in the event of its being so, I would retrench some of the optional classes that have been introduced into the new Curriculum.

Would you retrench the attendance upon them?—I would strike out of the Curriculum the Clinical and Military Surgery, and, perhaps, also the other three, namely, the Medical Jurisprudence, the Natural History, and the Practical Anatomy; the last only because the University at present does not possess the means of supplying that class, to its proper extent, with subjects for dissection.

Are the Commissioners to understand, that Dr. Hope, in the event of a class of Surgery being established in this University, would not recommend that the attendance upon any of these classes should be imperative?—He would not; always excluding from this view Practical Anatomy whenever there are opportunities for that being duly taught. This restriction of the number of classes I consider to be of importance, as tending to confine the attention of the students more particularly to the essential and fundamental departments of their profession.

Have you any other suggestions to make with regard to the course of Medical education?—None; I would be glad, perhaps, to add, that I have always felt an aversion to extensive changes, in consequence of seeing that the Medical School has prospered in a very uncommon

University of Edinburgh.

Professor Hope.

31 October 1826.

degree, and that its graduates have been, at least in equal, if not in higher estimation, than the graduates of any other British University.

In the event of the practice of Surgery being separated from the class of Anatomy, in what way would you propose that part of the course should be filled up by the Professor of Anatomy, it being understood that he gives about seventy lectures on Surgery?—First, by being more minute in the Anatomical Demonstration; and, secondly, by repeating the same Demonstration at least once oftener than is done at present; by which means the Anatomical course would be improved; and also by the interspersion of such Surgical observations as naturally arise from the subjects which the Professor has under discussion at the time.

Would it appear expedient to you, if possible, to add examinations to the present mode of conducting that class?—Dr. Monro has already a separate class for examination.

Which you think is proper and desirable?—Certainly.

Does that second class require the student to pay a fee?—Yes.

But in regard to the ordinary instruction of the class, might not examinations be introduced with advantage?—I entertain a great doubt if, in a regular course of teaching, it could be introduced with advantage.

Might it not be done by making use of a separate hour?—In a separate hour it may certainly be done with advantage, though it must be remembered that the examination of 200 or 300 students in an hour is not an easy task.

But if seventy hours were placed at the disposal of the Professor of Anatomy in the course of the session, even supposing that he had it not in his power, owing to the various arrangements of the University, to have a separate hour with convenience, might not a considerable number of these hours be devoted to examination?—They certainly might be devoted to examination; but I think they would be better employed for the instruction of his pupils, by extending the number of repetitions of each Demonstration, by the introduction of remarks on Morbid Anatomy, and such Surgical observations as naturally would occur, but which at present are left out in the Anatomical lecture that they may fall into the Surgical.

Does Dr. Hope think it would be beneficial, in case the Anatomy and Surgery were separated, that an additional number of lectures upon Comparative Anatomy were delivered?—I should consider it would be highly valuable to add Comparative Anatomy, but I think the best time to introduce it is when the Physiological Lectures are delivered.

In addition to the benefit to be derived to the University having a regular Professor of Surgery, is it your opinion that the course of Anatomy would be rendered more complete and efficient?—It is.

In several of the Answers, certain resolutions of the Scotch Universities, passed in 1803 and 1813, and some other years, are referred to as fixing certain points; can you inform the Commissioners where these resolutions are to be found, or is there a copy of them in the possession of the Senatus Academicus of this College?—Application ought to be made to the Principal or Secretary for this information.

Were these resolutions passed at meetings of any of the Principals or Delegates of the Colleges, or in what manner were such resolutions entered into?—Occasional meetings, at the time of the General Assembly, of Delegates from the different Universities take place; but, I believe, what is now alluded to was arranged by written correspondence.

When you say occasional meetings are held at the time of the General Assembly, are they for the purpose of making arrangements, in common for the Universities, in regard to the Curriculum for degrees, the course of studies, or for what objects are such meetings held?—To talk over generally the subject of University matters, and to have such measures brought before them as may seem to interest the whole of the Universities. I may instance for one, the Copyright Act; and another I recollect was a discussion respecting fees to be received by Theological Professors; but having attended only one meeting, or at most two, several years ago, I do not recollect any other topics that were discussed.

At whose suggestion was that proposal for fees being paid to the Theological Professors originated?—I cannot say.

Do you know if it was by Professor Jardine, of Glasgow?—I do not know.

Were you a Professor for some time in the University of Glasgow?—I was.

Professor of the Theory and Practice of Physic?—I was Professor of Physic, including the Theory and Practice.

Are you aware whether any improvements have been suggested by the Chancellors of the University of Glasgow, or any superintendence in practice exercised by them at any time?—I am not aware that there have.

Is it your opinion that, in that University, the situation of Chancellor is considered as a mere compliment?—I believe it is.

Are you, or are you not, inclined to ascribe that result in part to the election of Chancellor being supposed to be vested in the Professors?—I should suppose not.

To what circumstance would you ascribe the fact that no sort of superintendence has at any time been exercised in the University of Glasgow by the Chancellor?—To the common usage attached to the situation, and the Chancellor believing that such superintendence is not a part of his duty.

Are you aware whether the same result has not followed the election of Chancellor by the Senatus Academicus in every instance in which such mode of election takes place?—I am not sufficiently acquainted with the Constitution of the other Universities, to give a decided reply to that question. If that were understood to be a part of the duty of the Chancellor, I have no doubt he would faithfully perform it.

Do you not know that it is usual to consult the Chancellor of the University of Glasgow in important matters relating to the College?—That they consult with him, and often avail

themselves of his influence in matters beneficial to the interests of the College, I know well; and further, I certainly know that the Chancellor of that University, viz. Glasgow, does exert himself with great earnestness for the interests of the University.

But as to the superintendence of the Chancellor over the University, particularly in regard to its discipline, or any points relative to the institution of New Chairs or Courses of Studies; is there any such superintendence in practice exercised, or has there been, so far as you have been acquainted with the University, at any period?—I am not aware that he interferes, or has a right to interfere, with the internal discipline. In the establishment of New Chairs, as they are exclusively created by the Crown at present, I believe they all depend upon the influence of the Chancellor with his Majesty's Government.

Are you aware if, in the University of Glasgow, certain powers, such as the election of Professors, have been assumed by the foundation which were vested in the Chancellor?—I can only answer, that no question of that kind occurred when I was Professor, and I am not acquainted with the circumstance since that time.

During the time you were a Professor at Glasgow, or so far as you know the history of the University at any period, has the Rector ever exercised any superintendence further than that pointed out in the Act of Visitation, 1727, relative to the auditing of the accounts?—I believe the Rector has attended to various matters of College discipline at different periods.

Do you know whether any suggestions or improvements have ever originated with the Rector in that University?—I cannot pretend to say.

Do you understand the Chancellor to be the medium of communication with Government in Glasgow?—I do.

Does he appoint a Vice-Chancellor, or is there such a person in Glasgow?—To the best of my recollection, there is a Vice-Chancellor.

Is not the Principal generally appointed Vice-Chancellor?—I do not recollect.

Do you conceive, then, the non-interference of the Chancellor with the internal concerns of the University to arise from the mode of his election, or from the circumstance that it has never been conceived that it was an office in which such interference was expected or called for?—Entirely from the latter cause.

Is there an Anatomical Museum attached to this University?—Yes.

Is there an arrangement made by the University with the Army Board for the exchange for duplicates of their Museum?—I am not aware that the Army Board have a Museum; the College of Surgeons of London have a Museum, but I have no recollection of the Army Board having one.

There is a sum given to the University by Dr. Hope for the institution of a prize for Chemistry; have any regulations been laid down in regard to that prize?—Dr. Hope has not yet laid down those regulations.

Is there no allowance in your class for providing apparatus for the class?—No, none.

Is a very extensive apparatus necessary for teaching your class?—Certainly.

Is any allowance given from any quarter whatever for the purpose of repairing such apparatus?—None.

Looking to the present state of Science, and supposing a new Professor were called upon to teach that class, would it be a very serious and a very heavy outlay on his part to obtain an adequate apparatus?—It would require a considerable outlay.

Supposing a new Professor were to be appointed towards the commencement of a Session, could he possibly teach his class that year with any kind of success, without the aid of your apparatus being transferred to him in some way or other?—My apparatus would certainly be of great service, yet the Science is so generally studied, that from London or Paris, especially from London, he could be supplied with apparatus, sufficient to carry on his Winter course successfully, in the course of a few weeks.

The University of Edinburgh have not required attendance for more years than one, in some of the Medical Classes, from a desire to avoid the appearance of wishing to enforce attendance frequently upon their own Classes, in preference to the Classes of private Lecturers: setting aside that consideration, and supposing a regulation were made by an authority independent of the Senatus Academicus, is it your opinion it would be advisable to require the attendance of Medical Students oftener than once upon some of the Classes now included in the Medical Curriculum?—It is.

Would you prefer that to leaving them to the chance of obtaining, as at present, that instruction from private Lecturers?—As a University man, I would prefer their taking University instruction.

At present, while it is understood that most Students do obtain, by attendance on private Lectures, that instruction which you would desire to see secured by additional attendance upon some of the University Classes, is there any security that they shall so obtain such additional instruction?—None, excepting that derived from their fitness to go through the examination, to which they are subjected before they obtain the degree.

Do you regard attendance on private Lectures, in addition to attendance upon the University Classes required by the Curriculum, to be necessary, with the average run of Students, in order to enable them to pass such examinations?—I think so.

Do you understand that the consideration now adverted to is the only one that prevents the University from enforcing attendance for more years than one, upon some of the Classes included in the Medical Curriculum?—I know it influenced the Medical Faculty in their recommendations of particular Classes.

Upon what Classes would you recommend additional attendance?—Anatomy, the Practice of Physic, and Chemistry.

Is it understood in general that such subjects are studied by attendance on private Lectures,

University of Edinburgh.

Professor Hope.

31 October 1826.

in addition to the University Classes?—I believe that many do attend some of these Classes beyond the walls of the College, though I believe that some of these are repeated within the walls.

Do you consider such a regulation as that now adverted to would be imposing any great hardship upon the generality of Medical Students?—I think it would not; and in former years it was much more generally the practice to attend each of the Classes named twice than it seems to be at present.

Supposing the character of the Senatus Academicus were not held to be at all involved in the arrangement, would you recommend it as an advantageous change in the present course of Medical Studies?—I would do so if I were not teacher of one of the subjects.

Was the opinion of the Senatus upon that point very much influenced by the reluctance expressed by the Medical Faculty to appear to be biassed by such an exclusive spirit?—I cannot pretend to say what actuated the breasts of my Colleagues, but certainly the circumstance was strongly brought before the Senatus, and I believe there was a general feeling in the Senatus on the subject.

Are the Commissioners to understand, that among the private teachers in Edinburgh there are persons of considerable eminence?—Yes.

Have you anything to suggest to the Commissioners upon the manner in which Clinical Medicine is at present taught in the University?—I would propose no change.

Are you aware of a proposal that has been suggested for subdividing the Students, and having two Professors teaching at the same time for a period of nine months through the year, instead of a single Professor as at present, to prevent so great a number of Students following the Teacher in the Wards?—I have heard some talk about it, but no regular plan has been proposed. The one I did hear of did not seem to me to be a practicable one.

To what proposal do you now allude?—The proposal of having four Clinical Physicians in activity, and getting two additional Wards to the Clinical Medicine.

Do you consider that plan impracticable?—It appears to me to be attended with many inconveniences, and upon the first blush I would not feel favourable to it; but I speak with hesitation, as I have not an opportunity of considering the matter.

Are those inconveniences to be ascribed to the Hospital?—They are both connected with the Hospital and with the Medical Professors.

Had you an opportunity of hearing Dr. Home's views upon that subject?—I have not heard what views he entertains at the moment. We had a hasty conversation, but no definite plan was mentioned to me. The accommodations for the Clinical Teachers have lately been improved, by appropriating to their use Wards of a larger size. The crowd of Students attending the Clinical Professors has of late years been greatly augmented, in consequence of its being now understood that any Student at the Infirmary may accompany the Clinical Professor, whether he is a pupil attending his Lectures or not; formerly those Students only were permitted to enter the Clinical Wards who attended the course of Clinical Lectures.

Upon the supposition that a student is not to attend the Lectures of the Clinical Physician, what benefit will such a student derive from following that Physician in the Clinical Wards more than by following the Ordinary Physicians of the house in their wards?—The reason is two-fold: first, the Clinical Physician has the selection of whatever cases may present themselves to the hospital; and, secondly, he is so minute in his examinations, and the reports of the cases are so full, that it becomes more instructive to attend the Clinical Physician than the Ordinary Physician.

Do you know whether those students that have the privilege of accompanying the Clinical Physician, though not of his class, pay anything to the Infirmary for it?—Yes, they do.

Do they pay anything to the Clinical Professor?—Nothing.

Has that proceeded from any regulation by the Directors of the Infirmary?—No; it has gradually crept in.

Was it formerly considered that the Tickets taken out by the students to attend the Infirmary did not give them that privilege?—Formerly it was understood that it did not.

Is it your opinion that Anatomy is at present sufficiently attended to by medical students in the prosecution of their studies?—I have no means of knowing what progress the general body of medical students make in Anatomy.

Do you know what is the general opinion of the Medical Profession upon that point?—I do not.

Do you think that there is an adequate provision for the study of Anatomy made in the Curriculum for those who are to take their Degrees?—I think that the Curriculum does not include an adequate provision for the study of Anatomy.

To what extent would you wish to see an alteration?—To that extent I would wish to see an alteration; but the alteration should not stop there. I have already said that the Curriculum did not embrace an adequate attendance on Anatomy, Practice of Physic, and Chemistry; and, were any change to be made, it should extend to all these classes.

Does it appear to you that the present mode of lecturing by rotation upon the cases of patients in the Infirmary is preferable to an establishment for a stationary Professor of Clinical Medicine?—I am rather disposed to think that the present mode is the preferable one, in so far as that the students who are already instructed in the general principles of practice have the opportunities of seeing the different modes in which those general principles are applied by different individuals.

Would you apply the same observation to the case of Clinical Surgery?—Yes; I am of opinion that the privilege of lecturing upon Clinical Surgery, if particular wards could be allotted for that purpose in the hospital should extend to all the Professors of Surgery at present existing in the University.

University of Edinburgh.

Professor Hope.

31 October 1826.

Would you apply it also to the Professor of Surgery, if such a class were established?—I would. It has occurred to me that, for the Surgical Department, the best arrangement would be, that the Professor of Clinical Surgery should have the half of the course each year, and the other two Professors the alternate years.

Does it appear to you that there is any necessity for regulating the order of Medical Study more precisely than it is done at present?—No; though students do frequently take irregular Courses, I believe it is better to leave it as it now stands. There is one point as to the Curriculum which I beg leave to mention: I should consider it of very great moment if nearly a similar Curriculum were required for the Doctor's Degree in all the Universities in Scotland, in order, if possible, to get rid of the general complaint that has prevailed against Scotch Medical Degrees.

Do you consider Botany an essential part of Medical Education?—I consider Botany as a very engaging study, and useful to a medical man.

Do you consider it more essential than Mineralogy?—I do.

Or Zoology?—Certainly.

Do you not then conceive that all that is necessary to be known of Botany might be delivered in the lectures either of the Class of Natural History or Materia Medica?—If the Professor of Materia Medica were to give as much Botany as would be required, he would be under the necessity of leaving out of his Course much valuable matter; he certainly, in winter, could not do so.

Was it not the practice to illustrate an aphorism of Hippocrates by a commentary?—It was the practice: it is no longer so.

Was the aphorism given out in Greek or Latin?—In Latin.

Then did the aphorism require no knowledge of Greek?—No.

Would nothing be lost by doing away with that part of the trial?—No; it has been done away for some time.

Is Dr. Hope aware that the regulations of the Universities of Aberdeen and St. Andrews, with reference to the previous education, are different from those which subsist at the Universities of Edinburgh and Glasgow?—I understand that some recent regulations have been introduced into these Universities, in which there is a difference; but what these regulations exactly are I do not know.

Is it not provided, by the recent regulation at Aberdeen, that the candidate for the degree of Medicine must have taken the degree of Arts?—I have not been informed upon any authority that that is the case; and if it be, I should doubt much whether it be a judicious regulation.

Do you think that it is convenient that the regulations of the Universities, with reference to previous acquirements of candidates for degrees, should be different?—I think they should not be different, either as to previous study, or as to medical qualifications. If any University exact more previous study than may be suitable, that unnecessary portion should be retrenched; and if any University require less medical study than is proper, the quantum of medical study should be increased; and I do not consider that either Aberdeen or St. Andrews, where there is no regular Medical School, as well as from other considerations, should be a model for Edinburgh.

In a Treatise upon Surgical Anatomy, by Abraham Colles, one of the Professors of Anatomy and Surgery in the Royal College of Surgeons in Ireland, are these remarks:—"On the necessity of classical information it is needless to dwell, because, in fact, no person can be admitted or registered a pupil of the College of Surgeons until he has undergone a public examination in Greek and Latin before a Court of Examiners; but as the course appointed to be read for entrance comprises little more than Virgil, Horace, and Sallust in one language, and Lucian, Xenophon, and Homer in the other, I would recommend it to you occasionally to recollect and extend your knowledge of the Classics at your leisure hours. The College of Surgeons of Ireland," he says, "has not yet fixed upon a Scientific as it has upon a Classical course." The author, therefore, recommends attention to Mathematics, Natural Philosophy, &c., and says, that "he who aspires to eminence in any particular science must first acquire the habit of philosophizing in matters of science in general." Does Dr. Hope concur with these remarks to the extent of thinking that such previous Classical and Scientific information would be desirable for those who are to graduate at this University in Medicine?—With the exception of the Greek I concur in the general sentiments expressed in that quotation. In regard to general science it should be remembered that the Medical Curriculum does include a wide range of science, equally fit to introduce habits of thinking, equally fit for extending the thoughts and opening the minds of youth as any of the other departments of science whatsoever. For example, the science of Matter is in one very important branch pretty fully discussed in the Lectures on Chemistry. The science of Life, so far as regards the Vegetable Kingdom, is discussed in the Lectures on Botany. The science of Animal Life is largely discussed in the Lectures upon Physiology; to which, if the instructions upon Natural History be added, it constitutes a range of science equal to that which the minds of most young men are capable of duly receiving along with their more particular professional study. Although I consider every department of a liberal education very highly desirable, yet it is not advisable to press a very great variety of branches upon the youthful mind; and I cannot help adding the remark, that in a very great number of cases, during the 30 years that I have had the honour of being a Professor here, those young men who had made themselves most remarkable for their extra professional acquirements distinguished themselves the least in their Medical Examination.

Does Dr. Hope think that, to the extent he has mentioned, proofs of previous acquirements in education should be demanded of candidates for Medical degrees?—As the first step in

University of Edinburgh.

Professor Hope.

31 October 1826.

examination is or will be to be satisfied of a proficiency in Latin, which secures a certain amount of classical knowledge, I should consider that, though the delivery of testimonials of previous education be enjoined, such testimonials cannot well be introduced as absolutely essential.

What would be the disadvantage, in Dr. Hope's opinion, of requiring such testimonials being made indispensable, as is suggested?—It limits the mode of acquiring general information to public instruction, when as large a proportion of such knowledge as may be necessary may be acquired in private.

Does Dr. Hope think that the examination of a candidate for the Medical Degree should ascertain his having acquired such knowledge, whether by attendance on public lectures, or by private study?—I think that the examination should ascertain a due degree of proficiency of the Latin language; but it ought not to go beyond that point.

What objection would there be to requiring from the candidate for Medical graduation a moderate knowledge of the Greek language, however it might have been acquired?—I do not consider that the Greek would be of the least use to him in the prosecution of his Medical studies; therefore, I conceive that it would not be advisable to make any examination in a branch of literature which I do not consider of importance to him.

Although the Greek language may be of no value to him in his Medical studies, is not the possession of a certain knowledge of the Greek language a test or proof of more considerable classical attainments, generally, than requiring a knowledge only in Latin?—I hold the possession of the Greek language to be an ornament to a gentleman; but, holding the possession of the French language, and perhaps the German, to be of much more use to a Medical man, as so many works upon professional subjects are written in those languages, I should prefer, were it necessary, an examination in the first of those languages to the Greek.

Are you acquainted with the French Medical Dictionary that is in common use in France?—I am not.

Are you aware that, in that French Medical Dictionary, nearly every word, from A to Z, or from Alpha to Omega, is derived from the Greek language?—Not being acquainted with that dictionary I cannot answer that question; but I am well aware that by far the greater number of the terms used in Medicine are derived from the Greek; but, as medical men do not learn the meaning of these terms from the Greek etymology, but use them as arbitrary terms, of which they learn the meaning at the moment they hear them, and as many of the Greek etymologies suggest erroneous ideas, I do not consider it of any consequence that the Student should be able to trace the term to its Greek root.

Do you conceive that a person not acquainted with the Greek could make any use of a dictionary of that description?—Not knowing the dictionary I cannot, of course, tell.

Suppose it were understood that the Medical Schools abroad required evidence by examination as to the scientific qualifications of persons who obtain the degree, would you consider it to be prejudicial to the interests of the Medical School of Edinburgh if it were not required?—It would not. If an education necessary to take a degree in Arts should be required, I consider it would be highly prejudicial, because it would exclude from the profession of Physician a considerable proportion of those who take a Doctor's degree. I think it would be attended with injury to the inhabitants of this country, and with much detriment to the University, in so far as it would induce or compel many young men, who now take the degree of M. D. at this University, to be satisfied with the Diplomas or Licences to practise, which require a less extensive study, more especially in the scientific part of Medicine, than a Doctor's degree does; and the consequence would be that there would be less general medical information to be met with in practitioners over Great Britain, though, perhaps, they would be better Greek scholars than at present. The value of our degrees would not be diminished in the eyes of professional men, and still less in those of the public, who are to employ them, though such arrangements as may exist in foreign Universities were not adopted here. I believe that, in this country, there is no great demand for extra professional studies in Medical men: those younger physicians who have been most eminent for extra professional acquirements have succeeded in practice in general worse than those who have distinguished themselves for their professional acquirements only; nay, in some places, being distinguished for such extra professional attainments has been considered a bar to their success in their profession.

Supposing that extensive literary and scientific acquirements were exacted from Candidates for Medical degrees at other Universities, and not in this, would not the inference be that the Graduates at other Universities were learned men, whereas the Graduates at this University were not; and how would this operate upon the character of the University?—I believe that the character of the Medical School will depend more upon the acquirements that are professional, and which, I have already said, embrace a very wide field of science; and these will have more influence on the reputation of the students than their acquirements in general literature, or extra professional science.

Are the professional studies required for a degree in the University of Edinburgh of a higher and a more extensive order than the professional studies required in the foreign Universities, Paris, for example, or Oxford and Cambridge?—I believe the professional studies required in Edinburgh are higher than in the other Universities of Great Britain or Ireland. With respect to the foreign Universities, the whole plan of study is so different, and the whole system of Medical Education and Medical Practice is under such different regulations, that I do not consider a comparison can easily be drawn between them.

Although Dr. Hope would not recommend it as imperative that a more extensive course of previous education than what he has adverted to should be required of Medical Graduates, does he think that there would be any objection, that either in the manner of conferring the degree, or in some distinction in the degree itself, encouragement should be given to those who

are ambitious of giving evidence of superior learning, or a knowledge of general science?—I can see no objection whatever; and the degree of Doctor of Philosophy might be added to that of Medicine, so that, instead of being M. D. he would become M. & P. D.; to this I can see no objection.

Does Dr. Hope conceive that application to the study of Logic is less necessary as a preparation for the study of Medicine than for other learned professions?—I consider the study of Logic of very great importance to the study of Medicine, and of every other profession; and it is perhaps the only one that I should consider (did circumstances admit of it) of essential importance as a preliminary study.

Is there not a prevailing tendency among Medical writers to indulge in hypotheses, even without due regard to the strict rules of philosophizing?—As the science of Life is totally different from that of inanimate Matter, and cannot be brought under rule and measure as a science of inanimate Matter may be, those who think on the functions of life must necessarily indulge in hypothesis.

Might not that tendency be beneficially restrained by greater attention to the rules of induction?—Unfortunately, the rules of induction cannot admit of so rigid an application in the science of Life as in that of Matter, and therefore the deviation from them is more excusable.

Would it be possible to institute any Rules of Medical Logic distinct from those that are observed in other sciences?—The Rules for Reasoning in Medicine are founded on a different basis from those of most other pursuits, and therefore should be accommodated to the particular subject.

Might not the habit of mind formed by the study of Mathematics be productive of advantage to the students in Medicine?—The habit of close reasoning, wherever acquired, is certainly very valuable; but the most distinguished mathematicians have been by no means either the best physicians or the best reasoners on physic.

Will you have the goodness to state those circumstances which you think prevent the study of Logic being required of Medical students?—By the late Regulations the Curriculum of University study has been extended one year; and an extension to another year, for the sake of attending Logic in a University, would impose a heavy burden upon those who are to embark in the study of Medicine. Some doubt was entertained whether the extension to four years might not preclude the acquisition of a Doctor's degree to a number of able men in the moderate walks of life, and the addition of another year might have that effect in a much more decided manner.

Do you think that Logic should be taken during the first year of attendance upon Medical Classes?—I believe the present arrangement of hours entirely precludes it; but, were that not the case, I think it might.

Do you think the publication of a Thesis in Latin affords any test of literary acquirements?—None; unless the Thesis were entirely composed by the graduate.

Do you attach any importance to the forms observed upon the occasion of Public Graduation, or might they not be improved?—I am not aware of any improvement at this moment, but I would be very thankful to know how it could be made.

Is not the public defence of Theses, as it is called, a mere formality?—It certainly is.

Is any oath administered to the candidate before the degree is conferred?—There is.

Do you consider that an insignificant ceremony?—By no means.

Do you conceive it to be a great objection to the practice of conferring the degree in absence, that no such solemn obligation is taken from the graduates?—No Medical degree whatsoever is conferred in absence in this University, but if it is anywhere else I should think it an objection.

Is moral character taken into view before Graduation?—It certainly is; but it is only judged of by general report, and a knowledge of the person, no testimonials thereof being required.

Do the Examiners then judge of the moral character of candidates from their own opportunities of knowledge?—From such opportunities as have occurred to them.

Is there ever a rejection of a Thesis on account of heterodox opinions in Medicine?—I believe there is not; but there is frequently a rejection on account of imperfections. I would add, that heterodox opinions, if modestly supported, and free from absurdity, are rather approved of, marking originality and ingenuity than otherwise.

Are the Commissioners to understand that by the term heterodox you allude to speculative views?—Yes.

If the candidate were to recommend a practice disapproved of by the Medical Faculty, would he, at least, receive some salutary admonitions upon the subject?—A candidate seldom recommends a new practice without having had some experience of that practice, and the Medical Professor would receive such a recommendation with pleasure and satisfaction.

Are the Professors to understand that these Theses are read as sources of Medical knowledge?—Some of them are; those that are of eminence.

You do not conceive that they generally are?—No.

Have you any information to give, or suggestions to offer, with reference to your own Class of Chemistry and Chemical Pharmacy?—I have really nothing to suggest with regard to improvement in the one branch or in the other.

Are you inclined to suggest that the Apparatus of the Chemical Class should be attached to it, the Professor receiving something to keep it up, or being bound to keep it up at his own expense?—I think it desirable that there should be an Apparatus attached to the Class; but the emoluments of late years have been so ample that the Chair is able to bear the expense of that Apparatus, unless the funds of the University become so abundant as to be able to assist the wealthy Chairs as well as the poorer ones.

University of Edinburgh.

Professor Hope.

31 October 1826.

Did Dr. Black leave any Apparatus?—Dr. Black left a very excellent Apparatus, and a considerable collection of Mineralogy, which, from a private arrangement, became my property.

You have stated, among other improvements, that you think it would be desirable that students in Medicine should attend the Chemical Class twice; do you mean by that that you would divide the Course into two years, or that they should repeat their attendance upon the same Course a second time?—They should repeat their attendance upon the same Course a second time; because, from the very great length of the Course which I do give, I am enabled to go nearly as minutely through every part of it as I conceive, at a University, would be suitable. I would add, that those who are to make further progress in the science must work themselves in the laboratory, and both in the University and out of it. Such opportunities of practical Chemistry have, for several years, been afforded.

In that portion of your Course which is devoted to Chemical Pharmacy is as much of that branch taught as is necessary for the attendance upon the Medical School?—I pay very particular attention to the subject of Chemical Pharmacy; and, as the subject is itself a limited one, I can overtake the whole of it.

In the other part of your lectures do you explain to the students the application of the different principles you teach to the different arts of life?—Yes.

Your class last year consisted of 505 students; and, it appears by the returns, that there are small dues paid by the students of 4*s.* 6*d.* each, which make a considerable sum; will you be so good as to tell the Commissioners to what purpose those small dues are applied?—Those small dues go to the furnishing of fuel, and chemical substances used in experiments, to servants, assistants, and apparatus, which, together, consume much more than the amount of those small dues.

Do many Medical students attend your Class twice?—A considerable number.

Of those who do not attend your Class twice, do you suppose that they either attend Chemistry in other Universities, or attend another Course given by a private lecturer?—Several of them do; but I believe the number is not very great.

Might the office of Professor of Chemistry be filled by a person who is not a Physician?—Not well.

Has it ever been so filled?—Never in this University.

Is any considerable part of a Course occupied with subjects not essential to the Medical profession?—The Course embraces a wide field, of which a great part bears no relation to Medicine; but in the science of Chemistry all the parts are so linked together that that portion most essential to the Medical profession would not be duly understood without a knowledge of the whole.

Do you then conceive that all the branches of it must be useful to a Medical man, though not immediately subservient to the exercise of his profession?—Yes, certainly.

Do you conceive that the Professor of Materia Medica is entitled to treat of Chemical Pharmacy as well as the mechanical part of the study?—As I believe that in his commission the term Pharmacy is included, I conceive that Pharmacy, in its widest stretch, may be treated of by him.

Do the Professors of Natural History and Materia Medica both lecture, at considerable length, on the same subjects which occupy part of your time as Professor of Chemistry?—Having never attended the lectures of those gentlemen I cannot pretend to say whether they do or not.

Is there no concert among the different Professors to prevent the peculiar province of each from being encroached on by the others?—There is no peculiar concert. I have understood from Dr. Duncan, the Professor of Materia Medica, that he dwells more especially upon those branches of the subject of Pharmacy which fall less particularly under my view, and more lightly upon those that more especially engage my attention.

Do you think that the science of Natural History and Materia Medica can be studied to advantage without a knowledge of Chemistry?—I should consider that Zoology might be studied with very little knowledge of Chemistry; but Mineralogy certainly could not, nor Hydrography, nor Meteorology: Materia Medica could not possibly.

Would you recommend that Chemistry should precede the study of Materia Medica in all cases?—I would.

Would not a Professor, for his own sake, and for the sake of doing justice to the other branches which more particularly belong to his course of lecturing, rather avoid encroaching upon the province of another Professor?—I believe he would, unless the debateable land were a very favourite field with the Professor.

Do you consider yourself restrained from supporting theories which are probably opposed by other Professors in the University?—Certainly not. I hold it my duty to give my sentiments faithfully and honestly, whatever those sentiments are, upon the subject which I am discussing.

Are there any other suggestions which Dr. Hope would wish to make to the Commissioners?—No others.

James Russell, Esq., Regius Professor of Clinical Surgery, called in, and examined.

Professor Russell.

Are you Professor of Clinical Surgery in this University?—Yes, I am.

Have you had an opportunity of seeing the Queries that were sent to the Senatus Academicus, and their answers to them?—Yes, I have.

Do you concur with the answers so returned?—I cannot say that I concur with the whole of them.

University of Edinburgh.

Professor Russell.

31 October 1826.

Have the goodness to state what those points are from which you dissent?—There is one about the Medical Faculty. I am one of the few who think the Medical Faculty should not be confined to a certain class of persons, but that all those who are called Medical Professors ought to belong to it. I believe a memorial has been given in to the Commissioners to that effect.

Is it a memorial which you gave in, and to which you adhere?—Yes.

Have you anything to add to the suggestions which are offered in that paper?—Certainly: in that we only gave in our claim, but we did not enter into a discussion of the merits of the question. What we felt was this: the Medical Faculty consists of six Professors; there are three others, Mr. Jamieson makes four; there are Dr. Christison, Professor of Medical Jurisprudence; Dr. Ballingall, Professor of Military Surgery; Mr. Jamieson, Professor of Natural History, and myself; and we felt that we were quite kept in an inferior station upon all Medical questions. For instance, if a question were referred by the Senatus to the Medical Faculty we were not consulted about it, but the Medical Faculty reported upon it, and the other Professors were not supposed to be very well acquainted with it, though they were disposed generally to concur with the report. The Medical Faculty consisted of the number of six; and in that way we always felt that we had very little weight in their deliberations, though, from our situation, and professional intercourse with Medical people, we suppose ourselves equally qualified to judge upon all those points.

Do you mention this with reference to the addition of Chairs you have named to the Medical Faculty?—Yes.

Are you Regius Professor?—I am.

In the statement to which you have alluded, you have stated that it is contrary to the practice of other Universities to exclude these Chairs from the Faculty; can you point out any other University where they are added?—I am not so very well conversant with other Universities to be able to point them out, but we understood it was so: the gentlemen who drew up that statement are more connected with those points.

It is stated that that is among the causes why some of these classes have been so much neglected by students of Medicine?—That is what some of the gentlemen thought, that some of the classes are not attended, and they are not recommended by the Medical Faculty. As to my own class, it is more numerously attended than the class of Clinical Medicine; it is going on as prosperously as Mr. Allan and I would wish; but it would be more attended if it were protected: however, that is a matter of consideration. Some of the other Professors are very poorly attended. I know they explain the matter themselves, and they thought the gentlemen were so fully occupied by attending other classes that they were prevented from attending theirs.

How long has your Professorship been established?—Since the year 1803.

With the exception of the matters referred to in this document, are there any other points in which you disagree with the answers given to the questions sent to the Senatus Academicus?—I do not recollect exactly; there are so many of them: I do not remember any specially that I disagree with. I read them all over.

Have you any suggestions to offer with respect to the state of the University generally, or as to its Discipline and Course of Study?—What occurred to me was, that it would be an improvement if the lectures upon Anatomy and Surgery were separated: I would consider that as an improvement. I believe I am not singular in that opinion.

Would you propose that the Professor of Surgery should be a practical Surgeon?—Most unquestionably. I do not see that it can be so well done unless the Professor be a practical Surgeon.

Are there any other suggestions which you have to make?—Yes; I was going to state that it appears to me, from the nature of the profession, that it is very much a practical one, and the education should be as practical as possible; and I conceive it would be of the highest importance that the gentlemen should have the advantage of Practical Anatomy and Practical Chemistry, and of the Clinical Lectures, both Medical and Surgical, as they come to be the fundamental and essential points, and would make them the best qualified to exercise their profession. It appears to me Practical Chemistry and Practical Anatomy are auxiliary classes. I do not think they could well be properly taught by the Professors themselves; for they would occupy too much attention, and would be too much drudgery: the drudgery of attending a dissecting-room exceeds all belief. They are perfectly well taught by the Fellows of the College of Surgeons. There is one dissecting-room in the College, and there are four dissecting-rooms taught by Fellows of the College of Surgeons, and the Fellows of the College of Surgeons have begun to teach Practical Chemistry.

Would you enjoin attendance on those classes on Medical Graduates?—That is a difficult point. My view was that the gentlemen should be particularly examined upon them; and perhaps they should be enjoined to attend them. I cannot conceive that a gentleman can be well informed in Anatomy and Chemistry without putting his hand to them, and seeing the things himself. Mere lectures are insufficient to give that knowledge which is requisite for the exercise of their profession with certainty and advantage.

Would there be no difficulty in enjoining attendance on Practical Anatomy?—I cannot answer that: I am not a teacher of Anatomy.

Will you have the goodness to pursue any suggestions you may have to make with respect to the Course of Study in this University?—I would certainly think it of great consequence that the students were better informed before they begin their Medical studies. I know that from my own situation: as my father was Professor of Natural Philosophy, I attended to that subject more early than is generally done. I have found the very greatest benefit from it during the whole of the latter part of my life. I consider it as in a manner essential to be well informed of it. A student cannot so well understand the economy of the human body as one who is sufficiently acquainted with the general principles of Natural Philosophy.

University of Edinburgh.

Professor Russell.

31 October 1826.

Do you consider that a previous knowledge of Natural Philosophy and Mathematics is essential to any person who proposes to practise Medicine?—Certainly I do.

Are there any other suggestions you have to offer as to the previous education, either for the highest branches of the profession or the more ordinary ones?—I would speak of Practical Chemistry as being necessary, and Practical Pharmacy, which is included as a branch of Practical Chemistry. It is taught at present by a gentleman under the superintendence of Dr. Hope; and it has begun to be taught out of the University by Fellows of the College of Surgeons and Physicians. It is plain, that with such a numerous attendance as Dr. Hope has, a Professor would not have time to conduct a course of Practical Chemistry himself.

Are those lectures on Practical Chemistry given under the authority of Dr. Hope?—In the University they are. As to the advantages attending Clinical instructions of every kind, it would require a regulation of the Hospital to make them complete: it would be a great object if there were more connexion; but, indeed, that has been mentioned in the paper to which I have referred.—[*The Memorial of the witness presented to the Commission read.*]

Are you both a Clinical Lecturer in the Infirmary, and a Professor of Clinical Surgery?—Yes.

Are those situations naturally combined?—No; I could easily explain the manner in which they came to be united in my person.

It was from special favour to you for long and distinguished service?—It was conferred upon me by the Managers of the Royal Infirmary.

In the event of your decease would those two situations be separated?—They would necessarily be separated. The Professor of Clinical Surgery has no title to enter the Hospital as Professor of Clinical Surgery: indeed, the regulation of the Managers is, that the two attending Surgeons are expected to give Clinical Lectures, and I am put in as one.

In the event of a separation of those two situations, in what manner could the Professor of Clinical Surgery perform his duty?—I do not know that he could do it unless he were provided with patients in an Hospital; it would be necessary to have some arrangement of that kind.

Would it be necessary to connect that Professorship with an attendance upon some Hospital?—Yes, it would.

Are the Commissioners to understand that it is your opinion that it would be of great consequence that some such arrangement should be made at some time or other?—Certainly it is of great consequence that the Professor should have an Hospital; for this reason, because a Surgeon who is only four years in attendance may not find it worth his while to take the trouble of making lectures; and the fact is, that I went on many years without any assistance. I think it is about 12 years since the last arrangement was made; and till Mr. Allan began to lecture along with me, two years ago, none of the Surgeons who had a right to lecture would undertake the duty; so that if there are to be Clinical Lectures upon Surgery (and you find by the report of all Medical people that Clinical Surgery and Medicine are a most useful instruction), it is of great consequence that there should be a permanent lecturer; and the more he is employed about the Hospital so much the better. There is one thing of consequence which I should mention, namely, the opening of the public Museums to the students. There is one to be opened in the University in December, and there is one opened, which the College of Surgeons have been at the expense of £6,000 in procuring. It has been opened to the public, and has contributed very much to support the character of the Medical School; but it will not supply the want of subjects: it is a very useful auxiliary to illustrate particular diseases, and is useful to the students in general.

Will you be good enough to assign the reasons why you think a permanent lecturer a more beneficial institution than allowing Surgeons in the Hospital to lecture?—It is a different trade. A man may be an excellent practitioner, he may have had a great deal of study, without having learned the mode of communicating his information; and, unless he has an object in it, none of the Surgeons might think it worth their while to take the trouble and risk of coming forward as a public lecturer.

Why does Mr. Russell think that the establishment of a permanent lecturer would be better than a rotation of lectures by the different Professors of Surgery in the University?—Because the permanent lecturer will turn his attention more completely to the subject; his mind will be exerted continually upon it, and he will be improving himself; nothing is so improving, as I know from experience, as the giving of Clinical Lectures.

Would not the same observation apply to the lectures upon Clinical Medicine?—I did not attend to that so much; very likely it might, to a certain degree. I know, in my own case, that, though I attend the Wards regularly, the attention which I pay to cases when I am bound to explain them is different from the attention I pay to understand the case when I merely walk the Hospitals.

Do certain students receive gratis tickets from the University of Edinburgh?—The Medical Students do not; some of the classes do not pay at all; they do not pay at the Divinity Hall; the Church History, and some classes of that kind, do not pay.

Are there certain young men attending the Hospitals who have the privilege?—We grant them tickets, but it is no privilege. We are in use to grant gratis tickets to the clerks of the Royal Infirmary; that was formerly the case at the Medical Clinical Lectures, when they were delivered at the Hospital; when they were removed to the College the Professors suspended that right, and every person I have spoken to on the subject is of opinion that the change has had a good effect.

Is it not the understanding in all the Faculties that no Professor takes a fee from the son of another Professor?—Yes; I have stated that is understood perfectly, but they form a very small proportion of the Students. I do not think I have given a dozen of tickets for years.

Would it not be for the advantage of Students to see the practice of different Surgeons in

the Clinical Wards?—I think it would be of advantage, before a Student had any variety, that he should know one system well, and have some fixed principles in his head, which I would make him acquire by attending one man at once. After a student is well qualified in his own country, and goes abroad to see the practice of other countries, he then knows what he has to observe; but if he sees too great a variety at first he would scarcely form any fixed system of opinions. It is a point I have not attended to so much as other medical subjects.

Has Mr. Russell any other suggestions to make with respect to the education of Medical Students?—Nothing particular occurs to me that is connected with it; there is one thing I would mention,—I do not know if it belongs to University education,—I find all Surgeons consider drawing as a very useful accomplishment. I mention it incidentally. I myself was fond of drawing. I amused myself in that way, and I have found it of the greatest use in giving instructions. I find that Dr. Monro adopts something of the same idea; and I find many gentlemen at the Infirmary who regret that they do not draw. There is a great School of Surgery begun in London under Messrs. Wardrop and Lawrence, who wrote down to me to know the principles on which I made these illustrative drawings; for they thought they might illustrate all the doctrines of Surgery by them.

Do you know if there is a class for the purpose of teaching the Art of Drawing for purposes of Anatomy in Paris?—I do not know that there is, but it is not necessary; if one knows the general principles of Drawing, he can at once draw any subject he likes. I was going to mention another subject: I think a Physician should be a man of high character, and very much respected in society. The Degree was more esteemed here 50 years ago; the Members of the College of Physicians were looked up to as quite a superior class of men to other practitioners. Now I look on that as a matter of great consequence, and therefore I think it of much importance for the credit of the University, and the profession in general, that they should all be highly qualified; and therefore they should be advanced farther in life before they get a degree. For these reasons there has been a question agitated and mentioned in the Senatus Academicus, whether there might not be two ranks of degrees? Now, with respect to Scotland, I can speak very accurately as to the mode in which the practice of Medicine is carried on; but with the remuneration which the practitioners receive they could not afford the expense of a very long and tedious education. A good many years ago, when Dr. Finlayson was alive, and who was very much the leader of the Church, and understood every thing about it, I had a conversation with him, in which he admitted that a Country Minister was a much better situation than a Country Surgeon. Since then the situation of the Clergy has improved, and that of a Country Surgeon has rather fallen off, for two reasons: first, the Act which was obtained making £150 the minimum of the allowance for the Clergy, and then it has happened that the number of practitioners in Scotland has increased to such a degree, that you may say the country is overstocked with Country Practitioners; the consequence is, that none of them make anything considerable. This exists to a degree that I could hardly believe. I had to go to St. Mary's Isle, the seat of Lord Selkirk, and I found settled at Kirkcudbright a gentleman who had been there eight years: when he first settled there was not above one or two in his range of practice; when I was there, there were about twenty. There was another young man who was bred with me: he came home after the war, he had been at Waterloo, and he settled at Melrose; but he found that in every village there were many Practitioners, and thought he had much better join the Army; and he preferred going to a dangerous station upon the coast of Africa rather than remain here, and there he died. And I can say the remuneration in many cases is so small, that I have been applied to by most respectable practitioners, in very considerable county towns, to explain their situation to patients, that they could not afford to remain if they did not receive more liberal encouragement. Then another thing should be attended to: this degradation of the Profession, by its being overstocked, will increase, and produce a great evil in a short time. The country is well provided with practitioners at this moment, in consequence of a number of retired officers in the army and navy, who retire upon a pension of about £100 a-year, and if by their practice they can make £100 or £200 more, they can go on very well; but if this generation of Practitioners were to become extinct, I do not see what would become of the country if more encouragement is not given. There is no conception of the difficulty which exists to get respectable persons to settle. In Wigton Lord Galloway applied to Mr. George Bell, and Sir John Heron Maxwell applied to me, to know if we could not get a person well qualified to settle there, which we could not procure.

From what has fallen under your observation, do you think that at present those who enter the Medical profession could not afford the expense of a longer continued course of education in literature and science?—I think it doubtful: that is a question; but if I am permitted, I would tell how the fact is according to my conception; though the qualifications are made higher for those who are entering the army, yet there is no want of candidates there.

Does the evil seem to be, that the supply is infinitely beyond the demand?—Yes, it is so far; but there is an encouragement given for people of very inferior qualifications to settle.

Are you not of opinion that the number of Practitioners in the country is greatly occasioned by the diminution of the demand for them in the Military and Naval service of the country?—There is no doubt of it.

But, notwithstanding this great excess of the supply over the demand which exists for them, does the number of Medical Students continue to increase at the University of Edinburgh?—In general; they are not increasing this year, so far as we judge.

How would you attain the object which you think desirable of raising the qualifications of those who take the degree of Physician?—The only way of doing it is to have two ranks of degrees. If it would be thought proper to be done or not, is another consideration.

University of Edinburgh.

Professor Russell.

31 October 1826.

Do you mean to say there are a number of persons settled in the country who have the degree of Doctor of Medicine, and yet are not sufficiently qualified?—I would not say that they have all degrees of Doctor of Medicine.

Have they licences from the College of Surgeons, or some such qualifications?—They have qualifications, for they pass examination.

Is it your impression that country Practitioners are in general better or worse qualified than they were about 50 years ago?—I knew very little about them 50 years ago, for I was not carried out of town to see patients at a distance.

Or 30 years ago?—There has been great improvement in Medical education; there are more Classes, and perhaps better taught. One of the causes of the state of Medical practice is, that the Practitioners are not sufficiently respected by country gentlemen. Practitioners are often sent for from Edinburgh to a great distance, in consequence of want of confidence in the country Practitioners. The critical period of the case is frequently over before the Practitioner from Edinburgh arrives, or he is too short a time with the patient to be of much use to him. But if the country Practitioner received better encouragement, and were more trusted by the country gentlemen, the case would probably be better managed under the assiduous care of a resident Practitioner, than from the hurried visit of a Practitioner from Edinburgh. Distant visits put persons to a most enormous expense, which might be saved if they were more liberal, or gave more encouragement to the resident Practitioners.

May not that proceed from the high character in which Practitioners in the metropolis stand?—That should not exist.

Must it not always exist that the greatest talent will be found in large cities?—Yes; but not to so great an extent as to occasion the difference which I have known.

Would you recommend, that to qualify a gentleman to become a Doctor of Medicine, he should have a previous education of a higher sort than that which is now exacted from him?—Yes, I would; there is nothing at all exacted from him now.

Do you mean in the way of literature and science?—Yes.

What is it you would propose?—I think a gentleman should know Greek and Latin, as I have mentioned, and in general Natural Philosophy, connected with Mathematics. He would also be better for Logic and Moral Philosophy: the state of the mind sometimes comes to be treated of by Medical men. He would also be better for Natural History; that is as much connected with Medicine as Botany or Chemistry. I likewise think well of attending a Course of Medical Jurisprudence.

Do you not apprehend that to require such an extent of previous education would have the effect of deterring persons from coming here to take their degrees?—Why that leads to a question I cannot well answer; for if the degree is made higher, or a longer time is required to get it, no doubt it must diminish the number of the pupils.

Do you think that, provided those who did take the degree were of a higher class in point of attainments, it would be a misfortune to the country, or injure the reputation of the University?—No; I should think not, neither one nor the other. There is another point I may mention; there is a set of people here who go by the quaint name of Grinders; I think they are very useful and respectable men. These men are at present employed in a way that is not very serviceable. The way in which the thing is done is, that if a gentleman has not studied enough, or if he has been very idle, he gets a Grinder, who crams him with as much knowledge as he can hold for the course of four or five months, and teaches him to speak what he calls Latin; and, under this kind of tuition, he goes in and passes his Examination. Every body knows information gained in that rapid way cannot be the most accurate or permanent. It would be a matter of infinite consequence if these Grinders (who are many of them respectable and well-informed men) were placed upon a footing with the Private Tutors in the English Universities, and if those gentlemen who come here to study Medicine were put under the direction of these persons, who would tell them what books to read, and make their information much more regular.

Are the Commissioners to understand that those Private Teachers are by no means under the control of the Professors?—They are neither acknowledged nor known by the Professors as Professors.

Do you think it would be advisable that such a change should be made?—Certainly; for the Professors would then know whether the Students wrote their own Theses or not; but now they avowedly get these people to translate for them. These people have a regular table of fees for making translations.

By what means would it be possible to connect these gentlemen with the University, according to the existing system?—I do not know; it does not appear to me attended with any practical difficulty. They have all attended the University; many of them have degrees; some of them belong to the College of Physicians.

When the preparation under these Private Teachers begins with a view to the passing the Examination, is it within your knowledge that the Students do not pay the same regular attention to the Lectures as they did in the previous part of their studies?—I am not acquainted with the fact at all; I have heard of it.

Do you then consider that the Theses are any test of the qualifications of the Graduates?—It depends upon whether they are written by themselves; if they are, they are very good tests; some of them are very good productions. It might be of advantage if the Theses were in English; in that case they would not be involved in a language which is not so well understood, and in which their ignorance can be better concealed. Let them be put in English, and it will be an improvement.

Would it be of advantage if they were required to write something on the spot, and were put into a room for that purpose, and if the Theses were made much shorter?—It would be

University of Edinburgh.

Professor Russell.

31 October 1826.

an advantage if those gentlemen who intend to graduate were examined once a-year, or once in six months; it would be an advantage in that way, so that we could know more what they were doing. The Professors have a good deal to do; and whether we could impose more drudgery I do not know.

Would it be possible to introduce such a particular examination without an increase of the number of Examiners?—I do not see how that could be done.

What method would you recommend for ascertaining the literary qualification of candidates?—I do not know any other way but by subjecting them, as it is proposed in St. Andrew's, to an examination before they are allowed to enter the Medical Class. Some of these regulations take place in Ireland.

Suppose these Students were to come to this University to attend the Medical Classes, without having previously attended the Literary Classes here, would you, in that case, recommend an examination at the commencement of their Medical career?—Yes; I should think that very desirable, provided they were candidates for a degree.

Would you approve of that regulation for previous examination?—Yes, there are practical difficulties; and I do not say I know how to surmount them. In the next place the vacation is very long; and if by any contrivance it could be devised that the students should have their time more occupied in the vacation, it would be an advantage to them. It is a great hardship to gentlemen coming from America, or a distance, if they have a vacation for six months, although their time may be occupied by some Summer Courses, such as Botany and Natural History.

Would you think it an advantage if the Professors of Medicine gave Summer Courses?—There is one thing must be considered, that is, the labour of giving Courses, and how far a Professor may go without being exhausted. I think it will appear by the Report, in answer to some of the questions, that the Professors had given a great many extra Lectures. In that case they would have no extra lectures, but their regular ones longer continued, or with a subordinate course. There is another thing with regard to the crowded lectures, such as those of the Professor of the Practice of Physic, and the Professors of Chemistry and Anatomy. For instance, Dr. Monro gave eight lectures a-week at one time. If the student has three extra lectures to attend in a day it oppresses him very much, he gets tired of them, and they cannot have any good effect. I am satisfied the Christmas holidays are attended with disadvantage. Young people get habits of industry, and if they are broken in upon they do not always begin to study again as they did before.

Have you any other observations to make with respect to the course of study here?—I believe not.

In the letter which was sent by you and the other three Professors to the Commissioners, do you claim to be admitted to the privileges of the Faculty?—No, that was left open for discussion. When that question was moved by Dr. Hamilton, I said, as I have since, that I claim the privilege rather for my chair, and that nothing may be forfeited by my neglect; but for myself I do not want anything. What I claim is as to the privileges; I have no desire to participate in the emoluments to be received as a reward for the trouble of examination. The other question was left open for discussion. Some years ago I published a paper with my remarks upon the subject.

[*The witness laid upon the table copies of Remarks for the Improvement of Clinical Lectures on Surgery, published by himself in the year* 1824.]

You stated in answer to the 31st question, transmitted to the Senatus Academicus, that from some circumstances connected with your private lists, you must begin by giving the number of students that attended your class in the Summer Course of 1815; will you explain that statement?—The fact is, I lost them; but it appearing that there were some of them given for other years besides 1815, I would state I had them irregularly, and I gave them as I could.

Edinburgh, Wednesday, 1st November 1826.

The EARL of ROSEBERY in the Chair.

Robert Christison, Esq., M.D., Regius Professor of Medical Jurisprudence in the University of Edinburgh, called in and examined.

Professor Christison.

1 November 1826.

Are you Professor of Medical Jurisprudence in this University?—I am.

Have you seen the several queries which have been sent to the Senatus Academicus, and the answers which have been returned to them?—I have.

Do you concur in the various answers which have been given to these queries?—Yes, I do concur, with the exception of such variations as may be gathered from the subsequent remarks which I have to make; but they are trifling I believe.

Generally speaking do you acquiesce in them?—Generally speaking I acquiesce.

Do the remarks which you are desirous of making refer to the state of the University generally?—They refer to the subject of Medical Education, and likewise to my own department more particularly.

Previous to entering upon those remarks, are there any suggestions you would wish to offer to the Commissioners respecting the education or discipline of the University, independent of the Medical Faculty?—No, I do not think there are; I believe I concur very much with the opinions entertained by other Professors, who are much more qualified to judge of these matters than I can be.

Have you had an opportunity of seeing some notes, which were referred to by Dr. Alison (Dean of the Faculty of Medicine), before the Commissioners, and which he stated to have been either read or alluded to before the several Professors in the Faculty of Medicine?—

University of Edinburgh.

Professor Christison.

1 November 1826.

No, I do not belong to the Faculty of Medicine; that is one of the subjects upon which I would wish to say a few words.

Have you not seen those notes?—No, I have not.

Have you any observations that you are desirous of offering to the Commissioners with respect to the general education and discipline of the University?—Nothing whatever, except that I wish to state my concurrence with the opinions I have understood to have been stated very generally by the Professors with regard to the general jurisdiction of the Senatus. I conceive that, with the exception of the articles of patronage, fees, and funds, in no other body can the jurisdiction be so well vested as in the Senatus Academicus; but there ought to be a power of appeal from them, and that certainly not to the Town-council, but to some such body as a Chancellor's Court.

By a Chancellor's Court, do you mean that there should be a Chancellor and Assessors appertaining to it?—I cannot say that I have turned my attention particularly to what ought to be the constitution of this Court, and I do not pretend to give my opinion on that matter; but I should conceive the appointment of a Chancellor, Vice-chancellor, and Assessors, is the mode in which such a Court would be constituted.

Have you turned your mind to the consideration of the question, in whom it would be best to vest the nomination of the Chancellor, or the election of that officer?—I cannot say that I have considered it particularly, but I should think it might be very properly vested either in the hands of the Crown, or in the hands of the Senatus itself.

Would there not be a great objection to vesting it in the Senatus, if the Chancellor's Court became the controlling body over, or a Court of Appeal from, them?—If the Chancellor's Court were to be appointed *pro re natâ* to try any special question, it might be wrong if the Senatus had any such power of election; but if the Chancellor's Court is to be a standing court for trying such questions as may occur, I do not conceive there could be such an objection to it. At the same time I must say that a number of my colleagues believe we should keep out of the Senatus Academicus, as much as possible, all questions of election; and in that idea I concur.

You have stated, that, with certain exceptions, you would vest the whole regulations of the University in the Senatus, subject to the control of this Court of Appeal?—Yes; but I would designate those as being regulations confined to the internal discipline of the University.

Would you wish, therefore, that the powers of the Senatus Academicus should be clearly defined?—Most certainly: by all means.

Would you wish to see the doubts that at present may be supposed to exist as to the powers of the Town-council completely set at rest?—Certainly.

Would you recommend that that body should be excluded from making any internal regulations respecting the education or discipline of the University?—Certainly.

Have you any other remarks to offer upon the general question of the University at large?—I believe I have no more.

Would you now have the goodness to make any observations you are desirous of stating to the Commissioners respecting the Medical Department?—I would do so if I might be allowed to refer to some notes: I should wish to be as short as possible. The matter I mean to refer to, relative to Medical Education, is the change projected by some in the Medical Degree. I presume I may refer to the opinions expressed by various individuals of the propriety of raising the degree given at Edinburgh much higher than it is now, by requiring a previous education in Arts and Philosophy, besides an improvement in the medical part of it. Now, I confess, this might be very desirable; but, at the same time, it would be right to consider, in the first instance, whether such a degree is conformable with the state of society as to medical practice at present. I believe the Commission will find upon inquiry that almost all the physicians in good practice in Edinburgh, and other great towns in Scotland and England, with the exception of London, have commenced as general practitioners; that is to say, as family practitioners, practising indifferently Physic and Surgery, and of course on a much smaller fee than proper physicians usually receive. In consequence we can trace, I think, throughout the whole country, a gradual tendency to assimilation between Physicians and Surgeons. I may mention one fact which, however, I dare say, has been laid before the Commission already, showing this tendency and the necessity of it, namely, that in Ireland, by an Act of Parliament, Surgeons, as general practitioners, are the persons who alone are entitled to be made the Medical officers of the prisons; that is a very serious injury to those who practise as general practitioners, with the title of Physician. So much are Physicians and Surgeons now approximating in the nature of this practice, that, as is consistent with my knowledge, the young physicians of this place do now all act as general practitioners; and, unless they do so, I am satisfied they have not the slightest chance of coming into practice at all. I consider the system now to be very deep-rooted; and I question very much whether any alteration we could make in our degree would get the better of it. If the Commission consider the way in which true physicians are thus bred, it is the most rational way, perhaps, in which they can be made. There is no education which can possibly qualify a man so well as that which he undergoes while he serves several years as a family practitioner, seeing his patients at all times, and throughout the whole progress of their diseases. This being the case, therefore, I consider, if we wish to retain the number of our graduates, and by consequence the numbers of our students, our degree should be made to meet the state of society; and therefore it should qualify the graduates to be general practitioners. The question then, with me, would come to be, whether a very high degree, such as some propose, would not be exacting too much, considering the very small return that would be received by such graduates as general practitioners, during a considerable course of years, for the great additional expense of their education. So much am I satisfied that a high degree would not be much called for, that I

University of Edinburgh.

Professor Christison.

1 November 1826.

am sure our numbers, both of students and graduates, would diminish very considerably; at the same time I concur in thinking, with a number of my colleagues, and a great number of medical people generally, that a higher degree might be given by this University, provided care be taken that the inferior degree shall retain its present value in the eye of the public, and that it shall qualify practitioners to practise as they do now.

In reference, however, to this inferior degree, as now given, I have to suggest that I think it is susceptible of some improvement. In the *first* place, I think there is too little attention paid to the Surgical part of education. I know the title conferred by our University is that of Physician; but, at the same time, throughout England and Scotland generally, nay in this very city, persons practise, as I have already said, upon our degree as general practitioners. I may mention I am not a Surgeon; I have nothing but the degree of this University; and I practise the minor operations of Surgery just as well as I do strict Physic. Before mentioning any special alterations I would wish to say a word or two as to the state of our degree, in reference to the degrees of other countries. I know it has been thought by many that our degree still stands very high on the Continent. It does still stand very high; but I question very much if it stands so high in relation to the degrees of other countries as it once did; and simply because it has not, like the degrees abroad, followed the progressive improvements in medical science. I am well acquainted with the state of the medical graduates of Paris, and likewise with the state of the medical graduates of some of the German Universities. I have been at Paris, and I know many of the German graduates; and I must say, that, in regard to scientific acquirements, they are upon the whole a-head of our students. In regard to pure practice, however, and common sense, I may say that our students are a-head of them. By pure practice, I mean that privilege which qualifies students, in short, to be tradesmen; but, as men of science, certainly our graduates are not upon a par with the graduates of Germany and France; I mean as to medical science.

In point of practice,—as Physicians who are called in to sick persons,—do you think ours are superior to theirs?—I certainly would rather trust my own health in the hands of an Edinburgh graduate than in those of a Parisian. The departments I allude to, as those in which the Edinburgh graduates are inferior to the graduates of the Continent, and particularly Paris, are Physiology, Morbid Anatomy, and Chemistry, but particularly Physiology and Morbid Anatomy. There is likewise another, as the Commissioners will of course understand from my Memorial—I mean Medical Jurisprudence. If I am permitted I shall now mention the improvements which I think might be made in the course of education for graduates here. And, first, with regard to the preliminary education in Arts and Philosophy. Though I am certainly one of those who think that a preliminary education in a University, in Arts and Philosophy, cannot be safely exacted of graduates in Edinburgh, I am satisfied, nevertheless, that better means might be taken for ensuring a little higher knowledge in those departments. As to Latin, it is needless to say anything, for every medical man must know it; and the question comes to be, What means are to be taken for ascertaining their knowledge of it? Upon that subject I have nothing to say, for the Medical Faculty has referred to it, as well as I could possibly do, perhaps much better. With regard to Greek I must confess I have my doubts, and I shall mention my own case, as I believe it is that of most graduates who have paid attention to the language. I studied Greek a little for three years at the High School, and a good deal for three years at the University. I have had so little occasion to apply this knowledge, that, amidst the multitude of other more important pursuits, I have almost entirely forgotten it. If languages are to be insisted upon, and if any desire exist to require more than the Latin, I think it of much greater consequence for a graduate to know something of modern languages, particularly the French, and perhaps the German. There is not the least doubt that the occasions upon which a graduate would find benefit from languages, must be more frequent in the case of those two languages than in the case of Greek. I consider that no man who studies his profession scientifically ought to be ignorant of the French language.

Do you think, of the modern languages, that French is more important than German?—I think the French are further forward in many departments of Medical science than the Germans; at the same time there is a great deal of information to be got from works in the German language. In my own department they are far a-head of every other country. This is all I have to say in regard to preliminary education. Upon the proper Medical subjects I have likewise a few words to say; and, first, as to Anatomy. I believe I concur in opinion with almost every one you have heard, who has not some special interest in the question, that the subjects of Anatomy and Surgery should, as soon as possible, be lectured upon by distinct Professors. They are two subjects of far too great importance to be lectured upon by a single individual.

Will you now have the goodness to proceed with any general remarks you may have to make upon the subject of Chemistry?—Of course the Commissioners will understand that anything I have to say on that subject must not be taken as meaning anything disrespectful to the present Professor of Chemistry, to whom the University is most deeply indebted for the popularity that he has given to the science, and for his liberality in a public and private way; but I think a little more attention might be paid, as in the case of Anatomy, to practical instruction in Chemistry. Dr. Hope has lately encouraged his assistant to give practical instruction in this branch; but I confess I should like to see something more, and that there should be not only encouragement given by the Professor himself, and by the University, to the study of Practical Chemistry, but likewise encouragement given to the better students to prosecute their studies further. This view has been suggested to me by my visit to Paris, where I found the graduates much better acquainted with Chemistry; and this arises from the immensely greater opportunities they have of practical instruction. In Paris the laboratories of the Professors of Chemistry are open to a certain number of students. These laboratories

University of Edinburgh.

Professor Christison.

1 November 1826.

are pretty numerous, and there the superior order of the students engage in the very highest departments of Chemical investigation—even in the department of discovery.

By graduates at Paris, do you mean Medical graduates?—Yes, Medical graduates. Besides the laboratories of the Professors of Chemistry, almost all the Apothecaries (who are not like the Apothecaries in England, but properly Chemists, and many of them Chemists of great celebrity) have laboratories open for the instruction of gentlemen. I availed myself of this opportunity when in Paris; and I found in the laboratories of one of these *Pharmaciens*, as they are called, that I had the complete command, for a fee of £4 a month, of a perfect apparatus in all the very highest departments of Chemistry. If encouragement of this kind were given to students here, it would be of great consequence. Few might avail themselves of such an opportunity, but I am satisfied some would; and I know if any such opportunity had occurred when I was a student in Edinburgh, I should most certainly have availed myself of it. It is only within a few years that any attempt has been made to give the students instruction in Practical Chemistry. It was begun by Dr. Fyfe, and has been continued by him, and adopted by Dr. Turner, and likewise by Dr. Hope's assistant. I consider, if some means were fallen upon to enable the advanced students to study the higher departments of Practical Chemistry in the University, it would be of very great importance. I do not know whether it is owing to the want of practical instruction in Chemistry, or some encouragement to the superior class of students to enter into the path of discovery; but certain it is, that if, unfortunately, the present Professor of Chemistry were to be lost to us, there is but one man in Scotland, and hardly one in Edinburgh, who, in the public eye, would be accounted worthy of being his successor. This being the case, I think it well becomes the Commission, and the University generally, to consider what has been the cause of it. There is a great deal of general chemical knowledge in Scotland, but there are very few Chemists.

Do you rather ascribe that to the want of Practical Chemistry being so largely taught in the University as you could wish?—Of course it is impossible for a student to pursue Practical Chemistry alone; the expense of procuring apparatus is enormous, and there is no way in which it can be pursued but under the patronage of a Professor or a Lecturer.

Was anything of the kind you recommend done in the time of Dr. Black?—I am not aware that there was.

Are there very few of the keepers of laboratories, or Chemists here, who keep chemical apparatus, or prepare many of their own drugs?—Very few.

Do the Apothecaries at Paris practise at all?—Not at all.

Are they entitled to do so?—They are not. So far as regards their trade, they are strictly Chemists and Druggists, such as the London Chemists and Druggists.

Is it frequently amongst them that the science of Chemistry in Paris is taught to the utmost extent?—Almost universally amongst the better order of them.

Are the several editions of the Journals conducted by them?—Yes; there is a *Journal de Pharmacie*, and another, the *Journal de Chimie Médicale*, conducted by the same gentlemen. The gentleman with whom I worked is one of them,—Monsieur Robiquet.

Are they manufacturers also?—Some of them are. This gentleman has now become a manufacturer. They all make a number of their own medicines, at least of those which are difficult to make.

Are they engaged in Manufactures for the purpose of the Arts?—Some of them are. I do not know if I have made myself clearly understood, but I shall be if I just state how matters were conducted in M. Robiquet's laboratory. He gave instruction in Practical Chemistry to a class of 6, 7, 8, or 10; besides this he had 7 or 8 young men, who were working in the region of discovery; and those researches which were made by them, with his assistance, were published by himself. It is this practical department which I consider it would be of great consequence to introduce into our University.

Must not such a system result from the efforts of individual enterprise and individual capital, rather than from any regulation?—Yes, regulations are out of the question.

Would you propose that there should be a chair of Practical Chemistry, or what method would you recommend to attain the object you have in view?—There is a method pursued by Dr. Thomson, Professor of Chemistry at Glasgow. I am not aware of the particulars; but he does give encouragement of this kind, and has several young men working in his laboratory; some in the lower department of Practical Chemistry, and some, I believe, in the highest.

Do you think that if the Professor of Chemistry were to encourage a certain number of the best of his students in such undertakings, that it would be very beneficial?—Yes; but of course regulations are of no use in such a matter: it could only be opened to a few of the best students.

Would you annex additional assistance, with a view to the prosecution of Practical Chemistry, to the Chemical Chair, in some way or other?—Yes.

Was the chemist at Paris, to whom you referred, a person possessed of Medical knowledge?—Very little.

Do you not think that, for the benefit of students in Medicine, it is desirable the Professor of Chemistry should always be a Physician?—It is desirable that the Professor of Chemistry should always know Physic; I mean that it is not absolutely necessary that he should have the title of Doctor of Medicine, but he must be strictly acquainted with the relations of Chemistry to Medicine, and should be a person well educated in Medical science.

Are there any other observations you would wish to suggest?—The next subject is Clinical Medicine; and I concur entirely with the present system. I do not think any system is so well adapted to teach so large a class of students Practical Medicine, as the present system pursued at this University. The proposition of some, to attach the course of Clinical Medi-

University of Edinburgh.

1 November 1826.

cine to one Professor, I certainly do not approve of. There is one peculiarity in Edinburgh graduates which I have remarked, comparing them with those of other places, and which peculiarity I am disposed to trace very much to the present system of teaching Clinical Medicine; namely, the total freedom from the trammels of authority. I believe it would be difficult to say to what particular school of Medicine Medical graduates belong who are educated at Edinburgh; for they see so many kinds of practice that they are led to think for themselves at an early period.

You think that is an advantage which would be lost if the lectures upon Clinical Medicine were confined to one Professor?—I think nothing would be more likely to destroy this advantage than the teaching of Clinical Medicine being vested in the hands of one Professor, more particularly if that Professor were a man of great eminence.

Is it not quite possible that the persons who are entitled to give lectures upon Clinical Medicine may have had very little experience in practice?—It is quite possible, unless the Patrons, in electing Professors, look to this among their qualifications. There is one difficulty with regard to the Professors who are likely to take their turn as Clinical lecturers; I believe there is no absolute necessity for any Professor to lecture on Clinical Medicine, and there may not always be a sufficient number ready to take up this department.

Is it not a fact that some who are entitled to take up a course of Clinical Lectures do at present decline?—Dr. Monro, for one.

Would you apply the observation you have now made to Clinical Surgery as well as to Clinical Medicine?—Yes; if it were possible to put Clinical Surgery on the same footing it would be desirable; but that is difficult on account of the want of a sufficient number of Surgical Professors in the University.

Supposing a separate Professorship of Surgery, were instituted in this University, do you think it would be desirable that the system of teaching Clinical Surgery should be participated in by all the Surgical Professors?—I think it would, if it were as in Paris, where there are several Professors in the Surgical department; such as the Professor of Anatomy, of Operative Surgery, and some others; if there were several Professors of that kind it would be very proper. As it is, we have only the Professor of Military Surgery, and the Professor of Clinical Surgery.

If there were a Professor of Surgery, would it be necessary to keep up the Professorship of Military Surgery?—On that point I do not consider myself very well qualified to judge. I am not well acquainted with the peculiarities of it, not having studied the subject much. I should think strict Military Surgery but a limited field.

Do the lectures which are delivered by the Professor of Military Surgery relate to the Surgical art generally, or more exclusively to those casualties to which military men are exposed?—I have understood the present Professor directs his attention as much as possible to the peculiarities of cases in Military and Naval life; at the same time, it is absolutely necessary for him to give a great deal of discussion upon General Surgery. There is likewise a valuable department which he adds, I mean the diseases of hot countries, which cannot be so well taught by any person as by one who, in his youth, has been in those countries, and who lectures on the subject of Military Surgery; for the other Chairs under which those subjects could be brought are already quite overloaded.

Are there not several branches of the Surgical art, looking at it generally, which the Professor of Military Surgery might leave out of his lecture without impropriety, such as Lithotomy, and other branches of that kind?—Lithotomy need not be taught in that class; he might give his own views of the general principles of Surgery; and these, united with the Medical and Surgical specialties in the case of Military and Naval service, are, I should suppose, quite sufficient to make a most excellent course.

Would such a course, though excellent in itself, be sufficient as a course of Surgery generally?—No; for if you lecture upon the whole of Surgery, and also upon the military specialties of the Medical as well as Surgical department, you would make a course much beyond the present one.

Would it embrace all the subjects which a course of pure Surgery ought to take in?—No. Of course, it must be understood that it is quite possible for the Professor of Military Surgery to introduce everything relative to General Surgery; for whatever is Military Surgery is General Surgery, and *vice versâ*.

In your opinion, does the existence of the Chair of Military Surgery supersede the propriety of the institution of a separate Professor of Surgery?—No.

You think it would be better for the University to have the two Chairs?—Yes.

Do you think the Professor of Military Surgery is entitled to lecture upon those operations which are necessary in certain states of the female system?—I believe the Professor of Military Surgery has very little to do with these; at the same time, many Military Surgeons may, and do, practise those operations.

Are they understood to have any charge of the health of the wives of the soldiers?—Yes. When they go to the East Indies, of course, Military Surgeons are practitioners in the case of civilians whom they may meet, male or female.

Has Dr. Christison anything further to observe on the subject of Clinical Medicine?—There is another point, which is correlative only—the possibility of procuring, under the system of Clinical instruction, proper Hospital reports. I consider it a great loss to science in this place that, while a system of Clinical instruction is kept up upon such an admirable foundation, and since reports are kept of all the cases in the Hospital, and most of them very full, I consider it a great loss indeed that these reports are not published in some shape or other. I do not say how this should be done, but it would be well, if possible, to call the Managers' attention to the subject, as I know it has been called repeatedly before. It would be of great

University of Edinburgh.

Professor Christison.

1 November 1826.

consequence indeed; for, with regard to the public, the valuable cases that occur here are almost lost, for very few of them have ever come to publication. I know it is a difficult matter, but I do not conceive it one that is insurmountable. That, however, is not directly connected with the University.

Would you be desirous of enlarging the number of Clinical Lectures, or the number of those who lecture on that branch of Medical Science?—I should think it would be a good plan to have two Clinical courses; for the students attend in such numbers as to be a great inconvenience both to the Professor and to each other, and, no doubt, to the patients also. If the Clinical course were divided into two contemporaneous courses it might be desirable.

Do you think that the number of courses of Clinical Lectures, which students are required to attend, is sufficient for the instruction of such as have had no previous opportunities of witnessing the practice of Physicians?—That is a question very difficult to answer, for a student can hardly see too much of Clinical practice; but when it is considered that he has many other objects to attend to of nearly, if not quite equal importance, I think there is as much attendance now as can be well exacted; for, the Commissioners must be aware, that this particular subject of study requires a very great deal of time to be devoted to it to study it well.

Are there any other general observations which you are desirous of making?—Clinical Surgery should, at all events, be put so far, I think, upon the footing of Clinical Medicine, that it ought to consist of a course by the Professor upon cases of his own, upon which he gives reports and lectures, just as the Clinical Physicians do. The course should not consist of lectures upon the patients of other people.

Is it the practice at present that the lectures are given on the patients of other people?—They are the patients of the Ordinary Surgeons of the Hospital; their cases are lectured on by Professor Russell, who is not their Surgical Attendant, but merely a Consulting Surgeon of the Hospital. The lectures of the present Professor are, I am satisfied, just as valuable as lectures of that kind can possibly be made. But it is impossible that they can be so valuable as a course consisting of reports given at the bedside, and lectures upon those reports, as in the case of Clinical Medicine.

Would you, therefore, wish to see introduced, with respect to Clinical Surgery, the same principle of regulation which now takes place with regard to Clinical Medicine?—I confess I should wish it very much.

The next article I have in my list is the subject of my own Chair; but before proceeding to that I may mention a few other suggestions I have to make. The first is with regard to the finishing of the Courses of Medicine. I am not aware what is the custom now, but when I attended the classes there were two courses which were not completed in the session, the course of the Practice of Physic, and the course of Materia Medica. I consider it is of great importance that every Professor should get through his course every session. I conceive, for my own part, that I must very much and repeatedly have missed those lectures of Dr. Gregory, which he did not deliver in the session of my attendance, and which it was impossible for me to attend the next year, in consequence of other pursuits; I have no doubt students must often encounter inconveniencies on this account. The next subject is as to Examinations: I think examinations of students in classes, under proper restrictions, would be very desirable.

Do you mean previously to taking the Medical degree?—Yes, previously to taking the Medical degree; their examination, merely as students of the class, would be very desirable, but it must be under certain restrictions. Some have proposed that only those should be examined who give up their names to the Professor as being willing to undergo examination. Perhaps the contrary of this rule might be resorted to, namely, that all should be understood to consent to be examined who did not give up their names to the Professor as being unwilling to be examined. There are a number of persons, advanced in life, who could not certainly with propriety be examined in a large public class of young men. With regard to examinations for degrees I confess I have my doubts of the value of the present system. I have known students pass whom I certainly did not consider very well qualified. I do not know if the Commissioners have been informed of the method of examination pursued in practice at Paris, but I consider it a very good one. It throws, indeed, a much greater burden on the shoulders of the Professors. The examinations are divided into four stages, with the interval of a month between each, but at the close of all their studies. At the interval of a month before each examination the students are told what sciences they are to be examined on; there are three or four examinations; the student is much better able, in this way, to look back through his notes to refresh his memory, and to come prepared for the individual branches of examination; whereas, at Edinburgh, a student is expected to come prepared in all the immensely varied departments of Medicine. I cannot conceive how the students get on as they are said to do.

Is not the latter mode a greater test of the student's skill, when he does answer, than by having the subject given to him before-hand?—It may be a better test of his promptness, but not of his actual knowledge. In order to answer fluently, the candidate must take, soon before his trial, a general survey of the subjects of examination, in order to fix in his memory the minute parts which occur in the course of it. This he can easily do if the subjects are taken up successively and at intervals. But it is difficult or impossible if he has to undergo examination on the whole range of the Medical Science at once; at least, I remember I found it so, and accordingly gave up altogether express study for examination for more than a month before, and trusted entirely to my previous general studies. Very few candidates, however, could pass their trials in this way unless they had, which few of them have, the same opportunities of practical instruction in all the sciences as I pursued. I would not propose that such a system as that practised at Paris should be adopted at this University altogether, but

337

University of Edinburgh.

Professor Christison.

1 November 1826.

I think some useful hints might be got from it. I would be for adopting this mode so far as to divide the examinations into two, and have them in separate years. One great advantage from this change would be, that, instead of the students grinding for one year, they would grind for two—they would study for both examinations. I know many of the candidates live very idle lives during the first and second years, and then work very hard afterwards; of course, it is very proper that such a method should be fallen upon as would compel them to work hard during all the years of study.

While this process of grinding is going on are not the students very apt to desert the classes?—I do not know. By grinding I mean merely study—not grinding, properly so called. I do not approve of the system of grinding; I tried it myself, and finding it of little use, gave it up.

Do you think, when you passed your trials for your degree in Physic, that it might have happened that a candidate might have been examined upon heads which he had never heard lectured upon in a University?—I should think it possible. I remember I was examined upon a disease which I had never heard of before: when I was questioned upon that disease I certainly did not remember to have heard of it. It is exceedingly rare.

Would you think a subdivision of the Examination into two parts would lead to the students carrying on their studies more steadily during the whole course of their residence at the University?—They would study more steadily.

You would propose to make them study for the first examination as well as the second?—Yes.

As you say, if this recommendation were acted on, that it would throw a considerable additional burden on the Examining Professors, would it not be necessary to add to the number of Examiners some way or other?—I think it would be very proper that the load of examination should be taken off the shoulders of the present Professors to a certain extent; I certainly know it to be an irksome, a laborious, and ill-paid duty.

Would you propose to enlarge the fee?—I fear that would be hazardous.

Would you propose that any one should examine who did not participate in the fees?—It would be hard to compel a man to do so without compensation, particularly as examinations are conducted here, for they take up a great deal of time; at the same time, I should not wish to see that compensation made at the expense of the present Professors, for I think they are perhaps insufficiently paid—certainly they are not over paid.

But if this improvement were to be acted upon, which you have suggested, would it not be actually necessary to have additional Examiners?—I think it would be very necessary.

To whom would you extend that duty?—To the Professor of Surgery, of course; because, if there is a Professor of Surgery, his class ought to be made imperative for graduation. I consider it of far greater consequence that the Professor of Surgery should be an Examiner, and have his class made imperative, than the Professor of Midwifery, who was lately added.

You mean that such an addition would be proper if the separate Professorship of Surgery were established?—Yes; but if there is no other Professor I see no other Medical Professor so directly concerned with the studies of a graduate as I am. Of course, I conceive I am much more directly connected with the studies for graduation than is conceded by some of my colleagues.

If there were a separate Professor of Surgery established would you also include your Chair among the Examiners?—If the Commissioners were of opinion that the subject of Medical Jurisprudence should be studied more than it is by the students, then certainly its Professor ought to be an Examiner. If the students are expected to possess Medical-legal knowledge, in whatever way they are left to acquire it, it is proper that the Professor of Medical Jurisprudence should be an Examiner. If the Medical Faculty and the Commissioners are of opinion that such knowledge should not be expected from the students, I do not see what claim the Professor of Medical Jurisprudence has to be made an Examiner, unless the Commissioners, finding the burden too great for the other Professors, should single him out as a Medical man most directly connected with the subjects of study necessary for Physicians.

Would it not be advisable, also, to add to the Examiners, in that case, any other Medical gentleman, being a Professor, besides the Professor of Surgery, supposing that Chair to be established, and the Professor of Medical Jurisprudence?—The object of increasing the Examiners is to divide the duty into two parts; the Examiners should be equal in each; there would be four in each division if only one were added to the present number of Examiners; but, of course, that would make an even number, and it might be difficult to decide in regard to the merits of particular candidates. Ten, I think, would be a proper number; and in that case another Examiner, besides those two, would be requisite.

Which of the Chairs would you propose to add, so as to make 10?—Clinical Surgery.

Is the present examination of graduates conducted in the Latin language?—I am not aware how the Professors examine just now. I believe the laws of the University permit them to examine the student upon his knowledge of Latin, and then to question him in English, which I should consider certainly a better plan than the former system of examining in Latin.

Do you understand that the actual practice of the University now, in examining for the Medical degree, is to examine partly in English and partly in Latin?—I understand they are empowered to do it.

Which do you think the better plan—to examine in Latin in order to ascertain the knowledge of the student in that language, and afterwards in English, for the purpose of ascertaining his attainments in Medical science; or would you recommend examination partly in Latin for the latter object as well as the first?—I think the first plan the best. I can say, for my own part, and from my acquaintance with graduation, that according to the state of knowledge of Latin among graduates, the best Latin scholars have the greatest difficulty in speaking it,

University of Edinburgh.

Professor Christison.

1 November 1826.

for they know when they are wrong, but they cannot always find words to express themselves correctly; therefore they are much more embarrassed than those who do not know when they are wrong, who just put a Latin termination to their English words, and dash through thick and thin.

If examinations were conducted in Latin, in order to ascertain the proficiency of a young man in Medical science, might not the individual who is the most able by that means come worst off in his examination?—I think he might run that risk, as the knowledge of Latin goes now among good graduates.

Might that mode of Latinizing English words by the student pass as satisfactory?—I do not know what is the rule of the Medical Faculty; but I know, from the state of the knowledge of Latin among most of the graduates, it is quite impossible they can speak classical Latin.

Do you think the examination into the students' proficiency in the Latin language ought to be conducted by the Professors of the Medical Faculty, or might the Professor of Humanity be called in on that occasion?—It might be well to have the aid of the Professor of Humanity, if the objection did not occur, how he is to be paid; he cannot be asked to do this without receiving a fee. I see no difficulty in obtaining a knowledge of the students' proficiency in Latin by the Medical Professors, who must all know Latin sufficiently well to be able to examine upon it.

Have you any further observations to make previous to entering on the subject of your own class?—There is a project I have often thought of as likely to be very useful in the University; I mean the establishment of Prizes for the Medical students. I do not here refer to the establishment of such prizes as are given in the classes of Arts and Philosophy; the students there are much younger, and the prizes must be arranged in a different system. The prizes I allude to are Prizes of greater value; they should be few in number, and given only to those of the very first merit. In the Universities of Gottingen, Tubingen, and, I believe, in some of the other foreign Universities, there are several prizes given to the best graduates of the year, and these are ascertained by a Prize-essay on a subject assigned for the Thesis. Several very valuable dissertations, particularly on Physiology, have been published in consequence of these prizes. I have often regretted the little attention paid by the more advanced students in this place to the higher departments of their profession; and I think nothing would tend to make them study the higher branches more than the establishment of a few substantial prizes, which would at once mark them out, in the eyes of their fellow-students and the public at large, as the best graduates of the day. At present there are no means of distinguishing a man who passes his examination superficially and with difficulty from one who passes it triumphantly. One science will now be very much encouraged in this way, namely, Chemistry. It would be of great consequence indeed if even one prize only were to be given to the best graduate of the day, he being determined by the delivery of essays upon a particular subject, and that subject being one upon which the graduates could make original researches; such subjects are easily found in almost all the departments.

Would you propose that that subject should be prescribed by the Examiners?—By the Medical Faculty, and the prize should be conferred at graduation; one would be of great use; I never would wish to see more than two.

How would you secure against the possibility of the prizes being assigned to persons who did not themselves write the essays?—I think it might be secured very well, by the subject being such as no one would undertake for them; it would cost a great deal too much trouble. I am convinced there is no chance of the prizes being given in the way that is feared; they would require a great deal of research; and no man would submit to this, and be willing to transfer the reward of it to another person. I would, of course, exact from every person who delivered an essay a declaration that it was his own.

Is it not probable that the research would be so laborious as rather to divert the attention of the students from their professional studies at that particular session?—With some sanguine minds it might have this effect: I do not know, however, that this would be of great detriment; for, of course, it would be understood that the graduate must pass his examination besides. I do not know if any of the Professors have alluded to the legal rights of our graduates when they pass into England or Ireland. These are not defined; and since the Commission is engaged in investigating into all matters, it might be well if this were attended to a little more than at present. The reason why I say this is, that during the last 15 or 20 years repeated attempts have been made by the Apothecaries' Company in London to have the unlimited sway in the licensing of general practitioners—such practitioners as are sent from this University. They at last succeeded in procuring an Act, in 1815, in their favour; and, I believe, by the terms of this Act they can prevent Edinburgh graduates from practising as general practitioners in England. This has been a matter of serious annoyance to the Scottish Universities, and still more to the College of Surgeons. I have heard (I do not know if it is absolutely correct) that gentlemen licensed by the College of Surgeons have been interfered with in this way; and, from the terms of the Act, as far as I understand them, the Apothecaries' Society is entitled to demand of an Edinburgh graduate by what right he practises; and I should think an Edinburgh graduate would have some difficulty in satisfying an English Court of Law on the subject. This matter, I think, ought to be attended to.

Have you any remarks to make with respect to the order of Medical study?—Simply, that I think it might be very well if the Medical Faculty were to publish a programme of the order of study which the students should observe, if possible; but no compulsory rule should be laid down on the subject. The students have free access for information as to the proper course to be followed, by consulting their medical acquaintance in Edinburgh. At the same time, I think that the Medical Faculty should interfere so far as to give the public a recommendation regarding the order of study.

University of Edinburgh.

Professor Christison.

1 November 1826.

You have stated that if a higher previous education were required for Medical graduates, that it would have the effect of diminishing their number in this University, and also of diminishing the number of the Medical students; would the diminution of the number of Medical students be greater, in proportion, than the diminution of graduates?—I am not prepared to answer that question: my reason for saying a diminution of the graduates must be attended with a diminution of the other students also, arises from the fact, that a great number of students commence with no defined intention of becoming graduates, and actually do not graduate; but, nevertheless, looking forward to the possibility of their graduating, prefer the University lectures to private lectures. Many such students then would desert the University if the degree was made too difficult of attainment.

Do you know if the expenses of studies necessary for graduation be greater at Paris or at Edinburgh?—It must be much greater at Edinburgh, for there are no fees charged for classes at Paris; there is merely a general subscription four times a-year, about £1 each time, making £4 a-year, which admits the student to the whole classes.

Are there no fees for graduation there?—I am not sure.

Is not the number of classes that must be attended in the University in Paris much greater than here?—Yes, the number of classes is greater. I do not remember the actual number.

Is it not necessary they should attend four sessions of nine months each, and sixteen classes, and in nine of these twice?—I have not seen the recent code of laws of the Parisian school.

Is the expense of living at Paris much smaller than here?—Not for a Scotchman. I do not know how the French may contrive. The expense is very much the same as at Edinburgh.

You were understood to say, that Medicine, as a science, had greatly improved in France and Germany; have you any knowledge of the state of Medical Practice in Germany, so as to know if that also has improved?—I have no distinct knowledge of the state of Medical Practice in Germany. It must have improved of late years. I question much if it is on a par with the practice of this country, I mean Medical Practice. Surgery is in a state of great advancement. If I had taken any serious disease in France, I would much sooner have been under the hands of my companion than under the hands of any French graduate—by graduate, I mean young graduate. At the same time, I must mention that, for his standing, he was one of the very best practitioners that could be found.

Do you know if the University of Vienna requires attendance for five sessions of nine months each, and 18 classes?—I believe the students attend five sessions. I do not know the specialties.

Do you think the students have an opportunity of seeing much of Medical Practice?—From what I understand of the system pursued there, they have.

Would it be a great hardship to require an equal degree of attendance in this University?—Considering the expense of education here, and the relative return which a young man receives for a great many years after his graduation, I think it would be a hardship.

Is it not very possible for a young man to graduate here with a very incompetent knowledge of Latin?—I should think very few of the graduates of this University deserve the name of Latin scholars; and I certainly have known men graduate who would have had some difficulty in reading Latin authors even in their own profession.

Would it not be very desirable to improve this state of things?—I think it very proper that some means should be taken to let the public understand, that, before lads came forward as Medical students, they should know Latin better; if that were sufficiently understood, the requiring a better knowledge of Latin would be no hardship, as there would be no difficulty in the student making himself an adequate master of the Latin tongue, in whatever part of the country he lived.

Would not the requiring of a moderate knowledge of Greek ensure a considerable share of scholarship in Latin?—Of course: there is no man who could study Greek that would not know Latin better for it. But I doubt much the propriety of requiring Greek from Medical graduates, on account of the great variety of pursuits in which they have to engage, which are of much greater importance; and there are also other subjects which would be of more importance to them than Greek, and which they do not study. I allude particularly to the modern languages.

Has it ever been proposed in the Medical Faculty, so far as you know, to make it necessary that candidates should be acquainted with the modern languages, French and German?—Never, to my knowledge, has it been talked of; it may have been, but I never heard of it. A man, who, after graduating, possesses a sufficient knowledge of French to read it fluently, and lives in town, where he has access to French books, has a prodigious advantage over others.

For the purpose of procuring a more competent knowledge of the Latin tongue, would you wish that any previous examination should take place of the students when they enter the University, with respect to that particular department of knowledge?—There is a great difficulty in that, for many students may commence with a very inadequate knowledge of Latin, but feeling this deficiency, they may, by strenuous exertions, make it up. That students can do this, and carry on their professional studies at the same time, I have had repeated proofs. It would be very hard, therefore, to compel those students, who, at the time they might have been learning Latin, were not acquainted with the rules of the University, to spend several years more in learning Latin before they commenced their Medical studies, when, by this additional exertion, they could make themselves masters of it before they came forward to be examined for graduation.

Could any method be devised, by which those who are not sufficiently competent, at entering the University, might be encouraged to make that additional exertion, in order to render themselves sufficiently learned in Latin before they commence, or, at least, before they take their degree?—I may allude, as I have done frequently, to my own case, and it will illustrate

University of Edinburgh.

Professor Christison.

1 November 1826.

to the Commissioners, better than any general answer, the hardship of a rule requiring proofs of attainments in Latin, before the commencement of the Medical Curriculum. Until I was of the age of 18, I never thought what profession I was to follow. At this time I had studied Latin thoroughly; but if a student were in my situation, who had not paid the requisite attention to Latin, he would be thrown very far back. As it was, I could not by any possible exertions, have passed sooner than in three years, and I actually did not pass till my fourth year. I have no doubt there are many students in the same predicament, particularly among those who live in town, and whose parents' circumstances leave them the power of looking around them before they fix upon a profession.

But, though individual hardship arises from a system of regulations on that head, would it not probably lead to the benefit of science generally, and to Medical schools in particular?—I certainly think it might be of advantage, if such an examination were made before they commenced their Medical studies. If these hardships could be guarded against, which, in the first instance, would be very severe indeed, in consequence of young men and their parents being ignorant of the rule till it was too late to follow it, I have no doubt it would.

Is it your conviction that Medical students are generally very ardent and assiduous in the prosecution of professional knowledge?—I think the Medical students of this University are; that a number of them are very idle, cannot be denied; but the better description of graduates certainly study very hard.

Is it not a fact that many of them attend a much greater number of classes than are required by the Statute, both within and without the University?—Yes, certainly. One reason, perhaps, why compulsory rules requiring an additional course of attendance at the University should not be made is, that in that way the private lecturers would be discouraged, who are of great use to the University, and to science generally.

Do you think that the course of Medical education, as well as the other branches, ought to be completed within the walls of the University?—Yes, certainly. I beg to add here, that I am decidedly hostile to the exaction of University attendance for anything else than professional knowledge. I do not mean to say that the rules for compulsory attendance should include what may be called a perfectly complete course of Medical education. I think that would be hard on many students, and would be unfair to the private lecturers, considering that they are of so much use to us. It is of great importance that students should receive different views upon different subjects, and many of the private lecturers are of equal eminence with the Professors. It is very proper the students should have opportunities of attending out-of-door lectures, which they would not have, if these high compulsory regulations were enforced.

You would regret if a system were adopted, by which these private lecturers would be much discouraged?—Yes; I should be sorry that any system should be adopted that should throw the Medical students entirely on the University, and render it impossible for them to study elsewhere.

Will you specify what number of the Medical classes you consider indispensable previously to graduation?—I shall mention them in the usual order of study: Chemistry and Pharmacy, Anatomy and Morbid Anatomy, Surgery, Practice of Physic, Theory of Physic, Materia Medica, Midwifery and Clinical Medicine: these are the classes that are rendered imperative just now.

What others would you recommend?—Then, of course, I include the subject concerning the addition of which I have still to give my opinion, my own class, Medical Jurisprudence. If it were possible to do so, or if it can be done without overloading the students, but that I very much doubt, I would also require a Course of Clinical Surgery, only, however, on the improved system I have mentioned, and likewise a Course of Natural History. I forgot Botany. I would also add Natural History, and even Natural Philosophy, if it were possible to do so without overloading the students; but I doubt if we could do so at present. If the degree were raised by the addition of one or two classes, it might be proper to consider after that, whether others might not be added; but if a large number were at once added, I should fear, considering the state of the country, the institution of a rival University in London, and the hue and cry which would be raised by other rival schools, I should fear that the numbers would fall off very considerably.

Will you state what number of these classes should be attended oftener than once?—I think none; for if you compel students to attend any of them oftener than once, you prevent them from attending out-of-door lectures on the same subjects, which ought to be avoided. If any are to be exacted twice, I should have a difficulty in saying which ought to be chosen; certainly not the elementary classes, for these can be taught very well out of doors. If any were to be exacted twice, they ought to be what I may call the classes of application, those in which the elementary classes are applied, such as the Practice of Physic, the Materia Medica, or Clinical Medicine. I might likewise add, though its being attended twice is out of the question in the present state of matters, that the class of Medical Jurisprudence must also be considered as one of application; it is one in which, more than in any other, the student requires a knowledge of all the previous classes.

Is that the case in foreign Universities?—Yes.

In the enumeration which you have made, do you proceed upon the understanding that a more extended course of Anatomy, occupying the whole session, should be going on, or that Surgery should be separated from Anatomy?—I think either Anatomy or Surgery can occupy a Professor during the whole session perfectly well. Anatomy, with its correlative topics, and its bearings on Surgery, Physiology, and Morbid Anatomy, is amply sufficient to occupy a whole session.

You have stated just now what additional classes you would render imperative, prior to gra-

duation in Medicine; would you recommend that the present classes that are imperative should remain imperative, or that there should be any diminution of attendance in those classes for the present degree?—No; I do not see that any should be cut off. I know some have talked of cutting off the Professorship of Botany; but the Professorship of Botany is of great use, and should be retained as an imperative class.

University of Edinburgh.

Professor Christison.

1 November 1826.

Would you make the same remark as to all the others that are now imperative?—As to all the others there cannot be a doubt.

In the event of its being made practicable for Medical students at this University to take a higher degree than any at present known in practice here, would Dr. Christison think it very essential that an improvement should be made in the existing degree, and that it should be understood that its value was in no way considered to be diminished?—Certainly.

Dr. *Alexander Monro,* Professor of Anatomy and Surgery in the University of Edinburgh, called in, and further examined.

Professor Monro.

The Commissioners, having understood that you were desirous of offering some additional observations to them, request you will now submit whatever you wish to add to your former evidence?—I will do it with as great brevity as I possibly can. I omitted to mention, when I was last before the Commissioners, that, in consequence of a conversation with my colleagues regarding the extension of my course, I had intimated by letter to the Principal and to Dr. Hope, that, in consequence of their desire, I am quite ready to give as extended a course of Surgery as is given in Britain.

Do you mean that it should be in connexion with your course of Anatomy?—Separately. I wish also to state that some questions were proposed regarding general study: I consider it to be of very great moment that students should have attended twice the more elementary branches.

By the elementary branches, do you mean the elementary branches of Medicine, or of instruction in general?—I mean the elementary branches of Medicine. The grounds of my opinion are, because I have observed and believed, as well as Dr. Hope and Dr. Home, that our students now-a-days are not so well prepared in the elementary branches as they formerly were. Dr. Hope, Dr. Home, and myself, have been Members of the Medical Faculty of Examiners for 28 years, and I believe that is the result of our observations, that the students have declined rather than advanced in instruction in the elementary branches. There is another circumstance I will mention: I think it might be of great moment that there was a good draughtsman connected with the University; for there are many preparations illustrating diseased structure, the colour, form, and texture of which go as soon as put into spirits; it would be a matter of very great moment if there were some person who could represent these appearances; besides he might teach students drawing, which, I hold, might be of great importance to Medical students. I know that such a person is to be found.

Do you think that a draughtsman of that description ought always to belong to the class of Anatomy?—I think so. The next observation I would make relates to Clinical Surgery. I think that, in its present state, it might admit of much improvement; the present Professor, Mr. Russell, has no patients to lecture upon. By the regulations of the Hospital the ordinary Surgeons of the House have a right to lecture upon Clinical Surgery; but it might happen that the person nominated to be Professor of Clinical Surgery might not be Surgeon to the Hospital. The last circumstance I would wish to throw out to the Commissioners is, that it strikes me it will be a matter of considerable moment to the University, if there was a retiring pension given to Professors far advanced in life. It cannot be supposed that an old man's mind is as vigorous as that of a younger person, or that he will keep up his lectures in the present state of science.

Do you mean that there should be a retiring pension for the Professors?—Yes, with a view to induce a Professor not to go on beyond the strength of his mental powers.

Would the granting of such a pension, in your opinion, do away with the necessity of having conjunct Professors?—I am not aware of that; perhaps it might to a certain degree. I recollect an instance in this University, which was the case of Mr. Robison, who was in bad health for three or four years; Professor Greenfield acted in the mean time; and after having ceased to give lectures for four or five years, Mr. Robison resumed his duty, his health being much better.

Was Professor Greenfield appointed conjunct Professor?—He was not appointed: I believe it was a private understanding between the parties, in consequence of the bad health of Mr. Robison.

Would there not be a difficulty in having a retiring pension, considering that the chief emolument of a Professor is derived from fees; so that to make a retiring pension lucrative, it might be a great deal higher than the salary of the original Professor could afford?—It would be so. My own salary is the same as my grandfather had 100 years ago, £50. Some Professors have no salaries.

Do you think the present system leads to Professors continuing their lectures beyond the age when they are really capable of being of use to the University?—I do: indeed, I think when a Professor is unable to introduce all the modern discoveries into his lectures, and his mental powers fail to a certain degree, it is high time he should retire.

University of Edinburgh.

Professor Ballingall.

1 November 1826.

Dr. *George Ballingall,* Regius Professor of Military Surgery in the University of Edinburgh, called in and examined.

Are you Professor of Military Surgery in this University?—I am.

Have you seen the several Answers that the Senatus Academicus have sent to the Commissioners?—I have.

Do you concur in them?—I do generally.

Are there any remarks you would be desirous of submitting to the Commissioners with respect to them?—There are some remarks relative to the granting degrees in Medicine, and also to my own Class, which I took the liberty of laying before the Commissioners, in the shape of a Memorial.

Is that a Memorial which you delivered in about the 5th of October?—It is.

Does that Memorial contain all the observations that you are desirous of submitting to the Commissioners, not only with respect to your own particular class, but with regard to degrees in Medicine, to which you refer?—No, it does not contain the whole of the observations I was desirous of laying before the Commissioners, particularly with regard to degrees.

Would you have the goodness to state to the Commissioners those observations with regard to the degrees in Medicine which are not contained in that Memorial?—The best way will be to read some papers which I had occasion to print when the subject of the Curriculum was under discussion two years ago.

Would you have the goodness to make such observations upon that printed Memorial, or upon such parts of it as you think would be of service to the Commissioners as conveying to them your ideas in regard to Medical degrees?—In regard to the requisite qualifications for the degree of Doctor of Medicine, I differ widely in opinion from several of my learned colleagues; and being sensible that, in this instance, I differ from some of those whom I respect as my professional instructors and personal friends, I am therefore desirous of giving in detail my views of this important question, which I cannot do more concisely, nor more distinctly, than by reading the following extract from a speech which I delivered at a meeting of the Senatus Academicus on the 13th of October 1824, when the Medical Curriculum was under consideration.
